> The resolution of the Congress Working Committee regarding the Congress Socialist movement shows how reactionary the present leadership of the Congress has become. The programme adopted by the Patna Socialist Conference speaks not of class war but of organizing the masses on the basis of their economic interest and fighting for the removal of their immediate demands and leading them to independence and socialism. Nowhere in the Patna conference has the phrase 'confiscation of private property' occurred. He characterizes the Working Committee's resolution as a challenge to the socialists and concludes, 'let us accept this challenge and put forth our utmost energy to have this reactionary resolution rescinded and our programme adopted by the Bombay Congress.'

The reply of the executive committee of the Bombay Congress Socialist party states in part that the entire policy which the Working Committee has induced the Congress to accept is inconsistent with the Congress creed of independence, and denies that the party is disloyal to the method of non-violence. It asserts that it is as earnest about accepting non-violence as its creed as any other Congressmen.

Bombay, June 21.

"To import the topic of non-violence into this controversy is only to cloud the issue and create

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

prejudice. We desire to make it clear that just as other Congressmen accept non-violence as a policy so do the Congress Socialists," says a statement issued by the Bombay Congress Socialist Party in reply to the Working Committee's resolution on the Socialist programme. We feel, says the statement, that the opinion of the Working Committee is based on entire misconception of the nature of class struggle.

"Class struggle is inherent in the capitalist order of society, where a small-propertied class dominates over and exploits the mass of people. Class struggle means no more and no less than expression of irreconcilable antagonism, which is already there. It is only when the masses become politically conscious and desire to create a classless society, where exploitation would find no place, that the dominant class raises the bogey of class war."—*United Press.*

We do not know whether in India and abroad there are any thoroughgoing supporters of the absolute non-employment of physical force by individuals and small and large groups of men even for the attainment of legitimate and righteous objects. But without either accepting or rejecting the doctrine of such wholehoggers, we would certainly rejoice if the Congress Socialist party succeeded in ameliorating the condition of the masses in India by strictly following non-violent methods.

It should be added here that though the Congress is against class war and confiscation of private property, it does not accept the present economic order. The last sentence in the Working Committee's resolution on the economic programme adopted in Bombay on June 18 last reads as follows :

> At the same time the Working Committee is of opinion that the Congress does contemplate wiser and juster use of private property so as to prevent it from exploiting the landless poor, and also contemplates a healthier relationship between capital and labour.

Telegraph Line Between Persia and Afghanistan

An agreement was recently arrived at between the Persian and Afghan Governments for the establishment of direct telegraphic communication and the construction of six miles of line from Hirat to the Persian border wherefrom at present the nearest telegraph station is 18 miles. Both Governments, it is reported, have undertaken the construction of telegraph lines within their respective territories, linking the two neighbouring kingdoms.

The more the countries of the world are linked up with one another for peaceful intercourse the better it would be for the cause of humanity—of civilization and culture.

A Partly Un-national and Partly Self-contradictory Resolution

We have already in previous notes commented upon the Congress Working Committee's resolution on the White Paper and the Communal Decision, because our viewpoint being closely akin to the *National* Congress viewpoint, we have felt constrained to criticize the Working Committee's deviation from the *National* viewpoint. It is necessary to make some additional observations, which may involve some repetition. In our heading the resolution is characterized as partly un-national. It can be called partly anti-national without injustice, but it is better to be moderate in criticism. For the sake of convenience we shall again quote those portions of the resolution which are open to criticism.

> The only satisfactory alternative to the White Paper is a constitution drawn up by a constituent assembly elected on the basis of adult suffrage, or as near it as possible, with the power, if necessary, to important minorities to have their representatives elected exclusively by electors belonging to such minorities.

The mere fact that a constitution is drawn up by a constituent assembly, and not by the British Government, cannot necessarily make it satisfactory or more satisfactory than the White Paper constitution. To be satisfactory, it must in the first place be national—at least fundamentally and essentially so, it must not be anti-national, and in the second place, it must fulfil many other requirements which need not be specified here. Considering the mode of election of the constituent assembly foreshadowed in the resolution, it is quite possible for a constitution, to be drawn up by it, to be vitiated by anti-national communal bias as the White Paper is—to a less or equal or greater extent. For, as the resolution concedes to important minorities the un-national method of separate exclusive communal election of their representatives to the constituent assembly "if necessary," that "necessity" is sure to arise—some community or communities are sure to ask for it and to get it ; and representatives of those communities elected in that way are sure to insist upon the inclusion of separate and exclusive communal election of communal representatives in the constitution itself which is to be

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

drawn up by the constituent assembly. And either the majority community and the Congress will have to yield to this communal demand, or there will be no agreed constitution: for, according to another part of the Working Committee's resolution, "the Congress is pledged...to reject any solution which is not agreed to by any of the said parties."

In our opinion, therefore, the passage quoted above from the resolution should have ruled out the possibility of any anti-national constitution being drawn up by the constituent assembly by laying down that the constitution must not be un-national or anti-national in any fundamental or essential respects. And the resolution should certainly not have started with a flagrant departure from national lines and principles by indicating its readiness to yield to the communalistic clamour for the exclusive and separate election of communal representatives. And supposing, without admitting, that minorities should have this "right," why are only "important" minorities to have it? What is the standard of importance? Is it not true that the interests of "unimportant" minorities require more attention than those of "important" minorities?

> Among other things it will be the duty of the constituent assembly to determine the method of representation of important minorities and make provision for otherwise safe-guarding their interests.

Why is it assumed here that the method of representation of important minorities may or must be different from that of the majority and unimportant minorities? In the constitution of no civilized and modern country that we are aware of is such a distinction made between the methods of representation of majorities and unimportant and important minorities. In the League of Nations' Minorities Treaties, which embody the political wisdom of most of the leading nations of the world, no such distinction is recognized. The United States of America, Soviet Russia, etc., are not in the League, it is true. But they, too, do not recognize such a distinction. Assuming, however, without admitting, that minorities require special treatment, the Working Committee's resolution should have definitely shut out even the suggestion or consideration of separate communal electorates, which are un-national, the special treatment being confined to the reservation of a number of seats for the minorities for a definite period or to a system of proportionate representation, or both, and the like.

As regards safe-guarding the interests of minorities, the League of Nations' Minorities Treaties do *not* recognize that any minority group has any separate political and cognate interests, the only minority interests recognized and safe-guarded are those relating to their separate languages, if any, separate religions, if any, separate personal laws, if any, and the like. The Congress practice should be like that of the League of Nations. To recognize the existence of separate political and cognate interests of minorities and in consequence to give them separate sectional representation by separate electorates is to plant a "state within a state," to prevent which, according to Mr. Austin Chamberlain, was the object of the League of Nations' Minority Treaties, and should be the object of all Nation-builders.

> Since, however, the different communities in the country are sharply divided on the question of the communal award, it is necessary to define the Congress attitude on it. The Congress claims to represent equally all communities composing the Indian nation and, therefore, in view of division of opinion can neither accept nor reject the communal award as long as division of opinion lasts.

No doubt, the Congress represents all communities in the sense that among Congressmen there are members of all communities or in the sense that members of all communities are eligible for membership of the Congress, provided they accept its principles and 'creed' and fulfil other conditions. But it can hardly be admitted that it represents all communities *equally*.

But from the fact that it represents all communities it does not necessarily follow that it can neither accept nor reject anything on which opinions are divided. On the contrary, it is or should be the privilege and the duty of the Congress to find out what is National and to inculcate it, never minding whether that would increase or reduce the number of its adherents. All sections of the Hindus do not support the anti-untouchability principles and activities of the Congress, and numerous Mussalmans are opposed to it for reasons which need not be stated here. Nevertheless, it has never been said that the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Congress can neither accept nor reject it. Similarly, in no community is there unanimous or practically unanimous adherence to the cult of the charkha. But the Congress enjoins the production and use of khaddar.

We have pointed out in a previous note that if the Congress wants to condemn and reject the Communal Decision only when all communities are against it, it will have to wait for an indefinitely long time—before which that Decision may perhaps breakdown owing to its innate mischievous, vicious and iniquitous character.

In the meantime, being part of an official scheme, it will be given effect to and go on producing "untoward consequences," unless it is effectively opposed. One way to to do so would be for the Congress to boldly denounce it and call on all communities, including as many truly National Muslims as possible, to condemn, oppose and reject it. Such action on the part of the Congress will have the further indirect beneficial result of enabling the public to judge who are the genuine Nationalist Muslims and who are merely liaison officers of the communalist Mussalmans. As in the opinion of the Congress Working Committee, "judged by the National standard the communal award is wholly unsatisfactory besides being open to serious objections on other grounds," the Congress would have ample justification for adopting the course suggested above.

The other method of effectively opposing it, which has been suggested in the resolution, *viz.*, to arrive at an agreed solution of the communal problem, has been partly dealt with in a previous note and will be referred to again.

The resolution proposes neither to accept nor to reject the Communal Decision so long as there is division of opinion on the question. We are afraid this division of opinion would last very much longer than the Working Committee has perhaps anticipated; and that for very good reasons. Observers of political conditions in India cannot have failed to conclude that in self-defence British imperialists must go on favouring the growth of sectional ambitions and the rise of sectional claims. The greater the National self-consciousness in India—the greater the strength of Nationalism, the greater must be the partiality shown by British imperialists to particular sections of the people which are open to such treatment. Hence, as our Nationalism grows more vigorous, pronounced and articulate, the direct and indirect support to sectionalism and communalism given by British imperialists must grow greater. For this reason, the Congress should not expect communalism to dwindle and die a natural death in the near future. The Congress must directly, definitely, promptly and persistently fight it. For preserving or securing the allegiance of the sectionalists and separatists of any community the Congress cannot make higher bids than those of the British imperialists. If Congress concessions to them increased in arithmetical progression, the British imperialist favours would be showered down upon them in geometrical progression.

> No solution that is not purely national can be propounded by the Congress. But the Congress is pledged to accept any solution falling short of national which is agreed to by all parties concerned and conversely to reject any solution which is not agreed to by any of the said parties.

Whether *in the future* any solution that is not purely national can be *propounded* by the Congress or not, we do not know. But *in the past* the Congress *has* either propounded or accepted or been a party to solutions that are not purely national; *e. g.*, the Nehru Report, reservation of seats for minorities, etc.

The second sentence in the above extract reminds us of the story of a man who had abjured meat. One day when he sat down to dinner, along with the soup poured down on his plate there fell a piece of meat. The cook wanted to pick out and throw away that piece. But the diner said, "That which has come of itself should be allowed to remain"! Similarly, though the Congress will not itself propound any not-purely-national solution, it will accept (being "pledged" to do so) *any* solution falling short of national which is agreed to by all parties concerned, however communalistic and inimical to the growth of national unity and solidarity and responsible self-rule it may be! And "conversely," it is pledged to reject any solution which is not agreed to by any

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

of the said parties, however highly national it may be.

The resemblance suggested above between the abjurer of meat and the Congress must not, of course, be taken literally. For, the abjurer of meat in the story had a lurking lingering liking for meat, whereas the Congress has no such secret liking for communalism, but feels constrained by circumstances to yield to communalist clamour against its principles.

But let us try to be a little logical. The resolution says that the Congress is pledged to reject any solution which is not agreed to by any parties concerned. Now the Communal Decision *is* a solution of the communal problem and it is not agreed to but opposed by the Sikhs to a man and also by innumerable Hindus and others: why not then reject it outright? Perhaps it is to have the privilege and the honour of not being rejected, because it is not an Indian but a British solution!

Suppose the proposed constituent assembly arrives at substantially the same solution as or a worse solution than the Communal Decision, the Congress must then, according to this resolution of its Working Committee, accept it!

> It is, however, obvious that the only way to prevent the untoward consequences of the communal award is to explore ways and means of arriving at an agreed solution and not by any appeal on this essentially domestic question to the British Government or any other outside authority.

In a previous note we have commended this self-respecting attitude of the Congress. We do so again. But we beg leave to conclude by putting a supposition, stated above, in an interrogative form. If the agreed solution be more communalistic than national, will the Congress accept it? Are there no such things in politics as right principles? Is it true that the bigger the crowd of supporters —particularly of communalistic supporters—of any scheme, method, or opinion, the better it is?

Did Dr. Ansari Threaten to Resign?

The Leader wrote editorially in its issue dated June 24 last:

> Is it a fact that at Bombay Mahatma Gandhi was faced with two resignations, one resignation (not made known to the public) cabled by Dr. Ansari that if his view was not upheld by the Congress he must resign and the other by Pandit Madan Mohan Malaviya and as stated by the *Hindustan Times* the weak Hindu community's claim had to be ignored to please the Muslims? Is it also true that this time the great Hindu community is not going to allow itself to be treated in this manner and that already some activities are going on, the result of which will show that the community does not consider its interests to be safe in hands where full justice cannot be secured to its interest lest some other interests might get displeased?

The following appeared in the same paper next day:

> Some confirmation, though not authoritative, is available of the report hinted at already in this morning's editorial columns of the *Leader*, that a certain cable was received either by Mahatma Gandhi or by Pandit Madan Mohan Malaviya, from Dr. Ansari when the Working Committee and the Congress Parliamentary Board were considering at Bombay the question of their policy with regard to the communal award.
>
> It is said that in his cable Dr. Ansari, president of the Congress Parlimentary Board, threatened to resign or withdraw from the Board in case they did not accept the position with regard to the communal award suggested by the Swaraj Party at Ranchi prior to the Patna decisions, namely, that they neither accepted nor rejected the communal award.

The Congress and Mahatma Gandhi are in a very unenviable position. Its delicacy and critical nature may be realized from the occasional experience of heads of joint families. In order not to be accused of partiality and in order to appear just, sometimes such a head has to be less than just to his brother or his son and indulgent or over-generous to his cousin or his nephew. But domestic politics are not exactly the same as the politics of nations, nor are the former always a safe guide to the latter.

Father Ethelbert Blatter, S. J.

By the untimely death of Father Ethelbert Blatter, S. J., in his 57th year, India has lost an eminent botanist, a distinguished educationist, a truly pious man and a deeply and broadly human soul. He was born in Switzerland at Rebstein, "a bright little township perched high above the banks of the upper Rhine." As a Swiss he was to his dying day proud to be a son of such a glorious country.

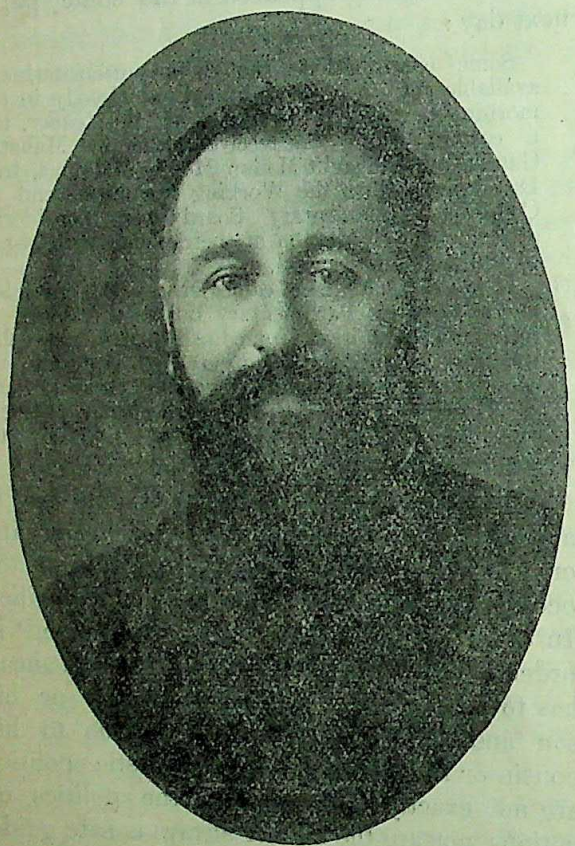
> "His home was nothing less than a castle which had belonged to the Knights Templars, had weathered eight centuries of history and was more

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

than figuratively haunted by the 'strange enchantments of the past and memories of the day of old'...It is a corner of the earth as inspiring as any spirited lad could wish to roam in. Here it was that the future botanist got his love of nature, of freedom, of spacious and cheerful living, of fun, of humour, of vast horizons."—*The Examiner*.

All through life he kept his boyish jovial spirits. Many people wondered how such a man could become a Jesuit, submit to stern rule, and live and die a poor selfless priest who



Father Ethelbert Blatter, S. J.

asked for no human reward and did not get any. That he was professor of botany and later principal, St. Xavier's College, Bombay, Syndic of the Bombay University and chaplain at Panchgani—these facts do not indicate how much romance there was in the life of this man, whose body was as big as his heart was large. For botanical studies and the collection of materials he made expeditions to Sind and along the Indus, the Rajputana Desert, Kashmir, Assam, and Waziristan. His botanical publications are numerous, only a few of them being : Flowering Season and Climate, The Flora of Aden, The Palms of British India and Ceylon, The Flora of the Bombay Presidency, The Ferns of the Bombay Presidency, On the Flora of Cutch, The Flora of Panchgani, Plant types for College students, A Bibliography of the Botany of British India and Ceylon, Flora Arabica, The Flora of the Indian Desert, Contributions towards a Flora of Baluchistan, Beautiful Flowers of Kashmir, Flora of the Indus Delta, The Flora of Waziristan, and The Bombay Grasses (in the press.)

That in addition to being a botanist Father Blatter was a poet need not cause any surprise ; for botany is not a dismal science.

In collaboration with Father Caius, Father Blatter has left ready a second edition of the late Major B. D. Basu's monumental work on *Indian Medicinal Plants*, so thoroughly revising and rewriting it and making such copious additions that it is practically a new work, double the size of the first edition. It is now in the press. It was a gigantic task but a labour of love all the same.

"He exercised a good influence over his students and many a young man owes his education in character and manliness to Fr Blatter."

Communal Representation

The subject of communal representation has been engaging public attention for some time past. But that attention has for the most part resulted merely in some persons expressing themselves as being for and some others against it, not in the formation of informed opinion on the part of many. The number of those who have studied the subject is not large. Those who may want to do so will not stand in need of rare books. They may read the Montagu-Chelmsford Report, the Simon Commission Report, Report of the Indian Central Committee, the Nehru Report, Sir N. N. Sircar's *Speeches and Pamphlets*, Mr. Shiva Rao's *Select Constitutions of the World*, Dr. Radha Kumud Mukherji's pamphlets on the League of Nations' Minority Treaties, the pamphlet entitled *The Communal 'Award'? Examined and Criticized*, with a foreword by Mr. C. Y. Chintamani, recently published by the Allahabad Law Journal Press, and the like. In the last-named publication, as pointed out

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

in a subsequent note in this issue, the reader will find the past opinions of prominent Muslim leaders on separate electorates, all being against them.

Sir C. V. Raman and the Indian Science Association

The Indian Association for the Cultivation of Science was founded in Calcutta in 1876 by the late Dr. Mahendra Lal Sircar, the renowned homeopath. Its assets now exceed six lakhs of rupees. It is an all India institution, though the founder was a Bengali and the bulk of the donations have come from Bengalis. The largest single donation to it was that of Rs. 100,000 by the late Babu Bihari Lal Mitra of Calcutta. The most munificent non-Bengali donor was the late Maharaja of Vizianagram, a patient of Dr. Mahendra Lal Sircar, who gave Rs. 50,000. Smaller amounts have been given by a very small number of other non-Bengali donors. We do not at all like any separate mention of Bengalis and non-Bengalis, but have been obliged to state these facts because of interested propaganda meant to produce the wrong impression that Bengalis have done little or nothing for the Indian Association for the Cultivation of Science.

Even when Sir (then Mr.) C. V. Raman was an officer in the finance department of the Government of India, he used to carry on scientific research in this Association. Sir Asutosh Mukherji discerned the great scientific ability of the then obscure young researcher and appointed him to the important post of Palit Professor in the Calcutta University. He has been connected with the Science Association for some 27 years and for the greater portion of that period he has been virtually its dictator and all in all, enjoying unchallenged power. This was not without some justification. For, as he said at the meeting of the Association held last month,

> As a Professor of the Calcutta University he worked in this Association in an honorary capacity and devoted much more attention to the work of the Association than to his work in the College or School. This was a subject of criticism both inside and outside the University. But he never concealed the fact that he worked in two laboratories and he used to say that in one of them he worked but did not get any pay but in the other he did not work but got his pay. —*Amrita Bazar Patrika.*

It was the researches which he carried out in this Association and the discoveries which he made there that secured for him the Nobel Prize in Physics. This was not only an unprecedented achievement and honour for an Oriental, but it made the Association also famous. In addition to bringing fame to the Association, though at the expense of the Calcutta University in more senses than one, he rendered service to it in another way. He applied for and obtained a grant from the Government of India for carrying on its work. Thus he was in these respects a well-wisher and benefactor of the institution.

These facts, as well as his eminent scientific ability, his great energy and his powers of speaking, show what he has achieved and what more he can achieve. But, like some other gifted and masterful men, he made a mistake as regards the means and methods of securing the permanence and progressive efficiency and usefulness of a public institution. For gaining such an object the co-operation of all sincere and fit men should be welcome. But far from seeking and welcoming such co-operation, he excluded even a man like Sir P. C. Ray—not to speak of the exclusion of other qualified men who are not so famous as Acharya Ray—and filled the managing committee with his own nominees, turning it into a coterie. Therefore, the institution ceased to be managed and looked after in the way that it should have been. Dr. Raman is now the Director of the Indian Institute of Science at Bangalore, and, therefore, no longer a resident of Calcutta. Nevertheless, he wanted to maintain his exclusive hold over the Indian Science Association in Calcutta. For that reason, he wanted to change its rules in such a way that no one might in future become a member of the Association and of the Managing Committee who was not a nominee, protege, or creature of his. Some details require to be known for understanding this manoeuvre.

Under the rules of the Association its managing committee has complete power to admit any applicant to or exclude him from its ordinary membership. Thus hitherto Sir C. V. Raman and the members of the managing

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

committee (his nominees) have been able to keep out "undesirable" men. But the managing committee could not prevent any one from being a life member. One could be a life member of the Association by giving Rs. 500 or more to the Association or Rs. 250 or more to the Mahendra Lal Sircar Physics Professorship fund. Such a donor became a member automatically by virtue of the donation. The change which Dr. Raman wanted to make was that even such a donor could be a member only after his election and admission to ordinary membership by the managing committee.

This change he sought to make by calling a special general meeting to be held before the annual meeting. Somehow his intention became known, and through the exertions of some well-wishers of the Association 68 persons became life members in the course of a day or two by paying Rs. 250 each or Rs. 17,000 in the aggregate.

> These gentlemen, including Sir Nilratan Sircar, Mr. Syamaprosad Mookerjee, Dr. P. N. Banerjee, Mr. Nalini Ranjan Sarker, Mr. S. N. Banerjee, Prof. Dr. D. M. Bose, Prof. Dr. Sisir Kumar Mitra, Prof. Dr. J. N. Mukherjee, Prof. Charu Chandra Bhattacharjee, Mr. C. C. Biswas, Hon'ble Mr. B. K. Basu, Dr. S. N. Sen, Meteorologist, Rai Bahadur Dr. Gopal Chandra Chatterjee, Dr. Harinath Ghosh and several other life members, went to the Association Hall at Bowbazar in the afternoon to attend a special meeting and also the annual general meeting which was to take place immediately after.
>
> EXIT BY BACK DOOR.
>
> Immediately on their arrival, Sir C. V. Raman hurriedly left the place through the back door and accompanied by Dr. Krishnan, the Secretary, repaired to the shop of the Book Company. A small deputation was sent there to induce Sir C. V. and his companion to come to the place of the meeting. Although they came to the Association Building, Sir C. V. Raman was found trying to prevent Dr. Krishnan, the Secretary, from attending the meeting. This curious attempt led Mr. Syamaprosad Mookerjee to exert his power of persuasion, which in the long run proved successful. With about a dozen of his followers Sir Chandrashekhar entered the meeting hall. —*Advance.*

So both the meetings were held. In the course of his speech Sir C. V. Raman said that he no longer wanted to remain president of the Association. We need not print the details of the proceedings—they have appeared in Bengali in *Ananda Bazar Patrika* and in English in *Amrita Bazar Patrika, Advance* and *Forward*. The following office-bearers and members of the managing committee have been elected at the annual meeting.

President—Sir Nilratan Sircar.

Vice-Presidents:—Mr. J. N. Basu, Prof. Dr. Birbal Sahni, Prof. Dr. Ganesh Prasad, Prof. Dr. J. N. Mookherjee, and Dr. Bimala Charan Law, Ph.D.

Secretary:—Prof. Dr. S. K. Mitra.

Members:—Maharajadhiraj of Darbhanga, Mr. C. C. Biswas, Prof. Satish Chandra Ghosh, Prof. Dr. D. M. Bose, Prof. Nibaran Chandra Roy, Mr. G. D. Birla, Capt. N. N. Dutt, Prof. Dr. Himadri Kumar Muherjee, Sir Onkarmull Jehtia, Rai Bahadur Dr. Gopal Chandra Chatterjee, Prof. Charu Chandra Bhattacharjee, Mr. Jyotish Pal, Dr. N. N. Law, Prof. P. N. Ghosh, Dr. M. S. Krishnan, Dr. S. K. Mukherjee of Lucknow.

The thanks of the public are due to all those who have worked to prevent an undesirable change in the rules of the Association—particularly to Mr. Syamaprasad Mukherji, whose great energy, powers of organization, resourcefulness and influence over men were brought into full play on the occasion. The new committee contains men of distinction. It is to be hoped that they will apply themselves seriously to the task of reviving and revitalizing the Association which they have undertaken.

Dr. Krishnan will, of course, continue to hold his professorship.

Bengal Hindus and the Congress Working Committee's Resolution

It is well known that the British Premier's Communal Decision has done very great injustice to the Hindus and to none more so than to the Hindus of Bengal. In our previous notes we have given our personal opinion on the Congress Working Committee's resolution on the White Paper and the Communal Decision. We must now advert to a representative Bengal Hindu view, by which is meant one held by those Bengali Hindus who are not under Congress party discipline. Besides, as in Bengal there are two Congress parties without the leadership of any towering personality, it is difficult to say what the real Congress view is in Bengal.

The Bengal Hindu view that we refer to, is printed below. We do not consider it unwarranted, though we cannot vouch for its accuracy in every detail.

The latest Congress decision has clean bowled the Hindus. Every one, whether Hindu, Muslim or English, takes the situation to mean this:

(1) Muslims insist on the Communal Decision.
(2) Congress does not object to it.

The strategical saying that when the White Paper disappears, the Communal Decision will also disappear, is deceiving nobody. If you say you are opposing the White Paper and then say that at present you are neither opposing nor accepting the Communal Decision, it can have only one meaning, *viz.*, that as regards the Decision, *at present* Congress is not opposing it. The further strategical saying that the Constituent Assembly will consider the Decision, is also deceiving nobody. If the Communal Decision can wait for the Constituent Assembly, why should not other parts of the White Paper equally wait?

As Congress is not opposing the Communal Decision, it is ten times more secure. What is the sense in Congress saying that, if there is an "agreed solution," that Decision must go? The Decision itself says the same thing. Congress knows full well that there will be no agreed solution and that nothing will happen at any Constituent Assembly.

It is easy to realize the intense sense of triumph which the Muslims feel over Mahatma Gandhi's attitude. Pandit Madan Mohan Malaviya appears to have been like clay in potter's hands.

So far as Bengal is concerned, the Hindus are doomed and not only will the Mohammedans be supported by the Joint Parliamentary Select Committee, but the Bengal Hindus will be so hopelessly divided that they will be treated with deserved contempt. Dr. B. C. Roy as well as Mr. J. C. Gupta, realizing the advantage of being loyal to Mahatma Gandhi, will do nothing to stop the rot. The members of the British Indian Association, the Indian Association, etc., will curse and swear at the Mahatma in their parlours, but they have not sufficient energy or courage to take any action in public. The Hindu Sabhas in Bengal have no money or efficient organization and there is little doubt that from Bengal there will be some representatives who will carry out the orders of the Congress Board and will sacrifice Hindu interests for keeping some Muslims with them.

Professor Devi Dayal

When we met Professor Devi Dayal of the D. A. V. College in Lahore a few years ago at the house of Prof. Diwan Chand Sharma, he was past 60, but did not look more than 50. Hence we can well realize that the death last month of this distinguished teacher came as a shock to thousands of Panjabis. *The Tribune* writes:

> By the death of Professor Devi Dayal the Panjab has lost a veteran educationist, an astute business man and a social reformer of strong convictions. Prof. Devi Dayal was only 69 years old at the time of his death; and those who knew him fully expected that he would live up to a ripe old age. He was a philosopher, guide and friend in the truest sense of those words, to the tens of thousands of students whom he taught in the course of his long and distinguished career as a teacher.

Mr. R. G. Pradhan's Article

Mr. R. G. Pradhan's article, published in the present issue, was written some weeks before the last meeting of the Congress Working Committee in Bombay.

Anti-Sind-Separation Work in London

Last month, Mukhi Govindram, the well-known Sind leader, gave to a representative of the *Sind Observer* an account of the work done by the London office of the Anti-Sind Separation Conference in England.

> Two Englishmen are working on their behalf who keep themselves informed of the situation and with the happenings in Sind and they are placing the case of the Hindus of Sind before members of Parliament. So far, they have met about 250 M. P's. and before the report of the Joint Parliamentary Committee is published, they hope to meet many more.
>
> A number of them have promised sympathetic consideration of the case of the Sind Hindus when the report of the Joint Parliamentary Committee will come up for consideration before the Parliament.
>
> Mukhi Gobindram felt very hopeful about the mission of the deputation of Sind Hindus to England, the personnel of which was soon to be decided.

Ahle-hadis Muslims Demand Joint Electorates

According to an Associated Press message, dated Benares, June 15 last,

> Demand for joint electorate in the next constitutional reforms has been made in a memorandum sent to the Viceroy and the Secretary of State for India by the All-India Ahle-hadis League, whose head office is at Benares.
>
> Maulanas Abulqasim and M. A. Saeed are President and General Secretary of the League respectively.
>
> The memorandum opines that separate electorate will go against the interest of the Ahle-hadis community of Muslims.
>
> The memorandum demands reserved seats for Ahle-hadis in the case of non-acceptance of joint electorate. It is stated that the population of Ahle-hadis in India is nearly two crores.

Rabindranath Tagore to Sindhis and Sinhalese

Last month Rabindranath Tagore made appeals to Sinhalese and Sindhis which are akin in spirit. On the 11th of June the public of Jaffna, Ceylon, gave him a reception. In replying to the address the Poet said:

> "What saddens my heart is to find that though you are born to a beautiful land, there has risen

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

no poet in your midst, inspired by her magical charm, no lover to sing her serenade. Your life seems to be floating on the surface of your history which almost solely consists of politics of a colourless kind. You have not yet been inevitably urged to take up that living instrument. Your own language has not yet fully strung her and tuned her. You would have surely felt the necessity of it, if your soul were fully awake and if it responded to the ceaseless messages of beauty that came to you from your horizon and blessings that meet you from the bosom of your earth.

"You indulge in the vanity of mastering a language which is not of your heart and of your birthright, which does not belong to your past nor to your future and owing to that obsession in her children your country is waiting in vain for her wealth of literature which only can help her to discover her own soul and to bring out the treasure lying hidden in the lightless corner of her mind.

"I hope that my coming to your country will not end in an ephemeral sensationalism, that even when I leave your shore the memory of it will speak to you about the greatest of your problems, which is that of finding your own true voice—not that of your master—in your own language. In order to justify your existence you must make yourself heard to your own self and to others.

"Do not waste your time and intellect in carefully imitating other people, however great they may be, imitating their idioms and being utterly lost in a vagueness of futile innanity. I shall consider myself as having failed in my message if I have not sufficiently impressed you with the truism that you cannot belong to yourself if you do not produce your own literature as the truest document of the mastery of your mind, and also if I have not persuaded you to believe that you must have a continental background of your culture, which is the Indian background that will vitalize your thoughts and enrich your imagination."

Similar is the poet's message to the people of Sind, published in the *Indus*, the annual organ of the Karachi Rabindranath Literary and Dramatic Club, reproduced below:

"Sindhis are an intelligent and adventurous people. Sindhi officials are found all over India and Sindhi merchants have carried Indian trade to many distant ports of the world. And yet modern Sind has contributed so little to the cultural renaissance that is sweeping over India to-day. This poverty is traceable, it seems to me, to the Sindhis looking for inspiration where only demoralization is to be had. Sindhis are still under the shadow of a cheap, foreign, imported culture. It is a sight, at once ludicrous and pathetic, to see their young men strutting about in foreign dresses, muttering foreign accents, imitating foreign gestures. We in Bengal were the first to come under the foreign fascination, but we soon strove to free ourselves and, in the process of refinding ourselves, we released forces which have given us a new pride, entirely our own. We may learn from other people but we can get inspiration only from within ourselves. My advice to modern *Sindhuvasis* is to remember and, by remembering, to recapture the glory that once flourished on the banks of the Indus. Let them *be themselves*, true to the life that has nourished them for centuries and their old glory will blossom again."

Central Provinces Government Discards Offensive Terms

Mahatma Gandhi writes in *Harijan*:

The C. P. Government deserves congratulations for announcing that henceforth the so-called depressed classes are to be known as Harijans, and criminal tribes as wandering tribes. Both the names 'depressed classes' and 'criminal tribes' were certainly offensive. And let us hope that the other Governments will copy the good example set by the C. P. Government.

"Pilgrim Scavengers"

Some idea of the kind of work done by Gandhiji's companions during his walking tour in Orissa may be had from the following passage taken from Mira Ben's article entitled "Pilgrim Scavengers" in *Harijan*:

Generally, at the end of the morning's march, a batch of men and women from our party visit the Harijan quarters of the village near the camp, taking with them brooms and spades. They talk to the Harijans about the necessity of sanitation, about keeping their yards and roadways clean, about burying rubbish, instead of leaving it to blow here and there, and about the virtue of digging a little hole when going to the jungle for calls of nature, and covering it up with earth afterwards, instead of soiling the surroundings and leaving everything exposed for flies to carry infection. While engaged in these talks, the party begins cleaning the basis itself. This draws out the Harijans, who appreciate the idea and soon join in the work themselves. The water supply and general conditions are then investigated and a full report is given to Gandhiji on return to the camp.

Local workers often join our sanitation party, and they not infrequently promise to revisit the basis at least once or twice a month so as to help carry on the good beginning.

Abdul Hakim's Dormitory, Madras Ramakrishna Home

The Abdul Hakim Ward, a new dormitory for the senior boys in the Ramakrishna Mission Students' Home, Madras, was opened on June 20 last by Sir C. P. Ramaswamy Iyer.

Owing to increased pressure for admission in the Home from highly deserving cases, they had to take in the Home more boys than the buildings could conveniently accommodate. A separate dormitory for older boys was felt as a great necessity and they appealed to the Prince of Benefactors, Sowcar Janab C. Abdul Hakim Bahadur, and he acceded to the request with pleasure. The Janab Bahadur not only took to supply all the bricks, wooden and metal materials needed for a "pucca" dormitory, but in grateful recognition of the timely munificence, the authorities had named the dormitory as "Abdul Hakim Ward."

While acknowledging the gratitude shown to him, Janab C. Abdul Hakim Sahib said:

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

He had never entertained the idea of perpetuating his name. But when he paid a visit to the school in response to the appeal made to him, he saw the names of Hindu Rajahs and Zamindars perpetuated and a thought arose in his mind to perpetuate a Mahomedan name also there so that posterity might see that Hindus and Muslims were living together in terms of peace, goodwill and cordiality (Cheers).

Well done and well said.

Nationalist Muslims on Separate and Joint Electorates

Though at present Muslims claiming to be Nationalists are praising the Congress Working Committee's non-acceptance and non-rejection of the Communal Decision, of which separate electorates are an essential feature, it was not long ago that their most prominent leaders condemned separate electorates and praised and asked for joint electorates. Brief extracts from their opinions are reproduced below from the Allahabad Law Journal Press pamphlet on the Communal Decision.

We shall first give the opinion of the late Sir Ali Imam. Presiding at the All-India Muslim Nationalist Conference at Lucknow on the 18th April 1931, he said :

"To-day's Conference represented Muslim Nationalists, in other words, people who were not wedded to a scheme of separation. They had been simply flooded with messages from every corner of India from different leaders who one and all insisted on the basic principle of joint electorates."

"Separate electorates connote the negation of nationalism. Political problems are but a reflex of social forces. If you erect an iron wall between community and community in their politics, you destroy the social fabric, and day to day life will become insupportable if you insist on building political barriers. Nationalism can never evolve from division and dissensions."

At this Lucknow Conference Dr. Ansari moved the principal resolution the last paragraph of which stated that "the Nationalist Muslim Party" "strongly holds" the principle of "joint electorates." In moving the resolution Dr. Ansari said, in part :

"This is not the occasion to expatiate on the absolute necessity of joint electorates for the growth of a united nationhood. I am speaking to Mussalmans just now, and I wish to tell the Muslim community though you that, apart from wider national considerations, the insistence on separate electorates would prove suicidal to the continuance of the Mussalmans in this country as a political and cultural force of any significance."

Presiding at the All-Bengal Muslim Nationalist Conference at Faridpur on June 27, 1931, Dr. Ansari repeated his previous views.

The principal resolution passed at this Conference insisted on "joint electorate with adult suffrage." In supporting this resolution Mr. T. A. K. Sherwani said.

> "The advocates of separation wanted to erect insurmountable barriers between Muslims and other communities. To this the nationalists could never consent. The evil effect of separate electorates was apparent from the fact that the spirit of separatism was penetrating among the Muslims themselves. Votes were being canvassed on the basis of a candidate being a Mirza or a Pathan, Qureshi or Ansari, Shiah or Sunni."

Dr. Ansari, in the course of a speech at the United Provinces Nationalist Conference at Meerut on the 28th July, 1931, stated that joint electorates were the second basic principle of the scheme he stressed.

Dr. Mahmud in his presidential address at the same Meerut Conference stated that

> "the programme of separate representation has killed the spirit of competition. It has arrested the natural and healthy growth of public spirit among the Mussalmans. Common electorates, on the other hand, will draw out the best and the noblest that is in the Muslim society."

Malik Barkat Ali, Chairman of the Reception Committee of the Panjab Nationalist Muslim Conference held at Lahore on the 24th October, 1931, said with reference to the question of separate electorates :

> "We feel that in the circumstances of today and in the India of the future, they should have no place whatever."

The Bengal Council devoted the whole of August 2, 1932, to discussing Mr. Abdus Samad's resolution in favour of joint electorates and ultimately adopted by 47 votes to 32 Mr. Tamizuddin Khan's amendment :

> "That the Government be pleased to inform the proper authorities concerned that in the opinion of this Council the system of separate electorates in the future constitution of the country should be replaced by a system of joint electorates."

Mr. Asaf Ali concluded a long statement issued to the Press on June 14, 1932, from New Delhi thus :

> "The simplest formula they (the Muslims) should stick to is 'joint electorates, no reservation, no weightage, no special constituencies and adult suffrage, or the lowest qualification for franchise to enable the bulk of the population to get representation, and if any formula for minorities is insisted upon by minorities in different provinces, it should be uniform for all minorities.' Any devia-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

tion from it would complicate both present and future issues, and would work to the detriment of both the country and even the Muslim community."

The principal resolution at a meeting of the executive committee of the Bengal Nationalist Muslim party held in August, 1932, under the presidentship of Chaudhury Mozzem Hossain recorded

> "its emphatic protest against the communal award recently given by the Prime Minister in consultation with the British Cabinet on the following among other grounds: (a) It recognizes the principle of separate electorates, which is fundamentally opposed to responsible government....."

Maulana Abul Kalam Azad said in the course of an interview to the *Free Press* in Calcutta on September 1, 1932 :

> "The Communal Award of the Prime Minister is the most dangerous thing that could happen to Indian Nationalism. It has set one community against the other, without giving any tangible benefit to any save the Europeans."

Dr. M. A. Ansari, President of the Nationalist Moslems, said in a recent interview, published in the *Hindustan Times* of the 13th March, 1934 :

> "The communal award is the result of the deliberate choice of a particular kind of Round Table Conference personnel to render a settlement impossible and thus impose an outside solution."

Communal Decision Not an Arbitral Award

In conferences of Hindus at Nagpur and at Bombay Dr. B. S. Moonje said that the Prime Minister's Communal Decision was not an arbitral award. This is a perfectly correct statement, as has been shown conclusively by Sir N. N. Sircar in his *Speeches and Pamphlets* and by others.

Calling off of Bombay Textile Strike

According to *The Bombay Chronicle*,

> The Strike Committee of the Girni Kamgar Union has passed the following resolution:
> "The Girni Kamgar Union Strike Committee met this evening and resolved to call off the strike as from to-day (June 23)."
> It is reliably understood that the Joint Strike Committee will, at its meeting to-day, also, pass a similar resolution.
> It will be recalled that the General Strike began on 23rd April last. On the first day, 25,000 men responded to the call of the Joint Strike Committee. On the second day 15,000 more joined and 4 Labour leaders were arrested for defying Police orders. On the third day the number of men on strike reached 50,000 and the Chief Presidency Magistrate issued an order under section 144 restraining meetings and procession. On the fourth day 65,000 men were on strike. On the fifth day 75,000 men were on strike. On 29th April 80,000 men were on strike and the Emergency Powers Act was brought into requisition to make a general round-up of Labour leaders.

From the very beginning of the strike the Bombay Government ought to have tried to bring about a settlement. Instead of that the steps that it took had a tendency to break the strike.

According to *The Sun* of Bombay some of the findings contained in the Report of the Government Departmental Enquiry into Textile Wages are :

> In Bombay, a cut of 21 per cent in wages between July, 1926 and April, 1934.
> In Sholapur, a cut of 17 per cent.
> In Ahmedabad, an increase of 5 per cent.

The strike leaders do not admit the impartiality and accuracy of this Report. But if these figures are correct, they show that the cut in wages has been the highest in Bombay. That would go to show, *prima facie*, that the strikers had a grievance and still have it.

Buddhist University at Sarnath

It was a dream of the late venerable Anagarika Dhammapala and of the Mahabodhi Society founded by him, that there should be a Buddhist University at Sarnath. The dream bids fair to be a reality at no distant day. The affairs of the University are to be managed by a Committee of which the president will be Mr. Justice Manmathanath Mukherjee of the Calcutta High Court, who is president of the Mahabodhi Society.

Plans to Reduce the Rice Crop !

With reference to the Government of India's practically abortive crop-planning conference the *Bombay Sentinel* writes :

> "No planning, but plotting" said Mr. Jamnadas Mehta at Geneva.
> He doesn't know of the plans of Sir Fazli Hussain to reduce the rice crop.
> When less rice is grown and it becomes dear, the agriculturists will pay more money to the Government, and they will then be able to restore the 5 per cent cuts to the Services.
> They will also be able to restore the Army Budget to its original figure, and will thus give better protection to Indians—against themselves, (*vide* Commander-in-Chief).

De Valera on Governor-Generalship of Ireland

Dublin, June 20.

"We would abolish the office of Governor-General tomorrow but for certain obligations of the Free State treaty and constitution," declared Mr. de Valera in the Dail when Mr. Cosgrave moved the reconsideration of the annual estimate for salary expenses of the Governor-General. Mr. de Valera added, he hoped ultimately to abolish the office and declared the functions of the Governor-General were ridiculous and the very title obnoxious to the whole Irish people.

Mr. Cosgrave's motion was defeated by 41 votes to 29 and the estimate agreed to without division. —*Reuter.*

Gandhiji Narrowly Escapes Being Bombed

Puna, June 25.

A bomb was thrown on a car which the assailant believed contained Mahatma Gandhi who was on his way to the municipal building to receive an address in the evening. Seven volunteers in the car were injured, but Mahatma Gandhi who was following in another car narrowly escaped.

We rejoice that Mahatmaji has not been hurt. We hope the volunteers have not been seriously injured. It is difficult to say to what class of terrorists the bomb-thrower belongs. *The Saturday Review* and men of its way of thinking should now at least hesitate to believe that the Congress is in secret league with the terrorists.

Gandhiji, of course, remains unperturbed—this is not the first time that an attempt on his life has been made. He will go on doing his duty, as usual, or perhaps with greater zeal.

Zanzibar Bills to Deprive Indians of Their Rights

Bombay, June 24.

The Indian National Association of Zanzibar has sent the following cable to the Associated Press:

"The local Government published draft Bills seven days ago which they propose to pass into law on June 28.

"These Bills are calculated to prevent Indians from acquiring land and depriving them of their ancient rights of dealing in the only important local industry, *viz.*, cloves, thus threatening the very existence of the whole community numbering fifteen thousand.

"Conjointly, they also practically deprive Indians of about eight million rupees, being the capital invested in *bona fide* business. We had applied to the local Government for postponement of these measures, but it has been refused. The relations between Indians, Arabs and natives are so far most cordial and intimate. The proposed legislation is sure to create a friction and racial bitterness. Great consternation, panic and fear prevail among Indians."

Hitherto Zanzibar Indians had not much of a grievance—the Hilton Young Commission found them a prosperous community. Now the Government there want to reduce them to poverty, following the evil examples of South Africa and Kenya.

Kelkar-Congressmen Pact Accepted

Bombay, June 25.

The executive committee of the Democratic Swarajya Party decided today to accept the pact arrived at between Mr. Kelkar and the Maharashtra Congressmen to carry on the work of Maharashtra in connection with the forthcoming Assembly elections. The meeting also decided to make clear that the acceptance of the pact did not prevent the party members from carrying on propaganda in matters such as the Communal Award, the Indian States' subjects, the debt redemption scheme, etc. The meeting further resolved that any member of the party chosen as a candidate for election to the Assembly should accept the discipline of the Parliamentary Board.

Indian Students and Burmese

The Rangoon Daily News has published a reasoned leader on the question of Burmese as a compulsory subject for Indian students who seek admission to the Rangoon University. It writes, in part :

> That this decision of the University authorities to place a disability against Indian students, wishing to continue their studies in the University, is most unfair, cannot be gainsaid. While in the case of English schools in Burma the standard of Burmese knowledge required of students there is low, that in Indian schools is not accepted as such. It is admitted by the Education Department that the standard of Burmese in English schools should be low. But the pupils of English schools have one advantage over those of Indian schools, *viz.*, they have a speaking knowledge of Burmese in most cases. The standard for Indian schools should therefore be lower than that which obtains in English schools. Indian pupils have to learn their own mother-tongue and English. Burmese they can learn only as a third language.

As regards Indian girls in Burma, the paper rightly argues partly thus :

> Female education is in the infant stage, so far as Indians are concerned; and it requires sympathetic encouragement. It will be a great hardship for Indian girls if they are required to offer Burmese in lieu of their mother-tongue for the Matriculation Examination. Most of the girls will probably go out of Burma by marriage or transfer of guardians. A knowledge of Burmese will not be of any use to them, if they are required by force of circumstances to join other Universities of India for general education. And if they are prevented from joining the University of Rangoon (while they are in Burma) they would be denied the elementary right of general education.

Kapurthala and Rampur

The state of affairs in Kapurthala and Rampur and, in many other states too, makes one wonder of what use the absentee princes are to their subjects. The Nawab of Rampur is not, of course, an inveterate absentee.

Kidnapping and Abduction of Girls and Women

Hindus in public meeting assembled have in many places in the Panjab, N.-W. F. Province and Sind raised their voice of indignant protest against the frequent kidnapping and abduction of Hindu girls and women. This state of things must not be allowed to continue.

Lifting Ban on Congress

The lifting of the ban on Congress organizations generally on the part of Government has been a wise act. It should be completed by lifting the ban on each and all of them and by the release of all leading and other political prisoners not guilty of acts of violence, and of course, also of all detenus. In the case of the latter, if Government have a case against any, why not try them?

India Asked to Keep Faith With England

On June 1, 1934, Sir Frederick Sykes, ex-governor of Bombay, declared at the Bombay dinner in London :

> "I feel we have kept faith with India. We may accordingly ask that India keeps faith with us."

Every Indian school-boy knows all about the redeeming of British pledges to India. Hence repetition would be unnecessary. But what pledge or promise did India ever make to Britain? Sir Frederick has perhaps dreamed that India promised to be eternally ruled by Britishers, to provide jobs for Britishers, to purchase British manufactures (only or mainly), to produce raw materials for Britain, not to turn her (India's) raw materials into manufactured goods, and so on and so forth. He has called upon India to keep this imaginary promise.

Wanted More Women in Parliamentary Board

Mrs. L. R. Zutshi of Lahore demands that as women have been comrades in arms with men in the fight for Swaraj, there should be more women in the Congress Parliamentary Board, and not merely Mrs. Naidu. She is right.

War Debts

Except Finland, all European countries which borrowed huge sums from America during the War have failed to pay the June instalment of their debts, following the high and mighty example of Britain. Britain said in effect : "Not that I cannot pay—I have a surplus budget. But after 15 lean years, my children are entitled to a little relief. Besides, my debtors have not paid me, and so how can I pay you? And moreover, paying you huge sums in dollars or gold would disturb your exchange rates." So, it is more honourable to feast than to pay your debts. America has rightly reminded Britain that the payment by Britain of her debts was never conditional on Britain receiving money from her debtors. And we suppose, America can take care of her exchange problems without British expert advice. America has said in her reply to the British war debt note that she has no desire to place impossible burdens on her debtors. But the beauty or the pity of it is that America's debtors do not want to bear any burden of debt at all.

Anti-Indian Propaganda in Europe

In a statement sent from Belgrade Mr. Subhas Chandra Bose draws attention to anti-Indian propaganda in Europe, *e. g.* :

> "In many countries I have been asked why Mahatma Gandhi is against the untouchables and why he undertook his fast in September, 1932 against their cause."

Mr. James Ramsay MacDonald also professed to think at the time that Gandhiji's fast was calculated to injure the cause of the depressed classes.

Congress Constructive Programme

The Congress constructive programme contained in the Working Committee's Wardha resolution is good—though there is nothing new in it. It was pointed out by us that Mahatma Gandhi's Patna exhortation to Congress workers did not mention

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

education. The Wardha resolution has supplied the omission.

Pandit Jawaharlal Nehru's Health

Pandit Jawaharlal Nehru's health has not improved in Dehra Dun jail. There is no sense in keeping him confined in summer within the limits of a high-walled small enclosure.

Neither is the joke of supplying him with a hand-fan enjoyable, when there are electric fittings in his cell and an electric fan can be easily supplied.

Honour to Anna Saheb V. R. Shinde

Those persons in Bombay who, in public meeting assembled, presented Anna Saheb V. R. Shinde with an address and otherwise showed their appreciation of his lifelong labours in the cause of the depressed castes, honoured themselves. Forty-one institutions took part in the function, which was presided over by Sheth Mathuradas Vasauji. Mr. Shinde took up the cause of and worked for these humble people before Mahatma Gandhi and Congress did so. In fact it was at his instance that the latter took it up.

Bengal Mill-owners' Association

The formation of a Bengal Mill-owners' Association under the presidentship of Sir P. C. Ray is a move in the right direction. Its object is to look after the interest of cotton mills in Bengal. Bengal can and ought to supply all her requirements of cotton yarn and cloth. There is in Bengal good agricultural land, too, for the production of cotton. The Bengal Government's agricultural department ought to initiate and encourage such production. The progressive development of Bengal's cotton industry is a sure, though of course not a complete, remedy for unemployment in the province.

Madras "Justice" Party to Admit Brahmins

The Madras Non-Brahman party is known by two other names, the South Indian Liberal Federation and the Justice Party. It has resolved to admit Brahmans into its ranks. The abandonment of an exclusive policy on its part is commendable. In wishing it God-speed *The Indian Social Reformer* points out its advantages over the Congress, *viz.*, twelve years' administrative experience, no communal commitments, and no restrictions as to the kind of cloth to be worn and the language to be used at meetings. *The Guardian*, a Christian weekly of Madras, observes:

> One outstanding feature of the Justice Party has been its virulent anti-Brahmin bias. It manifested itself in the severe exclusion of Brahmins from official jobs, from legislative seats and from nominations to local boards. The first of these will remain in full force, as the rule of communal rotation has been widely adopted. The second will likewise continue, as non-Brahmins have reserved seats in the Madras Legislative Council. It is in the third that Brahmins may have henceforth freer scope. There will therefore be little material difference in the position of Brahmins.....

The Servants of India Society

The Servants of India Society has celebrated another, the 28th, anniversary of its foundation day. It is characterized by the high ideal of service of its members, their spirit of sacrifice and self-abnegation and their expert knowledge. We wish it a long life of ever-increasing usefulness.

Bihar Earthquake Relief

The Bihar Central Relief Committee and the Bihar and Orissa Government have hitherto exerted themselves in various directions to relieve the distress caused by the earthquake The advent of the rainy season will necessitaet. other forms of relief. For, in addition to the usual floods, there may be unusual ones caused by the lowering of the level of land in large areas, the silting up of river-beds and the shrinking of their banks. The Central Relief Committee and the Government have, with commendable energy and foresight, made arrangements to meet emergencies.

A Blind Boy's Success

We join our contemporaries in cordially congratulating Sriman Sadhan Chandra Gupta, son of Mr. J. C. Gupta, on his remarkable achievement in passing the Matriculation examination of the Calcutta University with great distinction in spite of his blindness.

Sir John Thompson on White Paper Generosity

The following extract from a speech at Bristol of Sir John Thompson, ex-Chief Com-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

missioner of Delhi, gives some idea of the amount of power which the White Paper proposes to transfer to Indian hands :

> The Ministers will have the spending of 20 to 25 per cent. of the central revenues. They will not control defence and foreign affairs, which will be under the Governor-General. They will not without the Governor-General's permission be able to touch these thorny subjects of currency and exchange. They will not have the control of payments on account of loans, the pay of the principal services or their pensions, and they will not have the administration of the railways. They will not be able to amend the constitution, and if they menace the interests which are to be specially committed to the Governor-General's charge they will find that he has ample resources of persuasion and of power to protect them.

Progress of Non-violence !

War may break out again any moment between Japan and China. There may be war between Japan and Russia. Recently there has been regular war in Arabia. In South America some countries are still fighting. In addition to these a sort of civil war has been going on in many countries. They are the many acts of terrorism in Austria, the peasant revolt in Spain, the fight between Sir Oswald Mosley's blackshirts (Fascists) and anti-Fascists like communists and others and the riots in various parts of France between Fascists and anti-Fascists about the 24th of June last.

> "Over a hundred were injured at L'Orient in a pitched battle in which a mob numbering over two thousand charged the mounted police. One policeman had an eye gouged out, while 28 others were seriously injured.

Devastating Floods in Bengal, Assam and Bihar

There have been devastating floods in parts of Assam, Bengal and Bihar, houses being swept away, villages under water, crops destroyed, and people in many places living on *machans* (improvised platforms on tops of bamboo poles). A vast area in Assam has been cut off from the world. At Susang in Mymensingh, elephants and horses from the Maharaja's stables have been swept away. Harrowing details, including many certain and more probable loss of lives, are reaching the public. Relief societies are up and doing.

Graduate and Under-graduate Constables

Though unemployment among middle-class people in Bengal is most widespread, it exists in other provinces also. In consequence, at Agra one graduate and two F. A. or Intermediate passed young men have accepted posts of constables on Rs. 16 per mensem. Good would come out of evil, if the presence of educated men in the lowest ranks of the police had the effect of raising their moral tone.

New President of the Theosophical Society

Mr. George Arundale, known to Theosophists as Bishop Arundale, has been elected president of the Theosophical Society in succession to Dr. Annie Besant. To non-Theosophists he is best known as sometime principal of the Benares Central Hindu College and Dr. Besant's able and energetic lieutenant in her Home Rule campaign, who was interned with her and Mr. Wadia. It is to be noted that up till now the leading persons in the Theosophical Society have been all Occidentals —Olcott, Blavatsky, Besant and Arundale. Among Indian Theosophists Babu Bhagavan Das is known as a great scholar, a profound thinker and a spiritually advanced brother to persons of all faiths.

Another Extension of Life to Bengal Council

The Bengal Legislative Council has got another—the third—year's extension of life. Why? Bengal did not want it, but rather opposed it; some M. L. C's themselves did not want it, but opposed it; the Council has become unrepresentative, if it ever was representative; owing to its subservience, Government has already got a record number of highly repressive "martial" laws and cannot possibly require more; and it is not likely that in another year India will get a new constitution. It may be the intention of Government not to have a less subservient Council before the inauguration of the emasculating White Paper constitution. If so, the present Council would require at least another year's extension. The only gainers by extensions are M. L. C's like Chaudhuri Haji Badi Ahmed, Khan Bahadur Muhammad Abdul Momin, Khan Bahadur Azizul Haque, Babu Amulyadhan Roy, etc., who drew allowances of Rs. 2947, Rs. 2060, Rs. 2208, Rs. 1937, etc., in 1933 for attending Council meetings.

THE MODERN REVIEW

AUGUST 1934

VOL. LVI., No. 2 WHOLE No. 332

SUPREME MAN

By RABINDRANATH TAGORE

THE scientist solves the mystery of a piece of iron and says that it is nothing but the constant movements of electric particles of a special rhythm. The intervals between them in such a system are, in proportion to their size, immense. If our unaided eyes could see what has been discovered by scientific vision, then, like the individuals in human society, we should have seen the particles as distinct and separate. However distinct these may be, a force,—for let us call it a force—is working among them. It is a relating force,—the community force of the piece of iron. When we see the piece of iron, we do not see the multitude of electrons, we see the mass. In fact, the visible appearance of the iron is a symbol; it is not what it ultimately is. To take an analogy we are given a ten-rupee note. He knows it truly who at sight recognizes the piece of paper as a symbol of unity that represents ten separate silver coins.

We see the piece of iron to be iron, and yet it is only a physical symbol revealing the mysterious spirit of relationship which cannot be seen by the bodily eye. Likewise, the distinctions of time and place between individual men are very great, and yet there is a large and deep unity encompassing all men. This unity, imperceptible by the senses, is not that of a numerical aggregate, for it transcends all aggregates. Those who have in them the great capacity of feeling within themselves the one Spirit in all men, are the people to whom we give the name Mahatma or Great Soul. It is they who can lay down their lives for the good of all men. It is they who can address the comprehensive spirit within and without them and say "तदेतत् प्रेयः पुत्रात् प्रेयो वित्तात् प्रेयोन्यस्मात् सर्व्वस्माद् अन्तरतर यदयमात्म।"

— He is dearer than a son, dearer than wealth, dearer than all else is this spirit who is in our inmost heart.

The scientist condemns such statements. He says that we attribute humanity to God in calling Him our Beloved. I reply that it is not *attributing*, but *realizing* humanity. It is by developing the sense of the dignity of his human truth that man has attained to his God. The human mind cannot therefore protest against the attribution of humanity to his God, and it would not be at all true if he did so. Man does not attribute lighthood to the vibrations of ether, he feels and uses the vibrations themselves as light and is not deceived in such use.

There is the ultimate world entity even beyond the immediate entity of man, as we have the stellar sphere beyond the solar system. But it is primarily the solar system of which the earth is a part, it is solar heat that is the life of the earth, and it is the solar connection that governs the earth's movements and its day and night. We have knowledge of the stellar sphere, but it is the solar system we fully comprehend with our body and our mind. Similarly, the greatness which is supremely cosmical is for us an object of knowledge, but the greatness which is human is a matter for the fulfilment of all our body, mind and character.

But even the impersonal world with regard to which we can trace no distinctions of good and evil, beautiful and ugly, about which nothing more can be said beyond the fact that it exists, is bound-

ed by human knowledge. And therefore by knowing it we become aware of the extension of our own consciousness and we are glad. The world we know or hope to know sometime through scientific experience is itself a human world. *Man* alone perceives this world in the form of *his* thought within the scaffoldings of *his* Understanding and Reason. It is possible to conceive of a mind which perceives a world that is beyond the range of our mathematical measurements and does not exist in the space which *we* know. But how shall we call extra-human the world whose fundamental truths are found by man in conformity with the innate principles of his thought? That is why a modern scientist describes the universe as the creation of mathematical mind. But even this mathematical mind is not beyond the bounds of the human mind. If it were, then we could not have at all known the scientific theory of the world, like the dogs and cats who can never reach it.

The true character of Him who is the Qualified Reality, *Saguna Brahma*, is defined in our scriptures as *Sarvendriyagunâbhâsam*. All the qualities which belong to the external and internal faculties of man have their suggestion in Him. The very meaning of this is that the ultimate Truth for us is *human* Truth, and that is why this world we know is necessarily a *human* world. Even if there be any other world beside this, it is non-existent for us, not only for today, but for ever.

We give the name Love to that relation of one soul to another which is the deepest and truest. Our actual acquaintance with the physical world is through sense perception, but our true comprehension of the spiritual world is through love. In the love of his parents, man begins his acquaintance with the spiritual world from the very moment of his birth. Here we find immeasurable mystery,—the contact of the indescribable. The question may arise, wherein lies the basis of the truth of parenthood. It must be in Him, who is *Pitritamah pitrînâm*, पितृतमः पितृणाम्, who contains the perfection of the fatherhood of all fathers. We can understand the characteristics of this earth to which we are born by scrutinizing it from outside, but the mystery of parenthood we can comprehend only in the depth of our own spirit, and it is there in this depth that we realize the Supreme Father. This Supreme Father does not dwell in any particular heaven, nor is He to be found in the history of any particular time or country. He has not expressed Himself once and for good in any particular individual but extends His love over the past and future of humanity and pervades the whole world of man.

We hear of the God of man:

यद् यद् विभूतिमत् सत्त्वं श्रीमद् ऊर्जितमेव वा
तत्तदेवावगच्छ त्वं मम तेजोंशसम्भवम्।

Whatever has splendour, has beauty and excellence, is born of an aspect of my own divine energy.

In the universe there are many things great and small. So far as bare existence is concerned, they all have the same worth. From the point of view of mere actuality, there is no distinction for better or worse between the lotus and the clod of earth. But man has in his mind a standard of value, which does not judge by need nor by the measurement of size or degree. In man, there is the sense of perfection transcending all quantitative standards—a consciousness of the inmost satisfaction. This is what he means by excellence, and yet we find no unanimity of opinion about this excellence. How then can we say that this excellence is based upon an impersonal and eternal truth which is in the universal man.

We know all scientific truths have passed through innumerable errors. In fact, the errors are many, the truth is one. The errors are personal, the truth belongs to the all. The astronomer wants to study the planet with his telescope, but he has many obstacles to overcome. In our sky there are the dust of the earth, the enveloping atmosphere, the veils of vapour and many kinds of disturbances all around. Defects are possible in the instrument, and the mind which observes is clouded by its predispositions. Pure truth can be attained only when all the obstacles —internal and external—have been overcome.

It is easy to admit that the realization of pure truth is the manifestation of the universal mind, but it is possible to doubt whether in aesthetic experience, we realize the universal mind. How can there be an absolute standard of beauty when our sense of joy in it often varies with the country, time and the individual? And yet, when we look at human history over a large period, we find that the minds of all artists of all times tend to agree in their judgment of the merit of artistic beauty. It has to be admitted that it is not absolutely every man that finds complete joy in an artistic creation. Many have minds blind to beauty; their personal preferences do not agree with universal appreciation. There are also among men many who are naturally impervious to science. Their conceptions of the world are confusingly irrelevant and antagonistic, because their minds are prejudiced, for the prejudice of one does not agree with that of another. Yet they are so inordinately vain of the truth of their own parti-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

ticular wrong view that they are prepared to go to any lengths in support of their doctrine. Similarly, there is no lack of persons in the world with naturally deficient taste. In their case also, differences of opinion become dangerous. We cannot question the universal perfection of knowledge simply because there are different levels of born stupidity, of every variety, from the lowest to the highest. It is the same with regard to the ideal of beauty.

Bertrand Russell has expressed in some writing of his, that Beethoven's symphonies cannot be regarded as creations of the Universal Mind, for they are personal to him. Russell means that a symphony is not like a mathematical truth, which is an object to all minds and has the mind of the individual as merely the occasion of its formulation. But if it has to be admitted that everyone ought to appreciate Beethoven's creation, that if there is no natural deficiency of the mind, everyone must appreciate it when with proper training the opposition of ignorance and unaccustomedness have been dispelled, then it must also be admitted that the appreciation of the best composer is to be fully met with in the mind of Man and is impeded only in some particular men as listeners.

The intellect is indispensable for the preservation of life, but there are many instances of worldly success in spite of an imperfect sense of beauty. The sense of beauty has no sanction of vital urgency, nor does licence in this sphere carry with it its own necessary punishment. And yet a stupendous amount of effort is being applied to the task of creating beauty although in the maintenance of life it serves no purpose: only its influence is for transforming our inner being.

In the Upanishads we again and again find mention of this attainment through being. From these we understand that man is one in spirit with the Supreme Object of his strivings.

नाविरतो दुश्चरितान् नाशान्तो ना समाहितः
नाशान्तः मानगोवापि प्रज्ञानेनैनमाप्नुयात् ।

It is said that He cannot be reached through mere knowledge. He has to be realized through the perfection of being, by refraining from evil conduct, by achieving a steadfast mind through the control of the passions. In other words, this realization is the attainment of one's own eternal truth.

I have stated before that we must remove all impurities and disturbances of the environment and all individual idiosyncrasies if we want to see physical truth in its purity. This applies even more to spiritual truths. It is when we attribute to spiritual truth the perversions arising out of our lower nature that our mistakes become most dangerous. We can understand how much more ruinous than mistakes in knowledge are our mistakes in being when we find that the very forces which we have brought under our control through science become our medium of the hatred and avarice of man and extend the sphere of his self-destruction from one end of the earth to the other. It is for this reason that perversion of the nature of some particular individual or group in the name of the community or religion incites man's will to evil far more than scientific mistakes or conflicts of material interest. The communal god thus becomes the receptacle of hatred, vanity, snobbishness and stupidity. Insulted Godhead degrades man and keeps him in constant fear of his own fellows. This calamity strikes at the very root of power and fortune in our country.

There are instances of this in other countries as well. The traditional Christians express their contempt for the degradation and cruelty in the characters of the traditional gods and modes of worship of some Indian communities. On account of habit they cannot however see that their own conception of God is equally possessed by the evil genius of man. The community, whose sacred books condemn to eternal hell a child that has died before its baptism, has attributed to God a degree of cruelty that is perhaps unparalleled anywhere else. In fact, the conception of eternal hell, for any sin however heinous, is the most potent invention of human cruelty. Herein lies the explanation of the anti-scientific and anti-religious persecution practised in mediæval Europe in order to preserve intact the faith in scriptural religion. Even today that conception of hell pervades with horror the prisons of civilized man, where there is no principle of reformation but only the ferocity of punishment.

It is with the development of humanity that the realization of God gradually grows free of prejudice, at any rate, it ought to be so. The reason that it is not always so is due to the fact that we take anything and everything connected with religion to be eternal. It does not follow from our reverence for the eternal ideal of religion, that we must accept any particular religious dogma as also eternal. If we were fanatically to assert that every scientific opinion is eternally true, because there is eternal truth as the foundation of physical science, then we should have to assert, even today, that the sun is revolving round the earth. It is this mistake we generally make with regard to religion. The community gives the name of religion to its own traditional opinion,

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

and thus strikes at Religion itself. The conflict, the cruelty, the unreasoning and unintelligent superstition, which then emerge, are without parallel in any other sphere of human life.

Mistakes in science, or in our code of conduct, arise from our inability to comprehend the wholeness of truth. In spiritual life we realize the wholeness of our being when it is conscious of a centre in a great and eternal meaning.

The earth revolves round its own axis and yet it circles round the sun along its vast orbit. Whatever happens in human society also exhibits these two tendencies. On the one hand, the paraphernalia of wealth and power are accumulated through the urge of the individual ego and yet on the other, under the inspiration of the Universal Man, men unite with one another in their activity and their joy and make sacrifices for one another's sake.

Some years ago there was a report published in the London *Times*, which I came to know through the *Nation* of America. The British air-force was destroying from the air a Mahsud village in Afghanistan. One of the bombing planes was damaged and came down. An Afghan girl led the airmen into a neighbouring cave, and to protect them, a Malik remained on guard at the entrance of the cave. Forty men with brandished knives rushed forward to attack them, but the Malik dissuaded them. All this time, bombs were dropping from above and people were crowding in to take shelter in the cave. Some Maliks of the neighbourhood and a Mollah proposed to help the Britishers and some of the women offered to feed them. After some time they at last disguised the airmen as Mahsuds and brought them out to a safe place.

In this incident, we find the two aspects of human nature revealed in their extremest forms. In the bombing from aeroplanes we have an instance of the wonderful development of human power—the vast expanse of his mailed fist from earth to heaven. But to forgive and protect the enemy engaged in dealing death reveals another aspect of man. The natural instinct to kill enemies is the prompting of man's animal nature, but he transcended it and uttered the strange command: Forgive your enemies.

Our scriptures lay down that at the time of battle a charioteer must not attack the man who is not in a chariot but on the ground. Nor must he kill one who is impotent, or a supplicant, nor one who is seated or has his hair untied, nor one who humbly offers to submit. Nor yet must he kill one who is asleep or unprotected, naked or unarmed, a spectator or a non-combatant, or engaged in fighting another. He must remember the teachings of virtue and refrain from killing one whose weapons are broken, one who is afflicted with sorrow, one who is wounded or frightened.

We have heard Man say, न पापे प्रतिपापः स्यात्—Do not sin against those that sin against you. Whether or not the individual conforms in his conduct to this law he does not laugh it away as the ravings of a lunatic. In human life, we only occasionally find conformity to this principle and generally we find its opposite. In other words, its truth is hardly seen in a mere count of heads, and yet its truth is acknowledged. Where lies the basis of the aspect of man which realizes it? Let us see what answers have been given by man to this question.

यः-यात्मा विरतः पापात कल्याणे च निवेशितः
तेन सर्वमिदं बुद्धं प्रकृतिर्विकृतिश्च या।

He whose spirit refrains from evil and attends to the good has comprehended the *sarvam*, the totality. He therefore knows what is natural to him and what is an aberration.

Man comprehends his nature only when he abstains from evil and works for the good of all. This means that only the great among men understand human nature. How do they know it?

With a transparent heart, they comprehend the totality. The true and the good are in the totality. It is when man refrains from the sin which belongs to his nature as limited by the ego that he knows his own spiritual wholeness—it is then that he understands his own nature. His nature does not concern the individual alone: it concerns Him of Whom the Gita says, "पौरुषं नृषु"—He is the humanity in Men.

All that we have said so far about the good and evil is not from the point of view of the preservation of society. The code, based on the solid foundation of praise and blame, which society promulgates through commands and precepts for its own preservation, gives but a secondary importance to the eternal principle of Truth: the preservation of the traditional society is its primary object. We are therefore told that it is harmful to introduce into society the Religion of Truth in all its purity. It is often said that there is a great deal of stupidity in the common man. To keep him away from evil, he must therefore, if need be, be kept engaged with delusions, frightened or comforted with false fears or hopes, in short, treated as eternally a child or a brute. It is with society as with religious communities. The opinions and customs prevalent at some previous time are loath to give up their rights even at a later age. In the insect-world, we find some harmless insects that adopt the disguise of terrible

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

cises and thus secure themselves. It is the same with social laws. They try to make themselves powerful and permanent by disguising themselves as eternal truths. On the one hand, they have the external show of piety and on the other the terrors of torture in the after-life, various strict and sometimes unjust means of social punishment, compelling blind conformity to needless conventions under the threat of a made-to-order Hell. The Andamans, the Devil Islands of France, and the Lipari Isles of Italy, are the symbols of this very attitude in the field of politics. The inner truth about them is that the pure law of Truth and man-made laws do not move with the same rhythm. Those who revere the True, the Good, the Human as the ultimate goals of man have throughout the ages fought against this attitude.

It is not the object of this lecture to estimate the value of the good as conformity to society or the State. I want to discuss the basis of man's acceptance of the Truth, to discuss wherein Truth lies. In the many fields of interest in society and the State, we find at every step contradiction of the Truth in daily conduct, and yet man has given to it the highest place in his self-knowledge, called in his *dharma*, which means his ultimate nature. In spite of the many differences of opinion with regard to the ideal of the good that different countries, times and individuals have, all men have honoured the reality of the good. What I have discussed are the implications of this fact with regard to the nature of the Religion of Man. The conflict of "It is" and "It ought to be" has raged from the very beginnings of human history. In discussing the reason of this conflict, I have said that in the mind of man, there is on the one hand the Universal Man and on the other the animal man limited by his self-seeking. It is the attempts at harmonizing the two that reveal themselves in different forms according to different religious systems. Otherwise, only advantage and disadvantage, the pleasant and the unpleasant, would have prevailed in the law of life. There would have been no significance at all of sin and virtue, of good and evil.

The question has been asked about the truth, in the Universal Mind, of the pain and pleasure one feels in his individual mind. If we think about it, we find that the pleasure and pain within the limits of the ego are transformed at the borders of the spirit. The man who dedicates his life for Truth, for the sake of his country and for the good of man, who thinks of himself against a vast background of ideals, finds that personal happiness and misery have changed their meaning for him. Such a man gives up his happiness with ease, and by accepting pain, he transcends it. In the life of self-seeking, the burden of pleasure and pain is very great, but when man transcends his self-interest he feels the burden so light that his patience when faced with the bitterest suffering and his forgiveness in spite of the heaviest insults seems to us to be superhuman.

Discords become too evident when the tuning of the instrument is going on, but they are not a part of the music itself. Discords jar on us, and if they did not, we should not progress on our quest after harmony. That is why we give the name Rudra or Terrible to the Infinite—He draws us towards freedom along the path of the pain of disharmony.

Upanishad declares:

एषास्य परमागतिरेषास्य परमा सम्मत्
एषोस्य परमो लोक एषो य परमआनन्दः ।

Here we have the dualism of He and this, the individual man and the other One who is within him and beyond him. It is said that *He* is the ultimate aim of *this*, its richest possession, its final rest and supreme joy. In other words, it is in Him that *this* has its perfection.

He is not a mere abstraction. He is an immediate object of the most intimate awareness, just as much as the self which I call my own. When my devotion yearns after Him and in Him I find my joy, it is my self-consciousness that is enlarged, deepened and extended to the Truth beyond the limits of my narrow existence. It is *Eshah*, this great He who challenges man to strike after perfection through endeavours to struggle from the unreal to the real, from darkness towards the light, from death towards immortality.

This challenge never allowed man to stop anywhere; it made of him an eternal wayfarer. Tired and worn out, those who abandon the road and build themselves a permanent house have in fact built their own mausoleums. Animals have their lairs, but man has taken to the road. Those who are great among men are the road-builders and the path-finders. The lure of the call of the infinite in him has brought man out on the way in quest of the unattained. Empires rose and fell by the roadside of his journey, riches were amassed and then lost beneath the dust. Man built many an image to give form to his desire and again smashed them to pieces, like childhood's toys when childhood is over. He tried again and again to construct the magic key and open with it nature's treasure-house and again he discarded them all and started anew to search out the secret path leading to its depths. Age follows age in human history, and man continues in his ceaseless search,

not for the satisfaction of his material needs, but in order to strive with all his might for the revelation of the Universal Man in the world of men, to rescue his own inmost truth from the crude obstacles set up by himself. That is the Truth which is greater than all his accumulated wealth, greater than all his achievements, greater than all his traditional beliefs and knows no death nor decay. Man's mistakes and failures have been many, leaving their ruins on the way along which he came. The strain of his sorrow and suffering has been infinite, but they mark his strong perseverance to shatter the bonds of his imprisoned ideals. Who could have, even for a moment, endured all this struggle, if it did not have an eternal significance in an inspiration which ever urges him to realize a greater unity in wisdom and love with him who can lead his heart and mind into the truth of all things. Who among men can seek for comfort and where for him is rest? The only goal of human life is to offer freedom and be free, the freedom that guides it to the life which is worth while.

The article is principally based upon my "Religion of Man" and the Kamala lectures delivered at the Calcutta University. In the translation of it, I have been greatly helped by Mr. Humayun Kabir of the Calcutta University. In the present revised form it was delivered at the Andhra University, Waltair, on the 9th of December, 1933, being one of a series of three Readership lectures.

— RABINDRANATH TAGORE

"BREEZY APRIL, VAGRANT APRIL"

By RABINDRANATH TAGORE

Breezy April, Vagrant April,
Rock me in your swing of music !
Thrill my branches with enchantment
Of your touch of sweet surprises.
In my idle dream by wayside
You come startling me from slumber,
Wilful in your mood fantastic
Tease me with inconstant courting.

Breezy April, Vagrant April,
I live with my lonesome shadows.
I know all your fitful fancies
Language of your flitting footsteps.
All my secrets burst in blossoms
At your passing breath of whisper,
And my new leaves break in tumult
Of surrender of their kisses.

PACIFIST POLICY IN THE FAR EAST AND INDIA'S FREEDOM

By WILFRED WELLOCK (ex-M.P.)

THE issue of total disarmament is at last coming into the domain of practical politics.

Owing to its revolutionary character, however, there is little likelihood that this policy will be adopted by general agreement among the big Powers. In all probability its general adoption will depend upon one Power first applying it. To do this it will have to take its courage in both hands.

Opinion in Britain is strengthening in favour of the adoption of unilateral disarmament—by Great Britain, that is. During the last year or two the Churches especially have more and more veered round to this view.

Those of us who support this line of action are being asked to state our case in relation to the existing world situation. Hence the present article on the situation in the Far East, with special reference to unilateral disarmament and Japanese Imperialism.

In presenting a case for a pacifist policy in the Far East, I should not be warranted in assuming that were a British Labour Government, say, wholly to disarm, other Governments would immediately follow her example, although it is quite possible that the U. S. A. might.

Psychological Effects of Disarmament

What most people entirely overlook when discussing pacifist policy is its psychological effect, not so much directly upon Governments, as indirectly, through a change in public opinion. In disarming herself voluntarily, Great Britain would perform one of the most courageous deeds recorded in history, and this would not be a gesture to Governments merely, but to world democracy, whose acclaiming response would be instantaneous. There is every reason to believe that the direct result would be strong revolt and growing against the old order of things, and ere long changes which would amount to a social revolution. Britain's prestige and influence would be greatly increased both in a general way and in all international assemblies.

For more is involved in total unilateral disarmament than meets the eye, especially if the Power which disarmed controlled an Empire. Were Britain to disarm, she would prepare for that step by the issuing of a Declaration explanatory of her intentions. These would include the freeing of the Empire from military control, therefore the giving of freedom to India, for instance, and the institution of a sound democratic policy in Africa; a promise to place all international disputes not settled by agreement before the appropriate International Tribunal; and proposals for the constructive use of the £110,000,000 now being spent annually on militarism.

Such a policy would strike the imagination of the world, and point the way to an era of sanity and progress which the heart of mankind would endorse.

The new psychological situation thus created would constitute a powerful bulwark against Imperialism, and make it very difficult for any Government to support an Imperialist policy, not to speak of setting out to create an Empire.

Imperialism no longer Pays

Moreover, Great Britain would now be in a strong position to tell Japan that Imperialism does not pay; that whatever may have been the value of an Empire in the past, its cost today is far greater than its worth. Imperialism is the greatest stumbling-block in the way of disarmament, and its upkeep is costing this country annually more than the annual value of all British investments, public and private, in the Empire. Furthermore, such preferences as those arranged at the Ottawa Conference, given to the Empire at

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

the expense of the British farmer and the British taxpayer, in many cases, were given primarily to assist the Empire to keep up its annual interest payments to the British investor. Indeed, when these concessions jeopardize other investments, such as those in the Argentine, modifications have to be made. Then, to crown all, when the national consciousness of a ruled people awakens and the demand for self-rule asserts itself, Imperialism can be very costly indeed, as we are discovering in India today.

The U. S. A. is making the same discovery in regard to her financial Empire in the S. American Republics, in consequence of which President Roosevelt has renounced the policy of collecting interest dues by means of gunboats and declared in favour of discussion and co-operation.

Is it beyond belief that Japan can be made to see these things? There is good reason to believe that Japan will very soon learn this lesson in Manchuria, as already that venture is proving extremely costly, while the fruits of conquest are slipping from her fingers. The Chinese, moreover, are a patient and intractable people, and have methods all their own of defeating the conquests of usurpers and bullies. It is more than likely that Japan will very soon discover that in these days of enlightenment and awakening conquest and Imperialism do not pay.

Japan's Perilous Ambitions

At the moment Japan is credited with entertaining Imperialist ambitions in China, Siberia, India, Singapore and Hong Kong, in Australia, New Zealand and the Pacific. A pretty tall order. A century's hard work, if things went well. But a good deal is likely to happen both outside and inside Japan before she proceeds very far on her path of conquest. Let us face the realities of this situation.

It is generally agreed that Japan's first objective will be the conquest of part or the whole of China, and that afterwards she will make a bid for the conquest of Siberia. The attack upon India would come later. But if a subjugated India has been able to hold up Imperial Britain by means of pacifism, a free India would know how to deal with Japan should the latter attempt to conquer the country. Regarding the conquest of Siberia, if Japan does not feel equal to that task now, it is difficult to see how she hopes to be equal to it after she has been decimated and rendered bankrupt by her conquest of China. It is well known that even now Russia has 700 aeroplanes within easy striking distance of Japan; that she is constructing a large number of roads on her South Siberian frontier; that she is pushing on with the completion of the double railway line through Siberia, and that she is encouraging emigration to Eastern Siberia and developing industry there on a large scale. Soviet Russia is more than a match for Japan now and the disparity will increase in Russia's favour as the years pass. As for Japan being assisted by a simultaneous attack from the West by Hitler as is frequently being suggested these days, the latter is not likely to play so completely into the hands of the Communists. Were Hitler to attack Russia, before many weeks were passed revolution would be rife in Germany, which might very easily be the prelude to a European and indeed a world revolution. Hitler will think twice before making such a gift to Communism. Thus the invasion of China by Japan would be attended by tremendous risks which a disarmed Britain would point out to Japan.

How a Pacifist Policy would Operate

The question which now emerges, therefore, is what effect a totally disarmed Britain would have upon the proposed Japanese invasion of China. The conduct of Sir John Simon during the last two-and-half years is a proof that no Conservative British Government is likely to give serious opposition to such an invasion. Now while a Labour Government would definitely side with China and oppose Japan were the latter to invade the former, it is highly improbable that a Labour Government, even were it to retain its arms, would support China to the extent of going to war. And Japan would probably feel safe in counting on that fact. But I contend that a bloc of Powers which were ready to pledge their military forces to aid China could defend China equally well by other means. That

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

bloc would include Britain, U. S. A., Russia and France—the four strongest Powers in the world—financially and economically. That bloc along with other Powers that would come in with them, would be able to place an embargo upon Japan which would be deadly. This embargo would be on finance, armaments and on certain specified materials used in the manufacture of armaments. If need be, they might even make a world appeal for the voluntary boycott of Japanese goods. That would be tremendously effective, for the U. S. A. is Japan's best customer, and Japan knows very well that the easily accessible market of America consists of a population three or four times that of her own, whose standard of living and purchasing power exceeds that of any other country. Japan, faced with the united opposition above described, would think twice before jeopardizing a definite and very lucrative market for a nebulous one which depended upon an exorbitantly costly war.

Then, as Manchuria is teaching Japan, the cost of conquering China or some part of it would not be nearly so great as the cost of holding it afterwards. And China has an uncanny capacity for absorbing her conquerors, and she could absorb many Japans. Moreover, Japan may learn to her cost that the proposal to invade Siberia might provoke an attack upon herself by Soviet Russia should Japan invade China. Since a number of Fascist States have been set up in Europe, in all of which the fear of counter-revolution is rampant, the Western border of Soviet Russia is safer from attack than it has ever been. In such circumstance, Russia might feel justified in taking time by the forelock and either attack Japan or go to the assistance of those Chinese Provinces which have set up a Soviet system of Government, should they be attacked with Japanese assistance.

But as already indicated, a powerful deterrent to a Japanese invasion of China would be the example of Britain in granting freedom to India and substituting voluntary co-operation for domination.

Let us Understand Japan

But the strongest argument of all in favour of a pacifist policy (starting with a disarmed Britain) in the Far East is that it would be accompanied by measures which could allay Japan's fears and avoid most of the catastrophies above discussed. Our first duty is to try to understand Japan's position. Japan fears the future, the possibility of being overwhelmed by mightier Powers than herself in the Far East—Soviet Russia on one side and an awakened, industrialized and united China on another; the British Empire holding sway in the South and the United States in and across the Pacific. She needs some assurance. The voluntary disarmament of Britain would give her that assurance in great measure, while the declaration which would attend it regarding India, Australia, etc., would set her thinking and cause her to see the possibility of the dawn of a new era in international relations.

Sooner or later the emigration question, *e.g.*, will have to be raised in regard to Australia. The holding of Australia for high grade European citizens is a policy which cannot be defended. While the East is overcrowded there can be no excuse for allowing a vast continent like Australia to be at the disposal of a handful of people. Australia lies midway between the East and the West, and might fittingly be the meeting-place where East and West unite in the fullest sense of the term. On the other hand, Australia's fear that her standard of living might be jeoparodized by this proposal is a real one. But it could be met. There are plenty of people in Japan, India and China who are accustomed to a high standard of living and would fight to prevent it being lowered. Hence a solution would appear to be possible in a policy of selective emigration—a policy to which the Governments concerned would readily agree. Also, were the U. S. A. to disarm, that step would probably be followed by the restoration of the immigration quotas to Japan and China, as is being proposed by the advocates of disarmament in the U. S. A.

In my opinion action along these lines would revolutionize world thinking in regard to international affairs. Incidentally it would increase the prestige of Great Britain and make her counsels on all international bodies all powerful, while the common people of all lands would demand action in their own

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

countries on the lines of that taken by this country. Thus it is not unlikely that ere long Great Britain would have gathered around her a strong body of Powers which were ready to follow her example and disarm.

As I see the situation, therefore, a pacifist policy in the Far East, which of course would have to be started by one country alone, (I have assumed that it would be Britain,) is perfectly sound, would be beneficial from every point of view, and be the quickest way of ending militarism and Imperialism and of leading the nations to the methods of reason and co-operation on all issues, including the Economic, the right of all nations to adequate supplies of raw materials, etc.

CHRIST OR THE KAISER OF CHRISTENDOM

By MANILAL C. PAREKH

MORE than a century back, India registered its protest against Christian Missions through the mouth of its greatest son, Raja Rammohun Roy, whom Mr. C. F. Andrews speaks of as the greatest religious genius of modern times, in these words :

> It is true that the apostles of Jesus Christ used to preach the superiority of the Christian religion to the natives of different countries. But we must recollect that they were not of the rulers of those countries where they preached. Were the missionaries likewise to preach the Gospel and distribute books in countries not conquered by the English, such as, Turkey, Persia, etc., which are much nearer England, they would be esteemed a body of man truly zealous in propagating religion and in following the example of the founders of Christianity. In Bengal where the English are the sole rulers, and where the mere name of Englishman is sufficient to frighten people, an encroachment upon the rights of her poor, timid and humble inhabitants and upon their religion cannot be viewed in the eyes of God or the public as a justifiable act. We have been subjected to such insults for about nine centuries and the cause of such degradation has been our excess in civilization and the abstinence from the slaughter even of animals.

Rammohun Roy followed up this protest by issuing three big books which he called "Appeals to the Christian Public," pleading with them not to carry on such mission work as was done by "introducing a religion by means of abuse of and insult to the religions of the people of India, and by affording the hope of worldly gain to its converts." This was not merely an Indian protest but the protest of one who had openly declared himself a follower of Christ.

It is needless to say that this protest was not heeded in the least, and Protestant missions in India carried on their work in the objectionable manner described above. The methods of mission work, however, became still more objectionable and anything but Christian after about half a century from the time that Rammohun Roy voiced his protest. This was immediately after the Sepoy Mutiny of 1857. During this Mutiny a German mission working among the Kols offered (10,000) ten thousand Kol Christians, and an American mission working among the Karens in Burma, offered 3,000 Karen Christians to fight for the East India Company against the mutineers. The Company did not accept this help, mainly from prudential motives, especially as the Mutiny had arisen from a belief on the part of the people that the British were going to convert both the Hindus and the Moslems to the Christian faith. The Mutiny was quelled and these facts, *viz.*, that in India there were millions of people—the Untouchables and the Aboriginal Tribes—whose interests were not in some respects identical with those of the major portion of the nation, and if these could be converted to Christianity, the Government could have a large body of people on whom it could rely for support in times of trouble, came to be known all over England, and from Queen Victoria down to the commonest man an enthusiasm for mission work in India grew as never before. The churches and missions of other countries, such as, America, Germany,

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

etc., joined hands with the British missions, and from 1858 onwards we have had in India the now much-boomed Mass Movements. The number of these Mass Movement Christians grew in every part of the country by leaps and bounds, and from that time practically whatever little conversion there was among the upper classes came to an end. This is the genesis of the Mass Movements in India and what has been said here can be verified in Richter's History of Missions in India word for word.

We have in this story an example of Missionary Imperialism at its worst, and this in a country where religion means so much to the people, and where because of that Christianity should have been saved from being the scandal that it became. Christianity in India has been made a wrong use of in a way the like of which it is doubtful if anything in the history of entire Christendom has been known. I well remember a statement that was made to me by a well-known missionary in India who said, "Mr. Parekh, whenever any man comes to us for Baptism, the first question that we ask ourselves is, what does this man want ?" About the same time I was told by a young Salvationist : "The moment a man is baptized he is materialized." The situation is only a little better in China from where we have the words "Rice Christians." It is perhaps as bad in Korea. While I was coming to this country (America) first time *via* China and Japan, I met an Anglican Bishop working in Korea, who told me words such as these in regard to mission work there: "It is all bribery and I feel that even I am bought up : I am, however, prepared to work with my own hands."

In these countries and others we are face to face with Missionary Imperiailsm, which is a compound of five kinds of imperialism, *viz.*, religious, racial. cultural, political and economic, and Jesus Christ has been made into what may be called the Kaiser of Christendom, a figure as different from the meek and crucified Jesus as could be. This is the great tragedy of Christian missions in the Orient, and in it lies a real menace to the civilizations and cultures of these oriental countries. On the so-called uniqueness of Christ has been built up an edifice which is the very negation of the Christianity of Christ. Intelligent and honest missionaries are fully aware of these facts, and although they among themselves discuss these matters frankly and fully, they are afraid to do so before their home constituencies for various reasons. They dare not face the fact of failure of their life work and of the cause they have sponsored. Once in a while a man like Mr. C. F. Andrews has the supreme courage to break himself loose from this godless system and his very loyalty to Christ is doubted by his erstwhile co-workers for almost all his life. Indeed, things are so bad that a very eminent Anglican missionary, the head of one of the finest Christian missions, told me : "Real mission work has not even begun. What we have done so far is only philanthropy." I had to correct him by saying that the so-called mission work was or could be called philanthropy only when it was at its best ; on lower strata it could not be called even that. This was a correction which he gladly accepted.

The results of work done on these lines have been such that the Missions have now stuck in the mire of their own creation or Karma. The so-called National Churches are neither national nor churches. This is especially true of India. The church there is a socio-economic community the outlook of which is largely secular and materialistic. It is entirely parasitic to its Western patrons and what is worse is pharisaic in its relation to the people of other faiths. This attitude has been generated in it by the constant dinning into its ears of the indictment of faiths other than the Christian. The moral results of all this pharisaism have been disastrous. A very eminent English Bishop just before his retirement from India said to me : "Things are so awful that nothing that you can tell me would surprise me." One can find the same from the Regional and Fact Finders' Reports issued by the Laymen's Commission.

This is not the worst of it. The so-called National Church in India is now filled with a desire to swell its numbers. Backed up by the Missionary system of the Western World, it has generated enough momentum for this at least. Islam divided the Hindu society into two communities by its proselytizing work done during the last eight or nine centuries,

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

so much so that the Hindu-Moslem problem has now become a permanent problem giving the deepest anxiety to all lovers of India and of God among both the Hindus and the Moslems. To this problem Christianity is now adding another by dividing the Hindu society further (it has been able to make no impression upon the Moslems in India). In 1928, when Dr. Mott was in India, after a long talk with me about the way I came to know Christ and profess myself as a disciple by baptism, he asked me as to what it was that weighed upon my mind the most, I replied to him that it was the creation of this new community in the name of Christ and Christianity, a community which would add to the evils of communalism already rampant in India, and which would, moreover, be a stumbling block in the path of people who wanted in earnest to acknowledge Christ as their Master. The creation of the so-called National Church, which really is a community with a special non-Hindu legal and social status and with almost an anti-Hindu cultural and religious bias, is a powerful disintegrating factor in the life of India, and, what is worse, it is a huge bar in the program of the Kingdom of Christ inasmuch as it makes that Kingdom coincide with this socio-economic community.

Four years ago, when I came to this country (America) first, I tried to tell some of these things to the American Christian public and what I said was deeply resented. Indeed, one man in California, who had been once a missionary in China, went so far as to say that, if I said these things, he would see that I had no opening for speaking to the public. I then told him that there were many things in regard to the missionary problem which I had not told the people of India and which I wanted to tell the people here in order that the situation might be remedied, and he climbed down. None the less, the people of this country, especially the Christians here, were not prepared to listen to the truth about the Missions.

Since then a great change has come for the better, thanks be to the Laymen's Report, and one cannot be too thankful to God for this. The churches and the Mission Boards have been at least a little more humble and they have been rudely shaken in their dogmatic and imperialistic assurance that what they have been doing so far is the best that could be done. The Report, however, steered in the middle path. It could have been as orthodox in its belief as any group in this or any other country and yet its criticism of Missions would be valid. In this, however, it took the middle path, and surely in this it is truly representative of the best Christian mind in America and Europe. But the Report could have gone much further in its criticism of Missions. It has been largely silent in regard to the worst aspect of Missions *viz.*, their Imperialism. Dr. Fisher was the only one who pointed one to this shortcoming in it. Mr. C. F. Andrews has mentioned this matter in an article of his in one of the issues of *The International Review of Missions* of 1933, though he does not speak of the Report making this omission there.

This Report, however, has rendered the greatest possible service, not to the cause of Missions—the sooner we forget this term with all its unfortunate but almost inherent connotation of religious, cultural and racial superiority the better—but to the Kingdom of Christ, which after all is the thing that matters. It has been charged, falsely though, with syncretism, but even if there be any such element in it, it is far better than this Missionary Imperialism which has confounded in the past the Kingdom of Christ with Western culture and civilization together with various Colonial Imperialisms, and which would still persist in confounding the same with the various churches and Christianity. As both a Hindu of Hindus and a disciple of Christ, let me appeal to the Christians of America and Europe no more to confound the spiritual Kingdom of Christ Jesus with the secularized, materialized and carnal Christianity which the Churches and Missions represent both in the East and West. It is against all the principles and above all the spirit of Jesus Christ, and the time has long since gone, if it ever was, to divide the human race into Christian and non-Christian by the mere fact of baptism, which has been misapplied to such un-Christian and even anti-Christian ends both in the past and in the present. This confusion of thought induced by the lurking missionary imperialism lies behind the book, *The Christian Message in the*

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

World Today, which has been recently published.

Jesus Christ is a far greater reality on the Indian Road and among non-Christians in India and perhaps in other non-Christian lands, such as, China, Japan. etc., than in so-called Christian lands. Even the churches in these latter lands require as much to be converted as the "heathens" of Asia and Africa, and if Jesus Christ came today he would convict them of the sin of self-righteous pharisaism, the greatness of which is in proportion to what Christendom is to Jewry of His day.

What has been written here is a plea from a Hindu disciple of Christ for a return to Christ from the Kaiser of Christendom, and for ending this Missionary Imperialism, which is a compound of five types of Imperialism, in order to make room for a real and vital Christo-centric (not Christian) international, inter-racial and inter-religious unity of the world.

WORLD FELLOWSHIP OF FAITHS

By IDA M. GURWELL

IV. Exit Orthodoxy

It may be truthfully said that at many intervals during the sessions of the World Fellowship of Faiths, Orthodoxy gracefully made its exit in favour of many waiting active groups, religiously speaking, not known as Orthodox.

Lest we forget, we shall repeat again the purpose of the World Fellowship of Faiths ; "To unite the inspiration of all faiths upon the solution of man's present problems."

Bishop Francis J. McConnell, National Chairman, in an article in the *Literary Digest*, in comparing the Parliament of Religions forty years ago and the World Fellowship of Faiths says there are two vital differences :

> The first difference is that, instead of a comparative parade of rival religions, all faiths will be challenged to manifest or apply their religion by helping to solve the urgent problems which impede man's progress.
>
> The second difference is that the word 'faiths' is understood to include, not only religions, but all types of spiritual consciousness of conviction which are determining the actual lives of significant groups of people.
>
> Educational, philanthropic, social, economic, national and political 'faiths' will thus be included.

Under the second difference, we extend the horizon and bring into the Conference the educational, philanthropic, social and economic groups. They are present. Needed too. Who more than they know what is going on in the world ? Who in a position to have a truer reflection of life ? These groups are working daily with the conditions as they are, and not as some Idealist wishes them to be.

Such groups for want of a better name, might be called practi-religious. Their activities are important not only to the soul of man, but, his material well-being. These groups are the active end of religious thought. Our wide-visioned leaders know this. They welcome them.

Idealism is not so popular in the world today. Everywhere there are real problems to be solved if civilization is to endure. Perhaps these "unprofessionally" religious groups can show us a way. They do present many practical, adjustable ideas, and let us honestly say they seem to be working unselfishly for the greatest good for the most people.

Jane Addams, Honorary President of the World Fellowship of Faiths, said in her opening address :

> I am sure the soul of this complex age of ours must be discovered through the bringing together of many people from various parts of the earth.

We have carried out a part at least of Jane Addams' plan, namely, "brought together many people from various parts of the earth."

Such questions as the following were discussed :

> Proverty admidst plenty—How to cure it ?
> Men and machines—Which shall be master ?

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Non-violence—A key to world Peace ?
Racial and Religious persecution—How prevent it ?
How Faiths, in fellowship, may save civilization ?
Youth and the future.
How realize World Unity ?
Russia's Soviet Faith.
Public Ownership.
Motion Pictures.

There were many other questions equally important, but we give these that you may see the variety of interests considered throughout these sessions. Specialists in their particular field introduced each question. There can be no doubt as to the authenticity of information. Speakers taught us to respect statistics. They did not disguise facts. They spoke of tottering civilization and gave possible reasons, which those conversant with current problems must realize are truths.

Attending these meetings classified properly as un-orthodox, came groups widely known for their influence in shaping many thinking minds of the world. Each was given an opportunity to tell of his plan for World betterment. Leaders of Theosophy, Spiritualism, Unity, and Bahai, and many "cults" and "isms" not so well known were present, all responding in the earnestness of his accepted Faith. Large audiences assembled to hear these leaders, for many thousands of people in America and elsewhere are followers of these plans for living.

Theosophy was well represented. Mme. Rukmini Arundale gave an excellent talk on India. Her subject, "India, her past Contribution and Present Potential Power for World Progress". Rt. Rev. George S. Arundale, who is also a Bishop of the Liberal Catholic Church, gave an address on—"Theosophy, its Light on Living Today". This was a thrilling message. Attending almost every session was a representative of the *National Spiritualist* published in Chicago by The National Spiritualist Association. Sir Oliver Lodge's message was given in an earlier article. *Unity* was represented by the Founder who gave a most excellent and understandable talk.

The Bahai Movement, which originated in Persia, was represented by Rev. Albert R. Vail, Ph. D., who is Editor of the Bahai magazine, *Star of the West*. He talked on "The Bahai Program for World Re-construction." Chicago has been selected for the centre of Bahai activites in this country, and a beautiful temple, significant in traditions and symbolism, is being completed.

Motion Pictures were covered by Dr. Worth M. Tippy, New York. He gave definite instances where sermons, powerful ones, had been preached through Motion Pictures. In the United States, more than 60,000,000 people see pictures every week.

Mrs. Margaret Sanger talked on, "Women of the Future."

Dr. Carl D. Thompson, LL.D., Secretary of Public Ownership League of America, gave an enlightening talk on "Public Ownership the Way Out." He gave names of municipalities operating under this plan, that were free from debt.

Dr. James Yard, formerly of Northwestern University, Chicago, talked on "Youth of the Future." He spoke in glowing terms of the intelligent way in which the Youth of the world are facing the problems that have come to them through the disruption of the present social order.

Dr. Manly Hall, Los Angeles, Calif., whom many of us in America have acquired the habit of always hearing in his lectures, spoke on "How Man may Master Fear." He is a forceful and dynamic speaker and he talked to one of the largest audiences of the entire Parliament.

Mrs. Charles Church Terrel, Washington, a graduate of Oberlin College in Ohio, the first College in the United States to open its doors to coloured and white alike, told of her struggles and those of her coloured sisters in trying to overcome race prejudice. Others of her race talked on this question too, which is a problem in America, gradually being overcome.

Miss Muriel Lester, Social Worker, London, in whose home Mahatma Gandhi lived for three months during Indian Round Table Conference, gave several talks from her experience in Social Work and touched upon the fine qualities of India's well-known man and brought comprehensive plans for the betterment of the world's conditions.

There were 247 speakers on the programmes of the World Fellowship of Faiths. It is impossible even to mention the many splendid talks given.

In seeing the splendid co-operative work

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

of all these groups we might ask the question, ess what is religion? Are not all groups nd all men religious in the fullest meaning f the word?

In speaking of Religion, Hon. H. A. allace, U. S. Secretary of Agriculture, in s address on "Machinery, Economics and eligion" says:

"By religion I mean that instinctive, fundamenal, underlying attitude which everyone has to the World outside of himself and especially toward the ess tangible, more enduring, spiritual force." The religion I am talking about has nothing to do with creeds or churches."

V. Hostess Chicago

Everywhere in this vast city is seen people m all parts of the world. Not only has e World Fellowship of Faiths brought to the great religious leaders, but the world's has centred the interests of the educaal, economic, industrial and scientific world Chicago.

In the official welcome extended by Mayor to this Conference he said,

Perhaps no convention ever held in Chicago as represented such a cross-section of the whole orld. From all the corners of the earth you ome, free of prejudice, abundant in love for your ellow-men, and earnest in your desire to add the friendliness of your own particular faith to a common objective." "Out of this great convention must come plans which, if they are carried out, will exert a vital influence upon the whole world.

At the Morrison Hotel where the headquarters for this Conference was located, e registered many great names. Some a few days only; others for the duration the Convention. On the platform the ening night were many leaders who contrihed greatly to the success of the Convention. y were as follows:

Bishop Nakayama, Patriarch of the Tenrikyo Church (Shinto), Japan. (Translated by Prof. K. Kishimoto.)

Vidya-Vibhushana Pandit Dr. Shyama Shankar of India and Geneva, representing Hinduism.

Dr. Shwen-Ching, of China, for Confucianism.

Dr. Bhagat Singh Thind, of India, for the Sikh Religion.

Dr. Maneck Anglesaria, M. A., PH. D., of Bombay, India representing Zoroastrianism.

Bishop Kenju Masuyama, Buddhist, from Japan. (Translated by Rev. Terakawa).

Mr. Champat Rai Jain, of India, for the Jain Religion.

Pandit Ayodhya Prosad, B.A., of India representing the Arya Samaj of Bombay.

Syed Mutiur Rahman Bengalee, of India, for Islam, read a Cabled message from His Holiness Mirza Bashir-ud-Din Mahmud Ahmad, Khalifa-tul-Masih II, Head of the Ahmadiyya Movement in Islam, Qadian, India.

Dr. K. V. Mulbagala, of India, representing His Holiness Jagadguru Shri Shankaracharya, Head of the Hindu Seat (ranking as an independent State) established 1,100 years ago.

Rabbi Abraham Nowak, of the Temple on the Heights, Cleveland, Ohio [JUDAISM], Rabbi Jacob Singer, of Temple Mizpah, Chicago, responded for Judaism.

The Rev. William Franklin Slade, D. D., of the South Congregational Church, Chicago, spoke for Christianity.

Mrs. Mary Church Terrell, of Washington, D. C., called to represent Christian Coloured Women.

Rt. Rev. Callistos, Bishop of San Francisco, of the Greek Orthodox Church.

Duke Kwesi Kuntu, of the Gold Coast, West Africa, representing the Ashanti religion, was introduced to audience.

Rajah Jai Prithvi Bahadur Singh, a Prince of Nepal, closed the programme on the opening evening with a greeting to All Religions after a Peace Song, written by Rajah Singh, was sung by Emery Darcy.

Most of the above-named were guests from the Orient. We have said little concerning the leaders from Europe who were guests in Chicago. Still less has been said about those who attended as delegates from America. It would be unfair not to name a few of them, as they are Inter-nationally known, and contributed some of the finest thoughts of the Western world.

To us from Europe came representatives fully aware of the problems within their own borders as well as having a knowledge of the affairs of the world. Two of these delegates were outstanding. Their talks as well as their attitude of helpfulness and understanding won for them a place in our hearts.

Prof. Herbert von Beckereth of Bonn, Germany, delegated by the America Institute and the Authorities of Germany, gave an address that showed detailed study. His talk, "The Moral Basis of the Economic Order," reflected unbiased truths.

Dr. Herman Neander, Rector of Estuna, Sweden, was broad and sympathetic in his views. Nearing the completion of a three-year tour of the world, in which he made a study of the Religions of the different countries, he was able to give us much first-hand information. His angle on Russia seemed unprejudiced. His fairness to all nations was appreciated by his audience. He believes

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

thoroughly in the great helpfulness that must come to mankind through freedom of thought. It would seem that his talks were built of the proper amount of spiritual and the correctly measured amount of material that made them well-balanced. Through them he added the strength of conviction without inciting the sometimes accompanying argument. Dr. Neander talked many times while a guest in Chicago, but it seemed his discourse, "The Necessity of Co-operation among Religions," brought forcibly to his listeners the purpose of the World Fellowship of Faiths.

So many dalegates from America were present that it is possible to mention a few only. We listened to John Dewey, of of Columbia University, who is known as one of America's greatest Educators ; Bishop Montgomery Brown, D. D. of Galion, Ohio, who spoke to large audiences on his chosen subjects, first, "A Faith for a New World," second, "The New Faith from the view-point of Science." From the Mormon Church in Salt Lake City, came Hon. Brigham H. Roberts, who gave a most interesting talk on, "The Standard of Peace". Dean Roscoe Pound of Harvard University, "Faith in Civilization" and Dr. Preston Bradley, Chicago, "Ideals for a new world Order".

From the Jewish Faith, Judaism, came many delegates. In additlon to Rabbi Nowak whose response on the opening night proved his breadth of vision as well as sincerity of purpose ; Rabi Abba Hillel Silver, Rabbi Felix Levy, Rabbi Samuel Goldensen, all nationally known, came with others to join the Conference. They spoke eloquently on subjects of great interest to Jew and Gentile alike, and it may be said of these learned men that they spoke with an earnestness and sureness that comes only from deep convictions.

Because we feel poetry is related to religion, we must not omit our guest, Dr. Percy Mackaye. From his inspiring talk, "The Faith of Poetry", we quote here,

> "The founders of all World Faiths that have swayed Humanity—Jesus, Buddha, Confucius, Moses, Homer, Aknanton,—the seers of all philosophies, mythologies, religions—have been the supreme poets of their varied faiths." "Christian and pagan, Gentile and Jew, underlying and supporting all their creeds is the faith of poetry. The creative law of imagination."

A glowing purposeful group !
With my heart and my head,
I salute the Soul in you.

You taught us the Hindu Saluate. When we analyse it we find it means all ! We are practical in the Western World and direct. How better can we welcome you ? When one man recognizes the soul in another, then we have gone far toward Universal Brotherhood.

VI. To All Intent

To all intent, the second Parliament of Religions has been the Spiritual success of the age. Many facts have been brought to us, the principal one being, that TRUTH is vari-hued and can be broken up and viewed as colours of the spectrum ; like a well-cut gem it scintillates prismatic rays from each facet. It is a many-sided thing of fire and beauty. The great truth that *God is* reaches the consciousness of man through various channels.

There were no world problems solved at this Conference. How could there be ? The purpose of this body is, "To unite the inspiration of all faiths upon the solution of man's present problems." These meetings have brought about the "united inspiration", now it remains for the mind of the world to acknowledge this unity as one of the greatest steps yet taken toward helpfulness to all mankind. Remember this is a Religious union ! What could be more important to the world ? We have learned that religion shapes thoughts ; thoughts become words and deeds, and if the world deals with the concrete then in time it will accept what has been done here.

The Great Soul Lincoln in his Gettysburg speech, a speech that has been preserved in England as an example of pure English, and in America as an example of pure Spiritualism as well, said, "The world will little note nor long remember what we say here, but it can never forget what they did here." The bigness of the Parliament of Religions justifies the use of the quotation.

Before leaving the Conference, we shall quote Manly Hall, well-known Publisher and Lecturer. He has never been known to

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

great truths, and his address on, "True Fellowship of Faiths" evaluates World religions as the practical worker finds them. He said,

"For thousands of years the function of Theology has been to divide and confuse." "There can be no Christianity while five hundred Christian sects compete with each other in creedal barriers." "There can be no Fellowship of Faiths while several great religions of the world ignore the unity of their spiritual aspirations and emphasize their sectarian differences." "We fail utterly to be religious because we fail to realize Zeus and Brahma, Jehovah, Allah, and God are not different divinities, but the same Divine Essence interpreted through the language mediums of these different races."

He further said,

"Co-operation toward a common purpose is the most acceptable sentiment which modern religion can preach to a troubled world."

It has been said in speaking of the East and West, "Never the twain shall meet". It would seem they have met in the World Fellowship of Faiths, in mutual sympathy and understanding. The meeting has been brought about through the needs of a troubled world. Here all have learned to say meaningly, not *My* Lord, *Your* God, but *Our* Father, thus knowing brotherhood; and not *My* East, *Your* West, but *Our* World, thereby acknowledging Universal Togetherness.

On this the closing day, the lobby of the Morrison Hotel is still crowded with delegates from many lands. Emerson said, "The Old Religions have a charm for most minds which it is a little uncanny to disturb." Whether because of this charm, or through actual interest manifested, the Representatives of many Faiths have remained.

Great minds agree that when the problems of the world are solved, it will be done with religious thought back of it. What matters whether by the studied circuitous route of the East, or the youthful directness of the West? The very best in religious thought from both East and West must be used if the devastating, undermining influence of selfishness and greed is to be overcome.

Maharaja Gaekwar of India gave the opening address. A long list of other men from the Orient held an important place throughout the Conference.

In conclusion came the benediction, used so many times during the World Fellowship of Faiths. It was repeated in unsion. All earnestness went into it.

From unreality lead us to truth,
From darkness lead us to light,
From death lead us to immortality.

The beauty of this benediction falls like a rich mantle upon the activities of the Parliament of Religions. In the benediction, there is something of the quiet of the brood at evening when the sunset purples into night; Something of the Peace and Wisdom of the Himalayas; and behind all—hidden away in the heart of humanity a universal desire for right living to merit the crown—Immortality.

CONFESSION

By CHARLES C. MARSHALL

(After hearing Rabindranath Tagore at Carnegie Hall, New York, November 21, 1916.)

"Out of the Orient Light!" It shines again,
O Sage of India, from thy message wise
Athwart our Western World, unto our eyes
Starkly disclosing all our age-long sin,
Our lust for empire and our greed for gain,
The temple vowed to God and given to Baal,
And all the twice one thousand years' betrayal,
The red world-welter on the Danube's plain,
The iron rule that came with Christ's own bread
To India, and all the vast machinery
We sent to break the Orient's revery—
From West to East the Gospel we have spread.
And now the judgment! We have not sufficed.
We wrought for Cæsar while we spoke for Christ.

19—3 New York. November 29, 1916

CAUSATION OF GEOLOGICAL DISTURBANCES AND CLIMATIC CHANGES

By D. C. NAG

I. Geological History

THE periodic recurrence and worldwide extension of mountain-making and volcanic activities, the great continental floodings and the Ice Ages are the most remarkable geological events. There have been about a score of epoch-making geological cycles and as many marine transgressions since earliest known geological age. The upliftings of the Himalayas, Alps, and Rocky Mountains, during Tertiary Age, were thus more or less simultaneous; many other instances of contemporaneous world-wide volcanic activities and geological disturbances may be cited from definitely established geological history. There is definite evidence that at certain times glacial condition and at certain other times warm climate extended from Pole to Pole.

II. Evidence

Geological history is built on evidence found in the rocks of different ages, in fossils, stratigraphy, glacial boulder-beds, etc. The *true* density and chemical constitution of igneous rocks also throw considerable light on their condition of formation, particularly the relative temperature and pressure at which the rocks were formed—density varying directly as the pressure and inversely as the temperature. Accordingly, examination of density and chemical constitution of the basic substrata (consisting of diorites, gabbros, etc) shows that the rocks are products of crystallization from the parent basaltic magma at about 1200°C and 200,000 atmospheric pressure. This condition of temperature and pressure just below the crust is essential for the maintenance of dynamic equilibrium and the presumed viscous state of the subcrustal magma which may be defined as rocks in a state of incipient fusion.

There is therefore good reason to infer that an enormous subcrustal magmatic pressure constantly tends to uplift and burst the crust. The crust at the present time must be sufficiently rigid and strong to withstand the internal pressure and prevent world-wide violent explosion. This view throws new light on the outstanding problems about the causation of periodic world-wide geological disturbances (*Khando-Pralaya*) and climatic changes for which, at present, there are hardly any satisfactory explanations.

Seismology shows that the crust is rigid and solid to a depth of about 25 miles, where there is a marked *Discontinuity*. The average temperature gradient (50°C rise per mile of depth) according to which the subcrustal rocks should fuse at about 25 miles' depth, strongly supports this view. The solid crust consists of about 2 miles of sedimentary (porosity about 30 per cent), 7·5 miles of granitic (porosity about 0·4 per cent) and 15·5 miles of basaltic (porosity 0.2 per cent) rocks. Fissures and cavities are most likely confined to the upper zone (say, 8 miles) below which the weakness in the solid crust may be expected to exist in the form of local strains in molecular aggregation. The subcrustal magma under high pressure at times suddenly intrude through the local places of weakness in the substratum and produce commotion or earthquake tremor in the upper zone.

For a solid crust of about 25 miles' thickness and 2·8 as density, the gravitational pressure on the magma below could utmost be 1100 atmospheric pressure and that only if the continents were isolated floating bodies. If the crust were rigid, as it apparently is, the gravitational pressure on the magma should be practically nil—the crust should retain its shape even if it were hollow inside.

III. Explanation

There is evidently an enormous magmatic pressure, which at normal times like the present appear to be about 200,000 atmospheric pressure and this can by no means be due to gravity. There must be some other cause. The high pressure is apparently developed by steady increase of volume of the fluid materials in the interior caused by ceaseless atomic disintegration which is more active where the heavy and possibly the more radioactive elements predominate.

According to modern physical theory all elementary atoms are liable to atomic disintegration by which heavier elements are as a rule transmuted into lighter ones with increase of volume of the products and liberation of considerable amount of latent heat. The heavier atoms which have high atomic number and more complex structure disintegrate more readily than the lighter and simpler ones—those which have atomic number above 80 are highly radioactive. The disintegration is ceaseless and should be more active in the interior of the earth where the heavy elements predominate, particularly in the core the density of which is between

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

and 12. Enormous heat and pressure thus developed in the core of the earth where the temperature possibly exceeds 100,000°C and the pressure (according to Daly) ranges between one and 3·4 millions atmospheric pressure. The solid crust as an insulator resists the outward flow of heat and pressure which slowly and steadily accumulate below the crust. Eventually, at intervals of tens of millions of years, the subcrustal pressure gradually attaining maximum intensity, ruptures the crust, pours out lava flows, uplifts mountain ranges, raises oceanic floors causing continental floodings, and lets out the subcrustal store of heat which with the help of oceanic water, atmospheric agencies and solar-heat primarily governs the climatic condition and the evolution of this planet. This conclusion is strongly supported by its consistency with many important geological and pæleometeorological observations of eminent authorities. It accounts for geological cycles, Ice Ages and Interglacial warm periods.

IV. Climate

Schuchert in his *Climates of Geologic Times* (4) observed some close relationship between geological disturbances and climatic changes. The broad climatic changes of geologic times are apparently the after-effects of worldwide sub-aeriel and sub-marine mountain-making and volcanic activities. How the two different conditions of geological disturbances produce opposite effects on climate appear to be simple enough. Under the sub-aeriel condition the internal heat poured out with lava flows is quickly lost by radiation, while under the sub-marine condition the heat is long retained by oceanic water and distributed all over the globe maintaining a prolonged tropical and subtropical climate most favourable for the evolution plant and animal life. Ice Ages appear, as if *suddenly introduced*, during or immediately after the periods of marked mountain-making and volcanic activities and at times when the continents are more or less emergent; while worldwide tropical and subtropical climate, marked by maximum coal and limestone formations, falls in with times of great continental floodings. Continental flooding or marine transgression has been ascribed by some writers to the melting of polar ice; it is more likely to be chiefly due to upheaval of oceanic floors by sub-marine igneous activities which introduce heat into oceanic water and thus melt polar ice. The melting of polar ice may thus be only of secondary importance.

There are definite evidences that shortly after the grand Himalayan upheaval glacial condition prevailed along the foot-hills of the Himalayas at levels considerably below 5000 feet elevation; glacial condition also appeared in Jodhpur State shortly after the outburst of Melani rhyolites in Cadapah (Madras Presidency) after the local volcanic activities during Cambrain Age. Many other instances may be given (see, *Climates of Geologic Times* by Schuchert, 1914).

Hence, it is evident that local climatic condition and climates of geologic times have been primarily governed by the intensity of subcrustal magmatic heat and the way the internal heat is transported to, retained at and dissipated from the surface. Accordingly, at high elevation the rarified atmosphere by facilitating quick radiation produces cold climate; for similar reason the moon, which has thin atmosphere, gets very cold at night by quick radiation.

Solar-heat and atmopheric agencies are evidently chiefly responsible for the seasonal and diurnal variations. They also serve as moderator of extreme climates which invariably appear during and immediately before and after the great geological disturbances; they shorten the duration of Ice Ages which rarely exceed 100,000 years—a very short period according to geological time scale. It is quite evident that solar-heat could not prevent the recurring Ice Ages on earth nor the present frigid condition of the moon. Variation of solar-heat cannot account for the Ice Ages nor there is any other satisfactory explanation for repeated worldwide refrigeration. (See *Ice Ages Recent and Ancient* by Coleman, 1926.)

The short Inter-glacial warm periods in Ice Ages, which have been found so very difficult to account for by any of the existtng theories, are evidently produced by a series of minor later outbursts of heat through fractured zone developed in the crust by the original igneous activities. It may be noted that quicker succession of the minor outbursts of heat may even retard actual glaciation, as in the case of Deccan Trap which it seems was not followed by local glacial condition—the Inter-trappean beds present definite evidence of such intermittent minor outbursts of lava flows, during the late Creteceous Age, over an extensive area in Southern India.

The latitudinal variation of climate is commonly ascribed to the angle of incidence or slanting of solar rays. This seems hardly satisfactory; there must be other important factors. The latitudinal variation should be, to a large extent, due to distribution of subcrustal magmatic heat. The hotter and the more fluid magma should traverse the Equatorial zone being driven there by the stronger centrifugal force generated at the Equatorial region by the diurnal revolution of the earth. The cooler and the more viscous magma should, for the same reason, be in the polar subcrustal region. Accordingly, the Arctic and the Antarctic zones should be naturally cooler, but the extreme glacial condition of the present day is considered abnormal being remnant of the Pleistocene Ice Age which intensely affected the Polar region immediately after local volcanic activities. The extreme volcanicity abundant lava flows and the numerous geysores of Iceland and other evidences are suggestive

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

of intense snb-aerial volcanic activities at the fringe of the Arctic Circle, perhaps extending to the North Pole, which evidently originated the polar glacial condition. Further evidences of polar volcanic activities are likely to lie hidden under the thick sheets of ice which are now melting and slowly receding towards the Poles as the Polar climate is tending to become warmer again.

It is noteworthy that the Permian glaciation was chiefly confined to the Equatorial zone and Southern Hemisphere; the Poles were then very much warmer. According to Coleman and other eminent scientists there is definite evidence that at times warm climate extended from Pole to Pole. Unmistakable biological evidence shows that "in early Meocene time the climate was at least warm temperate in Arctic America." The North Pole was very likely habitable immediately before the Pleistocene Ice Age as suggested by Bal Gangadhar Tilak's Aryan Migration Theory.

V. Discussion

Considering the geological and paleo-meteorological evidences some of the principal theories regarding geological disturbances and climatic changes need considerable modification. The suggestions made in this paper are worth careful consideration and critical review.

The old theory of a cooling and shrinking earth and its surface corrugation is no longer acceptable as geological and pœleo-meteorological evidences indicate that no appreciable cooling has taken place since the earliest known geological age, nor there is any evidence of sufficient gradual contraction of the earth during the time (Schuchert). On the other hand, it seems more likely that the earth is increasing in volume; the growing excess of volume in the interior is apparently poured out as lava flows and this is also indicated by the mountain-making phenomena and the uplifting of oceanic beds. The increase of volume should be more consistent with modern physical theory and an *Expanding Universe*.

The commonly accepted view that the uplifting of mountains might be due to lateral or tangential pressure developed by the gravitational potential energy of the crust itself appears untenable as the horizontal component of gravity should be too small to cause the majestic upliftings of the Himalayas, Alps and other high mountain ranges of the globe. Besides, it is unable to explain the evident correlation between geological disturbances and climatic changes, nor can it account for the intense metamorphism, wrinkling and over-thrusting of the apparently too rigid strata of rocks in the upper zone.

The most widely accepted Theory of Isostasy is regarded by many as established fact. The theory is principally founded on the important geodesic observations which show that "density of rocks beneath the mountains is low and beneath the oceans it is high." The continents and high mountains are accordingly more or less isolated floating bodies capable of re-adjustment with loading and unloading at the surface, or it must be presumed that the crust is traversed by a system of deep fissures or visco.us magma-dykes which allow isostatic re-adjustment. Such presumptions are too speculative and highly improbable though they might explain the geodesic observations.

The high magmatic pressure as determined from the density of the deep-seated plutonic rocks and the apparent rigidity of the crust deny the possibility of isostatic re-adjustment at the present time. But a suitable condition for isostatic re-adjustment or even for the drifting of floating continents (Taylor's and Wagner's Theory) possibly arises periodically at times of epoch-making geological disturbances when the sub-marine sub-strata are fused and the overlying granitic and sedimentary layers are rendered more or less plastic by the periodic maximum accumulation of sub-crustal heat; the crust then loses its normal rigidity and the continents possibly behave like isolated floating bodies. Isostatic adjustments, as periodic phenomena, can just as well account for the geodesic observations about the density of rock below mountains and oceans. During this periodic weakened condition of the crust the high sub-crustal magmatic pressure can easily produce the revolutionary geological disturbances and topographical changes and at the same time induce the wholesale metamorphism and the intense folding, over-thrusting and wrinkling in the upper granitic and sedimentary layers; it is then chiefly the rocks acquire the gneissic and schistose structures. As soon as the excess of the sub-crustal heat is released the crust rapidly regains the normal thickness and rigidity by re-crystallization of the partially fused upper layers and the more completely fused basic sub-strata. The alternate fusion and re-consolidation of the rocks, by increase and decrease of volume, would certainly cause extensive crustal movement and minor geological disturbances; many fractures and planes of weakness are then developed in the crust which eventually become sources of fault-slips and earthquakes, and less frequently of igneous intrusions and volcanic activities.

VI. Earthquakes

Earthquakes are geological disturbances of extremely minor importance. Severe earthquakes are comparatively rare. They are ascribed by the majority of geologists to loading and unloading at the surface and isostatic re-adjustment. The present writer is inclined to think that severe eathquakes which often extend over a hundred thousand square miles are as a rule originated by sudden plutonic intrusions through zones of weakness in the sub-stratum at about 25 miles' depth which cause fault-slips and

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

originate secondary centres in a series of pre-existing faults at different levels in the upper fractured zone. For minor shocks it is not necessary to presume any underthrust or deep-seated plutonic intrusion; they may be originated even by heavy rainfall and loading and unloading at the surface. Thus 95 per cent of the severe earthquakes are confined to well-known fractured zones and their centres are more often found at about 25 miles' depth. The local variations of barometric pressure and alternations of hot and cold climates immediately before and after severe earthquakes are probably due to local disturbances of temperature gradient in the rocks immediately below the surface caused by fore-shocks and after-shocks; they are thus the after-effects of earthquakes and not the cause as suggested by some.

VII. Radioactivity

Joly has very ably shown the importance of radioactivity in geological history, particularly its thermal aspect. He has ascribed the causation of geological cycles to radiothermal energy of rocks and isostasy. According to him the radiothermal source of heat in the crust can produce local fusion and minor geological disturbances. The effect of increase of volume resulting from radio-active or atomic disintegration is of no less importance; how it causes the periodic worldwide mountain-making and volcanic activities has already been explained.

Besides, it is very probable that atomic or radioactive disintegration in the crust itself, by its tendency to increase the volume, produces more or less strain according to high or low radioactivity in the rocks and thus induces fractures in the upper zone and formation of high pressure minerals, such as garnets (which are abundant in the deep-seated Eclogite Series) in the deeper zone where the rocks are more compact and there is no available space to allow fracturing. The frequent disastrous rock-bursting phenomena in the deep Mysore gold mines appear to be due to local radioactivity but confirmative evidences are needed; the pegmatitic character of the gold quartz is congenial to radioactive concentration.

It has been argued in this paper that there is high radioactive concentration in the core of the earth. This might seem apparently improbable as it is inconsistent with the more or less established fact that the upper granitic layer is more radioactive than the underlying basaltic layer and the magma below. But a more careful considera-tion would show that the concentration of radioactive elements (Uranium, Thorium, etc.) in the outer crust is chiefly of secondary origin, evidently caused by infiltration of gaseous compounds through the crust from below and their deposition at low temperature and suitable condition in the upper zone (*pyrometasomatism*). Accordingly, some of the radioactive gases are found occluded in volcanic glasses and also found dissolved in many hot springs; some even escape into the atmosphere. Many of the heavy metals, by similar process, become highly concentrated and are found as ore-deposits near the surface. The higher concentration of radioactive elements in the outer crust should not, therefore, preclude their far greater cencentration in the core; according to density distribution in the earth the primary store of the heavy elements should be in the core.

VIII. Nature's Organization

Philosophical speculation and scientific study of terrestrial Evolution shows that Nature has worldwide organization and there is a system of uniformity in all her activities. The earth itself and all the inanimate things are apparently struggling, like an ordinary living organism, between destructive and preservative forces. It seems as if the living things are constantly striving for a happier or more peaceful state while the non-living for a more stable condition; they are actuated by similar motive forces. Analogy and uniformity thus lie at the basis of all sciences and scientific speculation.

Geological disturbances periodically threatens the earth with destruction. Various agencies, both physical and chemical, are kept vigorously engaged for the reparing and strengthening of the weakened portions of the crust (its fractured zones, oceanic depressions, etc.) and re-establishing the normal condition after a destructive geological disturbance. Accordingly, materials are being constantly denuded and brought down from high lands, particularly from high mountains where wind and rain maintain maximum denudation, into the oceanic beds which coincide with the weakest parts of the crust and are thus found most liable to frequent subsidence and upheaval; it may be noted that all the high mountain ranges of the globe originated by the uplifting of oceanic basin where sedimentation was thickest

According to natural process, the fractured zones, developed by geological disturbances, are eventually utilized for the pouring out of the internal excess of heat and materials, particularly the refractory silicates, which are essential for the building up and strengthening of the crust. The earth is young yet and its crust, which serves as protective armour, is perhaps still growing thicker and stronger. If the internal heat were not thus let out, it would possibly soon convert the earth into an extremely hot uninhabitable desert; if there were no intermittent outburst of lava flows, the crust would certainly burst with more explosive violence. Thus volcanoes act as safety-valves and the apparently destructive periodic geological disturbances are essential for the preservation of earth and maintenance of an equable mild climate suitable for the evolution of plant and animal life. In the same manner atmospheric and oceanic currents minimize the rigour of local climate by transferring heat from

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

place to place; accordingly the deep-sea regions are kept cold by the circulating cold water from the Poles as if for the preservation of deep-sea animals as also for maintaining the rigidity and strength of the more fusible and vulnerable sub-marine sub-strata.

IX. Evolution

The motive forces of all evolutions are inherent in atoms and these are set free with progressive atomic disintegration in which *time* and *space* are important factors. Thus, with the progress of time new materials (refractory silicates, new elements, etc.) are being chemically manufactured by natural process and new forms of life are being gradually evolved, under constant change of environment by the co-operation of protoplasmic matter and new forms of energy set free with progressive atomic disintegration. The mechanism of atomic dintegration is yet very little understood but it is evident that atomic and sub-atomic constitution lies at the bottom of all sciences. Atoms are now considered as bundles of energy congealed. Modern physical science and atomic theory have, during recent years, undergone revolutionary changes. Modern scientists are now more inclined to support the Mechanistic Theory which maintains that life is a "dynamic molecular organization" kept going by physico-chemical reactions. The old Vitalistic Theory has undergone considerable modification and is surviving only as "Lingering Dryads"* or superstition. The secret of life and both physico-chemical and metaphysical properties of the living and non-living appear to lie in the grouping of "ultimate units" which are neither electrons nor protons but are almost infinitely finer units than either of them. It is now an established fact that electronic configuration in molecular structure imparts characteristic physico-chemical properties to molecules.

X. Conclusion

The future geological history and climatic condition are thus likely to be governed by the material constitution of the earth. Density is an important factor; the heavier elements more readily supply the energy which causes geological cycles and maintains the temperature of the earth. The moon has become frigid and uninhabitable as it is considerably lighter than earth and contains lesser proportion of heavy elements. The earth will eventually become frigid and uninhabitable when, perhaps thousands of millions of years hence, its density by the natural process of progressive atomic disintegration will approach the present density of the moon; accidental collision with a heavenly body may in the meantime bring about more drastic revolutionary changes.

The present writer's conception of high sub-crustal magmatic pressure is fundamentally different from the generally accepted view; it is based on important scientific observations. Some of the arguments may be decried as speculative but speculation based on observational data has been the main spring of scientific advancement.*

* Persisting belief in nymphs of the woods among superstitious people.

* This article is an abridged summary of a paper read in 1932 in one of the meetings of the *Geological, Mining and Metallurgical Society of India*. The details are expected to be published shortly in the Journal of the Society.

HOME OF TANTRICISM

By Prof. NAGENDRANARAYAN CHAUDHURI M. A., Ph.D.

TANTRICISM was not born in the soil of India. The introduction of the worship of Śakti and of other similar rites in Tantricism which are clearly un-Indian in character, makes the conclusion indubitable that it must have been of foreign origin. And this view is confirmed by the following śloka of the Kulâlikâmnâya or Kubjikâmata Tantra which has been discovered by late Mahamahopadhaya Dr. Haraprasad Sastri, where Śiva says to Pârvatī:

gaccha tvaṃ bhârate varṣe adhikârâya sarvataḥ |
yâvannaivâdhikârâste na saṅgamastvayâ saha ||

"Go forth to India and assert yourself in the whole country. I will not unite with you unless you establish yourself there."

Now it is quite clear from the above śloka that Tantricism has been imported from outside of India and for this reason, I think, the Tantras bear also the name of Āgamas, though

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

we find the following fanciful interpretation of the word âgama :

âgataṃ śivavaktrebhyo gatañca girijâmukhe ।

"It has come out of the mouth of Śiva and delivered to the mouth of Girijâ."

Let us now find out the fountain-head from which it first originated. The Indian tradition that Tantricism derives its main teaching from the Śruti, is corroborated by the following lines of the Sûtasaṃhitâ where it is said :

śrutipathagalitânâṃ mânuṣâṇântu tantram ।
śrutipathagalitânâmeva tantroktapûjâ ।

"Tantricism has been evolved from the Śruti."

"Tantric worship has also come out of the Śruti."

Basing on these lines and on such other similar evidences and out of their profound devotion to Tantricism, the orthodox Hindu minds, in order to justify their theory, put forward quite a good number of arguments, though they are without any acceptable foundation. And they endeavour to establish a connection between the Śruti and Tantras. But it will be clear from a deeper study of the subject that instead of a link, there is a big gap between the Śruti and the Tantras.

In fact Tantricism has little connection with the ancient religion of the Hindus. There can be no questioning the fact that Tantricism is beyond the pale of the Vedic religion and built up on foreign elements. Tantricism is not included in the list of the fourteen branches of literature. Excepting in the Agnipurâṇa, the mention of Tantricism, found in some Purâṇas, is generally about the low sacrilegious character of Tantric cults. It is, therefore, quite evident that it was not at first accepted by the Brâhamaṇas, since it owed its origin to a foreign religion and therefore was opposite to the Vedic rites. There is a well-known myth regarding the sacrifice of Dakṣa where all the gods of the Hindu Pantheon were invited save and except Śiva. At this, Śiva became furious and destroyed the Sacrifice while it was flying away in the shape of a deer. He broke Savitṛ's arms, kicked out Pūṣan's teeth, knocked out Bhaga's eyes and paralysed all the gods who did not honour him. This also clearly shows that Śiva, who is the supreme deity and promulgator of Tantricism, was not, at first, included in the Hindu Pantheon and was always ignored for his foreign origin. Later on, he is, of course, regarded as a Hindu god and became the historical successor of Rudra of Vedic age holding a very exalted position in the Hindu Pantheon.

The statement that Tantricism owes its origin to the Śruti, has also been nullified by the following accounts of the Śrîmadbhâgavata and the Padmapurâṇa in which the followers of Tantricism have also been highly vilified :

bhavavratadharâ ye ca ye ca tânsamanuvratâḥ ।
pâṣaṇḍinaste bhavantu sacchâstraparipanthinaḥ ॥
naṣṭaśaucâ mûḍhadhiyo jaṭâbhasmâsthidhâriṇaḥ ।
viśantu śivadikṣâyâṃ yatra daivaṃ surâsavam ॥
brahma ca brâhmaṇâṃścaiva yadyûyâṃ parinindatha ।
setuṃ vidharaṇaṃ puṃsâmataḥ pâṣaṇḍaśâśritâḥ ॥
Śrîmadbhâgavata, IV, ch. II.

"Those who worship Śiva and those who follow them, are the opponents of holy scriptures and let them be pâṣaṇḍins. Let the silly-minded who with matted locks, ashes and bones have lost their purity, be initiated into the worship of Śiva in which wine and brewage are regarded as gods. As you are vilifying the vedas and Brâhmaṇas, the bridge and sustainer of humanity, so you have accepted the views of pâṣaṇḍas."

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

kapâlabhasmâsthidharâ ye hyavaidi-
kaliṅginaḥ ।
ṛte vanasthâśramâcca jaṭâvalkaladhâriṇaḥ ।
avaidikakriyopetâste vai pâṣaṇḍinastathâ ॥
—Padmapurâṇa, Uttarakhaṇda, ch. 235.

"Those who wear skulls, ashes and bones—the symbols, contrary to the Vedas, put on matted locks and the barks of trees, even without entering into the third order of life and are engaged in the rites, not sanctioned by the Vedas, are Pâṣaṇḍins."

In the Bhâgavata as well as in the Padmapurâṇa, the follower of Tantricism is called Pâṣaṇḍa which is a contemptuous term.

Tantricism has its origin in the Bon religion of Tibet. According to the Tibetan and Chinese traditions, it was Asaṅga who first introduced Tantricism to India from Tuṣita heaven where he learnt it from Maitreya Buddha. The word Tuṣita, has been, I think, sanskritized from the Tibetan word, Ti-rtse or Ti-se, the name of a mountain which lies to the north of the Himalayas near the Manasa Lake and is indentical with the Kailasa mountain. Zaṅ-Zuṅ is the ancient name of a province in Tibet and it comprised the district near the Kailasa mountain bordering on the west of the Manasa Lake where the Bon religion was first promulgated and where shenrab (gśen. rabs) or simply shen (gśen), the founder of the Bon religion, was born. It is also known from the Gurbum (mgur. bum.) of Mi. la. ras. pa. that at one time the Bon religion of Tibet was pravailing in the Kailasa mountain and there lived a great Bon priest in that mountain. It is now quite clear from the above that the home of the Bon religion is the Kailasa mountain in Tibet. We know from the Tantras that God Śiva, one of the deities of the Hindu Triad, promulgates his teaching on Tantricism from the Kailasa mountain to the world below. From these evidences, we are led to one positive conclusion that the home of the Bon religion is the home of Tantricism, which is the Kailasa mountain. Even in the modern days, this mountain is still an object of pilgrimage both to Bon people and to the followers of Tantricism.

In the colophon of the Sâdhana No. 127 of Ekajaṭâ, in the Sâdhanamâlâ there is a remarkable sentence :

âryanâgârjunapâdairbhoṭeṣu uddhṛtam ।

Here it is distinctly said that Ârya Nâgârjunapâda brought to India the worship of Ekajaṭâ from the country Bhoṭa (Tibet) where her worship was very popular and current. Ekajaṭâ is also known as Mahâcînatârâ i.e. Târâ of Mahâcîna or greater China. The greater part of Eastern and South-Eastern Tibet was administered by the Chinese and was under the direct control of the Chinese rule and for this reason this part of Tibet constituted what was called rgya. chen. or Mahâchîna (Greater China). This part also constitutes what is called bod. chen. or greater Tibet.

It is said that once Vaśiṣṭha, one of the greatest sages of Brâhmaṇism, went to Mahâcîna and there he saw the Buddha surrounded by a large number of women in a deeply drunken state and also engaged in obscene rites. At this very sight, he got horrified and asked the Buddha to remove all his doubts. Being thus implored the Buddha made everything clear and then Vaśiṣṭha attained Siddhi (Perfection) with the help of the Mantras and of the free use of the five Makâras, namely, madya (wine), mâṃsa (meat), matsya (fish), mudrâ (postures), and maithuna (copulation). This system of worship is quite un-Indian and has been imported into India from the country of Mahacina which I have already indentified with Eastern and South-Eastern Tibet.

In the pre-Historic age before the advent of the Aryans into India there was a colony

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

of the Tibetans from Kashmir to Assam along the Himalayas on the Indian side. Though the Tibetans were pushed back by the new-comers, yet in course of time the Aryans took up the Bon religion of their Tibetan neighbours and incorporated it in their own religion, mostly in a refined form so as to suit their own religious requirements and tenets. In ancient times two land routes connected both Kashmir and Assam with Western and South-Western as well as with Eastern and South-Eastern Tibet respectively. These two routes were generally followed by the immigrants from Tibet. Thus Kashmir and Assam were in colse communication with Tibet. For this reason, though Tantricism has never been universal in its acceptance, we find its magnetic influence over the religious life of Kashmir, Bengal and Assam. Kashmir and Eastern India have been two great centres of Tantricism; the former is famous for its sixty-four tantras and the latter has also contributed its quota to the spread and popularization of Tantricism. There are traces of Tantricism at Mohenjo-daro and Harappa, the history of which goes back to the Chalcolithic Age when the Aryans were never heard of. Abbinavagupta, Kṣemarâja, Vasugupta and other Tantric teachers of Kashmir contributed very highly to the evolution of the wide range of Tantric literature. Bengal is also very proud of having produced a host of Tantric saints and savants like Sarvânanda, Pûrṇânanda, Brahmânanda, Kṛṣṇânanda Âgamavâgîśa and others whose services in the cause of Tantric literature are equally invaluable. The Tantric forms of dikṣâ and worship of the goddess Kâlî and her different manifestations are still to be largly found in Bengal and Assam. In the Âgamaprakâśa, written in the Gujarâti language, it is said that the worship of the Goddess Kâlî was introduced into Guzrat and other places in Western India from Bengal I think that from Eastern India Tantricism also went to the Vindhya range and thence to southern India. The Vindhya range is also a great seat of Tantricism. The Śakti of Śiva bears also the name of Vindhyavâsinî (the female dweller of the Vindhya range). Southern India too is famous for its siddhântâgamas which are twenty-eight in number. Pûrṇagiri, Uḍḍiyâna, Sirihaṭṭa and Kâmâkhyâ—these are four Pîṭhas or sacred places of Tantricism, These are the four places where Tantricism first developed and was transmitted to the other Pîṭhas and to the rest of India Uḍḍiyâna (Oḍḍiyâna, Oḍiyâna, Odryâna) is identified with Udyâna in the Swat Valley. Pûrṇagiri whose Tibetan name is gaṅ. baḥi. ri., is, according to the Tibetan work Kâlacakrapariccheda dus. ḥkhor. gyi. ye. śes. kyi. leḥu, on the north of Udyâna whose Tibetan name is u. rgyan. in the Swat Valley. Both Sirihaṭṭa and Kâmâkhyâ are in the province of Assam. Sirihaṭṭa is modern Śrîhaṭṭa (Sylhet) and Kâmâkhyâ is in the neighbourhood of Gauhati. Thus the first two are situated on the Kashmirian side and the two others are in the province of Assam.

In course of time, in the 7th century A. D. when Buddhism penetrated into Tibet, its rulers embraced it and Lamaism began to grow, the Bon religion was actively crushed down and its establishments in the Western part of Tibet were totally destroyed by the Tibetan rulers. This is the cause of the decline of Tantricism, in later times, in the Valley of Kashmir as it did not receive any fresh inspiration from the Bon religion of Tibet. When the Bon religion was, thus, being annihilated in Western Tibet, the people of Eastern and South-Eastern Tibet, made an appeal to the Chinese to protect them and their religion which induced them to rule over these provinces on behalf of the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Bon people. Thus these provinces shook off the yoke of the Grand Lamas and for many centuries, have been under the sway of the Chinese Government. Thus the Bon religion, flourished in this part of Tibet, has, for many centuries, supplied new religious thoughts and ideas to the Tantricism of Eastern India. The practice of five Makâras, specially in Bengal and Assam, is due to their close touch with Eastern and South-Eastern Tibet, the most populous part of the country, where this kind of practice was, at first, originated. This is why we find even to-day the dominating influence of Tantricism in Eastern India, specially in Bengal and Assam.

Let us now explain the term Tantra. According to the Indian tradition, it is this :

tanoti vipulânarthâṃstattvamantrasamanvitân ।
trâṇañca kurute yasmattantramityabhidhîyate ॥

"As it profounds (tanoti) great things with their truths and Mantras and protects (trâyate) (its followers, it is called Tantras."

But this interpretation is very fanciful and does not cover the real significance of this particular class of religious literature. Practically all the Tantras chiefly deal with Magic and for this reason Tantricism is called indrajâlavidyâ, mohanaśâstra, rahasyavidyâ, *etc.*, i. e., the mystic science dealing with Magic. The Bon religion, too, which is the sources of Tantricism, mainly deals with Magic. The name of the Supreme Bon deity is gto. rgyal. ye. mkbyen, one who knows great magic.

Let us now compare the gods and goddesses of the Tantric Pantheon with those of the Bon.

Tantricism fundamentally deals with Śiva and his Śakti Umâ in their various aspects and for this reason, it is quite probable that Tantricism is also called Śâmbavi-vidyâ. As a form of worship, Tantricism is the same as Śaivism or Śâktaism. Later on the Tantras are generally classified under four heads, namely, Śaiva-Tantra, Śâkta-Tantra, Vaiṣṇava-Tantra and Bauddha-Tantra.

Śiva who is the main factor as well as the promulgator of Tantricism, is a god of external origin. The use of the word Śiva in the Ṛgveda has naturally led us to search for its Indo-European origin. But it has no Indo-European name and even in the Avestic language we do not come across with this word. This word has come from the Tibetan word, shi.ba, meaning auspicious, the name of a god. shi.ba. belongs to the Bon pantheon and holds a very unique position in the Bon religion He is also very fond of dancing with his attendants. It is quite likely that the god Śiva of the Tantric pantheon, who has been, later on, identified with Rudra of the Vedic age and who is also very fond of Tâṇḍava dance, originated from Bon Pantheon of Tibet. There are, of course, many words in the Tibetan language which have been directly borrowed from Sanskrit. And in Tibetan we find that Sanskrit palatal sibilant (ś) has been transliterated by Tibetan palatal sibilant (ś) *i.e.* the twenty-seventh letter of the Tibetan alphabet, *e.g.*, śaṇa, hemp (Tib.śa.na) ; śata, hundred (Tib.śa.ta) ; Śâriputra, the famous disciple of Buddha (Tib. śa.riḥi.bu) ; Śâkya, name of a race to which Gautama Buddha belonged (Tib.śâ.kya), śakti, spear, lance (Tib.śag.ti) ; śaṅkara, an epithet of Śiva (Tib.śaṅ.kar) ; śâlmali, name of a tree (Tib.śal.ma.li) ; śirîṣa, name of a tree and its flower (Tib.śi.ri.śa) ; śubha, happiness (Tib.śu.bham) ; śloka, sanskrit verse (Tib.śo.lo.ka) ; śrî, beauty, glory (Tib.śrî) ; etc., and nowhere we find a single instance where sanskrit palatal has been transliterated by sh, the twenty-first letter of the Tibetan alphabet. Had the word Śiva been borrowed from Sanskrit into Tibetan, as suggested by some, this word must have been transliterated by Tibetan palatal sibilant (ś). We find

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

another word śi.ba, (secondary form of ḥchi.ba), meaning 'death,' in the Tibetan language. I think that in later times both shi.ba (auspicious, prosperity, name of a famous Bon deity) and śi.ba (death) have been confused owing to their similarity in pronunciation. This is the cause of attributing destruction to Śiva, the Auspicious one' and he gets the epithet, god of destruction. For this reason it is quite likely that Śiva and Rudra of the Vedic age who is described in the Ṛgveda as fierce and destructive and as a god of destruction, have been identical and the former occupied the place of Rudra in post-vedic mythology.

The worship of the Female principle of Divinity in Tantricism has its origin in the Bon religion of Tibet. In the Bon religion the active principle is personified as ha.mo (Goddess). She is the active will of Divinity.

Umâ is unknown in the Vedic Pantheon. In the Pauranik as well as in the Tantric pantheon, she, as Śakti of Śiva, occupies a very high position. Umâ is said to be fancifully derived from 'u mâ,' 'O (Child), do not (practise penances)' said to pârvatî by her mother Menakâ. But really speaking, Umâ has been Sanskritized being borrowed from Tib. 'yum,' meaning mother, the Female principle of Divinity. As a goddess, 'yum' is worshipped in the Bon religion from which I think, she has been introduced in Tantricism.

Goddess Durgâ, wife of Śiva, is also unknown in the Vedic Pantheon. But she holds a very exalted position in Tantricism. She is very much fond of flesh and drink. According to popular interpretation, she is called Durgâ, because she saves her followers from 'durga' (Difficulty). But this interpretation is very poor and far-fetched. This word might have been derived from the Tibetan word 'gdug' (here the Tibetan feminine suffix 'mo' is left out) and the worship of the goddess Durgâ has been introduced into Tantricism from the Bon religion where the goddess dgug. mo.— a terrible goddess is most commonly worshiped.

Kâlî, wife of Śiva, who is also a very famous deity in Tantricism, is not traceable in the Vedic pantheon, The worship of the goddess Kâlî, in Tantricism, appears to have been borrowed from the Bon religion where the goddess 'rgyal. yum' is worshipped and she is one of the most popular deities in the Bon Pantheon. The word 'Kâlî' has been derived from Tib. 'rgyal'. Here the suffix 'yum' has been left out as it does not form an organic element in the whole name. There is a well-known Tibetan mantra, addressed to this deity. Even to-day this Mantra is chanted. And the Mantra is this :

rgyal. yum. sgrol. ma. khyed. sku. ci.
ḥdra. daṅ ।
ḥkhor. daṅ. sku. tsheḥi. tshad. daṅ. shiṅ.
khams. daṅ ॥
khyed. kyi. mtshan. mtshog. bzaṅ. po. ci.
ḥdra. ba. ।
de. ḥdra. kho. nar. bdag. sogs. ḥgyur.
bar. śog ॥

Ḍombî is also a very famous deity in the Tantric Pantheon. We find her worshipped in the Bon religion of Tibet. 'Ḍombî' has come from the Tibetan word 'gtum. mo.'—a fierce goddess.

Next we find the worship of spirits and demons in Tantricism and this kind of worship has been adopted from the Bon religion of Tibet where spirits and demons are most commonly worshipped.

Ḍâkinî is one of the Yoginîs. This word is feminine from the word 'ḍâka' which is unknown in the Vedic speech as well as in old classical sanskrit. This word has been introduced into later classical Sanskrit from the Tibetan language where 'gdag' means

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

'prajñâ' (wisdom) and then deified, meaning the god of wisdom. So Ḍâkinî means the goddess of wisdom and is expressed in the Tibetan language as ye. śes. kyi. mkhaḥ. ḥgro. ma. I have fully dealt with Ḍâka and Ḍâkinî in my 'Studies in the Apabhraṃśa Texts of the Ḍâkârṇava' which will soon be published and also in the *Baṅgalakṣmī*, a Bengali monthly (Kartik, 1340. B. S.)

Cumbikâ and Khaṇḍarohâ are also mentioned in the Tantras as the female energies (śaktis). Their worships have been introduced into Tantricism from the the Bon religion of Tibet. Cumbikâ has been derived from the Tibetan word 'gtso.mo'—a female spirit. Khaṇḍarohâ is also derived from the Tibetan word 'mkhaḥ. ḥgro. ma,' a female spirit with the infix-n- and the suffix 'rohâ' instead of 'mo,' the Tibetan feminine suffix.

We find the worship of Karṇapiśâcî in Tantricism. And in the Bon religion, ka.ra.naṅ, who is the source of Tantric karṇapiśâcî, is also worshipped as the mystic form of Ḍâkinî.

Guru plays a very important part in Tantricism as in the Bon religion. In the Bon religion, lama (bla. ma) holds a very high position and even he is equal to and sometimes superior to gods. In Tantricism too, the qualifications of a Guru are identical with those of Divinity itself. In the Vedic as well as in Pauranik religion, we do not find such a unique position of a Guru. There is no doubt that this is due to the influence of the Bon religion.

Tantricism, as we have said before, has kept in tact a system of religious practice which has come down to us as the offshoot of a very ancient religion which is quite un-Indian. I have shown above that the form of worship incorporated in Tantricism has its origin in the Bon religion of Tibet. The organic kinship between the Bon religion and Tantricism has been clearly brought out on the evidence of a number of deities of the Bon religion whose worship forms an integral part of Tantric cults. So far as the mystic teaching is concerned, Tantricism runs parallel to that of the Bon religion. Magic, fetishism, demon-worship and propitiation by means of incantations are features in Tantricism which go to show the affiliation and adjustment of Tantricism to the Bon religion of Tibet.*

THE BENGAL MONEY-LENDERS ACT, 1933

By PARIMAL ROY, M. A.

THE history of legislation against usury in India is briefly told. The Regulating Act of 1774, modified by later enactments, fixed the maximum rate of interest in India at 12 p.c. per annum. Subsequently in 1885 the Usury Law Repeal Act empowered the Courts to adjudge or decree a suit in which interest is recoverable at the rate stipulated by the parties or in the event of its absence, at a rate deemed reasonable by the Court. The law was misguisedly in favour of the creditors and the rates of interest on loans became in consequence competitive. The menace spread far and wide, until by amendments of Sections 16, 19A and 74 of the Indian Contract Act in 1899, the Civil Courts were allowed equitable jurisdiction with a view to relieve the debtors and arrest the practice of usury. Lastly came the Usurious Loans Act of 1918 by which further powers were granted to the Courts, in cases where the rate of interest was excessive or the transaction substantially unfair, to reopen the transaction as between the parties in a suit brought by a creditor for the realization of his dues, and relieve the debtor of any excessive interest.

The effectiveness of these legislations to regulate terms of contract between the creditor and debtor was, however, soon doubted. For example, quite a large number of judicial officers in their memoranda to the Bengal Banking Inquiry Committee complained that the Usurious Loans Act of 1918 was quite an inadequate legislation. It was extremely difficult, they said, to establish the "unfairness of a transaction or the excessiveness of a stipulated rate of interest", and the scope of the legislation was also alleged to be "considerably limited."

The Bengal Banking Inquiry Committee appreciated the weakness of the situation and laid down a number of suggestions for the better control of money-lenders. Much on the basis of these suggestions and greatly after the English Money-lenders Bill, 1927, the Bengal Money-lenders Bill was drafted, and it was passed into law in August, 1933,—bringing in effect "promise of delivery from the extortionate money-lender."* We shall discuss briefly in the following pages one or two of the more important features of this new legislation.

The necessity for a law against usury cannot be disputed. There *are*, however, a few dissentients† who condemn the usurers' plough for going even on Sundays and yet belittle the importance of a usury law on the ground that the rate of interest is exclusively a question of demand and supply. But if economic laws are inexorable, the money-lenders are, it is alleged, relentless. A law penalizing usury is not therefore always futile.

But the Money-lenders Bill which has recently become law is not all that could be done to relieve the situation. One of the greatest defects of the law is that it is much too ambitious. While it ought to have been taken as purely an experimental legislation applicable with caution and with an eye to practical defficulties the law as passed by the Legislature extends its provisions to the *whole of Bengal* (outside the Original Jurisdiction of the High Court*) and to *all classes* of money-lenders.

On the ground of securing uniformity in law relating to money-lending, the position is certainly unassailable. But some questions naturally arise. If the principle of the Bill is to protect debtors from the rapacity of money-lenders, there is no reason for discriminating between rural or urban areas as between the city of Calcutta and the muffassil.† And if the discrimination is once allowed, there is also no warrant for withholding its extension to the various *classes* of money-lenders. An amendment providing that the Local Government shall have the power of determining the area and classes of money-lenders to which the law would be applicable, was thrown out on the ground that it was against the principles of democracy.§ In pure theory, however, the Legislature was right. But there was certainly no harm in providing for a little of caution so that the application of the law could proceed by stages. This would not have gone against the principle underlying the legislation. For, if all debtors are to be relieved, all money-lenders need not be indiscriminately penalized.

The Act defines a money-lender as a person

---

* *The Statesman*, August 26, 1933.

† Bengal Leg. Council Debates, Nov. 22, 1932, P. 96.

* The *Damdupat* system applies within the Original Jurisdiction of the High Court.

† The *Damdupat* does not adequately justify the exclusion of Calcutta. Why not extend its application to non-Hindus and to areas outside Calcutta, if uniformity in law is the main object, without creating a new law ?

§ Bengal Leg. Council Debates, August 22, 1933. Pp. 71-72. The Government, however, recognized the experimental nature of the law and was prepared to accept the amendment in a spirit of caution ; for, they were rightly apprehensive that the desired results would not otherwise come about.

who grants a loan of money. Now a money-lender may either be a resident *Mahajan* or an itinerant *Pathan, Kabuli* or *Peshwari*, or a casual shopkeeper, pensioner or widow. If a *Mahajan* proves rapacious, the Act will certainly—and with justice—put a check to his malpractices. But the Act will be of no avail in the case of the itinerant money-lenders who do not keep any form of documents at all. Nor will it contribute to much social good if it purports to penalize a casual widow who ensures herself a precarious livelihood by lending out her little capital to neighbours. Besides, there is the question of the village credit societies, loan companies and other indigenous institutions. These rural credit agencies of Bengal—none too abundant—do not all deserve the check which the Act will impose upon them. The contention that "usury is more practised by these banking companies and loan offices, than by private persons" is open to question. On the contrary, the existence of these credit institutions has had in many quarters a very wholesome influence over the private money-lenders. Dealings being less personal and the credit operations more organized, they are always given preference to the ordinary money-lender who is in consequence compelled to bring down his rate of interest in order to face competition.* The Act will, therefore, succeed only in suppressing a large number of rural credit agencies, precipitating thereby a very heavy loss of credit. And with a retrospective effect it will all the more seriously affect the accommodations and investments previously made by these banks.

It thus appears that it has been extremely unwise not to have differentiated between the various *classes* of money-lenders all of whom do not equally deserve the consequences of this legislation. The Local Government, indeed, could have easily been given the power to extend the operation of the Act in respect of such classes of money-lenders as it would think fit. There is no point in fearing that this confidence would be abused.†

And then arises the question of the rate of interest. Section 3 of the Act provides that if the interest charged exceeds the rate of 15 p. c. per annum in the case of a secured loan and 25 p. c. per annum in the case of an unsecured loan, the Court shall presume that the interest charged is excessive and that the transaction is substantially unfair.

A legal maximum rate of interest has thus been fixed in respect of both secured and unsecured loans. The Bengal Banking Inquiry Committee did not fancy the idea of fixing a legal maximum for unsecured loans.* But the legislators apparently did not take it seriously. It is, however, not suggested that since a loan is *unsecured* the interest on it should be *unlimited*. But it ought to have been realized that any restriction of interest must always divert loanable capital to other avenues of income; so that a double check both on secured and unsecured loans will render the already slender rural credit all the more scarce to the greatest handicap of agriculture and the peasantry.

The wisdom of fixing a legal maximum rate of interest is also open to question. What may have presumably led to the provision is the complaint that a number of judicial officers made before the Bengal Banking Inquiry Committee about the inadequacy of the Usurious Loan Act. Among other causes which were alleged to have led to its failure was the "difficulty of proving that the interest is excessive," and one of the suggested remedies was the "fixing of a maximum rate of interest," Presumably the demand was not for *one* legal maximum rate for the whole of Bengal. For economic conditions vary from district to district and from villages to villages. A rate of interest which is regarded as usurious in Western Bengal is only tempting to the peasants of the East.†

The Central Banking Inquiry Committee was also unable to agree with the suggestion of fixing a definite statutory limit to the rate of interest. This, the Committee recognized, would be "neither practicable nor effective." § But unfortunately, the legislators missed the point and inexpediently enough laid down categorically a maximum rate applicable everywhere. The Bengal Banking Inquiry Committee recommended that "the maximum rates should be fixed according to the *special circumstances* of each province and if necessary for *different parts* of the same province and for *different classes* of borrowers." ** It is difficult to see why such an excellent recommendation did not appeal to the House.

Besides, the rates of interest that have been suggested are not also properly chosen. A rate of 15 p. c. interest on secured loans is particularly disputable. The original figure in the Bill was 12½ p. c. which was raised by an amendment to

---

5 p. c. But even then the rate is low and is supported by the custom of calculation in Calcutta and other city banks can charge in normal times 8 to 12 p. c. interest, with monthly rests, on money advanced against very sound and excellent securities, the money-lenders can easily go up at least to 18 p. c. for loans against securities which involve risk and uncertainty. For, in this province the land laws do not adequately protect secured loans from risks. Even under the new Tenancy Act (Sec. 26 D. Bengal Tenancy Amendment Act, 1928, though occupancy holdings, which are generally taken as securities, have been made transferable, heavy premiums have to be paid.* The interest does not only cover this premium, but must also provide against the risk of losing the holding in case the landlord exercises his right of pre-emption. And it not unfrequently happens that a mortgager refuses to pay rent when the mortgagee has himself to pay up the arrears in order to save his own interest. If all this is taken into consideration it will certainly be appreciated that a rate of 15 p. c. interest on the so-called secured loans is rather inadequate. †

As for unsecured loans, the rate of 25 p. c. interest is not also quite happy. In the absence of any security the realization of the decretal amount is always a question of time. Now, if this time is taken into account as also the rate of interest that the Court would usually allow for such period, it will be easily found that the final amount recovered by way of interest is very small and falls much below the rate stipulated. A solitary Councillor who apparently felt the argument, suggested that the rate should be raised to 37½ p. c. But the counsel went unheeded.

We are thus led to the conclusion that the legal maximum of 15 p. c. and 25 p. c. for secured and unsecured loans respectively have not been very properly chosen, being a trifle too inadequate. Curiously enough, the legislators, were afraid that the rates stipulated were already too high and therefore hastened to provide that the provision laid down in Sec. 3 "shall be without prejudice to the powers of the Court under the said section where the Court is satisfied that the interest charged, though not exceeding 15 p. c. per annum or 25 p. c. per annum as the case may be, is excessive" !

There is also in the Act a half-hearted attempt at eliminating compound interest. "Good opinions" for the retention as well as abolition of compound interest were offered and the legislators could not apparently make up their minds definitely in favour of either. So a compromise was made and compound interest was "discouraged". If a person, says the Act, contracts for compound interest in contravention of the Act, he would not be able to recover interest of any kind at a rate exceeding 10 per cent per annum. Thus the money-lender is not deprived of interest altogether, but the habit of charging compound interest is discouraged. As the mover of the Bill explained, "while we do not intend at this stage to abolish compound interest, yet . . . we want to discourage it".* We fail, however, to appreciate the special reasons for this unexpected measure of caution here,—particularly when it has been refused in other provisions of the Bill where it was far more necessary.† It is strange that the experimental nature of the legislation is recognized only in connection with compound interest !

Apart, however, from all this, the Act itself is based upon a wrong assumption that all money-lenders practise usury, and should therefore be brought under a 'more effectual control'. And consequently the money-lenders' point of view has been totally disregarded. One need not seriously press the argument that since the rate of interest is purely a question of demand and supply, no money-lender is usurious. But it remains a fact that in many places of Bengal interest at a rate exceeding 15 per cent is only too readily offered by the peasant if he is sure that it is going to fetch him a substantial capital for his soil. We have already mentioned that in the evidences it received and the enquiries it made, the Bengal Banking Inquiry Committee found an extraordinary variety of rates prevalent in the Province. For example, in Jalpaiguri the rate varies from 10 to 50 per cent per annum, while in Pabna it is between 37½ to 300 per cent per annum. In most other districts the minimum is 24 per cent and the maximum varies between 100 and 200 per cent.§ In such circumstances it has been extremely arbitrary to have stipulated a rate of 15 per cent per annum as excessive in order to penalize indiscriminately all classes of money-lenders including many who are not necessarily in the habit of usury.

---

* In many districts it is usual to find the price of the land falling below the average level to the loss of the outgoing *ryot*, but the landlord takes advantage of his position to extort a capital sum, called *naxarana*, in consideration of recognizing the purchaser's status, a sum which is incommensurate with the average profits from the holding. — *Land Problems of India*; Mukherjee, P. 159. *vide* also *Ibid.*, page 167.

† A glance at the table given at page 198 of Beng. Bank. Inq. Com. Report will show that 15 p. c. is the minimum rate usually charged in Bengal. On the average it varies from 20½ p. c. to 46 p. c. The English Money-lenders Act, 1927, puts the legal maximum at 48 p. c. The Uniform Small Loans Law of U. S. A. makes it 42 p. c.

* Beng. Leg. Council Debates, August 25, 1933. Page 219

† We have already mentioned how the Act ought to have proceeded cautiously in its application to *various classes* of money-lenders living in *various localities*.

§ And 'in spite of the very generally accepted view to the contrary, the rates of interest charged are not exorbitant'. *Capital*, August 31, 1933. P. 357.

Incidentally, this brings us to the question as to what exactly usury is. Formerly, this term was synonymous with interest. By common usage it now denotes "the practice of lending at interest which exceeds a lawful or reasonable rate".* A 'lawful' rate certainly refers to a legal maximum—from which the ridiculous conclusion is that there is no usury so long as there is no law against it. If, however, usury means a rate of interest exceeding a 'reasonable' rate, the idea is not clear until we define a 'reasonable rate'. And the 'reasonableness' of a rate being strictly relative, there cannot be *one* usury law against *all* money-lenders.

As a matter of fact the idea that has generally grown in every mind is that a rate of interest is not usurious so long as the borrower is able to pay it (should we say, without feeling it?). The money-lender's point of view has thus been sedulously avoided. It is a common knowledge that "interest rates vary with the supply of money, the demand for it, the risk incurred in lending it and the trouble and expense of collecting it."† So that the rate depends not only upon the *readiness* with which a borrower would pay it, but also upon the *willingness* with which the money-lender would agree to it. This important aspect of the whole situation has been totally lost sight of. The law, indeed, has gone so far as to penalize a money-lender if on account of the default of the debtor, any arrears of interest accumulate in excess of the principal. For, there is a section in the Act limiting the total accrual of interest to the amount of the principal originally lent.§

Before we conclude we shall point out another important fact which is sometimes very conveniently overlooked. The money-lender is not an extraneous element—far less an unnecessary appendage—of the present rural credit system of the country. His calling, indeed, cannot be abolished at a moment by making it illegal. The Royal Commission on Agriculture very rightly said that "if he is ever driven from the land it will not be by legislation but by the growth of the co-operative movement and more specially by the habits of thrift inculcated by that movement."* The same opinion was also given by the Central Banking Inquiry Committee which pointed out that 'a real and lasting solution can only be found by the spread of education, the extension of co-operative and joint-stock banking and by the training of the borrower in habits of thrift and saving.'†

The merits of the co-operative movement cannot indeed be over-estimated. But while we recognize the potentialities of the movement and even foresee its eventual success, we must not lose sight of the fact that in spite of everything, the money-lenders are going to stay with us for a very considerable period of time. For, "in spite of the large strides which co-operative credit societies have made of recent years and in spite of the excellence of those institutions, they have, as yet, touched the fringe of the banking problem of the rural districts."§ The Linlithgow Commission which advocated the growth of co-operative movement had itself to admit that the money-lender alone is in a position to provide the bulk of the capital required for current agricultural needs and on a recurrence of severe distress he alone will continue as ever, to support the peasants by timely loans —till we have universal primary education which may not be till years have elapsed.

If that is the situation, why all this legislation against the money-lenders?

---

A HUNGARIAN EYE ON INDIA

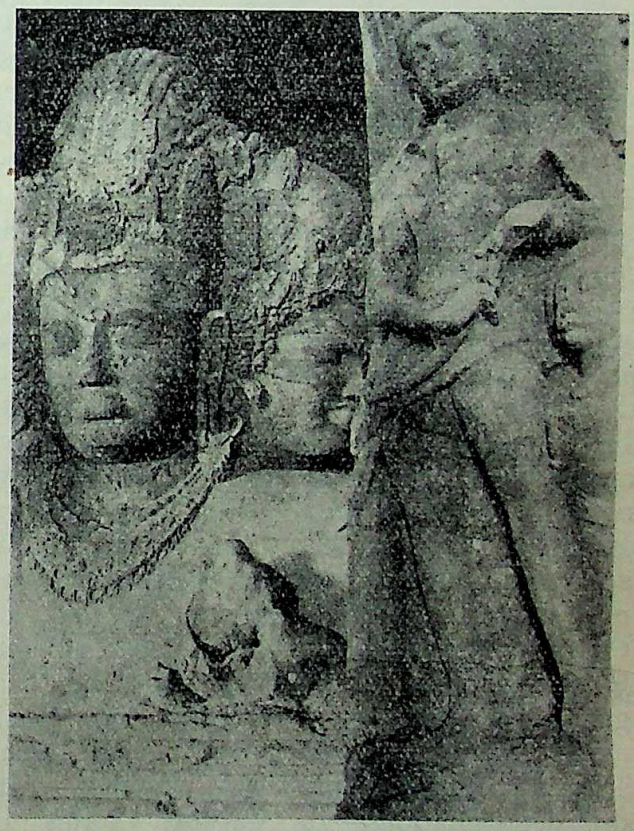
By Prof. Dr. JULIUS GERMANUS

I am aware that it is a bold assertion to make that Baktay's two volumes* take an eminent position in the huge literature on India. Numberless books of travel, descriptions of the customs, studies in the religion, philosophy, art and history have appeared in various languages, indifferent or excellent. Still this work differs from all of them, for it comprises India as a whole, it presents its throbbing heart and its spirit, which mightily heaves up out of the depth of Mother Earth towards the pinnacles of human intellect and sentiment.

Writers might view particular sides of a compound phenomenon and describe them with the accuracy of a photographic camera, the artist first imbibes the spirit of his object and projects it before his public, after it has become part and parcel of his individuality. The two volumes of Baktay's India are the work of the artist who, after ten years' intensive study of Indian literature, philosophy and art, has visited the country of his yearning and stayed there for three years, travelling across it from one end to the other, visiting the palaces of the rich and sleeping under the thatched roof of the poor, investigating the museums of the capitals and researching these objects of curiosity in their far-off original sites.

Imbued with an extraordinary love for Mother India, the author sees her with the eyes of a European and appreciates its majestic grandeur with the heart of an Indian. This rare capability renders his book unique in its kind. He stops for hours where the ordinary tourist would pass untouched, he gazes with thrill at monuments of art at which others would only cast a glance. A painter in his earlier days, he uses his talent to pick out the most characteristic views of Indian landscape and buildings for his camera and the hundreds of photographs that accompany the text present a veritable gallery of art on Indian life.

His book starts with the author's travel to India, from Italy to Bombay. His first impression strikes him already on the boat. A European, he feels a stranger among the Englishmen and Englishwomen on board. He has to unlearn his Hungarian tongue, he has to subdue his innate Hungarian love of ideals, which the vast Hungarian low-lands inspire into man and has to adapt his mentality to the "business view" of sea-faring nations. In Bombay, the ancient caves of Elephanta, the force of expression in the faces of Trimurti, which he finds superior to the products of Greek or Renaissance art, elicit a humble prayer from his breast :



The Hindu Triad (*Trimurti*) in the Elephanta Caves. Side View.

"Brahma satyam, jagat mithya
Jivo Brahmaiva, naparah."

Nothing can be more suitable to introduce a traveller to the mental world of India! From Bombay he carries his reader to the North and after a vivid description of the landscape he finishes the chapter with a eulogy of the affection Indians bestow on monkeys and on all other animals. "Is it a shame to man to descend from these monkeys who in their motherly love hug the skeleton of their dead young ones?"—he cries, as if to symbolize the Indian conception of unity of the Universe pervading the animal and vegetal kingdoms alike.

The book gives us chapters on the history and philosophy of India and points out that the early speculations have been in many cases justified by recent researches. Philosophy is the motto of Indian life and without its knowledge the rôle of Indians in human history cannot be understood. While other continents excelled in the joys of an earthly existence and developed the material foundations of this existence, India has created a spiritual philosophy which has become the common good of all her children and which philosophy transcends the narrow boundaries of our short life in order to encompass all phenomena of the Universe abstracted from the illusions of space and time. The world to Indians is not this tiny globe with its seducive appearances, but the unchanging eternal reality of the spirit, which reflects itself in all beings. Religion in India is either knowledge of the spirit, or love or virtuous deed—each man may grasp that form of worship, or walk on that path of salvation which is most suitable to his own self, in order to reach his final goal. This liberality of conception has eliminated religious wars and persecutions in Indian history. While Europe has churches, sects and denominations—all outward forms of organizations—India has *religion*. This standpoint of our author smooths the way to explain all customs of Indians, that other European travellers find grotesque and abhorrent—according to their intrinsic meaning. He has not found idolatry in the veneration of symbols of those who can grasp the Infinite only through finite forms—much as we express notions through definite words of sound and form.

One hardly feels how he carries us on deeper and deeper into the mentality of India. At every step some new and startling point of view presents itself before the reader and when he thinks of putting the book down, for a little rest, a new chapter opens new wonderful sights of India. One of the towns appears before us with its bustling bazaars, its sweet smells of spices, its glaring sunlight and resplendent cupolas and shrines, the melodious sounds of music played on fine and delicate strings, the narrow lanes lined with innumerable booths, before which Muslim women

The Hindu Triad (*Trimurti*) in the Elephanta Caves. Side View.

covered with their burqas linger like ghosts. where—in short—the pulsation of everyday life awakens in us a queer longing to go to see, to hear, and to feel Indian life, as it has breathed for thousands of years, always the same and always new.

A wonderful panorama opens before us in this book. From Peshawar, where the truculent Afghan scowls at the fertile plains of Hindustan, to the land of the five rivers we reach Lahore "richer than Shiraz and

Ispahan, "then the towns of the Rajput nobles who, in their baronial eagle-nests, jealously guard their honour and caste from times immemorial, while the architectural wonders of Mount Abu, the Pushkar lake, Udaipur, Ajmere, Jaipur, lie unveiled at our feet. Unveiled and resuscitated to life, not mere marble, stone and shunam—no, this would be the task of photography—but alive with the explanation of the creeds, legends, poetry, gay or sad, of the people who have built up these towns, enjoyed and suffered in them. We see the pious Jainas preserving "life" and venerating its unity through all the creatures of the earth, we see the law-abiding Sikhs reading their Granth-Sahib with the devotion of a monk and defending it with the valour of heroes, we see the Panjabi Muslims conquering and proselytizing and unconsciously absorbing much of the warmth, softness and intellectuality of the clime of India.

Again we lower the book into our lap and our eyes stare at the vast horizon projected before us. Kashmir shawls, ivory figures carved with a minute skill and superior taste, woven stuffs, and leather wares, cotton cloths, known throughout the world, are rolled to our feet. What a richness of human skill and industry! There is a grandeur in the smallest things if art inspires its maker and Indian industry is art unimpeached by the warning note of machinery, it gave free play to fancy and created the most precious trinkets for every-day use.

Each invader bowed his haughty head to the spirit of India. The Muslims, fierce and self in fight, humbly stooped down to pick up the fallen columns of Hindu temples and built their mosques from the very stones on which the exuberant Hindu imagination has hewn its legendary gods and their faithful satellites.

Fatehpur Sikri, the town of a dream, immortalizes Akbar, the greatest of Moghuls, whose heart listened to the whispers of Mother India: a true believer cannot worship God but in all religions. Agra, with the most beautiful building of the world, the Taj, this tear-drop frozen to marble stands out with the noblest monument to conjugal fidelity. Delhi with its fort and historic traditions, Lucknow with its decadent luxury, all pass review before our amazed eyes. "So much art, poetry and beauty kneaded out of the sweat and blood of a people can be seen nowhere in the world, not excepting Italy!" Then Benares appears on the plane with its impressive river-view and the burning ghats fraught with legendary memories of old give opportunity to instruct the reader in Indian literature and religion after which the author finishes his first volume with his visit to Sabarmati, to the Saint of India and the world. In all the turmoil of life today one figure stands out contrasting with the fragility of body the strength of his soul. The palaces, the fabulous riches, even the dead relics of art dwarf beside the mighty personality of the Mahatma. Our author

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

steps in the Ashram with a devotion he is unable to describe. He witnessed the physical cleanliness and moral purity of Sabarmati, he was thrilled by the enthusiasm and endurance with which the disciples work for a better future of India and he felt how the irresistible force radiating out of this focus of true nationality will conquer the whole of India. The time he spent at this earnest training ground of young India remained indelible in his memory and the description he gives of it deeply touches the reader.

The second volume leads us down the rich Gangetic plain to Calcutta, the emporium of India, where the manifoldedness of the country presents a new aspect: Bengal is the granary of the world. The mighty metropolis teems with busy people, thousands of vehicles convey the products of the plains and attract the greedy adventurer. Rice, jute, coal, iron, cotton, silk and hides almost stifle the atmosphere—and still even in this air saturated with the chinking of gold, the spirituality of India has heaved a sigh which has overcome the avarice of the trader. The Brahma-Samaj with its noble founders Rammohun Roy and the Tagores sprang up in the steaming soil of Bengal. The family of Tagore, the Maharshi and the Poet represent philisophic literature transcending the frontiers of India and reaching the farthest nooks of the world. Our author visited Santiniketan with the intention to stay there for some time but he left the place with some disappointment. The pushing force and sincere simplicity he found at Sabarmati, he missed at the "abode of peace."

Central and South India offers ample opportunity to the author to expatiate on problems which have attracted the curiosity of Europe and on which so many false notions have been formed. The fakirs and their mysterious powers are analysed here in a scientific way, the chariot of Jagannath and the syncretism of pagan rites with Hinduism are expounded in connection with the thousand shrines of Puri and Konarak. While the train carries us through the endless plains he throws a light on the mutiny showing both sides of the medal and paying a tribute to those who heroically fell in the defence of what they thought their birthright.

Old India, as it was before this fatal clash, is best represented in the native States, most of which Baktay also visited and presented before us, with all their splendour and all their romance. The Deccan, with the relics of Muslim empires, the phantastic rocks of Golconda which remind us of the travels of Sindbad into the valley of diamonds, the Ellora and Ajanta caves with the wonders they enshrine in their hand-hewn cells and temples, all appear in plastic description. The chapters on Indian art, painting and sculpture, the instructive digressions on the Indian theatre, old and new, on Indian music, exhale the thrill of the artist who wants to hear and to feel with the senses of the enraptured connoisseur and not as an indifferent or even biassed onlooker.

The description of the mighty temples of South India, the Dravidian culture, its origin and rôle in India, is followed by objective remarks why Christianity had so little practical influence on the Indian mind, and the book closes with the wonder island of Ceylon, where we take leave with a heavy heart from a continent so unique in its manifold riches in the present and the past. In his farewell words Baktay holds review of his experiences in the Indian world of matter and spirit. "India is the huge furnace of spirituality. She has gathered for thousands of years into one focus all that is beautiful, great and lofty which Man has thought of. Today the fight between East and West is still going on. West supports its claim with authority, supremacy and might, India has awoke to the imperishable powers of her primeval cognition: to the truth of the Spirit. The fight must end in a great reconciliation."

"I have witnessed many disquieting, antipathetic and even repulsive impressions in India" he writes, "but no sooner did I observe the complexity of impressions from an adequate distance, these unfavourable impressions faded and disappeared in the brilliancy of the beauty and truth experienced. The embraces of love and sympathy are wiser and truer than the methods of analysing criticism. I have lived in the complex of the great human facts of India and in its organic reality and in this complexity the external faults, the annoying defects dwindled into insignificance. The loftiest cathedral loses the essential beauty

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

radiant from its general aspect when we scrutinize—magnifying glass in hand—the small chinks in the stones of its walls. Which is the real, the true picture? That which presents the living reality of the whole or that which photographs every spot in the details? The synthetic view comprises every element, to present us the living entirety, the analysing criticism dissects the edifice into the thousands of its bricks and snaringly points to this huge heap of stones.

"I wanted to show India not as foreign eyes view her but as she appears in the light of her own goals and ideals."

These are the closing words of our author, which ring with the sincerity of his deep affection for Mother India.

And with all the merits of this book it has a great drawback: it is written in Hungarian and consequently closed to the great reading public of the world. A drawback, however, which I hope, a clever publisher can, with an adequate English translation, easily eliminate.

Budapest, 1934.

TAGORE'S VISIT TO CEYLON

By D. B. DHANAPALA

RABINDRANATH Tagore's recent visit to Ceylon with a number of Santiniketan students was a veritable eye-opener to the Ceylonese.

I met him on board the "Inchanga". I shall never forget that happy sight. In a sheen of orange light there he sat in his cabin—a picture of poetic delight. "I am not a politician; I do not want to reform the world," he said to us—newspapermen.

He smiled. He smiled more with his eyes than with his lips. But it was a tired smile—really like a prayer.

"With politics I am not concerned. My mission is of spiritual delights, of art and beauty far and wide."

An anxious request that he would say what Ceylon's contribution was to Indian culture was politely evaded.

"I do not know sufficiently of your culture, but I do hope you have a contribution to make to Indian culture....

"You are really Indians....We want you to come to us and share our heritage."

We got into a motor-boat to come ashore. A lantern was dimly burning. He sat with his eyes half-closed. He was dressed in a buff-coloured gown of sorts. I sat beside him longing to put yet another question. But it seemed a crime to spoil that unforgettable picture.

A bargee cried to his helpmate somewhere in the distance. Twinkling points of fire moved like reflections in the harbour like so many struggling worms.

And a poet was sitting inside this boat, with a lantern dimly burning—come with a message of culture from a mother to her daughter.

I felt I was assisting in a mystic ceremony of the spiritual regeneration of a nation.

The whole of Colombo was agog—nay, the whole island.

The Poet had come to Ceylon many a time. But this was the first time he landed with a kind of gist or summary of Indian culture—with a special mission to give the people of Ceylon, some idea of the culture that Santineketan represented.

For, with him came the band of his students who gave performances of *Shap-Mochan* in which all modern tendencies in Indian culture seemed to be boiled down into one glorious extravagance entirely executed in song and dance and rhythm.

The first performance of the drama was memorable. Every seat in the hall was booked days previously. Large numbers were disappointed, because owing to the smallness of the auditorium they could not get admission.

Since the unknown artist put the last finishing touches to the frescoes on the face of the rock at Sigiriya, nothing greater in the way of Oriental art has been achieved in the island than that created by the Tagore players in the presentation of *Shap-Mochan* that Saturday night. This is not said through love of hyperbole or any desire for grandiloquent expression. The house was crowded to its fullest capacity from an early hour. In hushed admiration the audience witnessed the performance as though a revelation were taking place before their eyes. And revelation it was, for, perhaps ninety per cent of those present had not imagined that Indian music could satisfy a cultivated mind.

Tagore reading one of his lectures at the Rotary Club lunch in Colombo during his visit

Comparison is the core of criticism. And no criticism is possible of the exquisite performance of that unforgettable evening, for never within living memory has anything similar to it been seen to afford comparison with, in Ceylon.

Once upon a time when the moon was very young, according to legend, there came by chance to Lanka (Ceylon) a Bengali called Vijaya to conquer the primitive tribe that inhabited this island in those days of pre-history.

After the lapse of almost twenty five centuries another Bengali had come, not by chance, with another band of loyal followers for the cultural conquest of what by contrast may be considered the primitive Ceylonese in the way of the highest possession of man—art and beauty and music.

At the first parting of the curtain the great cultural crusader, dressed in a saffron-coloured *dhoti* and *kurta*, with a scarf thrown about the shoulders, Bengali-wise, stood slightly stooping, with his finger tips touching in salutation. He was garlanded by Miss Nalini Wijewardene who paid homage to the greatness of this veteran artist by kneeling at his feet—thus composing a graceful picture of youth's obeissance to aged wisdom and the regenerator of a whole nation.

In a little speech full of endearing simplicity the Poet said :

"With some trepidation of heart I stand before you this evening, for this is the first time I meet you from the Stage. Some of you who do not know me are apt to exaggerate my merit and go on spreading an absurd rumour that I am a philosopher. I know that you will find it extremely difficult to reconcile your idea of a philosopher with that of a young aged man who revels in music and dancing. But I ask you to begin this evening with some confidence in my power to please you. But for that I ask you to meet me half-way and exercise your will to be pleased. It is needless for me to say that the first important step towards perfect enjoyment is a mutual co-operation between the artist and those who are ready to enjoy."

When the first scene opened it was a veritable feast of dreams and longings, translated into colour, sound and rhythm.

Against an orange background, with a border of peacock blue in between as a contrast, sat Indra's Court. The court's dancers, each in a different costume of shadowy, elusive gold, spotted green, crimson of the blood and creamy white, danced scattering flowers to the rhythm of a haunting melody that seemed to carry the audience away from the world of men.

The show was a perfectly woven pattern of marvellously matched colours. Bathed in flooded light the supple bodies of Bengali damsels moved serenely to rhythm. The pageant that moved across the stage flitted some time, with the swift gaiety of running water. At other times it lingered with the mourning of winds, the sadness of hearts and the suppressed ecstasies of great moments.

Each scene seemed a bringing to birth in a dream of beauty the frescoes of Ajanta and Bagh with a vividness that almost intoxicated the senses.

Through it all, Rabindranath Tagore himself sat on a side of the stage nearest the audience looking on the great pageant of music, dance, rhythm, fragrance, flowers and flames, like an artist looking at a picture of his own creation—the spiritual offering of a life of poetic cultural work.

Kathakali, Manipuri, Indo-Chinese, ancient Classical Indian dancing and the banal Nautch dancing of modern India—all these had been laid under contribution to evolve something absolutely new, neither Kathakali nor Manipuri nor Indo-Chinese nor classical nor vulgarly modern. And this something new is Tagore's creation original, exquisite, peaceful.

What Tagore has done for the dance, he has done to the music as well.

Classicism and modernism combined together to form something new—a perfect welding of music and emotion, sense and sound.

The whole setting was a lavish simplicity—Greek in design, Javanese in execution.

Tagore has borrowed largely, borrowed beautifully, borrowed extravagantly from all parts of India and the Orient. And the harmonizing of all these precious gleanings into one artistic

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

whole was the work of a master-artist with the vision of a poetic prophet.

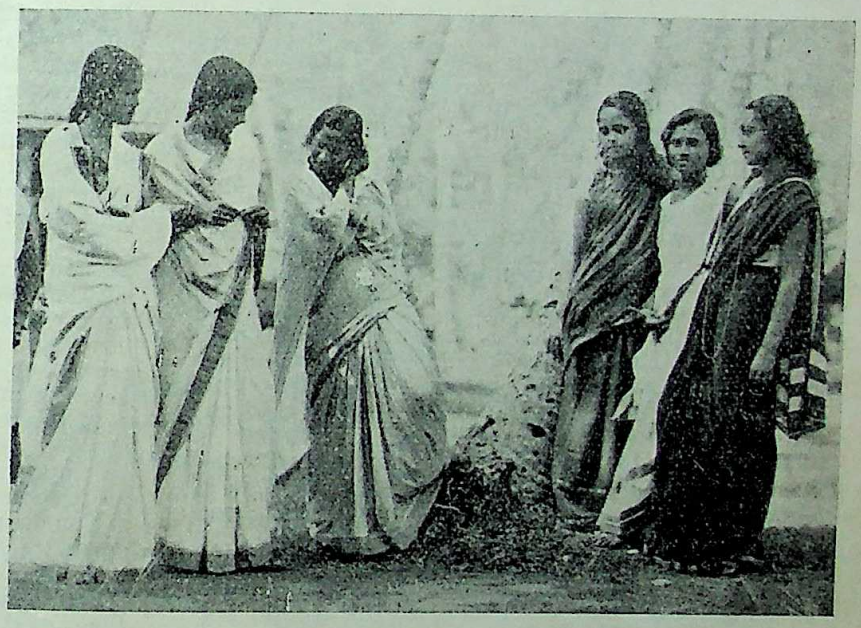
On that first performance the *Ceylon Daily News*, the Island's leading newspaper, wrote in the course of an editorial note headed "A Testament of Beauty":

"The warmth of the ovation accorded to the Tagore Players on Saturday on their first appearance in this country was a tribute to the beauty of their offering as well as a testimony that the artistic sensibility of our people is not yet dead or atrophied. The criticism is frequently made that the Ceylonese of today is an unworthy inheritor of the traditions of the race and unable to appreciate the ministrations of sound, colour and movement to the joy of life.

"It is unnecessary to recount the reasons why the arts suffered a decline in Ceylon. Except for a few scholars whose erudition has been devoted to the editing of works of ancient poets and philosophers, generations have passed without an outstanding exponent of a great art rising amongst us to re-awaken and re-fresh through his medium the slumbering spirit of the nation. The conclusion from this dearth of artistic genius that the people had lost all sense of beauty was pardonable. The response to the exquisite imagery and haunting melody of *Shap-Mochan* with its language of music and rhythm is, however, a proof that the people of Ceylon can appreciate the beautiful when they are brought face to face with it. The fact is that the Ceylonese had been starved of these things to such an extent that they became unfamiliar with them and were in danger of forgetting them. To Rabindranath Tagore we owe a debt for quickening the artistic conscience of the people as it has not been quickened within living memory. While the people of Ceylon accept gratefully and with humility the boon Tagore has given them, they may well ask themselves whether it is not their duty to do something more. It would be a poor compliment to the Poet to praise him but fail to be influenced by his example and his personality. Ceylon is very badly in need of a movement to inculcate a proper appreciation of Oriental art and music and it would be appropriate if she went to India, which has given her many gifts as mother to daughter, for guidance and help. Political advancement alone will not restore the self-respect of the people. If they are to lift up their heads without fear and take their place beside other Eastern nations that are challenging the attention of the world they must be able to show that they are capable of enduring achievements in the realm of the spirit. The magic touch of a supreme artist has brought out the latent forces of beauty and truth, long dormant in Bengal and the rest of India. We may look around in vain for him who is so to deliver us from the bondage of self-abasement. But against his coming we should strive to convey to the minds of the young and the receptive the value and beauty of music, dancing, poetry and colour which can convert human life into a sacrament. If the visit of Rabindranath Tagore and his party inspires us to begin such a task we shall honour the Poet much more than by mere praise. And in so doing Ceylon will honour herself."

The Sunday Edition of the *Ceylon Observer* was not less impressed, for its critic wrote :

"Against a plain, rose-coloured back-cloth, dispensing with superfluous accoutrements and trappings, in the way of Greek drama, the Santiniketan Players were disclosed at the parting of the curtains last night, grouped artistically in one corner of the stage, whilst the world-famous poet-producer sat on a colourful divan by the footlights following keenly and occasionally beating time. The Regal Theatre has rarely experienced such a stupendous attendance as last night when people had literally to fight for their seats on the unique occasion of the presentation of a poem-play by India's greatest poet of modern times. Tagore is the embodiment of all that is finest and loveliest in India's culture and truly is he fit to be the spiritual ambassador of his country to the world at large. It was indeed a great moment for the people of this country to be privileged to hear and see in person one of the outstanding figures of the age—one who has re-made his country and regained for it the respect and admiration that was her due."



Some of the students of Santiniketan who accompanied Tagore in Ceylon and took part in the play.
(Second from the right is a Ceylonese student)

After that first night's performance, the fame of the Tagore Players spread like a rumour all over the island. I know of people who travelled fifty, sixty miles to see them on stage.

Not only in Colombo, where *Shap-Mochan* was

played five times, but also in Galle, Matara, Kandy, Jaffna, the play was a great success. I have never known any play that evoked so much admiration and praise in Ceylon. Mr. D. R. Wijewardene,—the Ceylon Northcliffe—the Managing Director of the Associated Newspapers, which run six newspapers, both in English and in the veranculars, was so impressed by the Play that he opened the services of publicity which flooded the Island from end to end.

Before his arrival in Ceylon Tagore himself was diffident regarding the response to the visit. The organizers of the tour in Ceylon were pessimistic, too.

I well remember that untiring worker, Dr. S. A. Wickremesinghe, suggesting that the workers would have to go round the town, house to house, hawking the tickets, if need arose!

But the newspapers made the whole island Tagore-minded. People read Tagore; they talked Tagore; they longed to see Tagore and his players. "Going Santiniketan" became a magic phrase that expressed the idea of being artistic.

Not only was the play a success. The Art Show drew crowds.

Mr. Nandalal Bose, hitherto an unheard of name in Ceylon, leapt into the limelight and was featured in all the newspapers.

The retiring artist was induced by the *Ceylon Observer* to explain the tendencies in modern Bengal Art. His contribution was short and simple—but he left out nothing:

> "The new Art movement in India, inaugurated by Dr. Abanindra Nath Tagore, is only thirty years young. Here we have brought a small collection of paintings from Santiniketan, representative of this School. You will notice the stages through which the School has passed during her lifetime.
>
> Dr. Rabindranath Tagore, the giant-artist, who has produced about one thousand paintings in a short period of five years, has made the school take a step forward in her march towards the Unknown.
>
> We are marching towards the Unknown because it is only the present that exists for us and not the past or the future.
>
> We are Indian because we are trying to keep up the Indian spirit, although irrespective of style and technique, we welcome everything that has life, accept with regard all that those who come in touch with us have to offer.
>
> And it is for this reason that we do not attach much importance to technique and worship Life —the spirit of the living.
>
> Nature inspires us and the past. The past experiences of the world guide us.
>
> Here is the exhibition of our works, and they collectively speak all we have to say, because this is the language through which we are trying to speak.
>
> We have tried to express our joy because Art is the expression of Joy (ananda) of Life."

During the visit Tagore spoke frequently and on many subjects. Many were the occasions when the venerable Poet was made use of for personal propaganda and publicity purposes by aspiring politicians and shrewd tradesmen.

How much the Poet himself was pleased with what he achieved during his month's stay in Ceylon may be gauged from the message he sent to the *Ceylon Daily News* before his departure from the Island.

"On the eve of my departure from this beautiful land", he wrote, "I take the opportunity of offering my heartfelt thanks to the people for their very generous and warm welcome and hospitality offered to me and my students.

> "We have travelled from the extreme south to the farthest north and everywhere we have been greeted with enthusiastic welcome and untiring help that has done a great deal to lighten the strain of the continuous engagements, too arduous for our party who were not used to such a task. When I was about to take my voyage to Ceylon I expressed my confidence in my power to win the hearts and hospitality of the people in return for some of the best gifts that I had in readiness to offer them. My hope has been amply fulfilled, the credit for which is not mine alone and I gladly acknowledge that your own contribution to the success has been considerable. You came prepared to be pleased which I am sure is a trait of your hospitable nature and as a host you were eager to reward us with your recognition. In this you never disappointed us and I have most agreeably been impressed with the fact that you as a people are not given to carping criticism which usually accompanies the sneering supercilliousness born of an ignorance loudly trying to seem clever.
>
> You have the rare gift of friendliness which created a home atmosphere round us wherever we travelled in this island, for you easily banished the natural uncomfortableness of the unfamiliar by the sweet simplicity of your kindly spirit of service. From now the memory of the friends whom I have gained will make concretely real the vision of this country uniting it in the bond of love with my own."

Tagore's visit has left behind it a certain fragrance, an aroma that is subtle and sweet. In the island there is already a vague longing expressed and unexpressed. Whether this is merely superficial or lasting cannot be judged yet.

LITHUANIA'S AGE-LONG FIGHT FOR FREEDOM

By A. POSKA

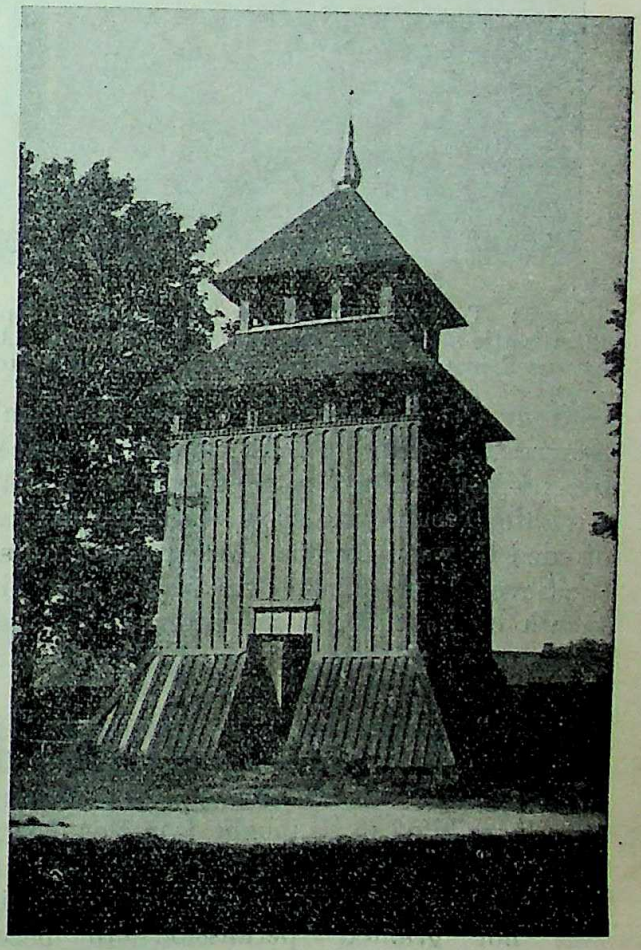
In spite of the fact that throughout the period from the 11th to the 15th centuries Christian Europe sent its best Cavaliers and Knights to fight pagan Lithuania—Lithuania expanded from Baltic to Black Sea, from Visla to Moscow. The Russians were very easily subdued, and Lithuanian kings entered into matrimonial relations with Russian principalities.

When constant fighting weakened Lithuanians in the West, they found allies in Russians and even Tartars; when peril menaced them from the East, Lithuanian policy was to become friendly with the crusaders. The Lithuanians frustrated the endless ambition of Chengiz Khan to conquer Europe, and constantly defeated and gave fatal blow to the Golden Horde, the Tartar kingdom in Europe.

With the expansion of Lithuanian territories the doors were widely opened for foreign influence. First we were confronted with the comparatively advanced West, and Lithuanians were absorbed into the East.

Lithuanian statute and the court language were Russian. Western ideas and notions bore their way through Latin, and Lithuanian language, as a language of minority, was neglected in the Lithuanian Empire.

In the beginning of the fifteenth century Poland was in great difficulties and sought union with pagan Lithuania. The Lithuanian king Yogaila married Polish Queen Yadviga and consequently both the States entered into personal union. With joint forces including Tartars and Russians Vytautas the Great gave the mortal blow to crusaders near Tannenberg from which they never recovered. After union with Poland Lithuanian kings baptized large number of people and officially Christianity became the State religion. But the people were for long centuries suspicious of the danger pending over them—for which they so bravely fought for centuries and continued to worship fire in thick forest until late seventeenth century. Slowly the grip of union was strengthened and Lithuania was annexed to Poland. Soon was introduced from Poland the system of vassalage and people were compelled to live in villages. The new type of aristocracy, though it contained some of Lithuanian blood, soon became more Polish than real Poles. The Churches also tyrannized



Ancient Lithuanian wooden Watch-tower

over the villages by heavy taxes and interfering in old customs. In the estates, churches and meetings the Polish language was used despising everything Lithuanian as pagan and working for its disappearance.

Lithuanians strongly disapproved of the union with Poland and the new system of slavery and rule, but tired of continuous wars and

Left: To those who fell for "Lithuanian Independence" an altar-monument of blood-stained stones collected from battle-fields in various parts of Lithuania. *Middle*: Statue "Free Lithuania" cast from shells and bullets etc. used in the Campaign. *Right*: An old Watch-tower

without a leader, cheated in Pollo-Lithuanian congresses, retired to their villages for peaceful life, no more taking any interest in State affairs. And the result was soon seen—Poland was divided between Austria, Germany and Russia.

Several times in the eighteenth and nineteenth centuries Poles and Lithuanians tried to shake off the Russian rule, but without any success.

The darkness of the most severe sway began with the Russian revenge for rebellions. The name of Lithuania was abolished, the language was prohibited to be taught, learnt or spoken. Lithuanian books (religious only at that time) were declared unlawful and to Lithuanians was not granted permission to become teachers, legal practitioners or Government servants in Lithuania proper. The catholic priests were in full sway, denouncing everything Lithuanian and preaching everything that was Polish but in Polish languge no one of the listeners understood anything.

It appeared as if the Lithuanian Nation had been completely washed out of the surface of the Earth, but the last live coal was yet burning, covered with thick ashes.

The last waves of passing romanticism of Europe inspired some of Lithuanian sons like Poska, Duonelaitis, Reza and others and they began to seek inspiration in Lithuania's past for its glory and riches of culture. Such names like Goethe, Lessing, Kant, Mickevitz and later linguists find real gold mines for their plots and studies. Brother Grims exposed celebrated collection of Lithuanian fairy tales. Adam Mickevitz, the greatest of the world's romanticists, sang "Litva ojczizna moja"—"Lithuania, my Fatherland, thou art like health, we realize your value only when we lose you." But he wrote in Polish, Kant in German, Dostoyevsky and Solovyov in Russian.

The national feeling of denationalized Lithuanians and those living abroad was roused and they became conscious that it was not a shame to be Lithuanian. But the nation drew the last breath in paws of the Russian bear. No one believed that the dying one was capable of new life.

But the new day was near and "Auszra" (Dawn) appeared in German part of Lithuania as a Lithuanian monthly calling Lithuanians to awake. Soon appeared several more papers and the Russian Empire had a hard

time to execute, exile and lock up thousands of Lithuanians for distributing illegal revolutionary literature. The Lithuanian book became a symbol of independent Lithuania and was procured and distributed with great difficulty under danger of death and exile. In this fight of the flea with the Elephant, the Russian Empire, Lithuanians lost hundreds of thousands of their best sons in jails, exiles, and executions. Many escaped to some more liberal countries like England, U.S.A., Brazil, S. Africa, Austalia, even now outnumbering the Lithuanian population in Lithuania proper.

Russia, completely defeated, proposed compromise, to print Lithuanian books in strongly Russian jargon, in Russian characters. But the Catholic Church, being afraid of orthodoxy, encouraged fight and boycotted Russian printed books.

Soon on the stage appeared poets Strazdas, Kudirka Maironis, whose songs blew out the last ashes and infuriated inextinguishable fire for Lithuanian resurrection.

The Russian Revolution in 1905 made the Czar grant some liberty and at this time the great Lithuanian National Congress in Vilnius demanded Lithuanian autonomy. But soon came defeat of the Russian Duma (Parliament) and terrible repressions darkened the sky of the great Utopia of Lithuanian freedom.

The bloody drama of the Great War was enacted in Lithuania and after four years hardly left a house standing or a family whose members did not perish from wounds or disease.

The Kultur-tragers of the civilized world occupied Lithuania and ruled it so cruelly that not the savagest tribes living under the Sun can parallel the sadism of the Superman. Before them all Czarist and Cossack cruelties were only "caresses." Terrorizing, robbing and killing innocent women and children just for sport, or using dead women's bodies for intercourse was the nimbus of occupants' triumph in Lithuania from 1915 to 1918.

But in 1918 the crushed ambition of the Superman took revenge in a most severe way in our unhappy land. Peace, and President Wilson declared the subjugated nation to be freed from the despotism of the occupants. A few Lithuanian veterans, women and war invalids gathered in the capital Vilnius on 16th February, 1918, and declared Lithuania independent.

The new Lithuania started a tragi-comical work to realize Lithuanian independence.

Germans got their own plans to put on Lithuanian throne one of their own princes.

The Germans were followed by waves of communists to occupy Lithuania and to spread world revolution into the West. First Lithuanian "troops" was of twelve to fourteen year old boys and girls, who began work between two fires, driving out Germans and guarding from communist invasion. After return of part of long-experienced war prisoners or refugees from Czarist armies defence was easier for the Lithuanians and soon Lithuania made peace terms with Soviet Russia. Seizing the opportunity, part of Russian and German monarchist army established themselves in Baltic States and began to rule, not recognizing local national governments. At the same time Poland, freed from Germans, started with the idea of building Empire to prevent to be united with Germany and Russia, and on the ground of past personal union to amalgamate also Luthuania and Latvia. Once more Lithuanians found themselves between two fires. Fighting all like one Lithuanians defeated Poles and signed a peace-treaty at Suvalkai where Poland acknowledged Lithuanian territory. Lithuania turned all its force against monarchists terrorizing the country and doubtless would have crushed them for ever, if the League of Nations had not interfered.

At the same time after a week of ratification Poland invaded Lithuania taking its capital Vilnius and a large part of Lithuanian territory. The central Polish Government denied responsibility of invasion—declaring that rebellious general Zeligonsky did it on his own account. To prevent new blood-shed the League of Nations and the International Tribunal at the Hague intervened declaring Lithuanian rights. Also the Central Polish Government promised to settle the question in a peaceful manner. But the Poles continued the invasion and Lord Curzon, Himans and other gentlemen from Geneva were busy to draw new lines of demarcation, neutral zones, etc.. The same fate attended also Klaipeda (Memel), the only sea-port of Lithuania. which was by Versailles Treaty separated from Germany as

Lithuanian to be incorporated in Lithuania. The sympathy of the League to Poland was known to Lithuanians. So the Lithuanian youth made same as Zeligonsky, but without consent of Central Lithuanian Government and drove away French troops and battle-ships.

But Vilnius, the old Lithuanian capital, and one-third of ethnographical Lithuania is yet under the tyranny of the Poles, who are trying to denationalize Lithuanians by not allowing Lithuanian schools, usage of Lithuanian language in Churches, etc.

Lithuania in protest for the last twelve years has not any communication with Poland, remaining in a state of war.

Soon after the War was over, the first Lithuanian Parliament in 1922 declared Lithuania a Democratic Republic, and a State of farmers where every government outlook will be from the point of view of farmers.

As everything was entirely destroyed, people were demoralized and robbed by endless requisitions,—the first steps of rebuilding were very difficult. The war disadvantage also gave new opportunity to rebuild the country on absolutely new modern lines—not villages but farms, new system of field division, agrarian reform, supplying ground only to those who cultivate themselves personally, etc. Modern hygienic and practical building rose in place of pre-War huts crowded in villages.

Not being able to compete with the grain-exporting countries, Government built national centres for preparing finished products instead of raw ones—butter, cheese, bacon, meat pastes, good bread, semi-finished flax, linseed oil, celluloid, ply-wood, dry fruits and confectionary in place of grain and timber exported in pre-War times.

Education was made compulsory. Higher schools and special schools teaching subjects like farming, agriculture, poultry, carpentry, applied arts, etc., are free to everyone and poor and talented students are sent to Europe at Government expense for acquiring complete education. In the University and the gymnasiums 40% students are allowed free and 25% are given scholarships.

In the whole system of education there is a tendency of selection and only fit and capable students are encouraged to higher studies and given full opportunity for research work.

Lithuanians being conscious of their situation and duties are continuing severe fight for their neglected rights. We decided to win our enslaved part of compatriots and old Vilnius not by sword, but by intellect.

We are conscious that we are not merely beggars to take everything from the treasury of culture without paying our own share to it. So we neglect civilization, but we are building culture,*—that is why Lithuania is different from other Baltic states.

* Civilization consists of things, of artifacts, of machines, of ways of earning a living; culture represents the organization of emotions; through cultural experiences we discover values and learn how to appraise our relation to the physical universe. Civilization is the embodiment of externals; culture is derived from the inner life.

—*Edward C. Lindeman*

THE CHARKHA AS A MACHINE

By MELLY ZOLLINGER (Zurich-Switzerland)
AND
W. LAKSHMANA RAO, M. A., D. Sc. (Tübingen)

The Beginnings of Charkha Research

FIFTEEN years ago Sjt. Maganlal Gandhi began to study the design of the types of spinning-wheels in use in the different parts of the country, with a view to the introduction of an improved type. About five years after Sjt. Maganlalji began, a prize was announced by Sjt. Ravishankar Jhaveri for the design of a spinning-wheel capable of producing an output three or four times that of an ordinary spinning-wheel. This gave a fillip to Charkha research; even though none of the designs submitted satisfied the conditions laid down. About this time, the All-India Spinners' Association established a Technical Branch at Sabarmati under the directorship of Sjt Maganlalji, to which a school for the study of Charkha was attached. This marks the first step in the establishment of a research laboratory devoted to the study of Khadi problems. Unfortunately Sjt. Maganlalji did not live long enough to see the fruition of his labours. His death was an irreparable loss to the Khadi movement and the scientific side of the movement suffered a temporary set-back. But thanks to the labours of a gallant band of workers in the various provinces of the country—

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Satish Chandra Das-Gupta in Bengal, Lakshmidas Purshotamdas in Bardoli, and Keshavbai Gandhi and Prabhudasbai Gandhi in Sabarmati—the research outlook is fast being rehabilitated.

Need for Further Research

Charkhas designed and made by the technical branch at Sabarmati and Bardoli are largely in use in Gujerat and have proved very efficient. It required years of patient work to produce this improved type of spinning-wheel. Yet the time has not come when we can cry halt. Even though the Sabarmati-type is by far the best spinning-wheel available to spinners, there are a number of problems connected with the Charkha and with spinning that still await solution. The time and labour involved in winding the yarn on the spindle, the consequent falling off of the spinning speed, the necessity of using fresh spindles, the time taken in changing slivers—these drawbacks are inherent in the charkha, which could only be overcome if an entirely new design is adopted wherein these operations could be performed automatically.

There are, however, other defects in the present-day type of the charkha—such as, the slippage and creeping effects, the frequent adjustment required to keep the 'mala' (the string passing over the wheel and the spindle) neither too tight nor too slack, the all too frequent snapping of the 'mala' and the trouble and time involved in preparing fresh 'malas', the fatigue produced after a few hours of continuous spinning, the slow spinning speed and the small output realized on the charkha—that can be certainly overcome, or at least minimized to a great extent, through a better understanding of the principles underlying Charkha Sastra and by the elimination of faulty spinninng technique. Patient research is required to correct these defects and the measure in which we succeed in our efforts to this end is the measure in which we emanicipate the poverty of the dumb millions.

The following is a brief resumé of the problems that confront us in this connection and the experimental work done by us to get a better orientation of these.

Efficiency of the Charkha

The out-put of a charkha and its capacity for high-speed spinning depend directly (not taking into account the skill of the individual spinner) upon the number of revolutions made by the spindle for every complete turn of the wheel (driver). The greater the number of spindle-revolutions per turn of the wheel, the greater the speed with which a spinner can operate. This is a very important factor and the low speeds of the spinners in these parts, is mainly due to the defective design of the charkha, which does not allow a greater spindle-speed to be developed.

The number of revolutions made actually by the spindle is much less than that obtained by calculation. Thus the actual number of spindle-revolutions per turn of the big wheel in the Pattusali charkha has been found by us to be (the average of a number of counts) 172. The discrepancy of 52 revolutions, or 27 per cent represents a loss in actual performance. This means that when we spin on this charkha, we do not get full advantage of all the energy used by us, but that we get an output equal to only 77 per cent of the energy, the rest being lost or wasted. The accompanying table gives the number of spindle-revolutions per turn of the big wheel and the efficiencies in this respect of the different types of charkhas in use in Andhra.

Table 1

Type of Charkha	Diam. of Wheel.	Diam. of Spindle.	Calculated Revolutions Number.	Actual No. of Revls.	Loss of Revls.	% Loss.
Pattusali (40-1000)	28″	1/8″	224	172	52	23
Velama (15-40's)	26″	3/4″	104	83	21	20
Berhampur (10-20's)	25″	1/4″	100	82	18	18
Nellore (6-15's)	24″	1/4″	96	72	24	25

"Slippage"

The chief factor in the loss in the spindle-revolutions is to be referred to what is known as "slippage" or "slip." When one wheel drives another, a loss in the revolutions of the driven wheel will always occur. This slippage will be a minimum when the driver and the driven are properly aligned. It is not possible to explain how this slippage occurs during transmission. In the charkha it might be that the 'mala' or (the rope passing over the big-wheel and the spindle-pulley) itself does not travel over the big wheel with the same speed as the wheel itself. Whatever be the cause of this slippage, we have to investigate how the various factors in charkha design and spinning technique effect this loss and how best we can minimize this. It is hoped that these investigations would lead to improvements in the spinning-wheel, so as to increase its efficiency, without materially altering its simple design.

* This charkha has been designed and made for us for the purposes of research by Sjt. D. L. N. Sastry, B. A., B.Sc. (Lond), Managing Director, Andhra Engineering Co. Ltd., Vizagapatam.

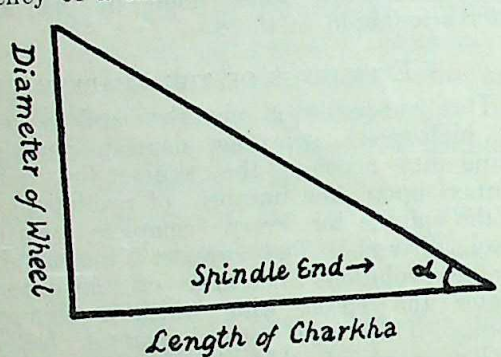
The Length of the Charkha

It is not usually recognized that the length of the charkha, or to put it more correctly, the ratio of the length of the charka to the diameter of its wheel plays a very important part in determining the slippage and in consequence the efficiency of a charkha.



From the above diagram it is clear that the 'mala' when passing over the wheel and the spindle-pulley makes an angle at the spindle end; and also that the value of this angle is dependent on the ratio of the length of the charkha to the diameter of the wheel (*i. e.*, this ratio is equal to the cotangent of the angle). From this it would follow that where the angle is greater, the mala grips a smaller surface of the spindle-pulley than when the angle is smaller, when it would grip greater part of the surface of the spindle-pulley. When the angle is small and the mala grips a greater surface of the pulley, there will be a minimum tendency for the mala to slip and for a minimum loss in transmission. In the following table we give the value of the angle and the dimensions of the different types of charkhas (the last column represents the efficiency per cent, as determined in Table 1):

TABLE 2

Type of Charkha	Diam. of Wheel	Length of Charkha	Angle made by the Mala	Length Dia-meter	Effi-ciency
	(D)	(L)	(d)	(cot d)	
Pattusali	28″	33″	42°	1.2	77%
Velama	26″	33″	39°	1.3	80%
Berhampur	25″	36″	37°	1.4	82%
Nellore	24″	26″	43°	1.1	75%
Sabarmati-Bamboo.	28″	39″	37°	1.4	85%
"Andhra"	30″	45″	35°	1.5	87%

It will be seen at once how important the dimensions of a charkha are in determining its efficiency. In the Pattusali charkha, which is exclusively used by the high count spinners, and which is considered to be the best type of the country-made charkhas, the wheel is larger than in any other, yet owing to the proportionately smaller length, the angle made by the 'mala' is larger and the slippage greater than in any other charkha. In the Sabarmati and Andhra types, the slippage is minimum, because the length has been made equal to one-and-half times the diameter of the wheel with the result that the loss due to slip has been reduced to a minimum. We cannot, for obvious reasons, increase the length of the charkha beyond a limit which is determined by convenience of the spinner. For all practical purposes, a length equal to 1½ times the diameter of the wheel and a wheel of 28 inches and a length of 42 inches would be very satisfactory for high count as well as for high-speed spinning.

Table 3 represents the results of another series of experiments, which also point to the above conclusions.

TABLE 3

(Type of Charkha: "Andhra." Calculated No. of Revls: 157)

Thickness of Mala (inches)	Spinning Speed	Angle=35° Tension of Mala (grams)	No. of Revolu-sions	Angle=42° Tension of Mala (grams)	No. of Revolu-tions
1/32″	Slow	115	141	85	132
	Usual	115	Loss due	95	Loss due
	Rapid	115	to Slip=10%	115	to Slip =16%
3/64″	Slow	130	134	110	128
	Usual	125	Loss due	110	Loss due
	Rapid	130	to Slip=13.3%	90	to Slip =18%
1/16″	Slow	200	116	180	115
	Usual	185	Loss due	150	Loss due
	Rapid	145	to Slip=26%	150	to Slip =27%

Thickness of Mala

The efficiency of a charkha depends also upon the thickness of the mala used. There is no uniformity among spinners with regard to the mala-thickness. The Pattusali spinners use very fine malas, whereas the medium count and coarse count spinners do not observe any definite rule at all. The Pattusalis, when questioned why they use only fine malas, are unable to give any reason at all, except that of custom. To get a more definite knowledge about the influence of mala-thickness on slip, a few experiments were devised by us, the results of some of which have been included in Table 3. The results are not very conclusive and require more experimental work: it is however more than likely that thinner malas improve the efficiency than thicker ones. (The usual thickness of the Pattusali mala is 3/64″, that used by other spinners is 1/16″.) It is also very probable that very thin malas (thinner than 1/32″) would not be able to drive the spindle at all, owing to the very small surface of contact between the mala and the spindle. It would be interesting to know the limiting values of mala-thickness.

The results also indicate that thicker malas exert a greater tension on the spindle and require greater energy to bring the spindle in motion than thinner ones.

Charkha and Motive-Power

To find whether one type of charkha runs more smoothly than another, or whether one

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

of bearings are better than another set, it would be necessary to find out the energy required to spin on charkhas under these different sets of conditions, and to compare the energy required, the charkha or bearing requiring the least energy being the more efficient. This has a very important value in charkha mechanics, because for spinning, we have to depend entirely on the power we can exert with our right arm. It is said that the maximum power that a person could exert is only equal to about 1/10 H. P. and that too for a few minutes (see *Khadi Economics* by Gregg. Ganesan, Madras). As our energy is so very limited, we must be in a position to use it with the greatest advantage and economy possible, and any knowledge that helps us to this end is of the utmost value to us.

The small amount of power required to spin on the charkha lies at the root of all Khadi economics. While protagonists of the spinning-wheel take their stand on the trifling amount of capital required to buy and maintain it and on the ease with which it can be worked by young and old alike, critics of the spinning-wheel point out to the monotony of spinning, which they allege, involves a wastage of time and labour, in return for a few pice—in short, that spinning is sweated labour. It is unfortunately true that a spinner has to work at least 8-12 hours a day to earn a few coppers and that a few hours of continuous spinning at full stretch induces fatigue, making it impossible for the spinner to work longer hours and earn more wages. We must not, however, be obsessed with the idea that this state of affairs is beyond improvement. A good charkha designed on scientific lines—a true axle, frictionless bearings, a light wheel, etc.—and a correct spinning technique would certainly eliminate a great amount of fatigue. This is amply proved by the astounding records in continuous spinning and in high-speed spinning set up by enthusiasts during the many exhibitions and competitions. One is forced to the conclusion that a greater appreciation of the principles of Charkha Sastra on the part of charkha manufacturers and on the part of spinners would very effectively minimize fatigue and make spinning more a pleasure than a task.

Weight of Spindle and Spinning Energy

It is often the case that spinners who ignore even the fundamental principles of mechanics are the worst sufferers from early fatigue. We shall instance one such case of early fatigue that has been studied by us.

Amateur spinners often find it trying to commence spinning owing to the frequent snapping of the yarn. But once they get fairly started at a good wheel, they find the 'going' so smooth that they are unwilling to stop even to remove the loaded spindle and replace it by a fresh spindle. They never considered that as their spindles get heavier (as spinning proceeds) it requires an increasing amount of energy on their part to turn the wheel. It is no wonder that they feel fatigued after three or four hours' continuous spinning. Their out-put falls gradually and at the end of this period they are thoroughly tired out; whereas, if they changed over to a fresh spindle in the middle of their spinning, they could not only have turned out greater amount of yarn, but could have spun for a longer time, without feeling fatigued. In this connection, it must be emphasized that the lever-type of handle fitted to the Sabarmati charkha is an immense improvement over the curved type that is common in the country-made charkhas. The lever-type very effectively eliminates fatigue and gives a great comfort to the spinner. (It is a good plan to fit these handles to the ordinary charkhas.)

Initial Torque due to Friction in a Charkha

In this connection some experiments were done by us to find out the initial torque due to friction with varying weight of spindle (*i. e.*, with different weights of cops on the spindle). The following table gives the results with the "Andhra" type of charkha, the length of the balanced lever-arm being one foot, diameter of wheel 30", length of charkha = 45", thickness of mala = 1/32".

Table 4

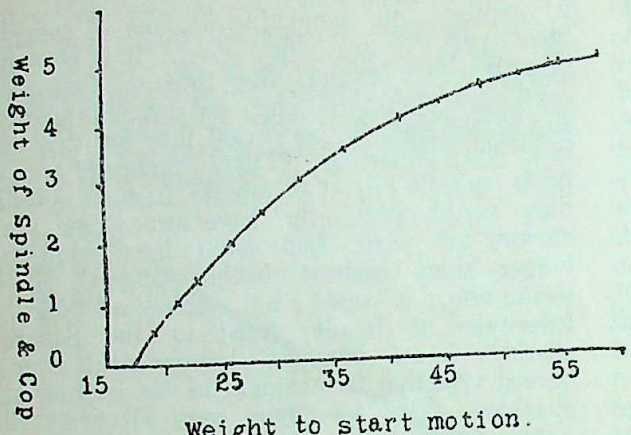
Wt. of Spindle (Tolas)	Wt. to start motion (Tolas)	Additional wt. for every 1/2 Tola weight of Spindle	Initial Torque in lb-ft.
Spindle alone	15 Tolas		0.025
0·5 Tola	19 „	1 Tola	0.475
1.0 „	21 „	2 „	0.525
1.5 „	23 „	2 „	0.575
2.0 „	26 „	3 „	0.650
2.5 „	29 „	3 „	0·725
3·0 „	32 „	3 „	0.800
3.5 „	36 „	4 „	0.900
4.0 „	41 „	5 „	1.025
4.5 „	48 „	7 „	1.200
5 „	58 „	10 „	1.450

The curve below represents the results obtained in columns (1) and (2) of the above table.

From the above experiments we can gather the following facts: (*i*) We must first overcome the initial torque due to friction. Then we must apply energy to keep the wheel in motion. As spinning is not a continuous operation, we are unable to take full advantage of any momentum gained by the wheel which we set in motion. The force required to operate a charkha with a 2-tola spindle, will therefore be considerably in excess of the force equal to a weight of 26 tolas, (*i.e.*, a force of 0·65 lbs.) required to overcome friction. We would not be far wrong if we assume the force to keep a charkha with a 2-tola spindle in motion, to be

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri



equivalent to 1 lb. (*ii*) From the data given in the above table, we can calculate the energy required to drive a charkha. This would be equivalent to about 0.008 H. P. to operate the charkha used in this experiment with a 2-tola spindle. It would be safe to assume that an energy of 1/100 H. P. would be required in spinning upon an ordinary charkha. (*iii*) The charkha in the above experiments was equipped with ball-bearings. In ordinary charkhas which are not equipped with any bearings, or at best with iron bushes, the initial torque to overcome friction and the energy required to spin would therefore be much in excess of that obtained for the above charkha.

Weight of Spindle-Cop and Tension of the Mala

It would also be interesting to know if the tension exerted by the mala on the spindle varies with the increased weight of the spindle-cop during the course of spinning. With this object in view a series of experiments was made, the results of one set (done on the experimental charkha) being given below in Table 5.

Table 5

Wt. of Spindle.	Tension of Mala.
Spindle only	9.2 Tolas
0 5 Tolas	8.0 ,,
1.0 ,,	7.4 ,,
1.5 ,,	7.0 ,,
2.0 ,,	6.6 ,,
2.5 ,,	6.0 ,,
3.0 ,,	5.7 ,,
3.5 ,,	5.4 ,,
4.0 ,,	5.0 ,,
4.5 ,,	4.3 ,,
5.0 ,,	3.8 ,,

The accompanying curve represents the relation between the weight of the spindle and the tension of the mala.

It will be seen that as the mass of the spindle increases, the tension decreases. This would partly explain why sometimes the spindle does not revolve when the wheel is rotated. As the mala exerts less and less tension, it is unable to transmit the motion of the wheel to the spindle. As a result of this, a great amount of loss due to slippage occurs.

The Practice of Spraying Yarn

Sjt. Maganlalji has written in his book that yarn, after it is hanked, should be sprayed with water and that such treatment improves the strength of yarn. The instructions issued by the A. I. S. A., to its members to spray their subscription yarn before sending it to headquarters, is apparently based on this. In the absence of definite information as to how many hours or days the yarn is to be kept in a wet condition, or the increase of strength resulting from such treatment, some of the members do not take the trouble of following the advice, while others spray their yarns for a few seconds and no more, while still some others keep their yarns in water overnight. There is thus no uniformity at all as to the procedure in this respect.

With a view to investigate the effects of spraying on the tensile properties of yarn, the following procedure was adopted by us.

Experimental Work

The experimental work done by us falls under two parts. The first part consisted in determining the count and uniformity of count and the tensile properties of the yarn samples. Each sample was divided into twelve smaller hanks. Two of the smaller hanks were kept as controls. Each of the remaining ten hanks were first thoroughly wetted and then kept in water for 1, 3, 6, 9, 12, 18, 24, 36, 48 and 60 hours respectively. They were then hung out dry in the shade. Afterwards they were again tested for variations in count and tensile properties. The material used for this part of the investigation consisted of 25 different grades of yarn, which included all the available grades in Pattusali yarn (in all 10 grades), all available grades in Velama yarn (in all 7 grades) and the medium grades in coarse yarn (8 grades).

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

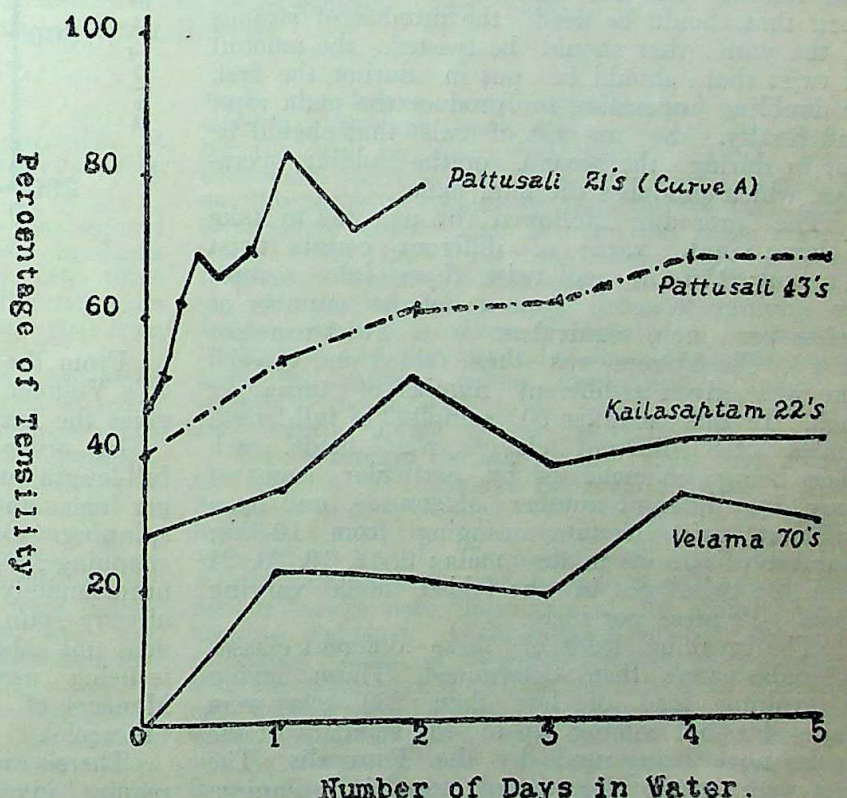
Digitized by Arya Samaj Foundation Chennai and eGangotri

The following is a summary of the results obtained by us in the first part of our experiment:
(1) Every sample tested by us showed an increase of tensile strength after being soaked and dried in water.
(2) The increase in strength was proportional to the duration of water absorption.
(3) The increase in tensile strength is not steady and gradual, but shows frequent rises and falls. The strength after treatment is, however, always greater than the initial strength.
(4) An increase in the evenness of count and uniformity of tensility always accompanies the increase in tensile strength.
(5) No appreciable change was noted in the count of yarn after absorption of water.

Extended Time of Soaking

After having demonstrated the advantage of water absorption, the period of soaking was increased, so that our procedure might have a definite bearing on the practice followed by weavers in this respect. Weavers, as a rule, wet their yarns before sizing them. In some localities, the yarn is kept soaked in the shallow water of the village tank; in other places, the yarn is soaked in earthen vessels containing water. There is no uniformity of practice among weavers in this respect. Weavers of Pattusali and Velama yarns (high count yarns) keep their yarns soaked overnight. Some fine-yarn weavers in the Berhampur area soak their yarns for one whole day. We have been told that Guntur weavers soak their yarns sometimes for a period of two whole days.

In the second part of our experiment, the duration of soaking was varied from one to five days so as to find out the effects of water absorption for periods much longer than 60 hours, the maximum period covered in the first part of this experiment. The material for the second part embraced only a few of the grades of the Pattusali and Velama yarns (*viz.*, Pattusali counts: 43 and 29; Velama counts: 29 and 70). Samples of coarse yarn (*viz.*, Kailasapatnum, count 12's) were also used for the purpose of comparison.
The results are represented here graphically.



Wear and Tear of 'Mala'

Spinners, both amateur and professional, are very familiar with the annoyance caused by the equipment wearing out of the 'mala' after only a few thousand yards of spinning and by the time and labour involved in preparing fresh malas. It costs spinners many a pang to be forced to use yarn of their own spinning for the purpose of making fresh malas and for the professional spinners this represents a source of loss. Again, a fresh mala requires adjustment every few minutes, owing to its stretching; this also causes hindrance to continuous spinning. (One has only to witness a spinning competition to realize how defective malas are a handicap to successful spinning.)

The malas used by the Pattusali spinners (these spinners take the greatest care in the preparation of the mala, as in fact in all their processes, which are based on traditional methods and to which they adhere, very rigidly adhere) require to be renewed, on an average, every 3 days roughly 10 times during the course of the month. In summer, a mala lasts for 4 days, whereas in winter only for 2 days. Again, during seasons when good prices are realized for yarn, the spinners work both day and night, and this naturally wears out the mala much earlier. The Pattusali women usually spin one tola yarn per day of about 8-10 hours. Thus, taking four days to be the maximum life of a mala, and calculating the yardage on the assumption of 40 count spinning, we find that the maximum yardage spun by the Pattusali mala to be equivalent to not more than 3,500 yards. In the case of coarse count spinning where a thicker mala is used the maximum life of a mala can be taken to be equivalent to spinning 5,000 yards.

About 100 yards of yarn (the Pattusalis are now getting into the habit of using mill-yarn

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

for their malas, these malas wearing out much earlier than the ones prepared from yarn of their own spinning) and about an hour's labour is required for the preparation of a mala. Thus the loss to spinner during the course of the month on this head would come to: the price of yarn that could be earned for spinning ten hours (approximately two annas); plus, the value of yarnu tilized in making ten malas (approximately 2 annas) a total of 4 annas.

The introduction of a mala having a longer life would undoubtedly be welcomed by the spinners as this would to a great extent minimize the labour and trouble involved. We have therefore devoted some time for finding out a process of making malas which would give a longer and more satisfactory wear.

Folding and Doubling Twist

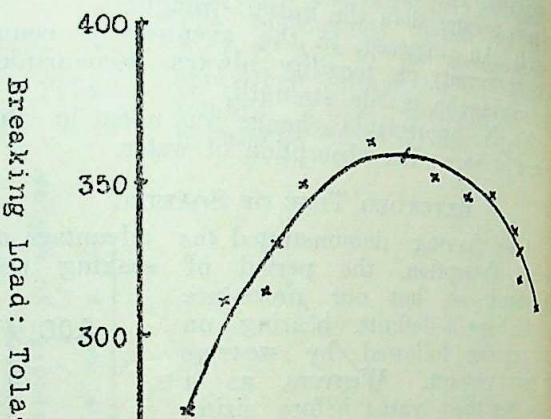
The problem of mala strength resolves itself into finding out the fineness or count of the yarn that should be used, the number of strands of the yarn that should be twisted, the amount of twist that should be put in during the first, or doubling operation to produce the mala rope, and finally, the amount of twist that should be put in during the second, or the folding operation, which produces the final mala.

The procedure followed by us was to take Velama single yarns of different counts (twist constant: 3.75-4.5) and twist them into a rope, by giving to each rope a definite number of twists per inch, equivalent to a Twist constant of 4·5. Each rope was then folded and to each one was given a different number of turns per inch. In this manner 50 samples of full-length malas of 8 different classes were made, each class being characterized by particular count of yarn, by different number of strands, and by a different twist (counts ranging from 10-35's; number of strands in the mala: 8, 12, 16, 20, 24 and 32; twist put in the folded mala varying from 1-12 turns per inch).

The breaking loads of these different classes of malas were then determined. Those having a breaking load of less than 250 tolas were rejected as not coming up to the standard of the malas now being used by the Pattusalis. The rest were tested for actual wear in spinning. Many of these were found to be satisfactory; specially those having 20, 24, and 32 strands with 5-10 turns per inch, and having breaking loads of 260-300 tolas, spinning from 8,000 to 12,000 yards before they snapped for the first time.

In the second part of the investigation, only malas having 32 strands of Velama 40's were used. A number of test-lengths were made, each with different number of twist-turns per inch. The breaking-loads of these test-lengths were found.

The relation between the twist and the breaking-load is represented graphically by the following curve.



From the curve we find that with a 32-ply, 40's Velama mala, a twist of 6-7 turns per inch gives the maximum strength.

In order to confirm these results, a few full-length malas were made with 6-7 twist-turns per inch and are now being used in actual spinning. One of these spun 15,000 yards before snapping; a third spun 20,000 yds; and was unfortunately lost by mistake; a fourth has already spun 40,000 yards and is still in use and does not show any signs of wear. (This mala is being used by Sjt. M. Kodandaramaswamy, Manager of the Fine Yarn Centre, A. I. S. A. Chicacole).

There are still a variety of problems that require investigation. Some of them are of scientific interest and some of them are of immediate practical importance. It is hoped that Indian University men would devote attention to tackling these in a scientific spirit and do their best to help the spinner and the weaver earn a living wage.

BOOK REVIEWS

BOOKS in the principal European and Indian languages are reviewed in THE MODERN REVIEW. But reviews of all books sent cannot be guaranteed. Newspapers, periodicals, school and college text-books, pamphlets, reprints of magazine articles, addresses, etc., are not noticed. The receipt of books received for review cannot be acknowledged, nor can any enquiries relating thereto answered. No criticism of book-reviews and notices is published.—Editor, THE MODERN REVIEW.

ENGLISH

THE NABOBS: *By T. G. P. Spear, Ph. D. (Cantab). Published by the Oxford University Press, London. Price 10s. 6d. net.*

This is an interesting and fully documented description of the social life of the English in India during the eighteenth century, divided into three periods: (*i*) from the beginning of English Settlements down to 1750, (*ii*) from 1750 to 1785 and (*iii*) from 1785 to the end of the century.

During the first period, the number of Englishmen in the different settlements was so small that a strong corporate life naturally developed. There were meals at the common table at which the Governor presided. The Company's servants in those days "believed in general fare washed down by copious draughts" of wine. Such hard drinking was partly responsible for the mortality which gave rise to the proverb "Two monsoons are the age of a man." Englishmen in those days generally lived in isolation from Indian society. What little Indianization there was, was only superficial, a thing of clothes and food and not a radical transformation of essential ideas."

During the next period when the Company's servants were changed from mere traders into masters of a vast empire, fortunes were more easily made. There was naturally more frequent contact with Indian society. Englishmen in India became so many 'Nabobs.' They acquired not only 'the wealth of Ind' but also the tastes and habits of the Indian country.

Indian dishes like 'palau' and 'cabob' which Thornton lovingly described towards the close of the eighteenth century, became more common. "By the time the fashion of *hookah* smoking had become firmly established" among Englishmen in this country. It extended even to the ladies. The highest compliment they could pay a man was to give him a pipe by smoking his *hookah*! Two other vices became more widespread among Englishmen in India during this period, were the adulation of the zenana and the addiction to the bottle. The acquisition of quick fortunes combined with the comparative paucity of English women, made the former practice possible and perhaps inevitable. European taste for a nautch disappeared by the end of the period, though in the army, enthusiasm for it continued a little longer. Throughout this period of transition from the old factory life to the more settled order, two opposite forces were at work, firstly there was "the cumulative effect of numbers in fostering a class spirit" among Englishmen and secondly "the orientalizing effect of contact with Indian society." Former influence ultimately triumphed and by the end of the century there was a growing contempt among Englishmen in India "of everything Indian as irrational, superstitious, barbaric and typical of an inferior civilization."

This ushered in the next phase when the racial gulf between the rulers and the ruled widened. "The frequency of grand dinners and reciprocal entertainments decreased, the formation of intimate friendship with Indians ceased....The higher posts of the Government were filled with appointments from England, its designs became more imperial and its attitude more haughty and aloof." As the author points out, "the days of corrupt officials, of ill-gotten fortunes, of oppression of ryots, of zenanas ..were also the days when Englishmen were interested in Indian culture, wrote Persian verses, and foregathered with Pandits, and Maulvis and Nawabs on terms of social equality and personal friendship. The tragedy of Cornwallis. ..was that in uprooting the acknowledged evils of corruption, he upset the social balance without which mutual understanding was impossible." Then followed "a period of social segregation and it was left for Rammohun Roy with his advocacy of western reforms and Bentinck with his greater sympathy towards India to lay the foundations of a new and better spirit."

Dr. Spear has given us an able and impartial description of social relations between Englishmen and Indians during the formative period of modern Indian history. He has not minced matters when he has referred to the rôle played by English ladies and missionaries. He finds a solution of present-day difficulties in better mutual understanding. The reviewer however has some misgivings. For, even if the social relations between the two

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

communities be as happy as possible, even if there is no trace of racial hauteur in the one, and of inferiority complex in the other, shall we have "rose trees and lotus flowers" instead of "stubborn cactuses of criticism and bitterness" ?

J. C. SINHA

PERSONALITIES IN PRESENT-DAY MUSIC: *By E. Krishna Iyer, B.A., B.L., Advocate, Madras (Jt. Secretary of the All-India Music Conference of 1927 and of the Music Academy of Madras, 1928-31): Rochouse & Sons, Esplanade, Madras, December 1933. Pp. 99, with a number of portraits. Price One Rupee only.*

This is quite an out-of-the-way book, which will interest all lovers of Indian music. It gives an appreciation together with short biographical sketches of some of the best known musicians (singers and players on the various instruments) and dancers of South India. In Northern India we do not know the name and fame of most of these experts in the Karnatak system of Hindu music, though occasionally in Calcutta, Benares or Lucknow we may have the privilege of listening to them and admiring their genius. Mr. Krishna Iyer has rendered a service of love to these eminent personalities of his part of our country, and we can form some idea of the *milieu* and manner in which the genius of these *Bhagavathars*—religious singers—and other exponents of vocal and instrumental music finds its expression An interesting section is on those South Indian *prima donnas* who are famed as the best exponents of classical Indian dancing, such as has been described in Sanskrit treatises like the *Abhinaya-darpana* and the *Bharata-Natya-Sastra*. The author has written with enthusiasm, and on the whole with its portraits and with the sidelight it throws on the music and dances of South India it will be a book to keep in all libraries of Indian music.

SUNITI KUMAR CHATTERJI

THE RASHTRAKUTAS AND THEIR TIMES: *By Anant Sadashiv Altekar, M. A., LL. B., D. Litt. (Poona Oriental Series No. 36).*

A book on this subject was reviewed in the May issue of this Journal, and regret was expressed that it was neither critical nor exhaustive. It is gratifying to note that within two months a new book appears on the field which is a scholarly production in every sense of the word.

Mr. Altekar has studied not only the political history and the system of administration of the Rashtrakutas but also the religious, social, economic, literary and educational conditions of the times. In dealing with these topics he has given clear evidence of a wide reading and a thoroughly critical judgment. His discussions on the origin and early history of the Rashtrakutas will, I hope, set at rest the controversies inspired by local or clannish patriotism. It is not possible or desirable to enumerate the various topics on which the author has thrown new light or made a critical study of all the relevant facts in a calm judicial spirit. We may refer, for instance, to his dissertation on pp. 139 *ff.* on the numerical figures attached to territorial divisions. Nor is it necessary to refer at length to some of his statements which appears to us to be open to criticism, *e.g.*, his statement that Govinda III compelled Dharmapala to recognize his suzerainty (p. 67). But we have no hesitation in saying that the book under review is the most critical and complete history of the Rashtrakutas known to us and that it reflects the greatest credit upon its author.

It is a matter of sincere regret that neither the printing nor the general get up of the book is at all commensurate with its intrinsic merits. The Rashtrakutas have at last got their historian, but not the publisher.

R. C. MAJUMDAR

NATURE'S FINER FORCES: *By Rama Prasad. Published by Theosophical Publishing House, Adyar, Madras. Pp. 275.*

As the name implies, the author seeks to interpret some of the mysterious powers that are there in nature and that modern science and philosophy have overlooked or have failed to understand. It is an occult science of the body in which Theosophy believes. The book abounds in occult phrases too: *e.g.*, 'auditory transparency' (p. 5), 'mental matter and 'spiritual matter', (p. 17), 'cardiac soul' (p. 210), etc. It professes to give us the deeper science of the body but quietly ignores the existence of modern physiology and anatomy. We are told of the differences of opinion that existed in the ancient world as to the centre of the system of the body (209), it being the navel according to some, the heart according to others. The difference, however, is considered "immaterial" (p. 210). And we are not even remotely asked to remember that modern physiology also may have to say something on the matter.

Adverse critics would probably think that such a book is only an amalgam of pseudo-science, pseudo-religion and sheer unintelligibility and that no useful purpose is served by translating worn-out Sanskrit texts into English and trying to pass them off as profound science. Though we would not entertain such uncharitable views about our author, we certainly regret the absence of any comparison of ancient theories with modern science. The book would have gained in value if occult truths could be tested and proved with the aid of modern science. With all the glamour of secret knowledge, the world cannot be persuaded to repudiate science so easily.

U. C. BHATTTCHARJEE

MY EXPERIENCE AS A LEGISLATOR. *By (Mrs.) S. Muthulakshmi Reddy, M. B. & C. M. Rs. 2.*

Dr. (Mrs.) S. Muthulakshmi Reddy, as is well-known, is a prominent physician and public worker and she was nominated a member, and elected Deputy President, of the Madras Legislative Council in 1926, continuing in that capacity till 1930. Her career in the Council is by itself a vindication of the rights of women, and she stands as a triumph for Indian Women's Association, which agitated for and secured suffrage in course of only a few years. In these pages she gives an account of her work in the Council, quoting liberally from her speeches to show the reforms she fought for and her achievement in the department of welfare of women and children. Her narrative extends from December 1926 to 1930 and is a record of practical reforms that she advocated for during the period. It is designed to serve as an incentive to other Indian women to enlist their services in the public cause, and there is a quiet note of satisfaction that is gained while doing one's duty. A little more personal touch would have added to the zest of the reading.

SHAKESPEARE AND THE PROBLEM OF EVIL. *M. V. N. Subba Rau, M. A. The East and West Publishing House, Rajahmundry.*

This was delivered as an Andhra University Extension lecture. Mr. Rau shows how Shakespeare viewed the problem of evil and he tries to find out the philosophy of life that formed the background for the view that he held. Shakespeare recognizes the place of suffering in the scheme of the world but he never makes the wicked prosper in the long run, and though "perfect justice" (as Dr. Johnson had pointed out) is generally absent from his plays, he never makes us lose faith in goodness and virtue. Dowden has discovered a *new* note of *reconciliation* in the last group of Shakespeare's plays; Mr. Rau contends that this note is not new, but it is a characteristic note, present in his earlier plays as well,—in this, however, Mr. Rau has been misled by the term *reconciliation* which Dowden has used in a wider, one would like to add, in a more spiritual, sense.

THE CALL OF THE SOUTHERN CROSS. *A. S. Wadia, M. A. J. M. Dent & Sons, Ltd., London & Toronto. 6s. net.*

Prof. A. S. Wadia has already made his mark in travel books and in this volume he has given his impressions of a four months' tour in Australia and New Zealand. He started on his voyage in October "saw" and "took" Australia and the two islands, north and south, that constitute the latter with undimmed enthusiasm. It is remarkable that the Professor finished his tour exactly as he had planned it—to the minute. He takes delight in praising men and nature alike, but in his most enthusiastic praises he never loses balance and never slips into a hyperbole, he is there to correct other people of such lapses. Mr. Wadia's commonsense seldom deserts him and it hampers his enthusiasm for the scenes he visits; he has an insight into human nature and the processes of civilization, and his evident enjoyment of the different phases of external nature is certain to be shared by the reader. The delightful pictures of Australian landscape and the map of the route traversed enhance the value of the book.

A WORLD IN DISTRESS: *the remedy as seen by the theosophist. A Ranganatha Mudaliar, B. A., B. L., M. L. C.*

This is Adyar pamphlet No. 171 in which the writer, taking up for his subject the whole of the world, confines himself to the distress in rural India; to think India a world by itself, and is it not an important—some would say, the most important—part of the world? It is, moreover, so true that India lives in her villages, not in her towns. The writer's analysis of the causes of India's suffering is lucid, and the exposition is delightful reading.

"The remedy" he prescribes is nothing but recognition of the principle of brotherhood in all scenes of life and acting up to it. A counsel of perfection! But the idealist is always open to this question, and Mr. Mudaliar's lecture (for this was delivered as a convention lecture) contains besides some useful statistics. It should be made welcome to the nationalist and widely circulated.

MY LIFE AS GERMAN AND JEW: *Jacob Wassermann. George Allen & Unwin Ltd., Museum Street, London.: 1934.*

The Jews constitute a problem in Europe. There may have been ever regarded with suspicion, distrust and contempt: the Nazi aggression of recent date is but an outbreak of deep-seated discontent, seething and rumbling underneath the surface of society. The problem is not for the Jews and the Europeans only, but it has its reflection in India as well, where provincialism and nationalism are in mutual conflict as well as grating against internationalism. The Bengalis are being ousted from the other provinces of India, the spirit of nationalism is silenced by the bogey of provincialism, and at last it is having its repercussions in Bengal as well, while mere humanity as such is generally given the go-by in our so-called enlightened circles watching their own interests argus-eyed. We thus come to the fundamental problem: how to root out the germs of hatred and racial bitterness from our midst—hatred that corrodes into the soul and chills all genial currents. Wassermann, the gifted novelist, could not cease to be a German because he was a Jew, nor to be a Jew because he was a German. The problem was so acute: he felt it deeply, thought deeply, and over his life, life in its freshness and with its early crises, there hung the shadow of this racial bitterness. He had to pay heavily all through his years in suffering and distress for having been born a Jew and for persistence to retain his nationality as German. He does not hint at the remedy for he has none, his mood is despair, and he merely presents the problem vividly and feelingly, but this sketching should draw us to the mystery and help in its solution. We are told his books have been proscribed in Germany, ever since the Nazis rose in power; and this autobiography (it is not a formal account of his life but the spiritual struggle of his life sketched out with a few bare but important incidents for its background), published in German in 1921, has been published in Great Britain only this year and after his death. The permanent interest of the book should be recognized and appreciated.

GOLAK, THE HERO: *By H. G. Bombay. The Times of India Press. 1932.*

The story of a hero is always refreshing reading, provided he is a real hero. Golaknath was such a one, born in Bengal in the early years of Victoria's reign;- influenced by the teaching of early Christian missionaries, he left house and home at what he considered to be the call of duty, at the bidding of a new-born faith. In a spirit of asceticism, he went so far as to shed off his surname. The result was that he sought for light and found it in Christianity. He settled down at Jullundur and his home there was a refuge for all in the Panjab who had been toiling in darkness. It is, in short, the story of spiritual adventure of a Bengali who stamped his personality on the lives and thoughts of many in the Panjab, the province of his adoption, and as such he deserves to be better known.

The writer, however, in his account of the early struggles of Golaknath, has failed to do justice to the different faiths; this is but natural and his bias may be overlooked. His ignorance of things in general may be proved from a single instance, his rendering of 'Golaknath' as 'lord of ten million cows.' The language is generally faulty, though the thoughts are easy to follow.

PRIYARANJAN SEN

EVOLUTION OF GITA: *By Kumudranjan Ray, M. A. Published by K. Ray, 17 Bhawani Dutt Lane, Calcutta. Price Rs. 4. Pp. 222.*

The title of this book is rather a misnomer. The

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

author has discussed various topics, such as the metaphysical and ethical ideas of the Gita, the date and philosophy of the Upanishads, the different systems of Hindu philosophy and their dates, *sutra* literature, Charaka Samhita, Buddhistic philosophy, Puranas, Tantras, the dates of Bhasa and of Kalidasa, etc. Many of his observations are thought-provoking and extremely interesting. The author has sometimes allowed his imagination to get the better of his reason. He has found descriptions of "ostrich-like flying reptiles, such as dinosaur, atlantasaur, etc., in the Vedas." But perhaps the "chronic brain disease" from which he suffers, as he himself says in the preface, is responsible for the discovery. The author has come to the conclusion that the Vedas were written long before 3000 B. C. The best chapter in the book is that which deals with the age of Kalidasa. The author has put forward very strong evidence to show that Kalidasa flourished during the time of the Sunga king Agnimitra, that is sometime about 150 B.C. This view was originally started by the late Principal S. Ray and also independently by Mr. Subramaniya. The arguments put forward by the author to indicate the chronological evolution of the Gita are not convincing. According to the author, Vyasa flourished in the 4th century B. C., and lived for more than 200 years—"for by Yoga power a man can live as long as he likes"!

THE TWELVE PRINCIPAL UPANISHADS *(Vols. I & II). By Dr. E. Roer. Theosophical Publishing House, Adyar, Madras.*

The Theosophical Publishing House, Adyar, Madras, has done a public service in printing the second edition of Dr. Roer's Upanishads. The text is in Devanagri and there is an English translation of the text, with notes also in English from the commentaries of Sankaracharya and the gloss of Ananda Giri. Prof. M. N. Dvivedi has written a very learned preface to the volumes. The first volume contains the Isa, the Kena, the Katha, the Prasna, the Mundaka, the Mandukya, the Taittiriya, the Aitereya, and the Svetasvatara Upanishads. The second volume is wholly devoted to the Brihada Aranyaka Upanishad. The printing is in very clear type and the edition has been very well executed. The book is one that can be confidently recommended to English readers of the Upanishads. The translation generally is true to text although exception may be taken to certain passages such as the rendering of *sloka* no. 23 of the second *valli* of the Kathopanishad where "*prabachanena*" has been translated as "by knowledge," "*Medhaya*" as "by standing," "*bahuna srutena*" as "by manifold science."

THE FUTURE OF THE THEOSOPHICAL SOCIETY—*Convention Lectures, 1930: By Annie Besant, B Sanjiva Rao, Earnest Wood, Hirendra Nath Datta, C. Jinarajadasa. Theosophical Publishing House, Adyar, Madras. Pp. 193, Price 1-8.*

This is a collection of five convention lectures delivered in Benares at the 55th Anniversary of the Theosophical Society in December, 1930. All the speakers have kept in view the question of the future of the Theosophical Society but they have approached the problem from different angles of vision. The lectures are all very instructive and may be read with pleasure and profit even by those who do not belong to the Faith.

TALKS ON THE PATH OF OCCULTISM—*Vols. I & II. By Annie Besant and the Rt. Rev. C. W. Leadbeater. Theosophical Publishing House, Adyar, Madras. Pp. 615.*

These two books record the talks by Bishop Leadbeater and Mrs. Annie Besant, on the three books namely the Voice of the Silence, At the Feet of the Master, and Light on the Path. The talks minus their occultism are thoroughly enjoyable and will appeal to the general reader. The occultism dominating the Theosophical Society is of such a type as to scare away rationally minded people. We are asked to believe that the Book of Dzyan has an "origin altogether anterior to this world" and that "it appears to be very highly magnetized for as soon as a man takes a page into his hand he sees passing before his eyes a vision of the events which it is intended to portray, while at the same time he seems to hear a sort of rhythmic description of them in his own language, so far as that language will convey the ideas involved. Its pages contain no words whatever—nothing but symbols." There are many gems of this type in the books.

G. Bose

SELF-RESTRAINT *Versus* SELF-INDULGENCE: *By M. K. Gandhi, Navajivan Press, Ahmedabad. Fourth edition. Re. 1. Pp. IX+162.*

It is curious that Mahatma Gandhi's book on the sexual question has run to the fourth edition, while his Autobiography, which is of far more abiding value, has run merely to the second edition. We need not, however, believe from this that people are beginning to take a healthy interest in the matter of sex. For that, they would rather turn to a physician or a psychologist than to Gandhiji. The fact is that when men fail to obtain the object of their desire, they like someone to tell them that gratification itself is bad; and that seems to be the chief reason why, of all his works, this book of Gandhiji on sex has become so popular with the public.

But for Gandhiji himself, the justification of self-restraint is entirely different. The present age hopes to make men happier by satisfying their physical hunger for happiness by an improved system of production and distribution. But Gandhiji holds that such a hope is, in the end, an illusion; and that man's true happiness lies in a limitation of the desire for pleasure so that his energies may be liberated for the service of Truth and God, which gives us a greater and a more permanent form of pleasure than is possible through the senses. From this point of view, his views on the sexual question are worthy of careful attention.

At times, however, Gandhiji seems to be actuated by a sheer love of chastity or purity for its own sake and not because it is a means to an end. That seems to us to be a form of idolatry; but Gandhiji answers the charge by stating that, in his own case, the means *are* the end. They are, in fact, identical.

Whether we agree with him or not, the book forms an important contribution to the understanding of the man who, like one crying in the wilderness, preaches the gospel of self-restraint in an age which pins its faith upon the fulfilment of the desires of man, so far as hunger and sex are concerned, as a means of rendering him happier in the end.

THE STATE OF THE SOVIET UNION : *By Joseph Stalin. Being Report on the Work of the Central Committee of the Communist Party of the Soviet Union. International Publishers, 381 Fourth Avenue, New York. Price 75 cents.*

This report on the work of the Central Committee to the 17th congress of the communist party of the Soviet Union is a concise but complete survey of the international situation and the internal and external position of the Soviet Union. As regards the international situation, it describes the movement of the economic crisis in capitalist countries, the growing acuteness of the political situation in capitalist countries, and the relations between the U. S. S. R. and the capitalist states. The second part of the report describes the Soviet Union's progress in industry and agriculture, the improvement in the material condition and culture of its toilers and in commodity circulation and transport. The third part is devoted to the problems of ideological-political leadership and those of organizational leadership. Being an authoritative publication the book will naturally be read by all who want authentic information relating to U. S. S. R. so far as it may be available.

As indications of material prosperity may be mentioned, (1) an increase in the national income from 35,000,000,000 rubles in 1930 to 50,000,000,000 rubles in 1933, and in view of the fact that the income of the capitalist elements, including concessionaires, at the present time represents less than one-half per cent, almost the whole of the national income is distributed among the workers, office employees and toiling peasantry, the co-operative societies and the state," and (2) "an increase in the average annual wages of industrial workers from 991 rubles in 1930 to 1519 rubles in 1933."

As indications of the cultural development of the country may be mentioned, (1) "the introduction throughout the U. S. S. R. of universal compulsory elementary education and an increase of literacy among the population from 67 per cent at the end of 1930 to 90 per cent at the end of 1933," (2) "an increase in the number attending schools of all grades from 14,358,000 in 1929 to 26,419,000 in 1933" (3) "an increase in the number of scientific research institutes from 400 units in 1929 to 840 units in 1933," and (4) "an increase in the circulation of newspapers from 12,500,000 in 1929 to 36,500,000 in 1933."

CHILD MARRIAGE : *The Indian Minotaur—an object-lesson from the past to the future. By Eleanor F. Rathbone, J. P., LL. D., M A., M. P. George Allen & Unwin Ltd., Museum Street, London. 2s. 6d. net.*

This book exposes the evils of child marriage, giving extracts from the Joshi Report and other sources, shows up the futility of the Sarda Act, and suggests future remedies. It should be read both by the opponents and the advocates or whitewashers of child-marriage. For the fact that child marriage still prevails both the people and the Government are to blame—no matter to what extent respectively. The remedies which the authoress suggests are mainly through women's part in the new constitution and through the education of public opinion by methods old and new.

LITERACY IN INDIA, *with statements giving population, the numbers of literate and English-knowing people, and their percentages in all the Provinces, Districts and States of India, according to the census of 1931. Prepared by the All-India Muslim Educational Conference, Aligarh.*

It is a handy and very useful publication.

SELECT CONSTITUTIONS OF THE WORLD : *Edited by B. Shiva Rao, M. A., Madras. Price Rs. 10. Royal 8vo., pp. 684.*

This bulky volume contains the constitutions of the following 19 countries, as also the Statute of Westminster : Irish Free State ; Kingdom of the Serbs, Croats and Slovenes ; Poland ; Austria ; Esthonia ; Czechoslovakia ; Germany ; U. S. S. R. ; Mexico ; Denmark ; Union of South Africa ; Australia ; France ; Switzerland ; Canada ; Belgium ; Norway ; Sweden ; United States of America. All editors and other journalists in India, all M. L. A.s, and members of the Council of State, all M. L. C.s, all leading Congressmen and Liberals and other publicists would be better equipped for their work if they possessed this valuable work.

It is true, as Mr. Shiva Rao says in the preface, that the value of the book would have been greatly enhanced by the addition of the constitutions of Turkey, Italy, Spain, Persia and Afghanistan But that would have involved some unavoidable delay. As it is, the book would be found very serviceable.

C

SAIVAISM, THE RELIGION OF THE ANCIENT BRITONS : *By D. Gopal Chetty Late Editor, "New Reformer," Madras. Published by the Author, Royapettah, Madras. Pp. 1-50. Price As. 8.*

The author of this booklet has made an attempt to draw the attention of the readers to the agreement (which he supposes to be very close) existing between Druidism, the religion of the inhabitants of Ancient Britain, and Saivaism by which he means the Saivaism of the South as prevalent among the Tamils. From this agreement he jumps to the conclusion that 'Druidism was Saivaism' (p. 47) and that the latter was the religion of the Ancient Britons who are identified with that branch of the Tamil race who after the submersion of the continent of Lemuria fled for life in crafts and reached the shores of Africa and from there went as far as the remote Erin (p. 3). It is supposed that these people took Saiva literature with them and preached the Saiva religion wherever they went. But it is to be noted that the points of agreement pertain mostly to traces of primitive religion including symbolic and phallic worship and mystic diagrams met with among people of different parts of the world. As a matter of fact, however, the arguments put forward do not appear to be sufficient to warrant the conclusion arrived at. But the booklet will be welcome to the general reader inasmuch as it brings home to him the principal characteristics of Druidism, a very old religion indeed.

CHINTAHARAN CHAKRAVARTI

THEORY AND PRACTICE OF COMMERCE : *By J. C. Mitra. Pp, 724. Price Rs. 4.*

This is, as Sir R. N. Mookerjee rightly calls it, an omnibus work dealing comprehensively with various aspects of commercial theory and organization, with particular reference to Indian conditions. The book is intended mainly for university students but those engaged in actual commerce have also a good deal to learn through its perusal, the only trouble is that Mr. Mitra has so much chaff mixed up with the real

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

grain that one is likely to get quite lost in the mass of unnecessary detail. Moreover, in a big volume like this, one might reasonably expect to meet with a critical study of the Indian Companies' Act, the absence of which considerably detracts from the merit of the publication.

FINANCE AND ECONOMICS. *The World Chaos and the Way Out Series: By Ernest Kirk. Pp. 142. Price Re. 1-8.*

This is rather an evangelist's approach to present-day financial problems than that of an economist. The author holds that the present world depression is not likely to be lifted so long as man's approach to the problems of life is not fundamentally modified in the light of understanding one's real self—"the inner Reality." This fanatical idea hardly needs any comment. We do not know why the author has wasted so much of his valuable time and energy on a thesis like this.

CURRENCY AND EXCHANGE: *By B. T. Thakur, M. A. Pp. 35 only.*

This is a monograph on Indian currency and exchange problems that loomed large with Britain's going off the gold standard in 1931. It embodies the views of Mr. Thakur as expressed in an address delivered by him to the Rangoon Rotary Club on the 20th October, 1931.

THE EAST INDIA COMPANY: *By J. D. S. Paul, M. A. (Yale), Ph. D. (London). Pp. 86. Price 3 Shillings.*

In a remarkably small compass Dr. Paul presents here a very good study of the early trading organization of the East India Company, from its inception to 1621, particularly with reference to the competition of the European nations for the markets of the East.

N. SANYAL

GOPAL KRISHNA GOKHALE: *His Life and Speeches by John. S. Hoyland, M. A. Builders of Modern India Series, Y. M. C. A. Publishing House, Calcutta. Price Re. 1-8.*

The portrait presented of Gokhale in this small volume of about 200 pages is admirable. By making plenty and skilful quotations from his speeches, the author makes the real Gokhale appear before his readers. Our impatient students of politics would do well in reading this volume to appreciate Gokhale's unique faculty of making interesting even the driest details of public business and how he came by it by laborious study of the *minutiæ* of finance and dry statistics; and what pure and undefiled zeal on behalf of the weak and oppressed, and what undying fire of love for India prompted him to do it. The author being a foreigner, the last chapter of the book on Gokhale's place in History is doubly interesting reading. The printing and get-up of the book is exc llent, and there is a good portrait of Gokhale. The usefulness of the book is increased by an index. At p. 138, one notices a small error. "Lord Ronaldshay tells us that six months *after* his Congress speech &c"—'after' should be 'before.'

J. M. DATTA

YOGA AND WESTERN PSYCHOLOGY: *a Comparison: By Geraldine Coster. Published by the Oxford University Press, London. Price 5s. net.*

This is, we think the first attempt made by a Western scholar to bring the Indian system of Yoga in relation with the Modern Psycho-analytic Therapy of the West. The Authoress' comparison of the analyser and the student of Yoga are real interesting and her English renderings of some of the Yoga sutras of Patanjali are accurate.

She has in the present volume dealt only with the externals of the subject as it were; let us hope she will in her next book go deeper and will make an attempt to bring out the more fundamental unity that exists between Yoga & Psycho-analysis.

SUHRIT CHANDRA MITRA

1. INDIA AND THE LEAGUE OF NATIONS *by Sir J. C. Coyajee, Kt., [Andhra University Series No. 5, Waltair].*

2. INDIA AND THE LEAGUE OF NATIONS *By Dr. V. S. Ram and B. N Sharma of the Lucknow University [Upper India Publishing House, Lucknow].*

These two works are the outcome of a laudable desire to interest educated India in the affairs and work of the League of Nations. Sir J. C. Coyajee writes from a somewhat inside knowledge of the working of the League as a member of the Indian Delegation to the League in 1931. He discusses some of the anomalies of the status of India as an original member of the League and the extent of India's international co-operation and commitment in respect of certain world problems like Disarmament, Economic Reconstruction, Public Health, and other Social and Humanitarian Work of the League. He brings to bear upon the treatment of these topics and, indeed, of his entire subject-matter all that mastery of details, clarity of expression, and objectivity of presentation for which Professor Coyajee is so well known. He has not, however, thought fit to handle some of the fundamental problems affecting the very foundations of the League and threatening its future, problems which may be ultimately traced the defection from the League of two such important and permanent members of the League Council as Japan and Germany, and of four out of seven Great Powers from its membership. The German view of the position which the League must answer in its best interests is that the League which was meant as a Society of Nations has in reality become a League of Victors who found in it a handy instrument for the enforcement and perpetuation of the kind of Peace contemplated by them, the Versailles Treaty. It began by excluding the Vanquished Powers who were "treated as moral pariahs." Their subsequent admission to the League did not alter the situation, the spirit of dualism in the League. It still breathes the spirit of discrimination in which it was originally conceived. Germany feels that the coalition of powers, never before known in world's history which brought about her collapse in the War now operates against her as a permanent factor in politics through the League on an extended scale. The joining of the League of neutrals has given to the Resolutions of the League the added prestige as expressions of world-opinion on the matters they decide. The neutrals have been involved in matters that did not concern them, and in responsibilities to which they were strangers, in various committees dealing with Mandated Territories, Minorities, and other matters of international control. This has adversely affected Germany's relations with the neutrals for no fault of her own. The long and short of the matter is that "Germany cannot and will not go back to Geneva as

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

long as the League continues an instrument for the maintenance of the Versailles Treaty," as stated by the German Minister, Goebbels. Indian nationalist opinion is also much exercised over the way in which the League's Scheme of Minority Protection so judiciously evolved by the collective statesmanship of the world has been given the go-by in India by an irresponsible Government who have thus destroyed the little lingering faith that her people still had in the League. Minorities in India are being overprotected, not protected to a fault, against the League's Minority treaties, in a manner that is subversive of the security of the State itself, under an autocratic government's scheme of 'Divide and Rule.' On the whole, the League is now passing through its greatest crisis which it can hardly survive if its most important work on Disarmament proves abortive like so many of its other adventures and endeavours.

The other book on the League by the learned editors Ram and Sharma is of less ambitious scope, but admirably fulfils the purpose for which it is intended. It gives a most readable account of the aims and activities of the League together with helpful constructive suggestions regarding its reform and future work. It should be widely used as a text-book in the High Schools and Colleges, though it has s much wider appeal. The question of the publication is fine alike to its matter, so judiciously selected, and the manner of its presentation so lucid and logical.

RADHA KUMUD MOOKERJI

BENGALI

SRIMAD BHAGAVAD GITA : *By Pandit Rajendranath Ghosh. Third Edition, published by Babu Amrapal Ghosh, 6, Parsibagan Lane, Calcutta. Price Rs. 3.*

Pandit Rajendranath Ghosh needs no introduction to the educated public. As an author and an editor of various classical works of Indian philosophy he has created for himself the reputation of an erudite scholar and a hard worker in Indian philosophy. His reputation imposes upon him a tremendous responsibility and we have every reason to expect from him a high standard of efficiency in every publication that he sets his hand to. In the book under review we are pleased to observe that Mr. Ghosh has not only maintained his high standard, but in some places he exceeds our expectations. The Gita is a highly popular work in Bengal and its editions are almost a legion. Mr. Ghosh, however, does not traverse the beaten track and he has chosen a new ground. His edition is almost an encyclopaedia of Indian philosophy. The fundamental concepts of Nyaya, Vedanta and Mimamsa have been explained with elaborate lucidity in a sonorous and lucid style. A careful student of Indian philosophy will find in it enough materials digested within a limited compass and we think a study of this work will clear up many obscurities and remove much confusion and it will thus help the progress of research. An elaborate table of contents, word-index and the index of slokas have made the book up-to-date and very suitable to the student. The enterprising publisher of the book deserves our thanks for having set a moderate price upon the book to make it accessible to all.

SATKARI MUKERJEE

BENGALI—ENGLISH

BAIJNANIK PARIBHASHA *or Scientific Terminology, Compiled by Bangiya Bijnan Parishat (Bengal Scientific Academy) and published by the Calcutta Engineering College, Bijnan Parishat Press, 18 Ekdalia Road, Calcutta. Price not mentioned. 127 pages of the size of the Modern Review.*

It is stated in the publisher's preface that the need for this book was felt because in the Calcutta Engineering College the medium of instruction is Bengali. He admits that the book is not free from defects and errors, and that, therefore, a second edition will be published very soon. Nevertheless, it must be admitted that it is a useful publication.

C.

MARATHI

वातम दार (News Reporter): *By Mr. S. R. Tikekar, Sadashiv Peth, Poona 2. Price Rs. 2.*

This first volume on journalism will be found useful to those who intend to be a regular reporter of any journal.

V. S. WAKASKAR

GUJARATI

LOPA MUDRA, PARTS II AND III: *By K. M. Munshi, B. A., LL. B., Advocate: Printed at the Surya Prakash Printing Press, Ahmedabad. Cloth bound. Illustrated. Pp. 92+102: Price Rs. 2.*

This Natak from the pen of Mr. Munshi, who has just come out from the Bijapur jail, is a fascinating study of India in the dim ages of the past, when the Aryas fought with the Dasyus, and the maidens of one enemy tribe fell in love with the youths of the other enemy tribe and the consequence was great *contretemps*. The scenes painted by Mr. Munshi are realistic, the old times with their rituals and observances, their forest life and their home life are presented vividly to our eyes, and the human feeling of love and lust, affection and hatred, which affected the mind of the primitive man as they affect the mind of the civilized man of today, in all their intensity and depth are graphically set out and brought into great relief against a background of jungle life as lived then. Mr. Munshi has studied this period of Aryan life with great care and has successfully tried to reproduce it, in archaic colours, in this and other volumes bearing on the subject. It is a new line struck out by him and does him great credit.

PRATIMAO: *By Jhaverchand Meghani. Printed at the Jayaswadeshi Printing Press, Ranpur, Kathiawad. Khadi cloth bound. Pp. 207. Price Rs. 1-4-0. (1934).*

These "Images" (*Pratimao*) represent seven stories. They are tragedies of modern life, and melancholy pictures of the present state of society. Mr. Meghani who till now was painting word pictures of the old folklore of Kathiawad, both in its martial and civil aspects, has now turned to cinema plots and he sees in the creations of cinema directors, the coming into being of a new world altogether. He considers the directors to be the interpreters of art in life. His stories give a vivid picture of the life—romantic and real of the chief characters figuring in them, and cinema-goers will perhaps recognize in them, the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

subject-matter of some picture or other seen by them. The stories are well and feelingly told. Mr. Meghani's powers do not suffer because of the change in the field of the activities of his pen.

BHUTKAL NA PADCHHAYA, PART I: *By Gunavantrai Acharya. Printed at the Swadeshi Printing Press, Ranpur, Kathiawad. Khadi Cloth bound. Pp. 202. Price Re. 1. (1934)*

This book, named "Shadows of the Past," contains eleven stories of the glorious past of Kathiawad. The history of Kathiawad during the mediaeval period is full of deeds of venture and courage, which resemble romance more than reality. Mr. Acharya has tried to catch this "romance" and perpetuate it by means of this collection. All the stories are full of nerve and set out vividly the nerve displayed by the different heroic characters, Hindu and Moslem. Altogether the work successfully gives the reader an idea of the state of society in Kathiawad in those far-off days. Readers already have encouraged it well, as within a short time two editions have been printed.

THE WATERS OF DESTINY

By SITA DEVI

IX

SUPARNÂ was very busy today. She was to stay and study at Delhi. It had been finally settled. Taran Babu had replied to Pratul's letter, eagerly welcoming Suparnâ to his home. His daughter Amitâ had also written to Suparnâ. Suparnâ had not understood all she had written. But she had understood that these people were very good and that they were very glad to have her there. As she must study, it was fortunate that she could stay with a Bengali family, instead of in a boarding house. She had grown up a good deal mentally during these few days. She had been discussing many things with her father and giving him her views on many subjects. On the whole, both father and daughter agreed that Delhi would be the most suitable place for her.

They were to start tomorrow. Suparnâ was extremely busy; she had tied the end of her *sari* tightly round her waist and was packing up her things. Pratul had to stay out shopping the whole day. Shashadhar Babu's wife had made him buy a lot of things for Suparnâ. "You won't get anything fit for a Bengali girl in that place," she had said, "You must get everything for her here." Pratul had given her some money and asked her to do all that was needful. So she had brought and ordered everything that she had considered necessary for Suparnâ. Suparnâ had gone to her a few times to take lessons in dressing and doing her hair. She still felt some difficulty in walking in high-heeled shoes, but she could walk quite fast in *Nagra* slippers. She had also purchased many books.

Raju's mother sat by her, helping her to pack. Suparnâ had become quite attached to her new belongings and was much afraid of spoiling them. Besides her new trunks, she had got a new suitcase, in which she was packing all the things she would need during her journey.

"How many new things appear daily in the markets," said Raju's mother. "People never saw so many kinds of boxes before. They had only huge wooden chests, in which they kept their utensils and the bits of gold and silver they possessed. And people never wore so much clothing either. If a woman had a *sari* of Baluchari silk or a Murshidabad silk, it was considered sufficient. And if people had to travel, they tied their clothing in a bundle and took it with them.

"We have not got such things even now, in the villages," said Suparnâ. "I did not belong to a poor family, but I never saw such things before. Now, that's finished, I have only my bed left to pack and the tiffin basket to arrange. But these things must wait to the last"

"Lord, what a far-off place, sister," said Raju's mother, "it takes nearly three days to reach it. My limbs ache so, if I stay in a train for more than three or four hours. I consented to go with you, because you are a child and must not travel alone; else catch me going! Besides, you said you would stop at Allahabad for one day and that is a temptation. I am getting old and I shall just take one dip in the holy confluence of the Ganges and the Jumna."

"But we shall be in such a hurry," said Suparnâ. "I don't know whether we would find time to bathe in the Ganges."

"Oh, never you mind sister," said the woman, "I shall see to it."

It was getting dark. Pratul had not yet come back. Suparnâ had her evening meal alone, made her evening toilette, and began to walk about on the terrace. Who knew for how long she was leaving Bengal? It was true she was not leaving any one near and dear to her, but still she had a love for the country. Would she ever see again Jamral, the playground of her childhood and Bhat-gram, that abode of horror for poor Suparnâ? And would she again see Shribilas? Suparnâ thrust the thought away from her. The rest forget this man, forget him entirely.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

her memories, she would keep hidden in her and turn them over at her leisure, like old She knew that her father would have thus. She knew that Shribilas had no the life planned for her. But it was so easy to forget. She had not loved Shribilas had never dared to. She had neither love from him. Shribilas had been like in the blossom of her young life. The wounds he had inflicted on her heart were raw. Would she ever be able to forget him?

Satulchandra came back at night. He had the whole day in making arrangements journey and drawing the money needed his bank. Seeing Suparnâ he said, "Why still up? You should have had your early, and gone to sleep. You won't get sleep perhaps for the next two

How can I go to sleep?" asked his daughter, not packed any of your things. I did know what to pack, else I would have long ago."

my packings?" said Pratul, "that's much. Only a few clothings. I shall that. You must go now and lie down. 's mother going?"

" said Suparnâ. "She has brought all things with her. She will sleep in my room." "That's all right then," said her father, "we have to wait for her in the morning then. your meal now and go to sleep."

's mother went down to bring up food. Pratul usually had his last with the other lodgers, in the first floor. was the only time when he could get them ther and could talk with them. Suparnâ had meals in her room. To-night too, she ate alone and retired to bed. Raju's mother down for her food. Suparnâ would never woman go down if she could help it. She Raju's mother would stay down, as long would. During the daytime the woman her young mistress, but she insisted on down for her last meal at night. She took plates Suparnâ had used and went down and never reappeared before eleven

train was in the morning. It is usual at the last moment that many things had undone, though one had been under pression that everything had been done. ding had to be tied up, the tiffin basket and the water carafe filled. Even people ed to travel lose their temper at this shout. Poor Suparnâ had never so far and her limbs began to tremble nervousness. Pratul was unexcitable and did not easily get ruffled. Raju's and the other servants somehow managed age. As she got into the carriage for to the station, Suparnâ heaved a sigh of

But she had still to face the uproar at the station and to get into the train. As she reached the station Suparnâ felt the same numbness stealing over her that she had experienced on the day of her arrival in Calcutta. Raju's mother caught hold of her by the hand and said, "Why do you feel so nervous, my little sister? Fools and idiots even are travelling far and wide now-a-days, thanks to the railway. Why are you afraid? You have your father with you."

Still Suparnâ could not shake off her fears. So many people and so much noise seemed to overpower her. After Pratul had pushed her into a compartment, she looked round her for the first time and saw where and with whom she had got in.

Pratul had purchased tickets for the intermediate class for Suparnâ and Raju's mother, thinking his daughter would feel uncomfortable in a second class compartment in the company of strangers. As Raju's mother was there he put them in the lady's compartment. He could have taken them with him easily, but here too he thought Suparnâ might not feel at ease, before so many male passengers. Raju's mother tried to reassure him strongly. "Don't have any fear, Sir," she said, "we shall be quite all right. I have been to Benares, Gaya and Gangasagar, all by myself, I know how to travel. Let anyone try to be insolent, and he shall see."

The compartment was not much crowded. On one bench sat a middle-aged widow, with a boy of eight or nine. On another bench sat a young married girl, with the veil pulled down well over her eyes. She had a baby in her arms. The third bench was now occupied by Suparnâ and Raju's mother. The porters began to push in all their luggage in this compartment with a great deal of noise.

The train never seems ready to leave Howrah and the passengers grow more and more impatient. Suparnâ too was feeling bored beyond measure. She wanted the train to start, she could not endure this turmoil much longer. Raju's mother, too, shared her impatience. "What's the use of waiting any longer?" she asked. "Perhaps another crowd may descend on us, if they get time."

"They might and we have no right to complain," said the widowed lady. "A train is not for the convenience of one person but for all. Many passengers might be rushing yet to catch this train. If they fail to do so, it might mean loss and inconvenience to them."

"That's true, mother," said Raju's mother, "but human beings are selfish, you know. Where are you going?"

"I am going to Chunar," the lady replied. "I live there for six months out of the year. My son works in Calcutta, while my daughter and son-in-law live in Chunar, so I have to fly from one place to another all the time. Where are

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

you going? You have got a large amount of luggage with you."

"Oh, we are not going anywhere close at hand," replied Raju's mother, "nothing short of Delhi. But we shall break our journey for a day at Allahabad, that's some comfort."

"You are going to Delhi?" asked her fellow-passenger. "Goodness, you would feel half paralysed by the time you get there. You are right, it is by no means a place you can call close-by."

"Have you ever been there?" asked Rjau's mother.

"Oh, I have been everywhere," the lady replied. "I regard the Punjab Mail and the Bombay Mail as my home. I was born in the Punjab and was married to a person who lived in the United Provinces. He was Deputy Magistrate besides—a class who are notorious for changing their places of residence every five months. Then my son began to work in Calcutta and my son-in-law went to Chunar, so I must be on the move all the time."

Suparnâ began to feel rather interested in the lady, who was a Bengali by birth, yet had travelled so widely. "But do you like to travel all the time?" she asked.

"I liked it when I was of your age," the lady replied with a smile. "But when I got little children, I was put to great inconvenience. Now that I am free again, I am beginning to like it again. If I remain long at one place, I feel very morbid. I like this constant motion."

At this juncture, another lady passenger tumbled into the compartment with a good deal of luggage and two or three children. Those passengers who arrive first regard the late comers as nothing but intruders, and there is never any love lost between them. Raju's mother made an awful face and turned her back on them. Suparnâ's expression, too, was not very cordial. The train was about to start and the porters in their hurry were flinging in the luggage quite recklessly. They put them on other's luggage and might even have put them on the passengers themselves, so eager were they to go away with their money. One porter nearly came to blows with Raju's mother, because the hulking fool had nearly crushed Suparnâ's frail tiffin basket beneath a huge steel trunk. The basket contained so much good food and all would have been wasted.

The widowed lady brought about peace again. She laughed and said, "It would never do to be so easily upset. The porters are foolish men and they have become sillier through hurry as the train is whistling to start. You cannot entirely guard against these accidents in course of a journey. So it is that our ancient Hindu law-givers have written, 'There can be no observance of laws on the back of an elephant and on big wooden planks.' This compartment is a big enough wooden plank. Now take hold of this bundle and put it on that trunk. And you push that box under that bench, my dear boy. Place that mat in that corner. Now we are quite all right and you can stretch your limbs at leisure. One cannot travel such a long way, huddled up in a corner."

The lady who had arrived last, now felt at ease. "You are a very smart person, my dear sister," she said to the widow. "You have restored order in this chaos within a few minutes."

"It needs genius, my dear," said the widow, with a smile, "else you cannot work miracles. You see, I have lived in these trains nearly as long as I have lived in houses. So I know thoroughly how the Punjab mail behaves. I can tell with my eyes shut, where we are, any time you ask me."

The train was travelling at full speed by this time. Everyone tried to sit as comfortably as possible. The children leaned out of the window looking all round them. The others tried to become friendly with the other passengers, so that they could have a good talk. The widow became a favourite with them all.

Suparnâ never spoke to anyone unless she was spoken to. She was terribly afraid of saying something wrong and being laughed at. But she too liked this lady very much. The widow was a rich man's daughter and a rich man's wife, yet how simple she was. She spoke to everyone on equal terms and did not put on any airs. She had a fund of genuine humour too, and could make others laugh heartily. But for a long time Suparnâ did not get any opportunity to talk to her, so busy were the others talking to her. Finding an interval of silence, Suparnâ edged a little nearer to the lady. She understood at once that Suparnâ wanted to talk to her. "With whom are you going to Delhi?" she asked her.

"My father is there in that carriage," said Suparnâ, "and I have got this maid-servant with me."

"Are you going simply for the purpose of seeing Delhi?" She asked again, "Do you study in a school?"

"No, I am going to Delhi to begin my studies. I have no opportunities here. Have you been many times to Delhi?"

"Yes, I have been there thrice I think, in my younger days. But I hear Delhi has changed a great deal, after it became the capital of India. But you will like it, there are so many places to go to, so much to see. Young people usually like it, but after you grow old, it depresses you very much. Only ruins and ruins! You understand fully what a paltry thing human life is, once you see these vast ruins."

Suparnâ understood only half of what she said. "Are there many Bengalis there?" she asked.

"Well, there are a good few," said the lady.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

"But most of the older residents have become Punjabis in habit and manners. They speak Bengali with such an accent that it is hard to refrain from laughing when you listen to them. Formerly, some of the ladies adopted Punjabi dresses too partly. They wear Punjabi ornaments even now. But now people from Calcutta are pouring in constantly so these people are being Bengalized again."

The sun began to grow hot. "Wash your hand and face, my little sister," said Raju's mother. "I am going to give you your breakfast, it is hot yet." "Yes," said the widow, "finish your breakfast now, or the compartment might soon become too crowded to allow you to do so comfortably."

Raju's mother knew how to take care of people. She served breakfast to Suparnâ very carefully. As the train stopped at the next junction, she sent for Pratul and provided him also with an ample breakfast. The other children in the carriage were looking on greedily, Suparnâ noticed it and gave a sweetmeat to each of them.

The train began to rush on again. It passed out of Bengal and Behar and came to the United Provinces. Bengali faces could be seen rarely at the stations, all were upcountry people. The ladies' compartment, too, began to get crowded. Pratul came now and then to see how they were getting on. He found Suparnâ quite comfortable under Raju's mother's care. Then night came on and the sound of voices gradually died down.

X

The party halted at Allahabad, but the halting was only nominal. They had not time even to untie their beddings. They bathed and snatched a meal somehow and then set out in a hackney carriage to visit the holy places, at Raju's mother's importunities. Suparnâ, too, wanted to have a dip in the holy river, but she knew her father would never allow her to bathe in the midst of a crowd of pilgrims and priests. So she had to remain content with sprinkling some holy water on her head. Raju's mother did not care anything about the lack of privacy, she had a good bath at the confluence of the one invisible and two visible rivers and waged a verbal warfare with the priests in a loud voice. She was bent on getting the maximum amount of merit for the minimum sum of money.

A feeling of indescribable joy was stealing through Suparnâ's heart. She had not heard of Delhi or Agra or Mughal and Pathan, but she knew of Prayag, and the holy confluence, from her birth. She had visited these places in her imagination countless times. She had no peace or happiness in her husband's house. She had thought many times of escaping to some holy place of pilgrimage and finding peace thereby. The names of Benares, Pravag and Gaya were very familiar to her. She had not imagined the place to be exactly like this. But the reality was more beautiful. She gazed at the broad blue expanse of the Jumna and at the line of trees on the other bank, at the temples of Jhoonsi and the small hamlet surrounding it. A long line of country-boats was passing by, carrying loads of passengers from many lands. Their dresses were of variegated colours and types and they spoke, too, in many tongues. Suparnâ liked the Hindustani women most of all, with their bright many-coloured *saris* and marks of vermilion on their forehead and on the parting of their hair. They wore small tinsel circlets also on their forehead. Suparnâ did not know their language, else she would have tried to make friends with them. She liked Akbar's fortress, but its grandeur did not touch her ignorant heart. She had never heard of Akbar, or of his achievements. She wanted very much to see the immortal banyan tree and felt sorry because she could not do so for want of time.

As their boat was returning to the place, where they had left their carriage, it passed by a small half-ruined temple. It was placed high on the bank and had no brick-built steps leading down to the river. A small track led up to it from the riverside. A few boats were tied here, waiting for some Bengali pilgrims who were coming down slowly and very carefully, after paying their homage to the deity of the temple. Suparnâ felt a strange attraction for this lonely temple, standing half-hidden under the shade of a giant peepul tree. "What temple is this, father?" she asked eagerly. "It is the temple of Manaskâmaneshwar" said he, after making an enquiry of the boatman.

Suparnâ bowed down with her hands folded. No one knew except the god, what she desired of the Lord of Desires.

There were many more places worth seeing, but Pratul was afraid of tiring out Suparnâ. So he decided to return. Suparnâ, too, was not keen on seeing anything else except the holy confluence of the Ganges and the Jumna.

Next day they started again. They had put up at Allahabad at the house of a friend of Pratul's and they had been treated with extreme cordiality. Raju's mother was enthusiastic in her praise of the family, as they had filled the tiffin-basket with various kinds of delicacies. Suparnâ was unaccustomed to long journeys and could not eat anything on the way, she felt so dizzy. Pratul, too, was a spare eater, so Raju's mother could do full justice to the good things. As she got into the hackney carraige for driving to the station, she said to Suparnâ. "They are real gentlefolks, sister, you can see that from their conduct."

"Why, because they have given many nice

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

things for you to eat ?" asked Suparnâ with a laugh.

Raju's mother felt a bit ashamed and said, "Lord, sister, how you speak ! My eating days are gone long ago. But this change of air has given me some appetite. Hence I can take a bite or two now. But how you can go on without taking anything at all passes my comprehension. At your age, we could eat and digest stones."

As soon as they reached the station they knew that they would not have a comfortable journey. The place was crowded to the full. "You must be very careful this time," said Pratul to Raju's mother, "but don't start trouble unnecessarily."

Both Suparnâ and Raju's mother were dismayed at the sight of so many strong people strangely dressed. Were they to travel in the same carriage with these people ? "Good God," said the servant woman, "Are we to go with these people ? Then that finishes all ideas about eating and drinking."

"You must not be so particular, during a journey" said Pratul. "They are human beings, just as you are."

The train rolled into the station. The female compartment had some passengers, but it had not yet become crowded. Suparnâ and Raju's mother got into it, the luggage was divided between Pratul's compartment and this one.

The ladies, who had been sitting inside when Suparnâ and Raju's mother got in, were none of them Bengalis. So there was no opportunity for starting a conversation. Two benches were full, the third one was partly occupied by some children. Seeing Suparnâ getting in, they escaped to their own relatives. So Suparnâ and Raju's mother sat down on it comfortably, quite satisfied with the arrangement.

But their satisfaction was of short duration. As the train was about to start, two meretriciously dressed women, with piles of luggage, tumbled into the compartment. To Suparnâ's inexperienced eyes they appeared in no way different from the other women. But Raju's mother jumped away to the extreme end of the bench in consternation and whispered, "Do you see, sister, these are Baijis (professional dancers ."

Suparnâ looked at the women carefully. She was very much surprised to see them wearing things similar to jackets and trousers like men, though they were undoubtedly women. They had a large pile of luggage from the midst of which many musical instruments showed themselves.

"How are we going to travel such a distance, packed like this?" said Suparnâ in dismay. "And what shall we do, if any more passengers get in ?" But no other passenger appeared and the train steamed out of the Allahabad station. Two women had come with the Baijis to see them off. They burst into loud sobs as the train started, drawing all eyes upon themselves. Suparnâ too was surprised. She had never believed these creatures capable of ordinary human emotions.

As the train passed out of the station, the two Baijis wiped their eyes carefully and settled themselves comfortably. One took up a comb and a small hand-mirror, and began to arrange her hair, while the other began to apply surma to her eyes, to enhance their brightness. The other ladies, who had hitherto remained shrouded in burkhâs, now took them off and began to take note of their fellow passengers. The two professional singers were of cheerful and friendly disposition. They began conversation with everyone of their own accord. They informed Suparnâ unasked that they were going to Agra and would travel in the same train with her up to Tundla junction. Hearing that Suparnâ was proceeding to Delhi, they said they had been to the place once or twice on professional business.

Suparnâ could not understand them clearly as they spoke in Urdu, but since they evidently wanted to talk to her, she replied to their questions with the best Hindi at her command. She did not very well understand the implication of the word Baiji, so she was not so greatly disgusted, as Raju's mother was or pretended to be. But when she saw one of them taking out a cheap *bidi* (country cigarette) and beginning to smoke, much of her enthusiasm for conversation cooled down. The smoke and the pungent smell made her giddy. The Baijis had a male servant travelling with them. He appeared between the compartment at every station and attended to the wants of the two women very assiduously. This excess of attention made Raju's mother furious, and she began to mutter remarks about the women, which fortunately Suparnâ could not hear.

The train went on passing station after station. In some places, passengers got down, in some places, new passengers appeared. On the whole, the campartment remained as crowded as ever. Raju's mother now wanted Suparnâ to take some refreshments. Suparnâ was not at all feeling like it, but owing to Raju's mother's insistence, she had to take something. She turned her back to the other passengers, and sat in that position. Though Raju's mother protested that her eating days were past, she now gave evidence to the contrary by making a hearty meal. The sky outside had become clouded over, and the spirit of the passengers, too, appeared to be damped. Nobody was inclined to talk much and some began to doze drowsily.

Everybody, with the exception of the Baijis, however. They talked loudly to each other since no one else was willing to talk. At one point, where the conversation lagged, or one the other felt drowsy, the younger of the would make a snapping sound with her fingers and thumb and cry out "Yah Khooda !

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

shookr hai!" The conversation would flow freely again. Suparnâ could not understand what the cry meant; to her the woman appeared to be half insane. Finding her father on the platform at a station she drew his attention to it and asked, "What does she mean by it, father?"

Pratul smiled and said, "Perhaps she means 'O Lord, I am grateful to Thee,' or something like it. I see many musical instruments; perhaps they might treat you to a song or two."

Pratulchandra was right. After a while the younger Baiji drew out a box harmonium and began to play on it loudly. She evidently did not like the idea of all her fellow-passengers going to sleep. After playing on for a minute or two, she began a song in a rough contralto voice, "Narangiâ harè tuâ binâ rahâ nahi jâi." Suparnâ was nodding drowsily with her head on the wall of the compartment. As the loud contralto voice struck her ears, she sat up straight in alarm. She could never have believed that such a sound could issue out of a woman's throat. But though she knew nothing of music, Suparnâ could understand that in spite of her voice, the woman was a trained singer. The Baiji was not content with singing alone, she also wanted to know the opinion of her audience about her performance. Being accustomed to entertaining, these two women went on entertaining the passengers throughout the journey.

It began to grow dark. Someone had told Suparnâ that many thefts were committed in the train between Allahabad and Delhi. She remembered these words now and began to get frightened. She felt sleepy yet did not dare to sleep. Now and then her head would sink forward on her breast and she would sit up straight again. At Tundla junction, the two Baijis got down with much bustle and noise. It became very quiet inside after that.

"Why don't you lie down for a bit, sister?" asked Raju's mother. "There is some room now to stretch your limbs. Another crowd may get in any moment."

"I am feeling very nervous," said, Suparnâ.

"You should not feel nervous, with myself in the same compartment," said Raju's mother. "As long as breath remains in my body, nobody would be able to approach you." Suparnâ felt a bit reassured and laid herself down on the narrow bench.

Night came down on silent wings and every sound was stilled, except the sound made by the wheels of the carriages. Whenever the train stopped, the noises of the station woke up Suparnâ. People came in, people went out, they talked, they quarrelled. All these she heard, as if in a dream and fell asleep again. The fear of thieves disturbed her slumber every now and then. Raju's mother had long since given up any pretence of guarding Suparnâ and was now snoring loudly, stretched full length on a bench. Thus the night passed away.

The train entered the Delhi station just as dawn broke. Pratul woke up first at the sound of human voices and getting down from his compartment, went to look for his daughter. He found both Suparnâ and Raju's mother sleeping soundly. He put his hand in through the window and shook Suparnâ gently, "Get up, dear, get up. We have arrived."

Suparnâ and Raju's mother both sat up at once. Then the porters came in to take out the luggage and the party got out.

The station at Delhi is a big one quite worthy of the eternal capital of old India. "This is even larger than the station at Howrah!" whispered Suparnâ to her father.

"Did you think there cannot be anything larger than Calcutta anywhere?" asked Pratul with a smile.

They found out very soon that not only the station but many things else here were superior to like things in Calcutta. The fee of porters, the hire for carriages appeared to be such that Pratul frowned in perplexity. These people evidently knew the world well. They were inhabitants of an ancient metropolis, and could give points to the Calcutta people about everything.

At this time their would-be-host old Taran Babu rushed in. He took Pratul by both the hands and began to welcome him with profuse cordiality. "Please, forgive this delay," he said. "This train arrives so ridiculously early that it is impossible to meet it."

"I never expected anybody to meet us so early in the station," said Pratul. "I was trying to hire a hackney carriage, but their terms seem rather outrageous to me. Is that the real state of affairs here?"

"Don't speak to those swindlers," said Taran Babu. "My house is within ten minutes' walk from here. We never take a carriage, if we can help it." He turned to Suparnâ and said, "What do you say, my little mother? Can you walk that far? My car had to be sent away for repairs, otherwise there would have been no trouble."

"I can walk very well," said Suparnâ.

So they put the luggage on the heads of porters and started on foot. One or two Tonga-wallahs now began to follow them, offering to take them on rather reasonable terms. Taran Babu shouted abuses at them and walked on even faster.

As soon as he set his foot on the streets of Delhi, Pratul felt his heart swelling with a strange emotion. But Suparnâ felt nothing, The name Delhi meant nothing to her. But she was amazed at its vastness, its cosmopolitan populace, and its queer stone-flagged streets.

In a few minutes they reached Taran Babu's house. It was situated in the heart of the town, but not in a too congested quarter. The house was two-storied, and was very neat

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

and clean. As soon as their arrival was known, everyone, including the servants, a girl of thirteen, and a small boy rushed out to meet them. The servants relieved the poters, and carried the luggage upstairs. The girl ran up to Suparnâ and took her by the hand, saying, "Welcome, my dear; it was getting so late that I had nearly given you up."

"We had to walk, so we became rather late," said Suparnâ, "You are Amitâ, are not you?"

"Who else?" replied the girl, with a laugh. "Did you get my letter?"

"Yes, I got it," said Suparnâ.

"Let us go up," said Taran Babu. "Is tea ready?"

"Quite ready," replied his daughter. "Did not I get up so early for it?"

They came up to the first floor. Amitâ took Suparnâ to her own room. Here Suparnâ washed her face and hands and changed her dress. Raju's mother was agreeably surprised on hearing that a Bengali servant actually worked here. So she went down to the kitchen to give him a look up.

Amitâ took upon herself the duties of a hostess and began to make the tea and serve the bread and butter

"Do you see what a great housewife she has already become?" said Taran Babu to Pratul.

"I think this trait is inborn in Bengali women," said Pratul.

The two small Bengali women looked at each other and smiled.

(*To be continued*)

LONDON LETTER

FROM MAJOR D. GRAHAM POLE

SOCIALISM IN OUR TIME

NOTHING has ever been so sacred to Conservatives as the right of private property. It is all the more surprising therefore to find the present Government, which is of course predominantly Conservative and controlled entirely by that party introducing a Bill "to vest in the Crown the property in petroleum and natural gas within Great Britain" and giving the Crown "the exclusive right of searching and boring for and getting" this petroleum. It also empowers the Board of Trade on behalf of the Crown to grant licences to such persons as they think fit to bore for and to get petroleum.

In moving the Second Reading of the Bill in the House of Commons, the President of the Board of Trade, Mr. Walter Runciman, said that the Bill would give the Government a chance of developing our national resources to the best of our ability and for the full advantage of the public. The Government have realized that so long as oil in Britain remains in private ownership it cannot be exploited. Lord Londonderry, in introducing the Bill on behalf of the Government in the House of Lords, declared that it was necessary in order to secure the exploitation of a commodity on which so much national well-being depends.

The Labour Party supported the Bill and urged the Government to be logical and go the whole way by ruling out private exploitation of the State-owned oil. But that was too much to expect from the present Government. It is however, valuable to have this striking admission from the Government that private ownership is holding up the development of oil just as it is holding up the development of the coal industry—a fact which has been emphasized in the report of every Royal Commission during the past twenty years.

WHY NOT EXTEND THE GOOD WORK?

The case for the public ownership and control of our national resources, as advocated by the Labour Party, is unanswerable. The National Government has now endorsed it; for every argument used in favour of the public ownership of Britain's oil supplies applies with equal force to every other resource on which the well-being of the nation depends.

NO SOCIALISTS IN "NATIONAL" GOVERNMENT

Some of the Tory die-hard Members argued that this Bill was simply socialism, which of course it is, although it could be improved by a Socialist Government. The Minister of Mines, however, said that

> "to argue that this is Socialism is a very dangerous thing to do, for if this is, as the Government believes, a practical proposition, a wise proposition and a right proposition, if you are going to label that Socialism, you run the danger of making Socialism popular, and that is the last thing that I or any supporter of the Government wants to do."

That comes rather strangely from a Minister of a Government whose Prime Minister has been a life-long Socialist and still declares, although few Socialists would believe him, that he has not given up any of his former principles. It seems to be rubbing in publicly the fact that the Prime Minister can hardly now call his soul his own. And it also explodes the idea that the Government is "National"—representative of all parties in the country. The only "Labour" men who support the Government are those who have swallowed all their former principles and

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

accepted, in their place, Tory ones—simply in order to keep their seats as members of the House of Commons and chiefly by votes of Conservatives.

Straws in the Wind

Even the coal-owners are now realizing that the ownership of minerals in a large number of hands is not for the public advantage. The Chairman of the Manchester Collieries Ltd., at their annual meeting this week, said that in his opinion "the industry as a whole was adversely affected by the fact that the ownership of minerals was in such a large number of hands" and he went on to add: "I am of opinion that the unification of mineral ownership is desirable." Had it not been for the selfishness and pig-headedness of the mineral owners, it would have been brought about many years ago.

The International Outlook

It is twenty years ago now since Sarajevo—twenty years since 28th June, 1914, when the Archduke of Austria and his wife were assassinated and the Great War broke over the world. One might imagine that the sense of this anniversary was heavy upon us; that this week the millions who were killed in that War would seem to rise from the dead to warn us against the consequences of such another disaster. But no. The exact opposite is the case. This week the National Government has shown its sense of what is fitting by going out of its way to stab the Disarmament Conference in the back—and it marked its respect for the anniversary of Sarajevo by choosing that very day on which to land an important military mission in France!

Never at any time since 1914 has the international outlook been so black. And never have we had a Government who cared less and would do less in the cause of peace. The way they have thrown away their opportunities at Geneva is almost past believing. The one and only idea of the Foreign Secretary, Sir John Simon, is not to commit this country to anything: he is religious in it. The result is that we have become a laughing stock to other nations instead of a power to be reckoned with. They titter with delight when somebody guys us at Geneva—as the French Delegate, M. Barthou, did in the Conference on May 30th.

Shilly-Shally

Even the Conservative *Morning Post* the devoted supporter of the National Government, is alarmed at the way in which Britain's prestige is declining abroad. It recently published an article entitled *Shilly-Shally*, dealing with the present conduct of our foreign policy. "It is impossible," it said, "any longer to maintain silence concerning the grave public anxiety which is being aroused by the indecision and lack of coherence in the present conduct of British foreign policy." This policy, it continued, has left Britain "isolated and friendless among the nations." It concluded by calling for the resignation of Sir John Simon.

But Sir John Simon has not resigned. Only the Prime Minister, too ineffective these days to make any positive protest, has decided to go on a long holiday... "The Prime Minister," said a high official the other day referring to the announcement of new air and naval programmes, "is happier out of this business."

Still, his colleagues in the National Government did not wait till Mr. MacDonald had left the country before they proclaimed their warlike intentions. As stated above, they chose this Sarajevo time to give a stab in the back to the Disarmament Conference.

World Peace in Jeopardy

The First Lord of the Admiralty and the Secretary of State for Air are the offenders and the First Lord began it. In a speech at Spetchley Park near Worcester, in the presence of Mr. Baldwin—the real head of the National Government, so there is no escape—he made an alarmist and provocative speech. This speech may be a turning point in history and is worth a little consideration.

First there is the now famous declaration: "I believe a strong Navy helps more than anything towards world peace." This from a member of the British Government, at a time when the whole future of disarmament trembles in the balance at Geneva!

No wonder the President of the Disarmament Conference, Mr. Arthur Henderson, said of it (and of the speech on the new Air programme made by Lord Londonderry):

> "If anything is calculated to make impossible the task of achieving disarmament at Geneva, it is speeches such as two that we have had from members of the present Cabinet this week."

But the First Lord of the Admiralty went to even more irresponsible lengths. To back up his plea for a Big Navy he did not scruple to try to frighten his audience into believing that we must increase our armaments here and now because we are threatened from abroad! What wickedness! "Don't think for a moment," he said, "that there are not covetous eyes on some of our great and fair heritage all over the world."

It is, of course, the stock-in-trade of the National Government to assert that we alone have decreased our expenditure on armaments while all the other great nations have been increasing theirs. The First Lord made great play with this argument. Said he: "In the last eight years Italy has increased her expenditure on armaments by over 91/2 p. c., the United States by over 10 p. c., Germany by over 12 p. c. Japan by over 80 p. c., France by over 100 p. c., and Russia—that Mecca of brotherly love—by over 197 p. c. We show the only decrease, a decrease of 16 p. c.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

It is high time that someone examined and exposed this argument and pacifists are at last waking up to the fact. Figures can prove anything. It makes a great difference, for instance, if instead of giving percentages, you give the actual cash amounts. It is only fair also to consider the relative position of different countries at the close of the last War. The percentage method assumes we all start from scratch.

Armaments Race Begun

A writer to the *News Chronicle* this week raises this first point:

> "Britain has no right to boast of taking the lead in navel disarmament until she actually spends less in cash on her Navy than do the other countries.
>
> "If we are still spending, say, twice as much as France or Italy on our Navy, we cannot expect them to be much impressed by our claim that we have decreased 16 per cent anyway."

And Mr. Richard Lee, the President of the Unitarian Peace Fellowship, has been letting in the daylight with regard to Russia's apparently swollen estimates:

> "The reply which Mr. Baldwin should have revealed is that Russia's navy was non-existent, apart from a few battleships after the war, and she had no air force.
>
> "It is true that in 1926-27 Russia spent 14·1 per cent of her Budget on armaments. Today she spends only 6·1 per cent. We spend over 14 per cent of our Budget on war preparations *more than double the Russian proportion*. Moreover as the wholesale price figure is 100 today compared with 148 in 1926, our actual expenditure has gone up over 30 per cent.

So that sneer about Russia and brotherly love wasn't really fair.

Indeed it is only safe to say one thing about armament figures at the present time—and that is they reveal that an armament race has begun. There is a Naval Armament Race going on now among Germany, France and Italy. And it is useless for us to say we must join in the race if we are to defend ourselves, because it is *solely owing to our lack of policy at Geneva that this race has begun.*

Our Biggest Blunder

France sets the pace on the Continent in the matter of alliances and armaments, France is the challenge to Italy and Germany—but she would call off the race *to-morrow* if Great Britain would come down on the side of a system of pooled security. But at Geneva at the beginning of this month Sir John Simon made it clear that Britain will not take on any new obligations. That was why M. Barthou, the French Foreign Minister, held us up to scorn. That is why he has been visiting Poland and the Balkans reviving French alliances —and annoying Italy. That is why Italy is building two 35,000 ton battleships. That is why Germany is making such an occasion of the launching of the latest pocket battleship. That is why France has decided to reply to Germany!

No wonder Mr. Vernon Bartlett, writing in a series of articles on "Germany To-day and To-morrow," says: "I look upon the British failure in Geneva to offer guarantees of execution of a disarmament convention as our biggest blunder since the War."

Why, oh why, can't we see that we all have the trumps in our hands—or if we can't see the trumps, why won't we try to play a courageous game? Not only France despises us but Italy. Signor Mussolini's mouthpiece, the *Giornal d' Italia* said the other day: "It is England's duty to make France follow a calmer and less bellicose foreign policy."

But far from seeking to enforce peace in Europe, we are ourselves going out of our way to discredit the whole idea of peace and disarmament. Perhaps the most outrageous feature of our announcement of an expansionist naval programme is that we should be making it at the present time. Why are we making it now?

Preliminiaries To 1935 Naval Conference

We are making it now because a Naval Conference is due to take place in 1935. As a preliminary to that Conference conversations are going on in London between England and America, and the Japanese Ambassador in London has been seeing the American Ambassador-at-large, Mr. Norman Davis, in this connection. The National Government are as secret as claims about what they have said at these conversations. But from reports which are coming back from America it is clear that we are already contemplating that the Naval Conference will be a failure—and indicating what our programme will be in that event!

That is the defeatist, non-possumus, way the National Government goes into peace conferences. That is why they always break down. It is exactly the method we adopted with regard to the Disarmament Conference and air armaments. As long ago as March, Mr. Baldwin was anticipating the failure of the Conference and hinting at the huge increase in our air forces which would follow. So that the Conference was allowed to fail—and before it is decently dead we have the new Air Programme. It will be the same story with regard to the Navy Conference.

At present our naval programmes are subject to the agreements signed at the Washington and London Conferences. But at the third of these Anglo-American conversations the experts issued a statement showing "the increases that could reasonably be held necessary for the safety of Empire routes if the present limitation agreements lapsed and were not replaced." If the 1935 Conference failed in other words.

What a spirit in which to approach a Conference!

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Why We are Taxed Heavily

But the first Lord of the Admiralty does not believe in Disarmament. He thinks it is a dream and that "It is about time we woke up." He is resolved on a large naval programme. He wants to build up to the limits of the existing treaties, and, if the Conference fails—beyond!

A peace-loving Government, of course, might propose, if and when the Conference had failed, that instead of all-round naval expansion there might be a Naval Holiday. But the National Government would think that was another dream.

Rumours are rife as to what Britain will demand at the Conference. It has been said, and it has not been contradicted that a demand will be made for 70 cruisers. Yet it was a demand for 70 cruisers that wrecked the 1927 Three-Power Naval Conference at Geneva.

Whatever we may demand at the Conference, we are going to give the world a foretaste of our temper now. Last week it was stated in *Reynold's Illustrated News*, a paper which is clever at uncovering official secrets, that

"When the Government comes to announce its Naval construction programme for the next twelve months, it will be found that this will exceed £14,000,000.

"It is expected that by the end of the present year this country will have under construction no fewer than 13 cruisers, 27 destroyers, 8 submarines, 4 sloops and an aircraft carrier."

Why do we want to strengthen our navy? There are three great Naval Powers—Japan, America and Britain. War with America, we are always told, is "unthinkable". Japan, then, presumably, is the potential enemy.

We have, of course, apropos of Japanese aggression in China, shown that we would never go to war with her in furtherance of any existing Treaty obligations. But perhaps we might if she "coveted" some part of the British Empire—of Australia for instance—as an outlet for her population. Yet the signs are surely that Japan will expand, as she has begun, on the Asiatic continent, in the islands of the Pacific.

In any event American opinion, which is always the more sensitive about Japan, is afraid that our new naval activites will have a most unfortunate effect on Japanese policy. The New York Correspondent of the *Manchester Guardian* telegraphs: "American anxiety over the new British programme is based largely on fear of its effect on the Japanese. The latter have already indicated that they want complete equality with the United States and Great Britain in the next year's Conference."

"While it may be argued that the new British programme would discourage the Japanese, making them feel they cannot afford equality on such an expensive scale, it is feared here that the result may be just the contrary and may embolden the Japanese to demand a tremendous increase in their fleet."

In other words, America fears that Britain's naval programme will lead to a new Naval Race. The old evil causes cannot fail to produce the old evil results···and end in War.

Dangerous Speeches

The First Lord of the Admiralty let loose the dogs of war all right when he declared (in the presence of Mr. Baldwin) that international disarmament had become a dream. He was closely followed by the Secretary of State for Air, Lord Londonderry, improvising on the same theme.

"Improvising" is about the only word that can be used to describe Lord Londonderry's statement in the House of Lords. It was on all counts one of the most disgraceful and dishonest betrayals ever put over. He said in the House of Lords—and it was broadcast all over the world—that the Government had held its hand as long as it could in "the hope that something might be achieved out of the Disarmament Conference." But now it had become abundantly clear that the other nations (!) would have nothing to do with disarming or the ideals of the British draft convention. So far from disarming, they are actually increasing their armaments. "Therefore, it would be imprudent on our part not to meet the situation which has thus been forced upon us."

This sounds dreadfully like the Kaiser's famous aside: "The sword of war has been forced into our hands"! And it has not deceived anyone abroad. One German newspaper headed a report of the speech with the caption: "The world in a fever of arming." And another with: "England wants to become the strongest Power in the air."

What They Conveniently Forget

Nothing could be further from the truth than Lord Londonderry's picture of the situation at Geneva and our part in it. We have done nothing, absolutely nothing, to help on the cause of aerial disarmament. Our only positive action has been in the opposite direction. We alone stuck out for the right to so-called police bombing—the right to bomb recalcitrant villagers and tribesmen in the remoter parts of the earth. And we underlined our diehardism on this point by seizing the next opportunity of such bombing. Ten days later, while air disarmament was still being discussed at Geneva, we were bombing tribesmen on the North-West Frontier of India.

The point about this reservation of course—the point about any reservation where air disarmament is concerned—is that it invalidates straight of any possible Air Convention. So long as any nation retains aeroplanes for its own national ends, those aeroplanes can be converted to instruments of war against other nations.

We pretend we do not see this dilemma,

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

although every other nation at Geneva does. The vast majority of the nations at Geneva see that the problem of air disarmament is only capable of international and universal solution, and they have declared themselves in favour of the international solution.

The French Proposals

This solution was put forward by France in February and March of 1933. France proposed the abolition of military aviation entirely. To make this watertight two conditions were essential. (*i*) Civil aviation must be internationalized. (*ii*) The League of Nations must be equipped with a small force of fighting planes to prevent the possible misuse of civil aeroplanes.

And how was England acting while France was seeking a solution of the air problem? She was putting every difficulty in the way that she could, apart from indulging in some private police bombing. "Readers of the Minutes of the Air Commission in February and March, 1933", says Mr. W. Arnold-Forster writing in the *News Chronicle*, "know that Lord Londonderry and Sir Philip Sassoon, instead of helping the French Air Minister in his splendid effort to secure agreement on these lines, put forward only the difficulties in the way."

International Solution only possible

No wonder Mr. Arnold-Forster describes the story that precedes this latest development, this announcement of an expansionist air programme, as "a story of hypocrisy which should make Englishmen sick." Lord Londonderry, he says, has never acted, never spoken, as if he meant to get any real measure of disarmament in the air. He has not even waited till the Disarmament Conference was dead!

Lord Londonderry blames the other nations. But the other nations are only facing facts. They know that there can be no disarmament without security—and no security without international security, without *pooled* security. It is worth listening to Mr. Noel Baker, summing up the position in a speech which he made the other day at a meeting of the General Council of the League of Nations Union:

> "The foreigners are not to blame, as is so often said, for the failure of the Conference up to the present time. They cannot put through any international solution of the Air problem without the co-operation of this country, and this country has not yet accepted the international solution which the vast majority of Europe is ready to accept.
>
> "It remains true to-day, as it was true in 1933, that if our Government accepted the international solution of the Air problem, the Air problem could be solved, and *The Disarmament Conference could succeed in a week.*

The Conference could succeed in a weak! And instead, under the stiff-necked, old-fashioned, guidance of Lord Londonderry and the Services, we are making straight for war. For make no mistake about it, unless the National Government takes to heart the rude awakening which has followed on the announcement of its bellicose programme, and stays its hand, we are in for an Air race with France. The declared objective of the National Government is "parity with the strongest country within striking distance of our shores." And of course France is the strongest country.

What Parity Means

Parity, says the impartial experts (not the Service ones), is a mirage. Even if you do achieve parity in the air, moreover, it will not prevent your cities from being bombed. There is no defence against attack from the air. As Lord Ponsonby pointed out in the House of Lords, not even the Secretary of State for Air has ever said that further squadrons of æroplanes are going to make this country safe from aerial bombardment or its consequences. All that "parity," assuming it to be attainable, could achieve would be to give us a *striking* force—not a defensive one. We might then be in a position to spread equal devastation with the force that was devastating us. In other words, aeroplanes are only weapons of aggression, and to increase your Air arm is to do nothing but invite competition in aggressive weapons.

Government By Tory Party Machine

And this is the competition that our National Government is forcing upon us and on the world. They have taken this terrible step and taken it *without any mandate from the electors.* The only mandate they can point to is the vote passed last year at the Conservative Party Conference urging the Government to increase the Fighting Services. Why should the country at large be dragged behind the Conservative Party machine?

The so-called National Government anyway has lost entirely any claim it had to be considered really national. As Sir Herbert Samuel pointed out in a speech at Darwen on 22nd June, there have been ten by-elections this year. And in only *one* of them has the Government candidate secured the support of more than one in three of the electors. Yet such a Government, acting without mandate and and in face of an increasingly minority vote, is taking this utterly grave step. There seems to be only one avenue of escape for us and it is to be hoped that the Labour Party in the House of Commons and in the country will insist on keeping it open. In March this year, when Mr. Baldwin was already talking about the failure of the Disarmament Conference, and the aeroplanes we would build when it had failed, he did try to soften the horror by speaking also of an Air Convention. What has become of that idea?

Mr. Baldwin said that if a convention on the lines of the British Draft Convention failed, we would "start work the next morning to get an

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

air convention among the countries of Western Europe." Well, what are we doing about it?

Of course, if Lord Londonderry and his kind remained at the Air Ministry, any Air Convention that we sponsored would have no more chance of success than had the Draft Convention. We would still hang back from internationalizing all aviation, from pooled security. And pooled security would still be the *sine qua non* at Geneva of an Air Convention.

What May Happen

But Lord Londonderry and the other cynical gentlemen may not remain in power. There have been so many rumours of a sudden General Election that, please God, one will come in time. If it doesn't, future ages may write our history thus:

In the twentieth year of the Anniversary of Sarajevo Britain took a step which led to the final World War. She dissociated herself from the Disarmament Conference and entered upon a Naval Competition with Japan and America and an Air Competition with France and the other Great Powers of Europe. The result was the Second World War, in which European civilization went down, and the stage was set for the rise of Asia. The rise of Asia, under the hegemony of Japan, will be the subject of our next chapter!

The Prime Minister in 1916 and 1921

Let me, in conclusion, quote Mr. Ramsay MacDonald, writing in the *Labour Leader* on 6th April 1916.

"....The task of Socialism is to eradicate from Europe confidence in military authority, and to lay through political sagacity and human goodwill made effective the foundations of peace—and we behold our justification. Ruin, sorrow, killing, are proving themselves to be impotent to do anything except to multiply themselves."

The world today shows how true these words are. The pity is that the Prime Minister is at the head of a Tory Government and seems to have swallowed wholesale their views and abandoned his former outlook.

Here is another quotation from the pen of Mr. Ramsay MacDonald, in the *Socialist Review* for January-March 1921:

"The priests and parsons whose profession it is to trim the spiritual lamps, and who lied so egregiously both to God and man when they told us of the purifying influences of war."

And again in the *Labour Leader* of 18th April 1918,

"There are but two policies: there must be no compromise between them; both must be carried out to their utmost. Theirs of fighting, basing victory on force and settling peace by the interests of that triumph: ours of agreement, basing victory upon right and settling peace by the wisdom of democracy."

The India Joint Committee Report

Hope deferred maketh the heart sick. Indians must be tired of waiting for the Report of the Joint Select Committee of both Houses of Parliament. The Government's proposals were issued well over a year ago in the form of a White Paper and they had promised to take Indians into consultation. The consultation between members of the British Parliament on the one side, and Indians and Burmans on the other, has been considerably less than it was during the Round Table Conferences. Indeed, before the Joint Select Committee they were merely witnesses whose evidence could hardly be expected to make much impression on a Government with its mind made up as to the limits of self-government it is prepared to give to India.

The members of the Joint Select Committee were not chosen because of their knowledge of Indian affairs, although in the case of some of them that was undoubtedly considerable. They were merely chosen because they represented the strength of the Parties in the House of Commons. Many of them were completely ignorant even of the elements of the problem for which they had to find a solution.

Any members with a real knowledge of India (and of the Reports of the various Committees and Commissions that have been set up one after another during the last ten years), could have dealt with the White Paper proposals in a few weeks. The Joint Select Committee has already spent fourteen months on the job and even yet they are far from having their Report ready for publication.

Mr. Baldwin promised that before the Report of the Joint Committee came before the House of Commons for discussion he would submit it to the Conservative Party in Conference. Had such a statement been made by the Prime Minister of a Labour Government, there would indeed have been an outcry. The Conservative Party Conference will not take place till the first week of October.

Parliament will probably rise about the end of this month and if the Report were published then or during the recess, the Government know that it would be excellent ammunition for Mr. Winston Churchill, Lord Lloyd, and their like to commence a raging propaganda throughout the country. But when Parliament rises its members usually disperse—and there is little chance of the Joint Committee meeting during August or September. Holidays and shooting birds are sacred duties in the eyes of the bulk of our legislators. The Report therefore is not likely to be issued before the end of October. And when it comes. . .

FOREIGN PERIODICALS

Pundit Jawaharlal Nehru

In an article in the London *Daily Herald* Prof. Harold Laski does not only draw a portraiture of the young Pundit, but surveyes as well the political situations of India at present. The following extracts are quoted from the *Living Age* :

I know few criticisms of our system in India more profound than the fact that we have been unable, in the post-war years, to win the loyalty of a single outstanding Indian who has any serious following behind him. Mahatma Gandhi, Lajpat Rai, C. R. Das, Vallabhbhai Patel, Nehru, everyone who in this last period has had a real hold upon the imagination of his fellow countrymen has been the passionate exponent of complete self-government. We hold India not by the quality of our rule, not by a reciprocal interest born of mutual good will ; we hold India by the sword.

That has been painfully apparent in these last three years. No country is held by good will when fifty thousand people have to be sent to jail. No people accepts the rule of a conqueror when the first symptom of women's emancipation there is their full participation in the Gandhi movement.

Basically, we are unwilling to recognize that Indian nationalism is part of a basic revolt of the East against western tutelage, to which there is no answer save that of freedom. It is a lesson we should have learned from our experience of America and Ireland. But it is also, as it seems, a lesson that an imperial race can understand only when it is too late. That is the price of empire.

We have given India a government amazingly free from corruption, eager to do justice in its own way, full of manifold good works. But we have never domesticated the system in the affection of the people. We have always been outside their confidence. We have done good to them ; we have not thought it consonant with our dignity to realize that a people is infinitely happier in seeking to do good for itself. So that, when Indian nationalism was born, instead of seeeking to make terms with it from the beginning, we threw it a concession here and there, as a bone was thrown to a dog. It was done always with arrogance, virtue, emphatic superiority. Now we are paying the price.

If anyone wants to know why Nehru is what he is, let him consider how the rule of Bengal is maintained. There has been ugly terrorism in Bengal, futile and wicked, the action, mostly, of young people barely out of their teens. To anyone not infected with the imperialist virus, that would indicate something gravely wrong.

It is an offense punishable by death to be in possession of arms. The Government may prohibit the publication of any document it thinks fit. It may hold trials in secret and in the absence of the accused. It may restrain the movements of persons under twenty-one. It may imprison up to three years for the possession of seditious literature.

The press is censored as in hardly any country outside Italy and Germany. There are military marches, accompanied by house searchings, and the saluting—it is alleged that this is sometimes forcibly exacted—of the flag. Collective fines are imposed on villages suspected of harbouring terrorists. Punitive police are quartered on them. There are endless arrests without warrant, special tribunals, orders to citizens to report weekly, even daily, to the police, to stay in a particular place, or not to go to some particular area, or—I quote from a government order—to 'conduct themselves in a particular way.'

—

Great Tasks of Christian Missions

Prof. Julius Richter, the Utopian champion of Christian Missions, dreams like Shakespeare's Gonzalo of a world Commonwealth of Christianity by converting almost all into the Faith, beginning with the primitive races in the romotest part of Africa. The following extracts, quoted from the *International Review of Missions* will be of great interest to our readers :

Christian missions are face to face with four great tasks of gigantic dimensions. The first is among primitive peoples all over the world, particularly in Africe, the Indies and Oceania. Their primitive beliefs will in all probability disintegrate and evaporate in a few generations, becoming crude superstitions. Will Christianity be able to supply them with a new and enduring religious foundation ?

The second task lies in China. The whole cultural structure of that empire which had outlasted millenniums and seemed unshakable at the end of the last century is completely broken down, and with it the structure of the State, its world view, ethical principles and basis of highly cherished literary culture. China needs reconstruction on a gigantic scale. This is the time of times for Protestant missions ; will they be equal to the challenge ?

The third task concerns Russian Bolshevism which is starting a world-wide propaganda with apparently inexhaustible resources in men and means. It is a passionate wrestling for social and economic justice combined with a fanatical hatred of Christianity. It is catching at the most cherished ideal of the modern world, and attacking its civilization along the line of least resistence—a widespread indifference to the Church. This renders the challenge almost superhuman for the weak Christian forces. Yet this campaign—organized anti-Christianity—is world-wide. What will be the outcome? Perhaps its gravest danger zone at present is in China. Is the alternative Christianity or Communism?

The fourth task concerns Islam. Islamic advance seemed almost to have come to a standstill at the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

end of last century, but its propaganda has started again with new zeal and success. We do not fear so much the organized propaganda of the Indian Ahmadiya, Persian Bahaism of the Khoja Agha Khan... for great regions such as equatorial Africa, Bengal and the Dutch East Indies the crucial question is Cross or Crescent? Christ or Muhammed?

We have often failed to take sufficient notice of a most important factor of the missionary movement. The religious conversion of tribes and nations is fairly easy if these are just emerging from their pre-history period and beginning to appear on the stage of history. The situation is infinitely more difficult if the new religion is a late comer after all the seats of religious civilization are already occupied and provision is being made for all imaginable religious needs. That has been the case in India, after four thousand years of luxuriant religious growth in every imaginable direction, from the crudest paganism to the highest soarings of theosophy and mysticism. It is the same in China, with her Confucianism, Taoism and Buddhism. It is the same, again, in Japan, with her nationalistic Shinto and the manifold sects of domesticated Buddhism.

—

Two Faces of Islam

Though the *Jihad* (holy wars against unbelievers) cannot take place now a days, Mr. Alfred Neilsen in an article in the *International Review of Missions* under the above caption endeavours to show that the eternal feeling of opposition and hostility of a Muslim towards one who has not embraced Islam is still visible. This perhaps has led Muslims to dream of a pan-Islamic federation in the West:

Turkey and a few other Islamic States are members of the League of Nations, but there is a widespread feeling in Islamic countries that it would be better to have an eastern, or even an Islamic, League of Nations as distinct from a western League.

Islam is and must always be more politically-minded than Christianity, which will be understood from a glance at the founders of the two religions. It is not only that Christ once told Peter to put up the sword and that Muhammad wished his religion to be defended by arms; but Christ's work was centred in the relation of men to God as sinners to the Saviour, and no laws or injuctions were given for the affairs of daily life or of social questions; it was all left to the work of the Spirit and of the principle of love. Whereas Islam has, in the Quoran and the traditions, commandments and prohibitions for all spheres of life including the political, and it is rare to find it maintained, as recently by the English Muslim, Mr. Sheldrake, that 'Muslims are not political in the real sense of the word.' An article which appeared at the same time speaks quite differently and is no doubt more in agreement with the Oriental Muslim mind.

"We are Muslims in the full sense of the word. Do not ask us to believe in some of the book and to refuse the rest. Politics are among the first duties of Islam and he who tries to prevent that will rob it of life. Muslims are weak at present only because they have left Islamic politics, which their opponents fear. Islam is a religion of power, not of weakness. The verses of the Quroan speaking of *Jihad* must be accepted as well as those about prayer. The Muslim who bears oppression without protest is no Muslim. Islam and politics belong together as the blood and the veins."

Taking a single local example, such as the development in Syria or Palestine after the great war, it is at once seen clearly how closely connected are religion and politics, especially in Palestine, because the holy places—holy also to Muslim—are there. The Arab Muslim population of Palestine in opposing the Balfour Declaration and Jewish immigration, has issued a call to the Muslims of the world to come to their help. In 1931 an Islamic World Conference was held in Jerusalem (see *The Moslem World* for October 1932) with representatives from nearly all Muslim lands. Even if this conference showed some of the internal strife that is found in Islam, and even if it was a disappointment to many Muslims, so that a second conference has not yet been called although it was decided to have annual conferences, still, it was an important step towards modern pan-Islam. One of its results was the sending of a deputation under the Grand Mufti of Palestine to Iraq, Persia, Afghanistan and India to inform Muslims there of the state of things in Palestine and to enlist their support, spiritual and financial, especially towards the creation of an Islamic university in Jerusalem, to be an Islamic centre of a character other than that of the famous old-fashioned theological school of al-Azhar in Cairo. Another outcome was the European Islamic Conference held in May 1934, as a branch of the general conference in Jerusalem.

—

Mrs. Naidu and Indians in Malaya

The following comment by N. R. appears in *The Indo-Malayan Review* on some views alleged to be expressed by Mrs. Sarojini Naidu to a special correspondent of the *Snnday Times* regarding the Indian emigrants at Malay:

Wide publicity has been given in the local press to what were described to be the views expressed by Mrs. Sarojini Naidu on the Indian question in Malaya. To one who has closely studied this pariot they came as a great surprise. In the absence of further confirmation it is unsafe to venture any opinion on the accuracy or otherwise of this report.

If we are to assume that the opinions alleged to have been expressed by Sarojini Devi are really hers, or are shared by other Indian leaders and politicians as well, then we can only suppose that by some cataclysmic suddenness political opinion in India on Indians abroad has undergone a remarkable transformation. If Sarojini Devi's "views" had been shared by the Government of India it would be a waste of money and energy to continue any further the established "Agencies" in Malaya, Ceylon or South Africa.

"Tell the Indians in Malaya" the poetess was reported to have said "you are economically better off where you are than you would be in your own country." This time-honoured fallacy has been exploded again and again so much so that I have neither the time nor the inclination to go into this matter at present. "You emigrated to better your own status, and for what you have done you are amply rewarded." I very much doubt whether Sarojini Devi has ever said so. She is not of the variety that rushes in where angels fear to tread. In this remarkable interview alleged to have been granted to a special correspondent of the "Sunday

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Times" she is credited with many other such statements which any one who knew Sarojini Devi well would certainly refuse to believe. They display an abyssmal ignorance of conditions here and shows an incapacity to appreciate the very elementary principles of colonisation.

The question of the status of the Indians in Malaya will continue to exercise the minds of Indian leaders both here and in India for some time to come. No Indian will remain satisfied with a third class citizenship. There should not be any difference between subject and subject.

In the past, leaders from India have always interested themselves in our behalf, not because in our negotiations with (and representations to) our governments here we have ever invoked their assistance, but because they have always shewn a desire to sympathise and assist.

—

The Woman's Movement in India

The following note by Miss. I. M. Dickinson on the progressive movement of women in India appears in *The Catholic Citizen*:

The Duke of Wellington wrote in 1805: "it is not possible to interest the British public in any Indian subject." If this were not to a large extent true to-day, the amazing growth of the woman's movement must have attracted far more general attention than it has done. But readers of the "Catholic Citizen" are among the honorable minority who are keenly interested in Indian affairs. They know the whole-hearted response which the progressive women of India have made to the call to service of their country.

An age-long discipline and a selfless devotion to the ideal of woman's vocation in the small group of the family have prepared the women of India for the wider field of activity now open to them. Individual women have for long distinguished themselves in all the careers open to them. That this should be so does not surprise the West as much as the conspicuous ability to organise, and still more, the determination to surmount all barriers of community and caste and creed which the woman's movement has called forth during the last decade. This organising ability and unity of purpose is manifest in the work of the three great All-India associations of women, the Women's Indian Association, the National Council of Women in India, and, most representative of all, the All-India Women's Conference. All these have branches in all parts of India and thus link up all the activities of the woman's movement.

The progressive women of India have a tremendous task to perform. On the one hand to struggle without ceasing until they attain their rightful place in the councils of their country; on the other to work for the uplift of those dumb millions in the villages of India until adult suffrage, which is their ultimate aim, can be reached.

We women electors of Britain must not rest content with admiring their courage. We have to use all our influence on behalf of their just demands for a fuller citizenship.

—

Reduction of Working Week in Germany

Since coming into power, the National-Socialist Government in Germany has devoted much attention to reducing the volume of unemployment. Among the practical measures advocated for this purpose is the reduction of weekly hours of work, and in this direction the government has laid down a series of principles for a beter distribution of employment between the employed and the unemployed. The following is quoted from the *International Labour Review*:

The first attempt towards introducing the 40-hour week in Germany was made in 1931, when at the end of January the Bruning Government appointed a committee of experts to study the unemployment problem. On the conclusion of its task the committee recommended a systematic reduction of hours of work as being, in its opinion, a particularly effective method of reducing the ever-growing unemployment figures. It suggested the passing of legislation authorising the Government to reduce the statutory hours of work, if necessnry to 40 hours per week, in industries and occupations where such a step was technically and economically practicable. It further recommended that wages should be reduced in the same proportion as hours, the purpose of the measure being to achieve savings which would enable industry to re-engage unemployed workers.

The Government adopted some proposals, and on 5 June 1931 it promulgated a Legislative Decree, supplemented later by the Administrative Regulations of 30 September 1931. The Government was thus empowered, subject to the approval of the Federal Council, to reduce hours in the manner indicated. At the same time the Government encouraged employers and workers to reduce hours of work by agreement.

The Bruning Government had tried to introduce shorter hours of work by Orders which would be binding in certain specified industries. The Von Papen Government realised from the first experiments that this scheme was not going to succeed, and it therefore decided to try to stimulate employment by another method indirectly connected with a reduction of hours of work. When the new German Government came into power in the spring of 1933, it at once opened a campaign for the widespread adoption of the 40 hour week.

The various ideas and principles of the campaign have had as a result that the introduction of the 40-hour week has been accompanied by a variety of measures, the central principle of which is that the aggregate wages paid must not be diminished. The aim in view is a redistribution of this amount over a larger number of workers, subject to the condition that each one is assured the minimum of subsistence. Moreover, as a corollary to the principle of the distribution of wages over the largest possible number of workers, no one may hold more than one post and overtime may be worked only in cases of extreme urgency.

—

Collectivization of Agriculture in Soviet Union

The concluding remarks of W. Ladejinsky's essay on the 'collectivization of agriculture in the Soviet Union' are reproduced below from the *Political Science Quarterly*:—

The results of the agricultural year of 1933 have shown that at that time the problem of increasing the productivity of the land was inextricably bound up with the problem of how to infuse into the collective movement a will to press forward. The answer was

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

found in a change of attitude on the part of the Communist Party toward the most important of all known agricultural machines—the peasant. This involved a shift of emphasis from coercive and repressive measures to policies more sympathetic to the economic interests of the collectivized peasants. In order that these interests be fully realized, a mutually advantageous exchange of goods must take place. The tendency now is in this direction, since a considerable part of this program is likely to be achieved through the realization of the Second Five-Year-Plan, the main objective of which is the increased production of consumers' goods at lower prices. As more of the peasants' needs would thus be satisfied, and an incentive to work created, so may they be expected to move to greater and greater efforts. But until such time as there exists a fully developed incentive to such efforts, it is premature to judge adequately the extent to which in Russian conditions a collective system of agriculture is superior to an individualistic system.

The Communists view the organisation of the collective farms not only as a means of raising large crops but also a major move toward building socialism in the village and in Soviet Union as a whole. Such an achievement depends upon the complete liquidation of the differences between the city and the village, with a classless society arising in consequence. In order to do away with classes, in Lenin's opinion, it was necessary "to eradicate the difference between the workers and the peasants, to turn all into workers." Thus, in order to solve the central problem of the October Revolution, the creation of a unified, planned, socialistic economy, the Soviet government must concern itself not only with making the collectivized peasant work to the best of his abilities, but must also proceed to the herculean task of de-peasantizing the peasant. Will the artel type of collective farm as now constituted be capable of accomplishing these two things simultaneously? One is inclined to question such a possibility, since the noticeable improvement of the work in the artel was due to governmental legislation which accentuated rather than eradicated the individualistic proclivities of its members. An agricultural system where the peasant cannot accumulate capital goods and where the State-owned land and the modern equipment are worked collectively, is unquestionably to break with traditions handed down by generations of small cultivators. But the perpetuation of this very type of a collective farm that allows its members to carry on a limited individual economy of their own and gives them the right to dispose on the open market the agricultural products earned as members of the collective is not necessarily conducive to the elimination of the acquisitive ideas of the peasantry. One wonders, therefore, whether the Soviet Government will not replace the collectlve farm with a State farm where the collectivized peasants will be transformed into agricultural workers and purged of a centuries-old peasant ideology. One may also venturc to suggest that the road between the present collective farm and the State farm—the "grain factory"—should be travelled slowly and carefully, for the attitude of the peasants towards the Soviet State during the period of mass collectivization and under the subsequent agricultural policies of 1933 is a concrete proof that the process of building socialism in the Russian village must proceed upon the maxim enunciated by Lenin, namely, step by step, and inch by inch."

—

Japan's Real Game

Karl Figdor, a German Orientalist, analyzes Japan's military ambitions in Asia, which, with the reported war in Arabia between the king of Wahabis and the king of Yemen, go to prove that the Orient is in Arms. The following introductory portion of the essay is quoted from the *Living Age*:

The dictatorship that the white race has exercised over humanity for the past century has come to an end It was during these years that the little Asiatic peninsula known as Europe overcame continent after continent economically and politically or else colonized them. But the sea of blood that flowed during the Great War drowned this chapter of history. An unprecedented crisis arose, inevitable and inescapable. The colored world is on the move Asia, which fructified the race of men for thousands of years, has risen in revolt. In a billion people, consciousness has awakened that they are now strong enough to determine their own fate. Just as we have spoken of a "yellow peril,' so to-day the words 'white peril' spread across Asia.

Where does this sudden understanding, this newborn power come from? It is not merely technology turning against its father. A new burst of national idealism has sprung from ancient wells, a deeply religious movement confronting the materialism of the white world and extending to Japan and Persia, to India, China, and Arabia. Fundamentally, it arises from the same desire for moral, spiritual, and political equality of treatment that we Germans have struggled for ever since the end of the War because we could not live without it. It is the recognition that a new world can arise only from the sources of national power. All of us, therefore, want the old order to collapse.

—

Modern Hungarian Writers

Joseph Remenyi surveys in a brief space, the literary activities of modern Hungary with the advent of the Catholic Renaissance in the country, which are reproduced below from *The Commonweal*:

There is a renaissance of Catholic literature in Europe which has reached Hungary too. For the past one thousand years Hungary has been an integral part of western Europe in the realm of literature as well as in the realm of other activities.

The aim of contemporary Hungarian Catholic writers is not a timid or vehement defense of Catholicism, but an attempt to portray the reality of Catholic principles, either with the lyric force of a poet, with the narrative and psychological reliability of a novelist. or with the dramatic instinct and vision of a playwright. Outside of the "'Catholic substance!' of their work, which is after all their ideological background, the uncompromising esthetic criterions are very important. Without the latter it would be merely a didactic literature, ethically and religiously justified, but outside of the jurisdiction of asthetic evaluation. In other words, literary ability is as essential to the Catholic writer as is his honest presentation of his faith.

Hungarian poets and writers of the past—especially of the nineteenth century—who definitely identified themselves with the dogmas of Catholicism were either minor creators or artistically insignificant. Their

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

religious honesty is beyond question ; the nobility of their purpose is nnneniable ; but they were not writers. they were only writing ; in most instances not poets, merely versifiers. The two representative Catholic poet of the nineteenth century—Antal Sujanszky and Bela Tarkanyi—were conservative disciples of the inherited forms of Hungarian poetry, but their poetry lacked originality, vitality, spiritual virility. It was pleasant and decent, not profound and magnificent. It was the kind of poetry that fits into a school textbook for educational purposes, but does not fit into a poetic anthology of real merit.

Ottokar Prohaszka, professor of Catholic theology at the University of Budapest later became the Bhishop of Szekesfehervar. The rebirth and newness of Hungarian Catholic literature can be traced back to this unusually rich spirit. Ramon Fernandez says of Cardinal Newman that he was the philosopher of reiligious experience. Reading the works of Ottokar Prohaszka—the bulk of which was written for adults—one would say that he was the imaginative incarnation of a religious experience. His baroque style, his personality that radiated humbleness and knowledge through his works, his transcendental sense of proportion, exerted a lasting influence on the younger Catholic generation of Hungary. Rationalism was then the all-dominating philosophical principle. Voltaire were quoted and not Pascal, the brain was emphasized and not the spirit, Herbert Spencer was dissected and not Jacques Maritain.

If, as T. S. Eliot says, Baudelaire discovered Christianity for himself, one must say that Bishop Prohaszka rediscovered Catholicism for a large percentage of Hungary. In addition to this, he induced, directly or indirectly, writers and poets to adhere to the integrity of Catholicism without offending the integrity of creative work He prevented a return to literary diletantism among Catholic writers.

It is a result of his influence that present-day Hungarian Catholic writers aim to produce a Catholic literature which in its transcendental and ethical substance is Catholic and in its form artistic,

Boris Balla, a novelist, who has the courage of his convictions and the artistic ability to portray it, is the most gifted writer of the Catholic renaissance in Hungary. He is still in his storm and stress period ; even the small quantity of his work indicates originality, spiritual richness, a feeling for realities and a visionary capacity for eternal values. Among the poets Laszlo Mecs and Sandor Sik must be mentioned. The former is a member of the Premonstratensian order in Czechoslovokia. His poetry is sometimes bombastic, sometimes loquacious, but it has touching and disarming humanness. Sandor Sik is a member of the Piarist order on the faculty of the University of Szeged. He is a somewhat more disciplined poet than Mecs, more mature, but he too is uneven from the viewpoint of nonconforming critical evaluation. There is much poetry in his play, not enough action. As a drama, it is static.

It is of interest that medieval Latin hymns were translated into Hungarian by Mihaly Babits, the greatest of contemporary Hungarian poets. His translations including that of Dante's "Divine Comedy," no doubt mean an enrichment of the specific Catholic elements of Hungarian literature.

—

Franco-Italian Relations

The following extracts of an address delivered at Chatham House by Maurice Pernot, quoted below from the *International Affairs* will give some idea of the present political relation between France and Italy :

The regime established in Italy by Signor Mussolini moves a certain number of Frenchmen to defiance. We may dismiss as childish the idea that a liberal and democratic parliamentary republic would be forswearing its principles by holding out a friendly hand to Fascist Italy. Nations live under the regime which pleases them—or which they deserve ; that is their own affair and in foreign policy such prejudices are out of place. Was not Francis I, the ally of the Grand Turk, and Felix Faure of Tsar Nicholas, autocrat of Russia ? None the less, there is a type of diplomacy affected by dictators which they alone are in a position to practise. In Italy to-day the Ministry governs without Parliament, and the Ministry is a single man. I do not suggest that elsewhere parliamentary control over government foreign policy is always effective—far from it ; but it does exist and in certain circumstances it does constitute a check to the executive.' There is no check of any sort where the government does not fear either Parliament or Press and moulds public opinion as it pleases. Thus while a parliamentary government will not be tempted to embark on a foreign adventure simply to increase its prestige or strengthen its position, to a dictator this temptation may prove irresistible. We are obliged to take into account the special risks involved from the international point of view.

Again, although in order to come to some understanding we must know each other, it is possible to know one another too well. The bitterest misunderstandings are those between relations, and the "two Latin sisters" have only too often provided Europe with an unedifying spectacle. I do not know if Prince von Bulow was right in holding the press responsible for the pre-War Anglo-German disagreements ; but I am convinced that Franco-Italian quarrels have been most unfortunately embittered by the newspapers of both countries. On the French side, writers have exasperated our neighbours by jokes in bad taste and an irony which wounds no less for not being understood. On the Italian side free rein has been allowed to attacks, not merely on our government and democratic institutions, but on our people, our customs and our traditions, with the constant refrain that our race is degenerate and about to disappear, leaving room for others stronger and better than we are.

But if anger and hate are unfruitful, a presumptuous optimism is not much more effective. For fifteen years we have heard both Italians and Frenchmen, with the best intentions, declaring that a perfect community of interest exists between France and Italy in all domains. What good is done by harbouring such illusions when the contrary thrusts itself before our eyes ? That best way of making things become what we wish them to be, is first to see them as thep are. Geographical reasons lead France and Italy to develop their activities in the same region, this Mediterranean Basin. France, rich in territory and raw materials, is poor in men ; Italy, over-populated, lacks room and the primary materials for her industry. The French interest is to absorb the excess Italian population which finds in France its means of livelihood ; but the Italian interest is to prevent this absorption and to keep for itself, although she exports it, the human material which she rightly regards as her chief asset.

INDIAN PERIODICALS

To Buddha

Visva-Bharati News published the following lines read by Dr. Rabindranath Tagore at the Colombo Regal Theatre :

The world today is wild with the delirium of hatred, the conflicts are cruel and unceasing its anguish, crooked are its paths, tangled its bonds of greed. All creatures are crying for a new birth of Thine. Oh, Thou of boundless life, save them, rouse thine eternal voice of hope, let love's lotus with its inexhaustible treasure of honey open its petals in thy light.

O Serene, O Free, in thine immeasurable mercy and goodness wipe away all dark stains from the heart of this earth.

Thou giver of immortal gifts give us the power of renunciation and claim from us our pride. In the splendour of a new sunrise of wisdom let the blind gain their sight and let life come to the souls that are dead.

O Serene, O Free, in thine immeasurable mercy and goodness wipe away all dark stains from the heart of this earth.

Village Self-Government in Bengal

The poor *chowkidar* of the Bengal village suffers from dual control—of the *thana* officer and the union board. In an article on village self-government in Bengal in *The Calcutta Review* Prof. Nareshchandra Roy writes :

This dual control not unoften places the *chowkidars* between two fires. In many places there is no love lost between the Union Boards and the *Thana* authorities. Long traditions of despotic rule have made the Police haughty and overbearing. When a Sub-Inspector of Police goes to inspect a village he expects and not unoften demands deferential attitude to him on the part of the Presidents and members of the Union Board These latter, however, are in many Unions jealous of their position and conscious of their rights, and become indifferent to the visit of the *Thana* Officer, who consequently comes to suffer from a sense of injured dignity. Nothing but heart-burning now characterizes the relations between the Union and the *Thana* authorities. When the relations between the two are so strained, the position of the watchmen becomes delicate. Those of them who try conscientiously to serve both the masters, find themselves deserted by both of them. Some *chowkidars* of course walk warily in the midst of these petty jealousies. They poison the ears of the *Thana* Police against the Board and are profuse at the same time in their complaints to the President of the Board against the demands of the *Thana* Officers. They help to vitiate further the already tense atmosphere. They neglect the work of the Board on the pretext that the Police makes too much demand on their time and neglect their duties on the plea that the President keeps them otherwise too long engaged. Serving two masters is always an uncomfortable job. If the Union Board is at all to remain invested with the duties of rural watch and ward, it should be given full authority and responsibility in the matter. At present its position *vis-a-vis* the *Thana* Police is invidious. It raises the tax for the maintenance of the *chowkidars* but it exercises only a nominal control over their activities. It pays the piper but cannot call for the tune. If the Government cannot entrust to it full responsibility as to the maintenance of peace and security in the Union, this function should be wholly withdrawn from it and entrusted to its own agents. Divided responsibility seldom makes for efficiency. The Government, however, seems to be unwilling to take any step either way. It sets its face even against a slight modification of the existing arrangement.

—

Functions of Indian Universities

A university is not a technological institute. So Prof. Gurmukh Nihal Singh writes in *The Hindustan Review* :

Universities can and ought to help in the advancement of industry through promoting the study of applied science and research in industrial problems but to train technical experts or technicians is not the work of a University but of special technological institutes and workshops. There is a very great need of starting technical institutions of all types and stages in India, and the Government as well as industrialists and businessmen and other educational organizations should co-operate in bringing them into existence. That will help not only industrial progress and the solution of the unemployment problem, but also the reform of the Universities in this country.

In the words of the Haldane Commission on University Education in London in 1913, "the aim of a University is the pursuit of knowledge not only for the sake of information but always with reference to the attainment of truth." On the other hand, "In a technical or professional school the theoretical teaching is limited and directed by the application of ascertained facts to practical purpose." Bearing in mind this essential difference the true functions of a University may be stated as :

(*i*) The conservation, dissemination and extension of knowledge ;

(*ii*) the inculcation of a spirit and love for learning and a burning zeal for its dissemination ;

(*iii*) the production of learned, cultured persons and leaders of thought and action ; and

(*iv*) the turning out a large number of young persons with trained, well-balanced, disciplined minds, with broad outlook and sound character—*i. e.*, of persons without technical knowledge required for specialized work but with a capacity to adapt themselves to the requirements of any situation.

How America can help India

Rev. Allen E. Claxton writes in *Prabuddha Bharata*.

If India has been at the end of the Pole where her religion has contributed practically nothing to economics, we have been at the opposite end and have made our religion a tool of economic development. America can help India to see that economic planning and the ordering of one's life to reach the highest possible efficiency can bring about organization in all departments of life and thus indirectly contribute to spirituality. I do not say that this is inherent in Christianity, for Christianity is more Oriental than Occidental. Gandhi's doctrine of non-violence is not primarily either Hinduistic or Buddhistic. It is fundamentally Christian, and he does not hesitate to say so. Christ definitely said, "What shall it profit a man to gain the whole world and lose his own soul." We have practically gained the world and have practically lost our souls. If India can spiritualize our religion and we can help toward making India's religion affect her daily activities, both of us shall be better off

America can help India through the example of a united government. Our history points out clearly how our thirteen colonies each gave up certain of their autonomous rights in order to form a strong federal government without which America could never have become a nation. The bloody War of 1861 to 1864 in which we settled the question of secession as much as the question of slavery should be a sufficient lesson to India that fighting between religions or provinces, will never gain her anything.

—

Chinese Attitude towards Christian West

In the same paper appears the following:

In a recent issue of the *Atlantic Monthly* is given the attitude of a Chinese writer to the Christianity in China. He says: "In whatever the missionary in China undertook he proceeded on one assumption, which he regarded as a self-evident truth: 'What is good for me must be good for you.' Not only did he apply it in religious matters, but in other fields as well. Take education, for example. Almost without exception, the missionaries deliberately copied American models so that Chinese schools became nothing but preparatory academies for American colleges. The charm of many Chinese girls has been destroyed by *The Fœrie Queene* and *The Lady of the Lake*; many Chinese boys have been driven crazy by Burke's *Speech on Conciliation with America*. The Lord made us different from the missionaries for no other purpose than to have the missionaries make us like them.

"The missionaries cannot understand that denominations have no significance to us. If we choose to become Christians, we are Christians—not Methodist Christians, Presbyterian Christians, Baptist Christians Somehow the fine distinction escapes us. If there is any difference between the sects, we dismiss it as unimportant. It seems to us that Christians should have better things to do than to wave baskets of dung before each other's noses We weep to see that the body of Jesus carries more bullets than that of a slain Chicago gangster—bullets inflicted by denominationalists.

"We Chinese have been good customers for ideas, even when they have been preached from behind barbedwire entrenchments. But the day when China could be made the dumping ground for the discarded thought of the West is gone for ever.

—

Early Hindu Colonization in Borneo

Prof. Dr. R. C. Majumdar has established in *The Indian Review* that Borneo came directly in touch with Hindu culture and not *via* Java. He has studied the images in the cave of Kombeng and says:

One of the most interesting facts about these images is, that they are not the products of Indo-Javanese art which was predominant in Borneo in the later periods, and as such we have to postulate a direct stream of Hindu influence from India to Borneo. The images of Kombeng cave are thereby invested with a great importance, being the earliest specimens of Hindu art in the eastern colonies. As already remarked above, they evidently belonged to a temple of which the ruins are preserved in the cave. That temple was one of the earliest specimens of Hindu architecture, though unfortunately nothing now remains of it *in situ*.

At various other places, *e.g.*, on or near the banks of the Mahakam river, Dr. Majumdar finds similar traces. He writes:

Here, again, the Hindu civilization is to be traced direct from India and not through Java. The same conclusion follows from a study of some archæological remains notably in the south and east, other than those on the river Mahakam and Kapuas. Thus we have to conclude that Hindu colonists, direct from India, settled in different parts of Borneo during the early centuries of the Christian era. The general belief that Borneo was colonized by Indo-Javanese emigrants, cannot be accepted, at least for the early period.

—

Disinfectants in Cosmetics

In *Scientific Indian* occurs the following:

Silver chloride silicic acid gel is one of the newer substances. It is a fine white powder. Small additions of this substance to usual powder bases are sufficient to give strong germ-killing power to dusting powders. For example, 10 parts of silver chloride silicic acid gel, powdered; 40 parts of purified silicic acid; 35 parts of talcum, 105 parts of starch powder and 5 parts of magnesia form a mixture which, because of its strong absorptive power, readily absorbs perspiration.

Very active preparations arise from the chlorination of phenols. Examples are trichlorphenol and trichlorocresol: however, their very strong odour prevents extended use for cosmetic purposes. Chlorination of thymol isomers such as carvacrol gives rise to monochlor carvacrol, a strong bactericidal, practically nonpoisonous, harmless to the skin, having good deodorizing power and only very slight odour. Its disinfecting power is far greater than that of phenol, being a little less than that of corrosive sublimate, while it is far less poisonous. It is a good foaming agent.

The Carey Centenary

William Carey,—better known as 'Carey'—died on June 9, 1834. So the Carey Centenary has

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

...ation due this year, and the followers of Christ ...ld over India have naturally referred at length ...to the good and noble mission to the fulfilment ...of which Carey dedicated his life. *The National ...Christian Council Review* writes editorially :

'It is recorded that 'From the day of his appointment ...in 1793 to the day of his death, Carey did not receive ...more than £600 from the Society's funds. He earned ...his own living and contributed something like £40,000 ...or more to the Baptist Missionary work in India.' ...That is an amazing record.

'We are thinking much of missionary methods in ...these days. Can we better those of Carey and his ...colleagues as set out in the historic Serampore ...Covenant? This is a covenant that never grows old.—

1. To set an infinite value on men's souls.
2. To acquaint ourselves with the snares which hold ...the minds of the people.
3. To abstain from whatever deepens India's ...prejudice against the Gospel.
4. To watch for every chance of doing the people ...good.
5. To preach 'Christ crucified' as the grand means ...of conversions.
6. To esteem and treat Indians always as our ...equals.
7. To guard and build up 'the hosts that may be ...gathered.'
8. To cultivate their spiritual gifts, ever pressing ...on them their missionary obligation—since Indians ...only can win India for Christ.
9. To labour unceasingly in Biblical translation.
10. To be instant in the nurture of personal ...devotion.
11. To give ourselves without reserve to the Cause, ...not counting even the clothes we wear our own.'

'It is written of Carey that 'his whole desire went ...was to meet the Will of God.' Therein lay the secret ...of his success.

—

The Virtues of Goats' Milk

We take the following from *The Oriental Watchman and Herald of Health* :

One of the great factors in favour of goats' milk ...is that the goat is almost immune from the tubercle ...germ. Her milk can therefore be drunk with safety, ...without being pasteurized or sterilized, which tends ...to destroy the vitamins. Professor Nocard, an eminent ...French research worker, states that out of 130,000 ...goats brought to Paris for slaughter, meat inspectors ...failed to find a single case of tuberculosis; in Prussia, ...out of over 47,000 goats, only 0.41 per cent were ...found to be suffering from tuberculosis. Goats are ...universally submitted to the tuberculin test in Prussia, ...and on an average only 0.5 per cent give a positive ...reaction for tuberculosis.

Goats' milk contains a fair proportion of iron, ...which should render it particularly beneficial in cases ...of anæmia.

Apart from the question of actual disease, goats' ...milk has a very strong point in its favour on account ...of its remarkable digestibility. Owing to the small ...size of the fat globules, and the soluble nature of the ...curd—as opposed to cows' milk which curdles in ...large masses—it is particularly suitable for delicate ...children and people with weak digestions. It digests ...in a fraction of the time required for cows' milk.

Comparison of Three Different Types of Milk

	Goat	Cow	Human
Water	86.45	87.40	86.40
Dry Substance	85	75	90
Casein	3.00	3.00	1.00
Albumin	1.00	.40	1.20
Fat	4.20	3.75	3 50
Sugar	4.50	4.70	7.00

Library Movement in USSR

Mr. S. R. Ranganathan, M. A., writes in *Advance India* :

Modern Library Movement began in Russia in 1919. In spite of 68 per cent of the inhabitants being illiterate, the State resolved that, by 1933-34, the ability to read and write should be the possession of every citizen. The public libraries, with their associated centres for the liquidation of illiteracy, were used as the chief lever to achieve this end.

The latest communication received, states, "The number of mass libraries has increased and quite a new network of them has grown up... ..The number of books in the public libraries increased from 9 millions in 1911 to 124 millions in 1934, The number of readers is growing continuously reaching 15 millions in 1932 as against 120,000 in 1926.

Nevertheless, the Central Executive Committee of the USSR resolved at a recent meeting that the work of the public libraries was still unsatisfactory, in many respects. "The set of books, especially in rural areas, is often obsolete..... The staffs are not sufficiently qualified to ensure an ideologically consistent direction of the work. There are also frequent cases of libraries being moved to unsuitable buildings."

—

Cattle Insurance

Cattle iusurance has not yet been very popular in India. So the following extracts from *The Bombay Co-operative Quaterly* should be read with interest :

Cattle are agriculturists' wealth and in some backward parts of the country, such as Dohad and Jhalod, the agriculturist invests his surplus funds in cattle and buying and selling of cattle with him is like uttering a currency note in the market.

In the absence of good cattle cultivation is not satisfactorily done in these days and the death rate of weak cattle also is rather on the increase. The agriculturist is again a poor man and loans apparently borrowed for bullocks are misused. If such loans are advanced in kind the unproductive debts will be very much avoided and the compulsory insurance of cattle is a sure check against such sins of omission or commission.

Such cattle insurance societies were first organized in Burma and then introduced in other parts of the country. A few were registered in Gujarat also but only one of those originally registered in the Ankleshwar Taluka survived, and after its area of operations was increased from time to time it was dubbed as the Ankleshwar Taluka Cattle Insurance Society. After these attempts had proved successful benevolent compulsion to the extent of insuring one cattle head at least was made as a condition precedent to every loan by a society if the loan was borrowed from the Central Bank, and the same conditions held good in another Taluka institution of the same type

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

which was only a few years ago registered for the Wagra Taluka.

An Estimate of Dr. Rabindranath Tagore

Mr. D. P. Rao gives an estimate of Dr. Rabindranath Tagore the man in *The Educational Review*. Part of it is given below :

In Rabindranath Tagore, we find, indeed a true exponent of Eastern thought and a real interpreter of Oriental poetry. But his vision is not narrow, his outlook is not short.

His mind has not been influenced by time and space. On the contrary, his heart is as wide as the sea and his soul as lofty as the star. At the same time he does not assert himself. He does not dogmatize not thrust his moral. He is thoroughly mild and humble in conveying the messages of his heart ever sincere and devoted to God, ever engaged in the quest of the Unknown Perfection.

To him life is a search after truth and perfection. "We are all trying to solve the riddle of the Unknown," says he, in all earnestness and devotion to the cause of Truth. He denounces materialism and the modern civilization, as it has made of man a living machine and reduced him to a self-seeking creature with an infinite craze for wants and gratification.

To him all education and religion that end in bigotry and prejudice of caste or colour, and help to create walls of division between man and man, are the curse of mankind. Accordingly his own works militate against those monstrous evils of passions and prejudices which baffle all attempts at true reformation. Not only that, wherever he goes, he exhorts people to carry on a strong and vigorous campaign against blind custom and ignorance, superstition and falsehood that threaten the very true order of society. It is his steadfast belief that the individual man whatever and wherever he may be, must exist for and subserve the great man within him and must express himself in disinterested works of love and charity, science, literature and philosophy.

To him a selfish man is ever held in bondage ; for all the while he works, in the narrow sphere, with dwarfed and stunted brain, with the vision narrowed and shortened down, to serve his mean and vulgar ends. His heart therefore turns to God for true freedom, which is of the mind and spirit rather than that of the body.

—

A new definition of Swadeshi

Mr. Maurice Frydman writes in *India and the World* :

"For the purpose of this Institution, the All-India Swadeshi Sangh, *Swadeshi* shall cover articles manufactured in this country by individual craftsmen and their families or co-operative associations of individual craftsmen, workers, and educated professional men who will accept directions issued by the Sangh as to the tools, technical instructions, quality and finish, planning of production purchase of raw materials and disposal of products, and will therefore exclude all article made by industries utilizing hired labour. The word Swadeshi will thus have the following meaning : Made in India—made at home or Made in India—made Co-operatively."

There is little doubt that this new definition, if accepted, will revolutionize the Swadeshi movement and will necessarily lead to a profound and laborous readjustment. Yet we consider it the only one, that will smoothly and peacefully lead this country towards a better social system, that will not create useless and wasteful suffering of individuals and chaos in the Nation's economic life, that has the merits of fundamental simplicity, that instinctively appeals to the commonsense of every hard-working man and that will find a ready response in the hearts and minds of the children of this country.

—

The Tragedy of Indian Education

The following lines from the same paper are instructive :

Now it is all very well to say that Education is an end in itself. It is. It is better to have developed your mental faculties than not to have done so. It is better to be men than a cow. There would be a certain indicency in admitting that one only sought education in order to improve one's economic position. And yet it is hard to put up with unemployment, under-payment or a soul-destroying job when one's faculties have been developed than when they have not. It is desperately hard when a man has worked hard for years and when his father has made sacrifices to help him, if he then finds that Society has no use for him.

—

Co-ordination of School and Home

To ensure the healthy education of boys both the parents and the teachers should co-operate. Mr. Paresh Chandra Sen, M. A., B. T., writes of the functions which the parent and the teacher should fulfil as follows in *The Teacher's Journal*:

The parent should see that young children receive proper training in truthfulness, obedience, cleanliness and preciseness at home. Young children spend the greater part of day in home circle and parents have got opportunity of inculcating on them, the habits of truthfulness, obedience, etc. They should see that the children imbibe the habit of doing the right thing in right time.

Parents should see that childred attend school punctually and regularly.

The parent should see whether children do regularly school work at home.

Guardians should always lend their helping hand to teachers and co-operate with them.

It should be the duty of teachers to see the parent, as soon as the child is admitted, in order to know the peculiarities and weaknesses, if any, in the character of the child. Prineipal rules and regulations of the school should be made known to the parent.

Periodical report should be issued showing the progress of pupils in each subject. The Head teacher should also note in the report lapses in conduct and attendance.

A day should be set apart in a year for meeting of teachers and guardians for mutual exchange of ideas and healthy discussion of matters relating to working of the school.

Teachers should set proper home work in order to keep a link between school and home. The child should learn that school and home are working together for its benefit.

One of the most important aims of teachers should be the fostering of the habits of punctuality and regularity.

FINANCE AND INSURANCE

Finance

Preliminary Forecast of Jute

The preliminary forecast of the jute crop for 34 just released by the Department of Agriculture, Bengal, shows that the propaganda for restriction has been almost counteracted by a temporary rise in prices at the sowing time. The consolidated figures are as follows :

Bengal including the States	2,186,100 acres
Behar and Orissa	163,800 ,,
Assam	141,600 ,,
Total	2,491,500 ,,

As compared with the 1933 figures the Bengal returns show an increase of 0.8 per cent, while the total has decreased by only 1.03 per cent. The decrease is to a large extent fortuitous, because due to the deposit of sand in the districts of Muzaffarpur and Darbhanga a very large area has been thrown out of cultivation in Behar where the decrease has been by no less than 28,300 acres.

Co-operative Societies in Bengal, 1932-33

The Report on the working of the Co-operative Societies in Bengal during the year ending on 30th June 1933 has been received by us late in June 1934. It appears that the Report, which consists of only fifteen pages, was signed on the 5th January 1934 while the Government resolution, a mere routine affair, was passed on the 7th of April, that is, after four months. It is regrettable that the Government reports are published so late that the public almost ceases to take any interest in them. Yet we have to refer to them for the latest available statistics.

During the year under review the running audit system was introduced to provide a check against fraud and defalcation. Due to the economic crisis adequate repayment of loans was not made by the members and so the proportion of loans over-due increased to as high as 60 per cent. At the same time a considerable idle balance has accumulated in the Provincial and the Central Banks. It will be remembered that very recently five Land Mortage Banks have been started as an experimental measure to provide long-term loans against land.

The Report reviews that the Agricultural Credit Societies are not working as they should owing to the depression, but that the Central Banks on the whole in a satisfactory position, and in some cases no Central Bank has been forced to close down. The prosperity of the non-agricultural societies has on the whole remained unaffected although many non-credit societies are far from working on a profitable basis. The general conclusion of the Report seems to be that the Co-operative system has passed through a critical year in a way which shows the inherent strength of the co-operative principle.

A closer study of the statistical tables however shows that the optimism is not justified. In case of the Provincial Bank the expenditure exceeded the actual income by Rs. 1,17,616 while the deficit in case of the Central Banks taken together was Rs. 6,58,904. Actual receipts exeeeded actual exenditure only in case of five Central Banks, while in some cases the actual disbursement is more than one thousand times the actual receipts. Curiously however some of these latter banks declared dividends in spite of this.

We are thus forced to conclude that the situation is not at all as reassuring as the Report has sought to show. The position of many banks is very serious indeed, and unless the situation takes a definitely better turn in near future most of the Central Banks would have soon to face a life and death struggle.

Co-operative Statistics 1932-33

	No. of societies	No. of members	Working capital
			Rs.
Prov. and Central banks	120	25,148	7,33,22,614
Agr. societies ...	21,342	771,144	5,92,03,158
Non-Agri. societies ...	2,184	247,705	3,76,75,840

Sources of Capital of Agricultural Societies

	Rs.
Share	55,27,194
Deposit (members)	19,83,317
do. (non-members)	17,08,994
do. (Provincial and Central Banks)	3,42,24,872
Reserve	1,33,64,101, etc. etc.
Total	5,69,00,456

The Tariff Board and the Steel Industry

In the recent Report on the Iron and Steel industry, the Tariff Board has reviewed the situation with regard to not only the Tatas but also others including the subsidiary industries. The Board concludes that on the whole the protective system has worked very well in spite of the cataclysmic fall in prices, increased freight charges and the last strike which so disastrously affected the Tata Company. The Tatas supplied no less than 72 per cent of the total available market in India in 1932-33 as against only 30 per cent in 1927-28. In addition to the growth of a re-rolling industry, the protective system has enabled the company to earn a profit and also to lay aside a large sum for capital improvement. At the same time the reductions in cost anticipated in 1926 have been fully realized even

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

allowing for the fall in the prices of coal and spelter.

The Report arrives at the fair selling price of steel products after taking into account the relevant factors such as the valuation of the property, depreciation, interest on the working capital, a reasonable rate of profit, freight charges, selling expenses and so on; and on that basis it proposes a new scale of duties in place of the old one which was suggested in 1926. Generally speaking, according to the new scheme there would be no protection whatsoever against most products manufactured in the United Kingdom. As regards others the duty is to be reduced to a mere fraction of the old level. The duties against the products manufactured in other countries are to be maintained at a high level, at enhanced rates in case of some items and at lower rates in case of others. The duty on fabricated steel is to be the same wherever it is produced, *viz.*, at Rs. 40 per ton. The Board proposes to include in the scheme of protection a provision for off-setting duties under which the Government will have authority to raise or lower the duties as occasion arises. It also proposes a scheme of duties for the Tin plate and the Cast iron industries.

We are not in a position to judge whether the 'fair selling price' calculated by the Board is reasonable. But *if* it is so, and *if* the British prices are not lower it stands to reason that there should be no protection against the British producers, even though the conclusion might appear as a recrudescence of the much decried Imperial Preference and even though the national sentiment might militate against it. We must however remember that what is economically right may not be politically wise. But what we do not understand is why the Tariff Board should go to the length of recommending the removal of even the revenue duties on certain classes of products manufactured in the United Kingdom. This is a matter which we think does not concern the Tariff Board at all.

We give below a summary of the new scale of duties proposed:

	Duties recommended in 1926 (Rs. per ton)	Existing duties (Rs. per ton)	Proposed duties (Rs. per ton)
Rails	13	16¼	Nil
Fish-plates	6	7½	Nil
Fabricated Steel Sleepers	10	12½	40 Nil
U. K. Products:			
Structurals	19	23¾	Nil
Bars	26	32½	10
Plates	20	25	Nil
Black-sheets	35	43¾	11
Galvanized Sheets	38	53	10
Tin-plate			38
Cast iron pipes			Nil
Bolts, nuts, rivets, etc.			Nil
Continental:			
Structurals	30	37½	43
Bars	37	46¼	39
Plate	36	45	25
Black-sheets	59	73¾	32
Galvanized Sheets	38	83	40
Tin-plate			59
Cast iron pipes			57½
Bolts, nuts, rivets, etc.			1-9 to 4-3

Sailendranath Sen Gupta.

Indian Insurance

Insurance Law Amendment

The decision of the Government of India to amend the Insurance Laws is a move in the right direction. There has long been a demand for such amendments, but for one reason or other it has been shelved until now. The first Law regulating the working of the Indian Insurance Companies was enacted in 1912, and was modified in 1928. But it has been pointed out time and again that the Law as it now stands is quite inadequate to deal with the many and various problems that have cropped up in regard to the Insurance business in India, since then. In 1925, a draft bill covering the whole field of Indian insurance was introduced in the Legislative Assembly but it proved abortive. For, a Committee in England was at the time examining the possible lines of modifying the British Insurance Law and the Bill was kept in abeyance till the proposed modification of the British Law could be effected. There the matter has remained. It is understood that the Government contemplate an amendment of the present Act so as to put a stricter regulation upon the unrestricted and unremunerative competition of companies which have grown like mushrooms and whose unbusinesslike methods of procedure constitute a grave menace to the savings of the middle-classes who so often find their only method of investment in life insurance." This is, indeed, necessary. But will the Government be pleased to introduce provisions to safeguard the Indian Companies from the lure of the strongly entrenched foreign companies which utilize their enormous resources in a manner calculated to place formidable obstacles in the way of the development of our indigenous concerns thereby sapping the foundations of our national economic progress? Such protective legislations obtain everywhere, and for that very reason, and will, therefore, be by no means peculiar to India. The main provision that urgently requires to be made is to require the foreign life offices to submit separate accounts of their Indian business and to make such deposits and render such accounts as Indian companies are compelled to do. We trust that Indian opinion will be duly consulted

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

sidered in regard to the possible lines of the posed amendment.

New Business of Indian Life-Offices

"Ours is a business that knows no depression" ully said a leading American Insurance man other day. This is no idle boast. For, ression has an excellent psychological effect this particular business. The worse the itions the greater the desire to save; and type of saving is so free from fluctuations. that the insurance business has been ely untouched by the depression but business figures of our leading Indian life-offices show a record of consistent and satisfactory progress in spite of it. On the one hand, this is an evidence of the popularity of life insurance in general and, on the other, it is an indication of the growing confidence of our people in our own institutions. The Oriental has come out first in the list with a business of more than Rs. 7 crores. The Hindusthan—as yet comparatively much younger,—stands second with a business of over Rs. 2 crores, followed by the National and others. A table is appended below to show the progress of the ten leading Indian life offices :

Name	Year ended	New Business	New Business last Year
		Rs.	Rs.
Oriental ...	31-12-33	7,04,26,203	5,94,00,727
Hindusthan ...	30- 4-34	over 2,50,00,000	over 2,00,00,000
National ...	31-12-33	1,67,15,000	1,55,73,000
Empire ...	28- 2-34	1,38,24,000	1,11,55,000
Bombay Mutual ...	31-12-33	1,29,16,500	75,65,000
New India ...	30- 3-34	1,11,66,800	1,05,26,000
Lakshmi ...	30- 4-34	over 1,00,00,000	over 80,00,000
Bombay Life ...	31-12-33	94,16,500	63,45,500
Industrial and Prudential ...	31-12-33	67,00,000	52,00,000
United India ...	31-12-33	66,40,918	49,65,750

Results of the National

The 'National' is one of the "Big Five" of Indian life-offices, and its twenty-seventh al report reveals that its working in the year has been satisfactory, indeed. During year 11,474 proposals for insurances amounting 2,12,27,035 were received of which 9 058 ed in policies assuring in the aggregate a of Rs 1,67,15,163, inclusive of reassurances. nett annual premium income from New es, after deducting the sums re-assured nted to Rs 8,42,479. The claims presented the year amounted to Rs 6,53,778 by and Rs 8,14,014 became due in respect of ed endowment assurances. The Life rance Fund, inclusive of other Funds, nted to Rs 2,05,38,459 as compared with ,35,046 at the beginning of the year. The interest income, after deduction of income- was Rs. 8,82,895 and the ratio of expenses ous level. The premium income remained almost at the

The Chairman of the Company explained, s presidential address, the causes of the t income being comparatively low, and tally referred to the opinion of Mr. J. M. who had recently foreshadowed that the of interest rates would go still lower in . It may be of interest, however, to note Mr. Keynes' dictum has been challenged Prof. Gustav Cassel of Sweden who does elieve that interest rates anywhere will fall a long period. Whatever may be the tive merits of the rival points of controversy, results of the 'National' in the past year been quite satisfactory. Here are some of nt features in a tabular form :—

		1933	1932
		Rs.	Rs.
New Sums Assured	...	1,67,15,163	1,55,73,782
Funds	...	2,05,38,459	1,83,35,046
Interest income	...	8,14,014	8,94,802
Claims :			
By death	...	6,53,778	5,87,563
By maturity	...	8,14,014	6,91,645
Total of Assets	...	2,23,05,561	1,99,03,160
Expense Ratio	...	27·4 p.c.	27·3 p.c.

Foreign Insurance

An Interesting Analysis

The "Weekly Underwriter" has made a very interesting analysis about the total number of death claims in the first year of insurance in the U. S. A. and the causes and incidence of such deaths. No less than 76,400 claims, totalling about $ 50½ millions were, according to the investigations of this weekly, paid during 1933 on policies that had been in force from one day to 12 months. More than 20,000 of the early claims were in respect of polices which were in force for even less than three months, and this group included policyholders of all ages, classes, and occupations. The causes of death were as varied as they were peculiar. Accidents were responsible for 10 per cent of the total death claims of life companies for all policy years in 1933, and for a much larger proportion—about 28 per cent—of the deaths that occured within a year of assuring. Autmobile casualties took the largest toll while diseases of the heart ranked second. From a sample of 1000 typical ordinary cases, it appeared that the largest number of first-year claims involved the age-group 40-49.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Undoubtedly such an analysis offers an exceedingly forceful selling argument. The huge number of deaths owing mainly to causes unforeseen, and the timely provsion that the Insurance companies make for the dependents of the deceased, cannot but have an appeal even to those who do not believe in insurance.

INDIAN WOMANHOOD

The late Mrs. Prakriti Devi

Mrs. Prakriti Devi, wife of Mr. Mahimohan Chatterji, advocate, died on 2nd June last. She was a lady of remarkable talents. She was an artist and also an expert in lac work, sewing, cooking etc. She was connected with various women's welfare associations.

Senhati is a village in the Khulna district of Bengal. Forty ladies of that village have set a noble example of practical philanthropy by clearing the local reserve tank of the weeds. Details of this appeared in *The Modern Review* for June, 1934, p. 717.

The Begum Saheba of Rampur is an accomplished lady. She is touring Europe with her husband, the Nawab of Rampur. A woman correspondent writes of her in *The Daily Express* of London as follows:

> She writes poetry, but may not talk much in front of the Nawab.
>
> "I visit the Maternity Hospital in Rampur," she told me, "and I started the child welfare there. Sometimes the Nawab's Ministers and his elderly intimate friends call on me, but I never appear with him in public. My rooms are in a wing of the palace facing a little garden."
>
> She has stepped out of that garden for the first time without her veil. She has gone all over Europe during the last two months. Seen Berlin, Vienna, Prague, Rome, Paris; been in theatres, restaurants, shops, and aeroplanes, and enjoyed all with such demure unconcern that no one has guessed she only knew shuttered rooms before.
>
> She meekly follows her husband's lead and laughs happily with a diamond set and twinkling in her nose.

NAZIS FALL OUT

By KARUNA MITTER

It is a commonplace in practical politics that the companions of today are the enemies of to-morrow, that is to say, those useful today must be destroyed tomorrow lest they assert their right to dictate or share responsibility. That Herr Adolf Hitler subscribes to this political maxim is evident from the way he made short work of some of his party chiefs recently.

Indeed, it may be said, Herr Hitler owes his present unchallenged supremacy to his inconstancy. If he had been faithful to the Duesseldorff "Belage" then he would only be a puppet today in the hands of those who forced him into that undertaking. For the Hitler-Papen-Hugenberg coalition cabinet was formed on the basis of that agreement with the definite object of keeping the National Socialist forces subdued by having Hitler in reins with merely the semblance of power; the idea being that when the rank and file came to recognize Hitler's incapacity for serious political work they would be prepared to transfer their allegiance to veteran leaders of the old Germany, provided they were above party. The men who thought thus undoubtedly misconceived the nature of the forces they were wrestling with. Their dubious victory in the latest tug-of-war cannot but be short-lived. It is a natural assumption on the part of these men of pre-War Germany who seem to have remained entirely oblivious of the prodigious changes in the *Weltanschauung* of the German masses, which the events of the war and post-war years have effected, that the country could be run on old lines with the help of the Reichswehr and the police. For the time being Herr Adolf Hitler seems to know no better. It may be that Herr Franz von Papen had therefore thought it an opportune moment for his Marburg speech.

It would not be wrong to assume that Herr von Papen's move was meant primarily to

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

strengthen Herr Hitler's hands in curbing the extreme or "radical" elements in the National Socialist Party, for not only he spoke in high eulogistic terms of the Fuehrer at Marburg but re-stated his admiration for Herr Hitler's work in 'stopping disintegration' in a speech before 2000 Saar women* on July 23, *i.e.*, six days after his first speech which had been suppressed by Dr. Joseph Goebbels, Reich Minister for Enlightenment and Propaganda. In spite of that he was not allowed to 'get away with it' without a scratch. Perhaps this was necessary as a sop to the Left sections of the Nazi Party among whom the Marburg speech had created a stir and to Dr. Goebbels,—for the diatribe was also addressed to some of the Vice-Chancellor's cabinet colleagues not least among whom was the Propaganda chief who had been acting as leader of the campaign against "carpers and critics."

Unrest Among Nazis

The radicals in the Nazi camp had for sometime past been grumbling at the general state of affairs in the country and the trend of the Administration. Herr von Papen's outburst, which was a direct outcome of this restlessness, instead of checking the disaffection increased it. Forgetful of von Papen's part in helping the National Socialists to power upon which he based his right and duty to criticize Dr. Goebbels made a vigorous counter-attack on him at a Nazi mid-summer nights' festival:

> "These former cavalry officers, club armchair critics, and reactionaries† could not prevent us from assuming power, and now they want to prevent us from using the power." The National Socialists, he said, seized the right to power because nobody laid claim to it—"no Crown Prince, no commercial counsellor (a title even now held by some eminent industrialists) no big banker, and parliamentary chieftain."

"The National Socialist Government" he continued "would have done better to put all these gentlemen under lock and key." He hinted that von Papen had found Hitler satisfactory but objected to his party officials, "little uneducated people," rather than to some of the higher people whose example they were expected to emulate. "These little people have conquered Germany!" People who crept into mouseholes and then reappeared camouflaged as Nazis "have not understood our generosity. Now they shall learn to understand our determination."

On June 23, chief Group Leader Edmund Heines in a mid-summer night speech to his Breslau Storm Troopers said, they must remain alert round the picket fire, for it was more necessary than ever to keep watch. They must see that the movement was not turned into other channels. He introduced a new song entitled: "We are not yet at the end; the fight is not yet fought out," and declared that "this is our wild and fanatical confession of faith."

Dr. Goebbels who was put on his mettle by Herr von Papen delivered several more speeches on the same subject. At Essen, he demanded: 'Is it not about time the people themselves had a word to say and put this company of stink-pots to flight?"

These speeches show that the Storm Troopers (*Sturmabteilungen*) were seething with discontent and might vent their wrath in another outbreak like those witnessed during the counter-revolution of last year. In fact, a few days after the Papen speech, during a mid-summer night festival at Quetzin in Pomerania there was an affray between Storm Troopers and Stahlhelms when an S. A. leader sustained injuries in a scuffle with a Steel Helmet. As a consequence of this the Brown Army command threatened dissolution of the ex-service men's organization.

There was, then, before the incidents of June 30 considerable tension in the country. Notwithstanding the ban on Herr von Papen's Marburg speech, its salient points had rapidly been spreading through the country by word of mouth. The matter was in all conscience serious; the text of the speech had been submitted to President von Hindenburg in advance who had approved of it and had congratulated its author in due course; on the 19th, Hitler met von Papen when the former assured the latter that certain conditions against which the Vice-Chancellor's criticism was directed would be remedied. Von Papen had nevertheless resigned though it was not accepted. Thereafter both had seen the President at his country home at Neudeck who tried to smooth matters out.

But there was yet to be trouble between von Papen and other members of the Cabinet. On the 28th, Herr Jung who was a responsible secretary of Herr von Papen and often inspired or even drafted some of his chief's speeches was arrested. Walter Schotte, another close associate, had his rooms searched.

The Osaf's Stroke

The stage was thus admirably set for Herr Hitler's dramatic move. Following the Quetzin affray, but for reasons more weighty than this quarrel, the S. A. men had been given a month's leave during which they were not to use their uniforms. They were on the eve of their holiday. Ernst Roehm, Chief of Staff of the Brown Army, was on sick-leave. The action began in the early hours of the morning on Saturday, June 30, Herr Hitler himself taking the lead.

Taking advantage of von Papen's speech he had apparently gained the permission of President von Hindenburg to make use of the Reichswehr

---

* Herr von Papen is the Special Commissioner for the Saar.

† Franz von Papen was formerly a cavalry officer. He is a reactionary and has been a member of that notorious *Herrenklub*, a resort of reactionaries.

to crush the leading malcontents in his own camp and strike terror into the heart of others. Resolved to take drastic action" against men the news of whose intention to rebel had reached him, "a visit to Western German labour camps was arranged in order to lull the plotters into a sense of security." Here at 2 a. m. in the dead of night accompanied by some companions (of whom Dr. Goebbel's name has so far been disclosed) he took an aeroplane from the Hangelar aerodrome near Bonn and flew to Munich, the Party centre. The operations were simple enough. The Brown House, headquarters of the party, was surrounded and occupied by the Reichswehr. Ernst Roehm, with most of his staff, Chief Group leaders—Heines and Schneidhuber, Group leader Schmidt and others were among the numerous arrests made. Simultaneous action was taken in other parts of Reich, notably in Berlin and Bremen. At the latter place Group leader Ernst, leader of the Berlin Storm Troops, was arrested. In Berlin itself the raids were conducted mainly by the State Police Detachment Hermann Goering" who wear light green-grey uniforms, and steel helmets which look very similar except at close quarters, to the Reichswehr uniform. Probably this was more than a mere accidental coincidence. The palatial residence of the Storm Troops Chief of Staff, the G. H. Q. of the Brown Army, and H.Q. of the Obergruppe III, Group Leader Ernst's regional command, were among the places surrounded by the police, occupied and searched, while General von Schleicher was sought out at his suburban home at Neu-Babelsberg and shot down at sight with his wife.

Since arrest all the leaders mentioned as well as numerous others have been disposed of by Nazi gunmen. The casualty lists include Herr Gregor Strasser, the one time chief lieutenant of the Fuehrer, Herr von Kahr who as Premier of Bavaria, frustrated the beer-hall putsch of 1923, Count Spreti, the Catholic Action leaders, Klansner, and Father Muhler, Herr von Alvensleven, a friend of Herr von Papen, and Herr von Bose, the Vice-Chancellor's secretary. Also hundreds of others have been taken into custody throughout the Reich. Their names as well as of many who are dead have been withheld. A Berlin correspondent opines that many personal grudges against individuals were satisfied in this affair. But Herr Hitler's explanation that there were plots against the Government does not seem to be untrue.

The Plots

The information available to the Government, it appears, revealed bostile intrigues among three different groups. Two of these groups were definitely connected. These groups were: (1) by some leaders of the Sturmableitungen among whom was General Roehm; (2) General Kurt von Schleicher, Herr Hitler's predecessor at the Chancellery and reputed 'strong man' of Germany having been associated with General Groener from the time of the Spartacist revolt, and his friends; and (3) Herr von Bose and his friends of Herr von Papen's circle were leaders of this group but acted without his knowledge and was connected with Roman Catholic clericals.

The Schleicher group, it is said, got in touch with the Storm Troops group through Gregor Strasser, Ernst and others. Considering the overtures Strasser made to von Schleicher when the latter was Chancellor for a pact between them, this story of Strasser acting as *liaison* man does not seem improbable. But what is not very plausible is the fact that the official story assumes a plot in which radicals and reactionaries are seen to be acting in concert for a common end. For instance, Gregor Strasser had definite Socialistic leanings and after his virtual expulsion from the party he sought consolation in the company of his brother who is an out-and-out Socialist; Heines' political ideas were not different from those of Strasser. On the other hand, Schleicher and Roehm embodied in themselves some of the outstanding traditions of the Junkers.

The explanation offered is that the Roehm group, vain of unrestricted power, spoilt by the sudden turn of fortune and afraid lest they be deprived of their freedom to indulge in utmost licence, had resolved to get rid of certain members of the regime and regain their former influence over the Fuehrer which had been waning since Herr Hitler's assumption of office. The motive for the "second revolution" at which they aimed was not the dethronement of the Osaf but the replacement of the other members of the Government with men more after their heart. The "Shadow Cabinet" list mentioned General von Schleicher and General Roehm.

The Paris cerrespondent of the *Daily Herald* reasons differently. He says General von Ribbentrop, Hitler's Special Disarmament Commissioner, who recently visited the French capital, promised M. Barthou that if France would agree to the German disarmament proposals of April 16, Herr Hitler would disband the auxiliary forces.

The correspondent further asserts that the news of the Paris parleys leaked out in Berlin and the Strom Troop leaders decided to resist disbandment. And upon the information supplied by the secret police, Hitler and Goering forestalled the saboteurs.

It may be both reasons weighed with the would-be insurrectionists, but that there was a definitely revolutionary back-ground can be taken as established. Mid-summer night speeches of Dr. Goebbels and Edmund Heines already quoted give an insight into the prevailing mentality among the rank and file of the party. A leaflet issued by the "Storm Troop Revolutionary Committee," which has been cabled out by the *Daily Telegraph* correspondent, states:

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

"Our leaders may be dead, but our work for the second revolution goes on. Ernst and the commanders who have been shot, understood the ideals of the Storm Troops. Those who remain do not. Herr Hitler has become the tool of reaction and of the industrialists who desire to crush the workers."

This means that Hilter is more unsafe than before. It is said that about a third of 3,000,000 Storm Troops have definitely Communist tendencies, and that their weeding out from the force has begun in earnest, that the "purge" of June 30 and the subsequent days is only the beginning of the wholesale "clean-up" which will involve as many as 50 per cent of the total number. Further, care will be taken that these men may not set up new organizations of their own. The claim, therefore, that the recent *coup* has strengthened the hands of Herr Hitler would seem to be idle. He has tried to reckon with extreme elements both of the Right and of the Left. His treatment of von Papen leaves no doubt about that. That he could not go further in dealing with von Papen and other reactionary elements is due to the fact that he had to rely and will continue to rely on the support of the Reichswehr. Now this support, so long as the present President is alive, will depend upon his acquiescence ; his sympathies are definitely with von Papen for whose safety he has made the Reichswehr responsible.

In addition to Herr von Papen, Hitler will have to keep in control two stormy petrels at his side, namely, Drs. Goebbels and Rosenberg, editors of *Der Angriff* and *Voelkischer Beobachter* respectively. Both are "radical" in their views. *Der Augriff* is generally full of slogans culled from the books of the much-maligned Bolshevists and it proclaims itself a newspaper "for the oppressed against the exploiter." Also Dr. Goebbels is by no means unambitious; he only submits to Hitler's leadership because he realizes he has been late on the scene. He loves to dwell in private upon his Socialistic ideas as opposed to Hitler's conservative ones. In 1930, he indirectly helped the Berlin Storm Troops to rebel against the Osaf.

Herr Hitler's seat of power, then, is not at all strong, if not actually shaky. He will henceforward depend upon the support of 100,000 men of the Reichswehr, 12,000 of General Goering's Special Police, and 20,000 of his loyal S. S. men (*Schutzstaffel*). The Stahlhelm organization will continue, as he assured Herr Seldte their chief, on June 29. But their attitude in any emergency must remain an uncertain factor. It is easy to see that Herr Hitler will have greater difficulty than before in steering a middle course which is now the only policy he can follow, though if he decided on breaking away from the Right and making friends with the Left Wing he could do so even now. But as the days go on, he will follow a more and more lonely course.

However, for sometime at least there is little likelihood of the regime crumbling. After the pricked bubble of latent revolution the Nazi ruling chiefs at Wilhelmstrasse gives an impression of strength. Perhaps the party "purge" which has done away with notorious criminals (it is now openly declared by Nazis that many among them were and are criminals) will raise Herr Hitler in the eyes of that section of the German populace which aspires after a strong, orderly, nationalistic government.

Yet, the Government's power would seem to rest not so much on any positive sanctions as on certain negative factors. Even so, any imminent danger to the present regime must be discounted. Not only the Left Wing parties but all opposition was broken last year and the Socialist groups are in disarray, leaderless, despondents and, perhaps, still a divided house. Whether the new elements thrown up by the Brown Army and the Steel Helmets organization will put heart into a demoralized population remains to be seen. But here still in the restricted circle of these discharged men, the diversity of social leanings make for political heterogeneity. Once more, we can hope to see the renewal and intensification of that struggle between the reactionaries and the revolutionaries, *i. e.*, between the bourgeoisie on the one hand and the proletarianized middle class Fascist elements and the Socialist workers on the other. Such alignment of forces would not be surprising nor even unprecedented. Broadly speaking, Herr Hitler's "purge" will drive discontent underground which will thrive there for sometime before some extraordinary situation (for instance, war) brings it up into the open.

KEY TO THE FRONTISPIECE

Punishment of the Sea

Ramchandra, in order to rescue Sita from the clutches of the Rakshasas, reached the sea-shore. He set to think how he could cross the mighty expanse of the deep. Bibhisan who had already become Rama's friend, advised him to wait on the bank in beds of grass in expectation of the diety of the sea. But the latter came not, when Ramchandra took his *mighty* bow in his hand to strike terror into his heart and spread conflagration whereby the water would be dried up.

The incident has been taken from Valmiki's immortal epic, Ramayana.

INDIA AND CZECHO-SLOVAKIA. OPENING OF THE INDIA SOCIETY IN PRAGUE

(From an Indian Correspondent in Prague)

CZECHO-SLOVAKIA is an important and progressive State in Europe. Both economically and politically it assumes a rôle far more significant than what estimate based merely on consideration of its area and population would probably suggest. Czecho-Slovakia is industrially one of the most advanced of the countries in Europe. On the collapse of the Austro-Hungarian Empire, no less than four-fifths of its industrial resources fell to the new State of Czecho-Slovakia. Since then industrial development has well kept pace with modern technical progress. Czecho-Slovakian industries, many of them, are built on the basis of wider markets than the present home one. In view of this and the policy of tariffs and other restrictions raised by various neighbouring lands that once formed home markets to present Czecho-Slovakian industries, the latter have since the war been devoting added attention to more distant markets, India being an important one among them. Already there is a significant trade between India and Czecho-Slovakia. Czecho-Slovakia is an important buyer of various Indian products. The extent of the export of Indian goods by Czecho-Slovakia is generally not well realized in India, owing to the imports coming through foreign ports and the statistics generally available not giving the real situation. At present, trade between the two countries shows a great adverse balance to Czecho-Slovakia. In fact, among the countries with which Czecho-Slovakia has an unfavourable or passive trade balance, India assumes leading position. This fact should receive serious attention in India, in view of the general tendency all over to reduce the adverse trade balance with separate units to the practical possible limit, so that such a development in the case of Indo-Czecho-Slovakian trade does not happen to the detriment of India's exports. Owing to the advanced state of Czecho-Slovakian industries in various branches and their being fitted well in accordance with world market, Czecho-Slovakia is in a position to make good contribution to India's import trade in several lines and assume an important rôle in the economic development of India. An improvement in Czecho-Slovakia's adverse trade balance with India, as such, need not involve prejudice to India's exports to Czecho-Slovakia and actually there is scope for the expansion of India's export trade further with Czecho-Slovakia in connection with an improvement of Czecho-Slovakian exports to India. Here it may also be stated that there is a fair amount of scope for Indian students to receive practical training in various lines in Czecho-Slovakia and also marked readiness to extend opportunities for such training as circumstances permit. This is a point the significance of which is not to be overlooked owing to the important and growing difficulties in various lands to such training. The extension of such opportunities as indeed the expansion of India's exports closely connected with the development of Indian exports from Czecho-Slovakia.

Politically, Czecho-Slovakia assumes a dominant role in Europe as the leading factor in the Little Entente. The history of Czecho-Slovakia and its treatment of the problem of minorities offer much of interest and importance to India. Czecho-Slovakia has a well-advanced system of education and social welfare institutions. Prague its capital, an ancient city of great beauty, is one of the most noted of educational centres in Europe. Czecho-Slovakia possesses some of the best known watering stations and health resorts in Europe. It is a country that should prove of interest to students, public men, and visitors from India. There is considerable interest in Indian affairs in Czecho-Slovakia and much valuable work for the development of this has been done by several well-known Indologists like Professors Winternitz, Lesny, and Pertold. Visits of useful nature in recent period from India have also contributed to this. It would probably be not incorrect to say that more is known of India in Czecho-Slovakia than of the latter in India. It is valuable to have knowledge about Czecho-Slovakia extended in India as it would be helpful for India's own development.

An important and useful step in bringing the two countries closer to each other and promoting cultural and direct commercial relations between the two was taken recently by the opening in Prague of the India Society under the auspices of the Oriental Institute in Prague. The inauguration ceremony took place in the main hall of the palatial headquarters of the Oriental Institute before a large gathering composed of professors, business men, and others representing various professions. A number of Indians were also present, including Subhas Chandra Bose, and Erulkar, the representative of Indian Chambers of Commerce in London. Proceedings were formally opened by the President of the Oriental Institute, Minister Hottowetz, who welcomed the idea of the Society and expressed the hope of the Society realizing its purpose. Minister Hottowetz was followed by the Chairman of the new Society, the distinguished Indologist and great friend and good-wisher of India, Professor Dr. Lesny, who in a lengthy speech, elaborated the aims of the Society, emphasized its importance, and declared that its success depended greatly on the interest taken in the Society and furthering of its aims in both lands. He assured keen interest from this side. As the main tasks of the Society, Professor Lesny stated, spreading information of value, extending useful contacts, promoting visits of value, and attending to the requirements of students, visitors and business men. Professor Lesny referred to the work of the Society being supported by a regular supply of Indian papers, periodicals and other publications, which he declared would be kept at public disposal and put to wide use. It is to be hoped that Indian papers and periodicals will support the valuable work undertaken by the Society, at a time when there is much reference in India to extending of interest in India abroad, by supplying regularly copies of their publications to the India Society in Prague. Copies are to be addressed to: The India Society, C.O. Professor Dr. Lesny, Philosoficka Fakulta ; Smetanova nam 12, Prague I, Czecho-Slovakia. On behalf of India, Subhas Chandra Bose, who on the occasion of a previous visit of his to Prague, had pointedly raised the issue of opening of a Society such as now formed, and Erulkar, the experienced representative of Indian trade interests in Europe, spoke, expressing appreciation of the founding of the Society, recording estimation of the friendly spirit in this country for India, underlining the value of the Society, and assuring that Indian opinion would not be wanting to lend it all possible support. It is to be trusted that response from India will well justify the last sentiment expressed by the Indian representatives.

Prague, 16th June, 1934. N.

MADAME CURIE

Digitized by Arya Samaj Foundation Chennai and eGangotri

By Prof. S. K. MITRA, D. Sc.

THE importance of a scientific discovery is judged by its applications. The applications might either be in the realm of pure science where the newly discovered truth opens up, as it were, new vistas of investigation leading to unknown and unexplored regions, or it might be in the realm of the so-called applied sciences where the discovery is directed to the service of mankind for enhancing the amenities of every-day life. Judged from either standpoint the scientific discoveries of Madame Curie stand very high indeed. Her discovery of the radio-active elements, Radium and Polonium, towards the end of the last century created what is justly described as a sensation not only in the scientific circle but also amongst the general public.

Madame Curie in the Laboratory

A particle of Radium emits enormous amount of energy in the form of rays of various kinds. The rate with which the energy is emitted is such that the particle can raise its own weight of ice-cold water to boiling temperature within 40 minutes. And yet the particle does not exhibit any measurable decrease either in its weight or in its store of energy. Where does this energy come from? The scientist says that the atoms of radium are undergoing spontaneous disintegration with disruptive violence. And, in doing so they are emitting their nuclear constituents in the form of radiations which are classified technically as alpha-, beta-, and gamma-rays. Of these, the first two are electrically charged matter particles—the positively charged nuclei of the helium atoms and the negatively charged electrons respectively and the third are bundles of pure energy not unlike the x-rays. The atomic nuclei have vast stores of energy, so much so that the decrease in radiating power and consequent loss of mass of a particle of radium due to the continual emission of energy become appreciable only after hundreds of years.

The particles which are shot forth from radium possess tremendous velocity—nearly one-tenth of that of light (velocity of light is 186,000 miles per second). The high speed and the extremely small dimensions of the alpha particles have been of inestimable value in the experimental study of the constitution of the atoms. An alpha particle shot through matter might come close to an atomic nucleus and undergo deviation from its straight course in much the same way as a comet coming from afar is deviated by the gravitational field of the sun when it approaches the latter. (There is a difference; in the case of the atomic nucleus and alpha particle the force is of electrical origin and is one of repulsion, in the case of the sun and the comet it is of gravitational origin and is one of attraction.) These deviations give valuable information to the physicist regarding the structure of the atomic nuclei. Further, not infrequently, the alpha particle in its passage through matter would strike the nucleus itself of the atom disrupting and transmuting it to the atom of some other element. It is not possible to recount here all that has been possible to achieve in the field of atomic physics with the help of the radiations from rodio-active substances; suffice it to say that but for the discovery of radium our progress in the knowledge of atomic physics would have been retarded by at least half a century.

The practical application of radium in the treatment of the fell disease cancer is well known. The growth of the malignant cancerous cells is checked by the gamma-radiations of radium. The suffering humanity—at least a section of it—owes a deep debt of gratitude to Madame Curie for the discovery of a remedy of an otherwise intractable and deadly disease.

Madame Curie's name will be cherished in the memory of all not only as that of a great scientist but also as that of a great benefactress of the human race. Being a woman she could not gain admission into the cotérie of the forty "immortals" who constitute the Academie des Sciences; nevertheless, the greatness of her scientific achievements will rank her amongst those men of science who by their pioneer work create permanent and everlasting memorials for themselves.

THE REVOLUTION IN SIAM

By LANKA SUNDARAM, M.A., Ph.D. (Lond.)

On the 24th June 1932, the *Bangkok Times* issued its small special edition with the following paragraph :

"A revolution has at last broken out in our midst. Perhaps that is inaccurate since we believe the King is still on the Throne : but surprising events have to be recorded. The trouble started at five o'clock this morning, but only the people living up town were for some time aware of anything unusual, as the operations were carried out quietly by most of the Army and Naval units of the city. Machine guns, tanks and other equipment were taken out on the streets, and as the time advanced certain units were despatched to the palaces of high Princes of the Royal Blood and other high Army officials, who were surprised and told to accompany the revolutionists to the Throne Hall of Ananta Samagom, near Dusit Palace, where they were this afternoon being held under arrest, the grounds being well guarded by soldiers and marines in full field outfits and carrying guns with fixed bayonets."

On the same day the *Bangkok Daily Mail* came out with the first real account of the Siamese revolution in the following words :

Bangkok awoke this morning to find that the greatest political sensation of its 150 years of existence had taken place quietly and without forewarning in the early hours before dawn.

By noon today it was generally known that the Army and the Navy had completed a successful *coup* for the purpose of bringing about a radical change in the Government of Siam.

Leading members of the Royal Family including H. R. H. Prince Paribatra of Nagor Svarga, H. R. H. Prince Purachatra of Kambaeng Bejra, H. R. H. Prince Damrong and H. R. H. Prince Narisra, were taken from their homes by armed force and were this afternoon being detained at the Throne Hall.

Phya Adhikarana Prakas, Director General of Local and Provincial Gendarmerie, was also placed under custody in the course of the movement.

The Coast Guard Cutter *Yam Fung*, it is generally believed, was despatched to Hua Hin for the purpose of bringing to the Capital Their Majesties the King and Queen.

As far as could be learned this afternoon, the object of the *coup* was to institute some form of limited monarchy in Siam to take the place of the present form of absolute monarchy.

It is reported that his Majesty the King will, with other members of the Royal Family now in custody, be asked to confer with the leaders of the *coup* at the Throne Hall in the near future with the idea of signing or otherwise affirming a form of constitution which is being drawn up and which will limit the powers of the King and invest certain rights, perhaps including the rights of franchise, in the hands of the people of Siam.

Late this afternoon a *Communique* was issued by the Provisional Government from the Throne Hall stating that the People's Party having taken control of the country for the purpose of instituting a new and better form of Government, H. R. H. Prince Paribatra of Nagor Svarga suggests that all military and civil officials and employees co-operate in preserving law and order so as to avoid unnecessary bloodshed. His Royal Highness, in recognizing the new Provisional Government, also requests all Government Departments to continue to function as usual without interruption.

At the same time a *Communique* addressed to His Majesty the King at Hua Hin was made public in which His Majesty was requested to return to the Capital and assume the Throne under a limited monarchical form of Government approved by the People's Party.

It was stipulated in this *Communique* that if His Majesty objects or refuses to comply with this request, the People's Party would immediately announce the election of one of the members of the Royal Family to the Throne.

The Official *Communique* is signed by Phya Bahol Bola-bayuha Sena, Phya Song Suradej and Phya Riddhi Aganaya, all officers in the Army or Navy.

Army Officers carrying the Constitution Document

Phya Sena Songkram, General Officer Commanding, the First Army Corps, is said to have resisted the leaders of the *coup* and is reported to have been shot and critically wounded at his home in the early hours of today. He was taken to Chulalongkorn Hospital. A police guard in the compound of the Palace of H. R. H. Prince Paribatra of Nagor Svarga is also reported to have been shot when he resisted the armed force that came to take His Royal Highness into custody. Besides these two incidents, no other casualties occurred as far as could be learned.

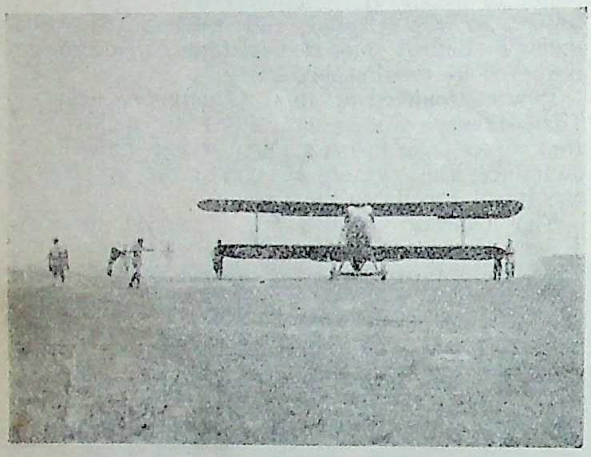
Except for scattering crowds in the neighbourhood of the Throne Hall and the Grand Palace, there was not the slightest sign of excitement in the city this morning or this afternoon. Police were on duty as usual, Courts functioned, mail collections and deliveries were carried out as usual. It was reported that early this morning telephone wires at various Government Departments and at some official residences were cut, but if they were, somebody had made rapid repairs by ten o'clock. It was also reported that the land telegraph system had been destroyed but the Post and Telegraph Department was accepting both domestic and

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

foreign telegrams and radiograms as usual this morning.

Scattering crowds gathered this morning at the roads leading to the Throne Hall, where the members of the Royal Family were under custody. The roads were guarded by sailors with fixed bayonets and none but Army or Navy cars bearing officers or men were admitted closer than two or three blocks to the imposing white palace in which a national drama was taking place.



The Siamese Air Force which is being formed at the Min Don Aerodrome

Now and then a truckload of uniformed men, with a machine gun mounted, would appear from within the compound of the Throne Hall and as they passed the crowds outside loud cheers arose, which the soldiers returned vociferously. There was no hysteria ; no bad feeling anywhere evident. Foreigners who were curious to find out what was going on were politely told that they could not enter the Throne Hall, but that was all.

According to widely circulated reports, H. R. H. Prince Paribatra of Nagor Svarga was the first member of the Royal Family to be placed under custody of other members of the family and of the Director General of Local and Provincial Gendarmerie.

It was also generally reported that H. R. H. Prince Purachatra of Kambaeng Bejra, Minister of Commerce and Communications, had escaped capture but later in the morning it was learned authoritatively that His Royal Highness was among those at the Throne Hall.

Two manifestoes were issued, apparently by the leaders of the movement, but without any signature of any sort. The first of these recited a list of wrongs said to have been committed to His Majesty the King and by members of the Royal Family and stated that the object of the movement now afoot was not to pull down the present reign but to put up a form of limited monarchy which would be 'a Government by the people and for the people.'. The second manifesto simply declared that members of the Royal Family were now under custody 'in the hands of the citizens' and that warning was thereby given that any objection raised to the forces of the movement would jeoparadize the position of the members of the Royal Family.

The foreign diplomatic corps was taken completely by surprise by the *coup*, this morning, as, in fact, was nearly everybody else. Since the Ckahri Celebrations last April all talk of an uprising of any nature had died down entirely. It was generally thought that no action of any kind was contemplated by any of the foreign countries represented here since there had been no violence of any kind and since the lives and property of foreign residents seemed to be as safe as ever. It was generally looked upon in diplomatic circles as a purely domestic matter of internal politics.

On the following day the same paper published the following details :

His Majesty the King at 10-30 o'clock this morning signified by radio from Hua Hin that he was fully prepared to accept the wishes of the People's Party, which acquired control of the Government yesterday morning by a neat and almost bloodless military *coup*.

At the suggestion of Luang Suba Jalasaya, Acting Commander of the H. M. S. *Sukhodaya*, the vessel sent to Hua Hin by the Provisional Government, it was decided that His Majesty should return to the Capital on a special railway train rather than by water as the accommodations on the Navy vessel are not suitable for the Nation's Ruler.

The Provisional Government here accepted this suggestion immediately and before noon today a special train was on its way to the seaside resort to bring His Majesty back to the Capital.

The hour of the arrival in Bangkok of the special train bearing His Majesty was, however, being kept secret in order to insure the safety of the Ruler. The Provisional Government announced :

'Despite wild rumours of yesterday and today it is now authoritatively established that H. R H. Prince Purachatra of Hambaeng Bejra is in Hua Hin and will return to the Capital with His Majesty the King probably late this afternoon.'

His Majesty, in a second radiogram to the Provisional Government today, stated not only that he accepted the wishes of the People's Party but that he had for a long time been considering the institution of a limited monarchy but had found it impossible heretofore to realize his hopes along this line. He was returning to the Capital with high hopes for the nation's future prosperity and peace under the new form of Government suggested by the People's Party, the radiogram said.

The Editor of the *Daily Mail* was present in the Throne Hall, with other members of the Siamese Press, when the momentous news of the King's willingness to accept the wishes of the People's Party was received.

An officer read the radiogram in a voice charged with emotion and as soon as he had finished, the words : 'The King Accepts' in English and in Siamese were shouted triumphantly by a dozen voices. The soldiers and sailors on the lawn outside took up the cry and soon the news spread like wild fire down the crowded avenue toward the Grand Palace and cheer after cheer went up from the throngs of soldiers and civilians.

There were a thousand different rumours and reports this morning as to what the Provisional Government intends to do, and what its immediate

1. Col. Phya Bahol Bola-bayuha Sena, Commander-in-chief. 2. Phya Manopakarma Nitidhada, President of the State Council, virtual dictator, ex-Minister of Justice and Finance. 3. Luang Sindhu Songkram, Royal Siamese Navy, who took a prominent part in the Revolution. 4. Luang Subha Jalasaya who commanded a gunboat and coveyed the revolution group's message to the King at Hua Hin Palace and brought back the Royal acceptance

...ors are. The best answer to all these rumours ...ems to be contained in the words of one of the ...ders of the movement who was questioned by ...e Editor of *The Daily Mail*.

'Nothing is settled' he said, 'nothing can be ...ettled.' We are now waiting to confer with His ...ajesty, the King!'

What was yesterday a rather mystifying military *...p d'état* became today clearly defined as a move-...nt in which both civilians and military men ...e taking part, the express purpose of which is ...unite the country behind His Majesty the King ...d to reduce the power of certain members ... the Royal Family who are believed ...d to have been conducting themselves in ...e best interests of the country. Everywhere ...n the Throne Hall was evident this sentiment of ...solute loyalty to His Majesty the King. And ...gedly, no word was spoken in the presence of this ...ence concerning the alleged shortcomings of any ...mber of the Royal Family. The Princes who ...e in custody are being treated with every respect ...d are being made as comfortable as possible on ...e upper floors of the Throne Hall. It was pointed ...t that the reason the Provisional Government ...se the lower floors of the Throne Hall for its ...ecutive offices was out of respect for His Majesty ...e King, whose throne is on the upper floor.

Phya Bahol Bola-bayuha, the military executive ... the Provisional Government, in which both ...ilians and military men are united, sat today ... an ordinary table on the lower floor of the ...rone Hall and from there directed the work of ...oring peace and order throughout the Kingdom, ...getting the Railways running again, of restrain-... certain elements of the new regime which ...ght be too boisterous in their enthusiasm. He ...ms weary and it is said that he has not slept ... two nights. To the table in an unending ...eam came Government officials needing special ...ections, Army and Navy officers with reports, ...ilians with reports, and newspaper representa-... asking for reports. With a modest and ...fident air the Chao Khun received all callers ...ere, after the frivolous ones had been sifted ...t by a group of hardworking underlings, and ...s interview lasted not more than two minutes.

A press table was set up in a corner of the lower floor of the Throne Hall and newspaper representatives were politely received. Only one or two were able to see the executive of the Provisional Government, and these only on special business regarding censorship, but the others were given what definite news was available. The Editor of the *Daily Mail* seemed to be the only Westerner present but he was extended every courtesy by both minor and major officials of the Provisional Government.

'We would like to tell you more,' one of these officials said to the writer, 'but at the present time it is not deemed wise to do so. We are making every effort to keep peace and order and thus far have been entirely successful. Whatever the rumours may say, we have nothing definite yet to announce regarding the details of the new form of Government proposed, nor can we yet state our plans regarding certain members of the Royal Family who are now in custody. I may only say that whatever is done will be done with liberality and without hysteria. We have no desire to tear down anything or to destroy anything—only to institute a better Government under His Majesty the King.'

And he reported again :

'We are waiting now for our king.'

It was authoritatively learned that there was an important conference last night at which leading Government officials and others were present, including some of the members of the Royal Family. Reports of this conference were broadcast last night over the radio. But it was made clear today after the news of His Majesty's acceptance of the wishes communicated to Him by the Provisional Government, that all decisions would be cancelled or deferred until after His Majesty's arrival today or tomorrow.

The Throne Hall itself presented a military aspect, with machine guns mounted in all the windows of the upper floor and with soldiers and sailors with fixed bayonets crowding the lawn in front. Around the roadway outside were stationed armoured tanks and machine guns. The military guard was continued today on all roads leading to the Throne Hall and none but those

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

with special business and special permits were permitted to enter the general area. These however, were politely conveyed by sailors whose, smiles and jovial remarks belied their fixed bayonets.

Late last night the Provisional Government, through the Foreign Office, issued a statement to all foreign Legations and Consulates declaring that all treaties would be strictly adhered to without change and that every effort had been and would be made to prevent any further bloodshed or any loss of property to private citizens or foreign residents.

In a statement issued at the Throne Hall it was stated that at a meeting held at 4 p.m. on Friday heads of all Ministries had agreed to the following provisions of the People's Party :

All officials were asked to continue their work as usual in all departments where ordinary tasks were being carried on. All matters that would ordinarily require the perusal of the King must be submitted to the leaders of the Provisional Government. All matters about which there might be any doubt should likewise be submitted to the Provisional Government leaders.

'Notification is hereby given to all government circles that the coun ry is temporarily under military control and all officials in Government service are asked to continue to serve in their respective capacities just as though nothing had occurred', the statement declared. It was signed by Ministers or Under-Secretaries of all Departments.

I have been obliged to quote extremely from these two papers in order to faithfully and correctly record what actually took place at the time when Siamese revolution became a settled fact with amazing speed and drama. Since this first revolution there were two other developments which have thoroughly reshaped the national polity of Siam during the past two years. A second revolution in the constitutional development of Siam was witnessed during my sojurn in that country in June 1933, perhaps to mark the first anniversary of an earlier *coup d'etat*. Early this year there was again another "breeze" in the shape of administrative and military readjustments. These three events supply us with the delimitation of Siamese politics within our own time. It was after this third attempt on the part of the people of Saim to work out a modern constitution that His Majesty King Prajadhipok and Queen Rambhai Barni left the country on a European tour for purposes of health. The country may now be said to be obtaining a progressive stable Government, for an all-round and extended development in its national economy. A sort of constitutional limited monarchy is the only description which can be applied to this State in the Orient.

In order to appreciate fully these remarkble developments witnessed by modern Siam, the following facts must be remembered.

Siam from times immemorial was accustomed to the traditional absolute monarchy of the Asiatic type. The King was the symposium of all that is good and beneficent in the nation. He was the repository of justice and benevolence. His person was sacrosanct. The people voted to him absolute ungrudging obedience, as a fulfilment of their civic virtues Even the Holy Roman Empire of the early Middle Ages did not enjoy the rights and privileges which a modern Siamese king annexed to himself. He was above law. He was law incarnate. He was the intercessor. He represented the basic principles of the Buddhist *Sangha*. But even this democratic institution could not succeed in evolving a democratic polity for Siam during the historical period. It was within the province and prerogative of the King to harness the economic and political springs of the nation. In fact, prior to June 1932 King Prajadhipok was Siam, and Siam King Prajadhipok, and in this he was only following the precedents set up by his predecessors.

In the previous article we have seen that the agricultural economy of Siam did not give the vast proportion of her people any adequate opportunity for self-expression and civil and political freedom. Pastoral life cannot be institutionalized in a political sense in any part of the world, and without respect of races and colour. An amalgam of races, Aryan and Mongolian, cannot be expected to foster progressive ideas. There is not the slightest doubt that the vast majority of the Siamese people are, even today, irresponsive to progressive ideas. Such being the case, the country was dominated by the Royal family and its numerous court. Marriage laws in Siam must be considered to be lax, and an all-powerful court can easily turn itself into a vast congregation of colateral branches. It was a surprising fact for an Indian visitor that prior to the revolution every department of the administration was fully manned from the lowest to the highest places by persons who can, with a certain amount of exactitude, trace their blood relationship to the Royal family. *Chao Phya* was originally a title exclusively reserved to members of the Royal blood, even though at the present moment it is more or less the highest decoration available even to important lay personages in the administration, and *Chao Phyas* were to be found during the pre-revolution days placed even in the lower ranks of officialdom. In the financial statement for the year 1930-31 provision was made as regards the allowances and supplies to princes and other dignitaries to the extent of six lakhs of rupees annually apart from fiefs and other hereditary emoluments available to most of the members in the higher court officers. There is not the slightest doubt that pre-revolution Siam was dominated by the dogma of Royal Blood. Ability and competence were not the criteria for employment in the State. Naturally Siam was denied the opportunity, for generations together, towards educating the people in the art of Government, and as such denied them fruitful employment in the service of the State.

The people were fully obsessed with the virtues of a simple religious life. Acquiescen-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

established order was the key-note of Siamese national activity. There was very little local responsibility in the affairs of the State. The wheels of absolute monarchy moved joyfully in its policy of slow grinding. There could never have been any scope for a critical attitude on the part of the people towards the Government and certainly there never was such an attitude until the revolution of the 24th June 1932 ushered into existence a new regime of things.

It would be an half truth to say that the Siamese Revolution was a revolution of the people, *qua* people. It was more or less engineered by a group of party leaders, high government officials and the army and the navy. It was a revolution against the absolute authority of a Royal oligarchy. Even the lopping off of Cambodia in 1905, besides other territories by foreign nations, could not wake up popular Siamese national conscience. A corrupt and inefficient court paved the way for a gradual system of extra-territoriality in Siam in which the balance of advantage was with the foreign powers. In the development of foreign jurisdiction in Siam, the people surrendered their rights in regard to the operation of Municipal laws and regulations obtaining in the Kingdom. Article II of the British Treaty of 1855 ran as follows: "Disputes arising between British and Siamese subjects shall be examined by the consul in conjunction with the proper Siamese officers; and criminal offences shall be punished, in the case of English offenders by the consul according to the English Law." Similar provisions were enjoined in the treaties between Siam on the one hand and the U. S. A. and France on the other. These laws continued to be in force for nearly seventy years, simply because the people of the country were unable with their own initiation to uphold their national sovereignty. Extra-territoriality became the hand-maid of foreign aggression into Siam, and the nation was entirely helpless to strengthen the hands of its monarchs in upholding the dignity of the State.

Popular political education in Siam is a matter of recent date. Even today it cannot be said that the entire nation is politically conscious and educated. The aftermath of the Great War, and be it remembered that Siam was in the pay roll of the Allied and Associated Powers, brought about a certain wave of the desire for self-expression all over Asia. What Asia witnessed during the past twenty years was repeated in Siam. In our country the national fight was against foreign rule. In Siam it was against foreign intrusion and coercion. It was only in 1926 that extra-territoriality was finally abolished, and it was after that event that the Siamese people felt the necessity for an assertion of national sovereignty. The process was slow but steady. The story is simple.

Luang Pradit strode across the Siamese horizon during the pre-Revolution days. This high and keen officer of State wanted to bring about a sort of Siamese communist polity to prevail in the country. His imagination was fired by the Russian experiment. He wanted to have a full grip upon the agricultural economy and community-organization of the country, which was dominated, in tin and rubber in particular, by foreign capital. A nation-wide organization of peasant councils was organized and Luang was within an ace of success before the Revolution broke out two years ago. King Prajadhipok realized that menace of communism spreading under the leadership of Luang Pradit and with considerable dexterity sent him to Paris on a pension, to remain a permanent exile abroad. Even as late as 1933, I observed numerous prosecutions against communists and ex-communists filling the records of Siamese courts. This genuine people's movement, if ever any people's movement existed in Siam, was thus nipped in the bud. But foreign-returned Siamese leaders imbued with ideas of democracy stepped into the breach, and the Revolution of 1932 was brought about with the rapidity of a lightning. They were unable to appreciate the perpetuation of Royal prerogative and mis-government in Siam, and wanted to see that the constitution of the State was modelled on modern lines.

The following indictment of Royal absolutism and mis-government in Siam, as contained in a manifesto of the People's Party on the day of the revolution, is an illuminating document:

> "Ever since ascending the throne the King has ruled as an absolute monarch and has bestowed all the important government positions on His relatives and to favourites who are unqualified for their positions.
>
> "Ever since the beginning of the King's reign the public has expected fair play from the Government, but everything came out quite the contrary. The king ruled with an absolute sway without heeding the wishes of the people who had no chance to voice their plight. The favourites were left to do as they wished in their own aristocratic ways, satisfying their greed and desires, accepting bribes in construction undertakings, profiting from the recent rise in pound sterling and spending lavishly from the country's funds.
>
> "The favourites exceeded their power and usurped the rights of the people, forced them into humility, prevented them from getting facts about their country's condition, and prevented them from getting proper education so that they would be in ignorance of what was going on behind the scenes. These favourites played for their own aims, cast everything else to the winds and left the country in turmoil which accounts for the incurable depression.
>
> "This unaccountable depression which has descended upon the people the Ruler found it difficult to control because He did not rule for the people, as is the case in other countries. The government has treated the people as slaves. They were treated as animals, not as human beings. All taxes were collected for the pocket of those in power, which no other country has

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

ever done, except Russia when ruled by the Czar and Germany under the Kaiser, and both dethroned their rulers because of these same selfish aims.

"The Government made the people believe it would do its best to cure the present situation, but the statements to this effect were untrue. The people were not allowed a voice in affairs because they, the people, were regarded as fools and incapable of thinking for themselves.

"And what made the people fools? They were prevented from getting better education, better knowledge of government affairs, especially the evil designs that were being carried out in government offices.

"It must be remembered that this country belongs to the people, not to selfish royalty and favourites, as a place for them to achieve their own desires.

"Remember that our ancestors gained freedom for us and therefore the country must be governed by the people and for the people.

"The Royal families are robbing the people of their means of livelihood, filling their own pockets and leaving the people to their own plight. The farmers have no income from their property, retrenchments continue to go on in government offices without pension privileges, scholars who leave schools by the hundreds every year have no work to do, no helping hand is extended to the thousands of unemployed, no sympathy is extended to them by the government. Those at the heads of the government have filled their own purses, some sending their gold to foreign countries so that they could leave the country hurriedly in case of an emergency.

"The people must now know and understand their plight, and instal a government of their own so they can have a voice in it. The aim is not to pull down the present regime but to establish some form of limited monarchy.

The people have already sent an ultimatum to the Ruler and unless He submits to the wishes of the people he will reveal himself as a traitor to His country and the people will act accordingly.

If the people establish a new government of their own, the country will be lifted from its present economic plight. The new rule will be set up with the following aims and principles:

(1) The freedom of the country and especially the freedom of the people must be preserved. This must be so particularly in regard to economic freedom.

(2) There must be better administration in the interests of the people's welfare.

(3) Aid must be given to the people, especially the unemployed.

(4) There must be equal rights and fair play for all citizens.

(5) Freedom must be given to every citizen without conflicting with the four aims above mentioned.

(6) Education and knowledge must be furthered.

Citizens are invited to aid in the important event that has taken place here in the interests of the general welfare and the maintenance of justice and freedom. Relief will be extended to all citizens and everything possible will be done for the country's welfare. A government by the people and for the people will be set up."

But for one casualty near the New Palace, and that too accidentally, the Revolution of 1932 may be said to be bloodless. It is a glowing testimony to the miracle which could only happen in the annals of oriental monarchy, and certainly it is without parallel in any part of Asia. The revolution of June 1933 and the latest political changes do not constitute any further step in the march of popular government in Siam. At best, they indicate domestic changes-over on a modest scale.

The present constitution of Siam must be said to be a limited monarchy, the reins of Government being vested in the hands of a group of high State officials and leaders of the Army and the Navy. There is a State Council and a People's Assembly, and in the constitution document "The People" figured nominally prominent. Actually, there is no basis at all for us to assume that franchise, political and municipal is extended and popular control of state affected.

There was a tentative constitution dated the 27th June, 1932 as signed by King Prajadhipok. But the Assembly of People's Representatives fully discussed its provisions and a final constitution document was presented to His Majesty on 10th December and received his assent. The following are some of the important provisions of the December Constitution and I am quoting from an attested copy supplied to me by the Home Department of the Siamese Government:

General Provisions.

The kingdom of Siam is one and indivisible. The Siamese people of whatever race or religion are all equally entitled to the protection of this Constitution.

The sovereign power emanates from the Siamese nation. The king, who is the Head of the Nation, exercises it in conformity with the provisions of this Constitution.

The King.

The person of the King is sacred and inviolable.

The King shall profess the Buddhist Faith and is the Upholder of Religion.

The King is the Head of the Siamese Forces.

The King exercises the legislative power by and with the advice and consent of the assembly of the People's Representatives.

The King exercises the executive power through the State Council.

The King exercises the Judical power through the Courts duly established by law.

Subject to the approval of the Assembly of the People's Representatives, succession to the Throne shall be in accordance with the Law of Succession B. E, 2467.

Members of the Royal Family from the rank of Mom Chao upwards, whether so born or created, are above politics.

Rights and Duties of the Siamese.

Subject to the provisions of this Constitution all persons are equal before the law. Titles

acquired by birth, by bestowal or in any other way, do not confer any privilege whatever.

Every person is entirely free to profess any religion or creed and to exercise the form of worship in accordance with his own belief, provided that it is not contrary to the duties of a national character or to public order or public morals.

Subject to the provisions of the law, every person enjoys full liberty of person, abode, property, speech, writing, publication, education, public meeting, association or vocation.

The Assembley of the People's Representatives

In the meeting of the Assembly of the People's Representatives words uttered by members whether in making a statement of fact or in expressing an opinion or explaining a vote are absolutely privileged. No legal proceedings whatever can be taken against them.

This privilege extends to the printing and publication of the minutes of the meeting by authority of the Assembly and also to statements of fact and opinions expressed in the Assembly by persons invited by the Assembly to do so.

During the session of the Assembly of the People's Representatives, when a criminal action is brought against any one of its members, the Court must obtain the prior permission of the Assembly before the case can be tried. The proceedings of the Court must not interfere with the liberty of the Member concerned to attend the meeting of the Assembly.

However, the proceedings of the Court prior to the plea of membership remain valid.

During the session of Assembly, none of its members shall be arrested or summoned for detention except when arrested while in the act of committing an offence in which case the matter must be reported without delay to the President of the Assembly. The President may order the release of the prisoner.

All laws can be promulgated only by and with the advice and consent of the Assembly of the People's Representatives.

If the King disapproves of the bill, the Assembly shall, after the lapse of one month from the date when the bill was submitted to the King by the President of the State Council and irrespective of whether or not the bill was returned to the Assembly within the stated period, reconsider the bill by secret voting taken by roll call. If the Assembly reaffirms the bill, it shall once more be submitted to the King. If the King fails to append His signature to it within 15 days it may forthwith be promulgated and published as law.

The Assembly of the People's Representatives has the power of control over the affairs of the State.

The State Council

The King appoints a State Council, composed of one President and from 14 to 24 other State Councillors.

The appointment of the President of the State Council shall be countersigned by the President of the Assembly.

The State Council is charged with the duty of conducting the government of the State.

The President and 14 other State Councillors shall be selected from among the members of the Assembly of the People's Representatives. The remaining State Councillors may be selected from among the persons who possess special knowledge or experience. These persons need not be the members of the Assembly, but they must be persons who are capable of holding a political position.

It is the King's prerogative to declare war, make peace and conclude treaties with foreign states.

A declaration of war will only be made when it is not contrary to the provisions of the Covenant of the League of Nations.

Treaties which provide for a change in the territories of Siam or which require the promulgation of a law to enforce their provisions must receive the approval of the Assembly of the People's Representatives.

The Courts

The Judicial power shall be exercised by the Courts according to law in the name of the King.

All Courts can be established only by means of a law.

Judges are independent in holding trials and giving judgments according to law.

Final Provisions

The Provisions of any law which are contrary to or in conflict with this Constitution are null and void.

Absolute right to interpret this Constitution is vested in the Assembly of the People's Representatives.

This Constitution can be amended only under the following conditions.

(1) A motion for an amendment can only be made either by the State Council or by members of the Assembly of the People's Representatives collectively of not less than ⅓ of their total number.

(2) When a motion has once been passed, it should be left in abeyance for a period of one month. On the expiration of this period the motion shall again be submitted to the Assembly.

(3) Voting shall be by roll call, and the number of votes in favour of the amendment must not be less than ¾ of the total number of the Assembly.

When the voting on both occasions has been made in the manner above described, the matter shall be proceeded with in conformity with sections 38 and 39.

We are nowadays hearing much about a constituent assembly and new reforms for India. It is well to remember the moral of the Siamese Revolution and set ourselves towards the fulfilment of our national ambitions. Given time, Siam is bound to progress towards a "Government by the People, for the People" which was loudly canvassed for during June 1932.

COMMENTS & CRITICISM

"Relative public spirit and enterprise of Hindus and Muhammadans in Bengal"

In the June issue of *The Modern Review*, one Mr. J. M. Datta has contributed an article on the above subject. I would not dare offend good taste by casting any aspersions on the learned writer, but it is clear as daylight that he certainly did not spend so much of his energy out of any generous motive. I give full credit to Mr. Datta for his facts and figures which I unhesitatingly accept. But in doing so, I challenge him to prove that the so-called absence of public spirit and enterprise in Muhammadans of Bengal are due to any inherent incapacity in them.

The spirit of 'enterprise' and 'public spirit' of his community which Mr. Datta has so expatiated is mainly due to their English Education which brought to them a vast amount of wealth and influence, almost exclusively by means of Government service, under the aegis of the British rule. Education, as the Hindus understood it, in my community began to make rapid strides only the other day and I will not be far from right if I say that the greatest impetus was given to it by the partition of Bengal. Long before that, Hindus filled up practically all available Government posts, high or low. By this means as by no other that I can think of, they acquired not only wealth for themselves but also a tremendous influence. The Muhammadan, partly on account of his lack of education and partly due to his want of influence, was jealousy kept out from a very lucrative field where the Hindus were enjoying a sort of unrestricted monopoly. What this monopoly means will be clear from the fact that even today, when adverse comments are heard regarding the undue patronage being extended by Government to my community in the matter of appointments, out of the total provincial revenue of about Rs. twelve crores, six crores roughly go into the pockets of my Hindu brethren in the form of salaries and allowances, while not even a bare crore in the pockets of the Muhammadans. My figures are not imaginary, for I consulted the Government budget figures of 1932-33 and made a rough calculation out of them. If the railway, posts and telegraphs and other private services and the learned professions were taken into account, the 'national wealth' of the Hindus, if I may say so, would be much more.

What I mean to say is that the moral and material gain of the Hindu community secured through Government service and the professions have been immense and the benefits derived from them go down to generations. Out of them grow the enterprise and the public spirit of Mr. Datta's kind.

Let me now pick up a few examples set forth by Mr. Datta, and tell him what we feel about them. Mr. Datta has referred to the number and variety of magazines in Bengali. True the Muhammadans can claim only six as against the eighty of the Hindus. But why it is so? Half truths are sometimes positively dangerous, and here Mr. Datta ought to have given the full truth. I dare say, the Hindu reading-public looks with a sneer to any magazine with a Muhammadan name, and I have yet to know any Hindu who graciously subscribes to any Muhammadan magazine and paper.

Mr. Datta has also cited the example of the Calcutta University Institute, where out of 1466 student members, only 7 are Muhammadans. It's a pity that it is so, but does Mr. Dutta know of the existence of the Muslim Institute of Calcutta which has hundreds of Muhammadan students as members? As regards inter-collegiate recitations, I doubt whether Mr. Datta is quite correct in holding that not a single Muhammadan student was a prize winner, for in 1932, one Muhammadan student, as far as I remember, got the 2nd prize in English.

I will conclude by giving a very specific instance of the public spirit of the Muhammadans. When Mahatmaji issued his momentous 'fiat' directing boycott of all Government institutions, Courts, Schools, Colleges, etc., etc., as a preliminary step, more Muhammadan students came out of their schools and colleges than Hindu students did, and this itself speaks a volume of their public spirit.

NOTES

A "Warrior" Chief Justice Designate

According to a contemporary, the new British Chief Justice chosen for the Calcutta High Court served in the last world war. Is it meant that that is a qualification for this high office ?

As Bengal has been for years practically under "martial" law, which is going to be perpetuated, it is perhaps fitting that her Chief Justice should be an ex-soldier.

Law Member's Specious Arguments in Support of Terrorist Bill

In the course of the debate on the Bengal Terrorist Bill in the Legislative Assembly, Sir N. N. Sircar, the Law Member, is reported to have said :

"Arguments have been advanced that these repressive laws should be suspended as they did not succeed in fighting terrorism. Why not suspend repressive laws for non-political murders, dacoities ?"

The Law Member, who is a subtle logician and debater, seems to have lost sight of one important difference between terroristic murders etc., and ordinary murders etc. The latter have been committed up to the present time in all ages and countries and continue to be committed, whereas the former have been confined to certain periods and countries. Therefore laws which are meant to repress the latter class of crimes, which appear to be a permanent feature of human society all over the world—so far as anything mundane and human can be said to be permanent—such laws also must be similarly a permanent part of the statute-book. But as terroristic crimes are not permanent and ubiquitous, there is no case for perpetuating any law intended to repress them which has failed to produce the intended result. On the contrary, as the present Bengal Terrorist Act has been a failure as a device for eradicating terrorism, some other contrivance on altogether new lines ought to be devised and resorted to. This, however, requires more wisdom, humanity and courageous statesmanship than the rulers of India appear to possess.

The implication perhaps underlying the Law Member's question, namely, "why not suspend repressive laws for non-political murders," etc., seems to be that such laws have nowhere been repealed or made less rigorous. But that is not correct.

> "Death was in former times in England the ordinary punishment for all felonies. It would be possible to extend almost indefinitely the list of offences for which men could be legally hanged at the commencement of the 19th century" —*Chambers's Encyclopœdia.*

But both owing to the spread of more humane and civilized views and to the inefficacy of excessively severe laws,

> "the inhumanity and impolicy of the old criminal code ["there were more than 200 offences in the statute-book for which capital punishment might be inflicted"] gave way to a course of legislation which has reduced the application of death as a punishment within its present humane limits." —*Chambers's Encyclopædia.*

Let us confine our attention to the case of murder.

> The Children Act, 1908 (8 Edw. VII. chap. 67), enacts that sentence of death shall not be pronounced against a person under sixteen years of age. This enactment extends to England as well as to Scotland."
>
> "In the United States,...in some states, as Michigan Wisconsin, Rhode Island, and Maine, capital punishment has been done away with."
>
> "In Holland . . . capital punishment was totally abolished by law in 1870. In Rumania it was abolished in 1864, and Portugal has adopted the same course.—*Chambers's Encyclopaedia.*

So it is historically true that even in the case of offences which seem to be a permanent ugly feature of society, laws are changed or repealed or their rigour softened in course of time.

The Law Member is also reported to have said that compared with what was being done in Germany and Italy to crush rebellion against the powers that be, the repressive laws meant for Bengal were like milk and butter. That is true. But is it not also true that there were and there still are possibilities of the "rebels" in Italy and Germany seizing the supreme power and forming the Government in their respective countries?—possibilities which never existed and do not exist in the case of the Bengal terrorists. Is it not true that in importance and equipment the Bengal terrorists are as "milk and butter"—to use the Law Member's phrase— as compared with the Italian and German "rebels"? In any case, greater severity in one country does not necessarily justify severity of a lesser degree in another. The requirements of each country must be considered independently according to the conditions prevailing in it. The Law Member might also have borne in mind the fact that just as Mussolini's and Hitler's repressive "laws" and "steps" and "measures" are far more severe and drastic than those adopted or intended to be adopted for Bengal, so are the "nation-building" and employment-giving endeavours and activities of these tyrannical Dictators far more extensive than those intended for Bengal by the benign constitutional rulers of India. We do not suggest that the constructive measures of the Dictators justify their tyranny. What we mean is that if there is to be any comparison, it should not be confined to only one aspect.

Caste-creating Endeavours of the British Government

The backward condition of India and many of her miseries are said by Britishers and other Europeans to be due in part to the system of caste which has prevailed here from ancient times. Without discussing the correctness of this view, it may not be unfair to state that the British people consider caste to be an evil. Nevertheless, when it is to their advantage, they like to be caste-ridden. What is the British practice in India? The highest offices in the civil and military administration of the country are held by Britishers. They are the modern Kshatriyas of India. Nay, in the majority of cases they are, or at least until lately they were, the Brahmans of India too; for the highest offices in the education and scientific departments are or were their monopoly. And if the whole truth is to be stated, they are the principal Vaishyas too; for the commerce and industry of the country are chiefly in their hands. The vast majority of Indians have been relegated to the position of the fourth caste of Sudras, and in the British Dominions they are the Panchamas or Pariahs.

But the British nation has not remained satisfied with simply making themselves the three higher Hindu castes, as it were. Among Indian themselves the British Government have created a new system of caste. Take the army. Some Indians are said to belong to a martial race, province, class and caste, and others to unwarlike ones. Recruitment to the army is practically confined to the former to the exclusion of the latter. The former are the British-made neo-Kshatriyas among Indians.

This new caste system is being gradually introduced in the civil administrative departments also, the latest step taken being the communal division of appointments in the services.

If now any Britisher says that Britishers condemn the caste system, an orthodox Hindu may very well reply: "You are either an ignoramus or an unconscious humorist;—you observe caste, have been in fact creating a new caste system and yet you inveigh against it!"

Creating or Propping up Occupational Caste System

The Panjab Land Alienation Act is based on the assumption that, if a man belongs to a certain religious community, it cannot be presumed that he is not an agriculturist—and hence he is not precluded from being or becoming an agriculturist. So he can hold land and purchase more land, and land can be sold to him. But if he is a Hindu, and if he wants to purchase land or if anybody wants to sell him some land, it has to be proved that he belongs to a caste which in the opinion of the Government has agriculture as its hereditary occupation. The result of such a law is that any one, irrespective of his creed and caste, cannot acquire land and become a farmer.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

This is a kind of new caste system. Just according to the old orthodox Hindu theory, a Sudra is not permitted to recite or hear the Vedas, so no one can become a cultivator whose ancestors did not till the soil. Such a rule is the creation of the caste-condemning British raj! It is not, however, necessarily true that those whose ancestors were cultivators must be the fittest for agricultural work, and those whose ancestors were not cultivators cannot become good cultivators.

Favoured "Castes" in the Public Services

The object of the Government of India's Home Department resolution regarding the representation in the public services of some minorities and of Muslims in particular, is said to be "the redress of communal inequalities." Anglo-Indians and Moslems have long been in practice favoured "castes" in Government service. The resolution only gives fixity to and extends the practice. We call them "castes," because one of the harmful features of the caste system is that under it some groups of men are favoured and others are discriminated against, and this feature is present in the rules under discussion.

Appointments in the public services are a kind of remunerative occupation. There are other kinds of remunerative occupation. In the public services in India as a whole Hindus preponderate for two reasons: (1) because in India as a whole they are the majority, (2) because in India as a whole they are the most advanced in education. If non-Hindus had been preponderated in the public services, Government would not perhaps have thought of any redress of communal inequalities."

We are here treating Government service only as a means of making money like other remunerative occupations. If "redress of communal inequalities" in any occupation leads to the disturbance of the occupational character of any caste or class or community, will Government intervene to give the members of that caste or class or community, thrown out of employment, any new source of certain income? By the reservation of 25 per cent posts in public services in general for Muslims, of 8½ per cent for other minorities, and of 9 per cent in the railways and 5 per cent in the posts and telegraphs for Anglo-Indians, in addition to those which these communities can get by competition, Hindus are sure to lose a good many remunerative jobs which they could have otherwise got by their merits. Therefore, there is sure to be greater unemployment among Hindus in the future than there is at present. What remedy will Government provide for this increased unemployment among Hindus?

Among the followers of many callings in many provinces, Muhammadans form a larger proportion than their percentage in the total population. For instance, in Bengal Muhammadans form 54.8, Hindus 43.1, Christians 0.4 and others 1.7 of the population. But of those employed in agriculture Muhammadans form 62.7 per cent, Hindus 34.7 per cent, and Christians and others 2.6 per cent. Will Government "redress communal inequalities" in this occupation? The reply will, of course, be that that is beyond the province of Government to attempt, *laissez-faire* being the best policy. That is really so. But why did not the Panjab Government then follow that policy as regards land alienation?

Similarly, of tailors, book-binders, bricklayers and masons, bakers, meat-sellers, boatmen, lascars, etc., in Bengal, Musalmans form more than 55 per cent. Will Government "redress communal inequalities" here?

Cultivation of the soil and the occupations indicated above are not negligible as sources of income, as many farmers and craftsmen are better off than ordinary clerks and teachers.

If it be said that in the Government service Hindus hold more than 44 per cent of the posts in Bengal and "communal inequalities" should be redressed, our reply is that the Bengal Government has been already doing it. For instance, in the Education Department, among inspectors 54.2 are Muhammadans and among teachers 46.8 are Muhammadans. The Eighth Quinquennial Review on the Progress of Education in Bengal for the years 1927-1932 states:

> "It appears that the Moslems are well represented on the inspecting branch, but the number of teachers in secondary schools and specially in high schools is inadequate."

This is a curious observation, seeing that

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

of persons literate in English in Bengal Muhammadans are only 24.9 per cent and Hindus 69.6 per cent! Some idea of the proportion of graduates in the two communities in Bengal can be formed from the fact that Hindu post-graduate and research students are 85.7 per cent and Muhammadans 13.

It is not our opinion that it is the business of Government in any country to "redress communal inequalities" in any occupation. On the contrary, we hold that every one ought to be free to follow the occupation he likes and is fit for and that in all occupations there ought not to be any interference with the fittest obtaining the reward of merit. Government's duty is to see that there is as little unemployment as possible. We have made some remarks on and asked some questions relating to "redress of communal inequalities," only because Government wants to do it only in one occupation, namely, Government service in the civil departments. But to be consistent and fair they ought to do it in all occupations. This they cannot and will not do. This can, of course, be attempted, if, as in Russia, all occupations be brought under State control. But the State in Russia does not care for religious creeds and does not recognize separate communal interests.

Representation of Some Minorities in Public Services

The Home Department anti-National resolution of the Government of India regarding the representation in the public services of *some* minorities and of Muslims in particular begins thus :—

> In accordance with the undertaking given in the Legislative Assembly the Government of India have carefully reviewed the results of the policy followed since 1925 of reserving a certain percentage of direct appointments to Government service for the redress of communal inequalities. It has been represented that though this policy was adopted mainly with the object of securing increased representation for the Muslims in the public services it has failed to secure for them a due share of appointments and it has been contended that this position cannot be remedied unless a fixed percentage of vacancies is reserved for the Muslims. In particular, attention has been drawn to the small number of Muslims in the railway services even on those railways which run through the areas in which the Muslims form a high percentage of the total population. A review of the position has shown that these complaints are justified and the Government of India are satisfied by the enquiries they have made that the instructions regarding recruitment must be revised with a view to improving the position of the Muslims in the services.

The "undertaking" referred to ought never to have been given. No State that we know of reserves any percentage of appointments to Government service for particular communities.

What is the meaning of "the redress of communal inequalities"? What is the standard of communal *equality* in the public services? If it be contended that the numerical strength per cent of appointments held by each community should be equal to its numerical strength per cent in the total population, then the resolution does not at all aim at such equality. For, *in addition to* the jobs which *some* minority communities may get by competition, certain percentages of appointments in all or some civil departments are reserved for them; and these percentages of reservations are *greater* than the percentages of numerical strength of these communities in the population of British India. Musalmans are not 25 per cent of the population, but less, Anglo-Indians are not 9 per cent (or even one per cent) of the population, and so on. Hence, even if the resolution had not said that the reservations were in addition to what the favoured communities could capture by competition, the reservations would have meant the certain *creation*, *not* the *redress*, of communal *in*equalities. The reservations being in addition to those which can be got by competition, the resulting inequalities would be all the greater. And the greater the progress made by the favoured minorities, the greater would the inequalities be; for there is no limit set to the proportion of jobs which they may secure by competition, nor is the majority (Hindu) community given any guarantee that their share of appointments would not go below a certain percentage.

For these reasons, instead of the words "for the redress of communal inequalities," the resolution ought to have used the words "for the creation of ever-increasing communal inequalities."

The prefatory paragraph is defective in another respect. The real object of the resolution is "improving the position of Muslims and of the Anglo-Indians and domiciled Europeans. Therefore, the general reference

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

the "redress of communal inequalities" is misleading. For the aborigines, the Buddhists, the Jains, the Indian Christians and the Sikhs are not even mentioned by name. The "depressed classes" are no doubt mentioned, but only to be treated to the very consoling observation that

> In the present state of general education in these classes the Government of India consider that no useful purpose will be served by reserving for them a definite percentage of the vacancies, out of the number available for the Hindus as a whole, but they hope to ensure that duly qualified candidates from the depressed classes are not deprived of fair opportunities of appointment merely because they cannot succeed in open competition.

Verily Dr. Ambedkar has got his reward for being a party to the Minorities Pact !

The paragraph quoted above contains the words "out of the number available for the Hindus as a whole." But this is misleading, as there is no fixed proportion for Hindus. It would gradually decrease as the Muslims and other non-Hindu minorities are able to capture more and more jobs with the progress of education among them.

Moreover, the following paragraph contains a device by means of which Muslims may be given a certain undefined proportion of the 8⅓ per cent reserved for "other minority communities" :

> (III) If members of other minority communities obtain less than their reserved percentage in open competition and if duly qualified candidates are not available for nomination the residue of 8⅓ per cent will be available for Muslims.

It is taken for granted that "duly qualified" Muslims will always be found not only for the jobs reserved for them but also for those reserved for other communities for which duly qualified persons from those communities cannot be found ! In other words, Muslims must be favoured by hook or by crook !

As "duly qualified" does not indicate any fixed standard, it will always be possible for any departmental or sub-departmental head—particularly if he be a Muhammadan—to declare that "duly qualified candidates" for those jobs belonging to "other minority communities" are not availble and therefore they must be given to Muslims.

And why not to Hindus, pray ? The definite provisions made for Muslims are over-generous without the above additional provision, and the lot of the Hindus has been made very precarious. Therefore, windfalls and "residuary jobs" at least ought to have been assigned to them. But Hindus do not deserve any consideration. For have they not clamoured most for Swaraj and suffered and sacrificed most ?

Communal "Award" No. II

The communal division of appointments in the public service has been called Communal "Award" No. II by some Muhammadans. In effect it will nullify, to a greater extent, all efforts to produce national unity and solidarity in India than the Communal Decision of the Premier. The Communal Decision has given fixity to the already existing divisions and dissensions and created more. But it relates only to a few hundred seats in the central and provincial legislatures, not directly to the loaves and fishes of offices, big and small. The communal division of jobs relates to several lakhs of appointments in the whole of British India ; for what the Government of India has done all the provincial governments are sure to do—we mean those which have not done so yet. Therefore, however much we may dislike and discourage and condemn envy and jealousy and scrambling for office, there will be such things all over India, the exhortations of the lovers of India will not be able to kill them, and the mutual relations of different communities will not be what they ought to be. Nevertheless, we must make the utmost effort to counteract the evil effects of the communal decision and the communal division of jobs.

Why No "Redress of Communal Inequalities" in the Army ?

The Government of India's professed object in reserving certain percentage of appointments mainly for Anglo-Indians, domiciled Europeans and Muslims is to redress communal inequalities. Let us assume that this is the real object.

Why should this policy be confined only to the civil departments ? Why should not there be redress of communal and provincial inequalities in the Army, the Navy (such as it is) and the Air Forces ? The official answer will, of course, be that there are some posts in these departments for which Indians in general are not fit, and for the rest only members of some communities in some

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

provinces alone are fit, and it is the fittest alone who ought to be appointed.

Without entering into a discussion of the other statements, we unreservedly agree that it is the fittest alone who ought to be appointed. We ask, why in the civil departments of the state the fittest alone should not be appointed? In the resolution it is stated,

> (V) In all cases a minimum standard of qualification will be imposed and the reservations are subject to this condition.

Why should any persons possessed of only a minimum standard of qualification be preferred to any who can satisfy the maximum standard?

Efficiency of the State

Work in the various departments of the state must suffer in efficiency if the rule of appointing the fittest be not followed, as it will not be followed in the case of a considerable proportion of appointments. Efficiency can increase only with securing for all posts, high or low, the ablest persons available. But the Government of India is not going to follow this simple rule.

It is sheer waste of the tax-payer's money to give salaries meant for the fittest to men of minimum qualifications, and it is an infallible prescription for the production of discontent to leave abler men unemployed in order to give jobs to the less able.

Commander-in-Chief's and Law Member's Alleged Opposition to Communal Division of Appointments

It is said that when the question of communal representation of some minorities in the services was under discussion in the Governor-General's executive council, the Commander-in-Chief and the Law Member opposed any such scheme. Perhaps both opposed the communal division of the appointments on the ground that it would make for inefficiency or decreased efficiency and probable corruption, too. The Law Member being an Indian may also have thought that there should not be any addition to the already existing things which set Indians by the ear.

And it is possible that the Commander-in-Chief had some reasons in addition to decreased efficiency for opposing the scheme. He thought perhaps that if there was to be "redress of communal inequalities" in the civil departments, there would inevitably be a clamour for such redress in the Defence Departments of the Government, and that there was no just and logical answer to such clamour;—therefore, let sleeping dogs lie. It is not beyond the range of possibility that while engaged in the discussion he thought that, as the forces commanded by him were meant to defend the country against both internal disturbances and external aggression, it was best not to give any additional avoidable cause for widespread discontent.

A Constitutional Question

The recruitment of the public services was one of the questions discussed by the so-called Round Table Conference. And it is a problem which the Joint Parliamentary Committee is bound to consider. When its report is submitted to the British Parliament, the latter will deal with it.

Such being the case, have the Secretary of State for India and the Government of India any constitutional power to deal with a part of the problem? Have they not usurped functions which do not at present belong to them?

Why This Job Allotment Now?

It is natural to feel some curiosity as to why this allotment of jobs to some communities should have been made at this particular juncture. No definite answer can be given—only guesses can be made.

The genesis of all such measures of favouritism is to be found in the fact that the greater the political self-consciousness in India, the greater must be the efforts made to detach or keep detached considerable groups of men from the national movement and the national struggle. Perhaps the Joint Select Committee has made such changes in the White Paper as to make it still more unacceptable to the people of India—if that is possible, and hence it has been felt that something must be done to keep satisfied some minorities at least among whom National consciousness is undeveloped or confined to a small number. There may be another reason. Government may have felt that by not rejecting the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Communal Decision outright the Congress has made a bid for Muslim allegiance, and so a higher bid must be made. This is the higher bid. If the Congress now says, "Let the Muslims have the jobs," Government may have to disclose something more up its sleeve. Or the Communal "Award" and the Communal Division of Jobs, etc., may be only parts of the patronage which Government promised in return for the Minorities Pact or something similar. The following "inside story" of the cause of the failure of negotiations between the Aga Khan and Mahatma Gandhi, published in the *Daily Sun* of Bombay, dated the 20th July, 1934, makes this conjecture probable :

It was past midnight. Mahatmaji has just returned from continuous work for the whole day. But he did not stop to take rest. He took his "Charka" and drove straight to the Hotel where the Aga Khan and the Muslim delegation were.

THE MUSLIM PROMISE

The substance of the Muslim talk was "What do we gain by making a common cause with you! You do not accept our 14 points."

Mahatmaji's reply was, "What will you give us if you get your 14 points ? Will you stand by the Congress?"

"But suppose if Muslims remain neutral, will you be satisfied ?" Sir Muhammad Shafi suggested a *via media*.

"No," said Mahatma, "we want your co-operation. We are ready to pay the price for it."

The Muslim delegation was engrossed in thoughts. At last the Aga Khan said, "Our whole delegation is not present here. We need consultation. But be sure that, if you accept our 14 points, we are almost certain to join you in your political demands."

MAHATMA ACCEPTS 14 POINTS

Then Mahatmaji wrote in his own handwriting the draft of the agreement accepting the 14 points of the Muslims on condition of their joining the Congress in its political demands.

The Aga Khan promised to let Gandhiji know the final decision before noon. He asked him to obtain Malaviyaji's consent.

HOARE IN A FIX

In the early morning London was fast asleep. But one Englishman was awake. He was the Secretary of State for India. He had his own intelligence department. He knew about the Gandhiji-Aga Khan Pact. He saw the Indian Empire slipping from his hands. He was waiting for somebody. That somebody came. He saw that the Muslims were in a dilemma. Gandhiji had accepted their demands. They had no way out.

HOARE'S BARGAIN

"Now what is the position," asked Hoare.

"What will you give ? Anything more ?" asked the Muslim member.

"I accept the 14 points and above that the Government's whole-hearted patronage," said the Secretary of State.

MALAVIYAJI UNRECONCILABLE

The *London Times* flashed in the early morning the news of the Gandhi-Aga Khan Agreement.

Jayakar saw Malaviyaji early in the morning. Sir Purshottamdas Thakurdas and Mr. Birla were having a hot discussion with Malaviyaji.

Pandit Malaviya said that he would never accept that agreement. "Tell Gandhi Maharaj that I would never concede all that."

VAIN APPEALS

Sir Purshottamdas and Mr. Birla pleaded with the Pandit. They said that it was the master-stroke of Mahatmaji. And if this opportunity is lost Hindus will suffer for ever. Mr. Birla said to him that he was losing the opportunity of a life-time. But Panditji was adamant.

It was 9 in the morning. Newspaper men were coming one by one in the room near the R. T. C. Hall. They were told of the Gandhi-Aga Khan Pact. They were losing heart at the news. They made long faces.

EMPIRE BREAKING

Then came the Secretary of the Press Committee. When he knew it, he exclaimed, "What ! what do you say ?"

He sat down in the chair as if reclining. He sat with eyes closed for a while. When he got up—his face was pale. To him the British Empire was being broken.

After him the Aga Khan's messenger came to Gandhiji and informed him that they could not accept his offer, as all the Muslims did not agree.

If this "inside story" be correct, if not in all its details, at least substantially, then the Division of Jobs must be taken to be the fulfilment in part of Sir Samuel Hoare's promise of whole-hearted patronage. What next ? the curious reader may ask. The answer is, the Aga Khan most probably has asked for a State to govern, with what result, is not definitely known.

Our last guess is that perhaps the Secretary of State and the Government of India had come to know what the Joint Select Committee were going to recommend regarding the recruitment of the services and finding the recommendations not to their liking, they have confronted the Committee with a *fiat accompli*.

Numerical Strength and Proportion of Jobs

Assuming without admitting that all communities should have their fixed share of Government jobs, what should determine the share ? There are some kinds of such work which even illiterate adult persons can perform. These may be divided according to the numerical strength of *adults* in the communities. For other jobs only literate

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

persons are fit. These may be divided in proportion to the numbers of *adult* literates in the communities. For another class of jobs *adult* literates in English, or rather *adult* undergraduates, are fit. These may be apportioned according to the numbers of *adult* undergraduates among the communities. Similarly, with regard to offices which can be filled efficiently only by post-graduates, medical graduates, graduates in law, graduates in engineering, etc.

Therefore, even on the aforesaid assumption mere numerical strength cannot entitle any community to a fixed proportion of posts of all or most kinds. But we do not at all admit the soundness of the assumption. All posts should go to the fittest.

The Queen's Proclamation and the Division of Jobs

We always take our stand on human rights, on the elementary sense of justice, on the equal rights of all Nationals in a State to enjoy all opportunities according to their ability. We have never taken our stand on Queen Victoria's Proclamation, because it has been treated by British imperialists practically as a scrap of paper. But in recent times in connection with the White Paper, Sir Samuel Hoare took his stand on it in order to give the citizens of the British Dominions (like South Africa, which was not a British Dominion in 1858 when the Proclamation was issued and which treats Indians like pariahs) equal rights in India with Indians. So it may be allowable to make a passing reference to the Queen's Proclamation. In it the Queen said :

> "We declare it to be our royal will and pleasure that none be in any wise favoured....by reason of their religious faith or observance, ...
>
> "And it is our further will that, so far as may be, our subjects, of whatever race or creed, be freely and impartially admitted to offices in our service, the duties of which they may be qualified, by their education, ability, and integrity, duly to discharge."

Is the Government of India Home Department resolution relating to the representation of some minorities in the services, consistent with the passages quoted above ?

The Evil Results of Favouritism

It has been already stated that the evil results of favouritism would be less efficiency in all departments of the Government, and most probably corruption, too. There may also be increase of crime and disease and inadequate collection of revenue. Free and impartial admission to office of the fittest, irrespective of race or creed, gives a great stimulus to progress in all directions. Favouritism takes away this stimulus. As regards education, the favoured feel that they need not strive to surpass or even equal others in intellectual equipment, and those not favoured may feel that, as intellectual achievement does not necessarily count, the pursuit of knowledge has no intrinsic worth. In this way favouritism serves as an obstacle in the way of the progress of education among both the favoured and the not-favoured.

High officers of the Government have declared on various occasions that complete Indianization of the services has not been possible because of the lack of fit Indians for the higher offices. Is favouritism the way to increasing the fitness or the unfitness of Indians ?

Special Pleading for Anglo-Indians

The following passage occurs in the resolution under discussion :

> The Anglo-Indians have always held a large percentage of appointments in certain branches of the public service and it has been recognized that in view of the degree to which the community has been dependent on this employment steps must be taken to prevent in the new conditions anything in the nature of a rapid displacement of the Anglo-Indians from their existing position which might occasion a violent dislocation of the economic structure of the community.

In the above extract, for "The Anglo-Indians," substitute "educated Hindus of the middle class," and you will get an equally cogent, if not more cogent, argument.

Government have done something which will occasion a disturbance of "the economic structure" of the middle classes of the Hindu community. But such an eventuality, being a Hindu affair, can be looked on with unconcern.

Gain and Loss to Muslims

Musalman Indians, like Indians of other religious communities, will suffer from the evil consequences to the State, such as inefficiency and corruption, and to the nation, such as the damping of efforts for educational and cognate

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

progress, born of favouritism. Musalman Indians will be particularly affected, as intellectual eminence is never the direct, or even the indirect, product of the patronage of a minimum standard of qualifications.

Let us turn to the gain to the Muslims.

Though the Government of India's resolution relates to posts under that Government, not to those under provincial Governments, we may take into consideration all Government posts, for the provincial Governments are sure to do what the central Government has done.

In British India 2,24,996 men serve in the police and 3,52,563 men are employed in other services of the State (not military). So there are altogether 5,77,559 Government servants in the civil departments. In the whole of British India Musalmans will get 25% of these, or 1,44,389. In the census report of 1931 the average size of the family of police employees is given as 3.7 and of other Government officials as 3.8. Therefore, the average size of a Musalman official's family may be taken as 4, or 5 including himself. So by 1,44,389 jobs going to Musalmans altogether 7,21,945 Musalmans will be made gainers. Now, in the whole of British India there are 6,70,20,443 Musalmans. Deducting 7,21,945 from this total figure, we get 6,62,98,498 as the number of Musalmans who will not be direct gainers from the Government policy of favouritism, though they will suffer as much as, or rather more than, non-Musalmans from the evils of favouritism resulting to the State and nation.

Will there be any countervailing indirect gain to the 6,62,98,498 Musalmans? Not to any appreciable extent, we should think. We do not, of course, say or suggest that Hindu Government servants distribute their income to all and sundry. But from our knowledge of the small number of educational and other public institutions founded and maintained by Musalmans in Bengal and the very small help which they give to their co-religionists suffering from famine, flood, storms, etc., it does not seem probable that the pecuniary gain of the 1,44,389 Musalman officials will be of appreciable advantage to the vast majority of Musalmans.

Competitive Examination For Musalmans Alone

If the generality of Musalmans, as apart from the *Jo-hukums*, want to be gainers by the favour shown to their community by the Government, they should insist on all posts meant for Musalmans being filled by competitive examination confined to Musalmans alone. That will give some stimulus to education in the community.

Non-Muslims and Government Service

There are many men who are on principle against the acceptance of Government service. The new Home Department resolution does not make the range of occupations that may be chosen by them narrower than before. As regards others—we refer particularly to non-Muslims, they can still compete for many posts.

Government service may be looked upon from two points of view, as a means of earning money and as a means of serving the country. For, though Government servants and pensioners are precluded from doing anything directly or indirectly to promote the cause of freedom, they can serve the nation to some extent in other ways by doing their duties faithfully. We do not forget that many Government servants are or have to be hostile to the cause of freedom. We are not referring to them.

All non-Muslims should banish from their minds envy and jealousy of Muslims.

The patronage bestowed on Musalmans and withheld from the Hindus may become to the latter a blessing in disguise, if they turn their attention to industries, including scientific agriculture, and trade more than they have hitherto done.

Indore Meeting of All-India Women's Conference

Excellent progress, both social and educational, formed the keynote of the reports of different constituencies at the half-yearly meeting of the Standing Committee of the All-India Women's Conference held in Indore on the 21st and 22nd July last. No less than 22 out of the 38 members of the Standing Committee attended from all over the country.

The members present were:—Mrs. Rustomji Faridoonji (Hyderabad, Deccan), Rajkumari Amrit Kaur (Jullunder City), Mrs. Hamid Ali

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

(Satara), Mrs. Brijlal Nehru (Lahore), Rani Lakshmibai Rajwade (Gwalior), Miss L. M. Naidu (Hyderabad, Deccan), Mrs. S. N. Ray (Social Secy., Calcutta), Mrs. Lakshmi N. Menon (Lucknow), Mrs. S. S. Chitambar (Jubbulpore), Mrs. Hosain Ali Khan (Hyderabad, Deccan), Mrs. D. Subhadra Chenchiah (Madras), Miss G. J. Bahadurji (Bombay), Mrs. S. N. Wadia (Baroda), Mrs. S. C. Roy (Calcutta), Mrs. L. F. Massey (Ajmere-Merwara), Mrs. M. Solomon (Konkan), Mrs. Sorojini Mehta (Bombay), Miss A. Khemchand (Sind), Miss Shoila Bala Das (Orissa), Miss Magda Friedmann (Delhi), Mrs. U. Nagu (Indore), and Mrs. S. C. Mukerjee (Hon. Organizing Secretary, Calcutta).

Through the courtesy of Mrs. Nagu, the members were the guests of H. H. Maharani Sanyogita Bai Saheba Holkar, H. H. Maharani Indira Bai Saheba, H. H. Chandravati Bai Masaheb and Princess Sabitri Bai Saheba.

In welcoming the members at a public meeting in the Town Hall, H. H. Chandravati Bai Masaheb, who presided, said that at present women were in total darkness so far as real education was concerned, and it was indeed very happy to find that some attempt was being made in educating them. She, however, wished the attempt to be more in the direction of the village population, as the large majority of women in India resided in villages and not in big cities, which were awakening to the fact and endeavouring to shoulder their responsibilities themselves as well as with the help of their own governments. Education, if well-directed, was the soul of every reform, and if the soul was purified, the social side must improve in all its aspects.

The reports of the work accomplished showed that all the constituencies contributed towards the relief of the sufferers in the earthquake in Bihar. Harijan work was being carried out most satisfactorily in nearly all the constituencies. An All-India Sarda Committee was formed by the A. I. W. C. for propaganda against child marriage and to conduct prosecutions and to devise ways and means for improving the Act.

An All-India Day was fixed for November 24, 1934, on which date public meetings would be held throughout India and propaganda undertaken regarding the appointment of a Commission to enquire into the legal disabilities of women.

It was decided that a manifesto and questionnaire from the A. I. W. C. should be issued to candidates seeking election to the Assembly eliciting their views on questions affecting women, so that the members of the constituencies should help only those candidates who favoured their claims, to secure election.

It was further resolved to lay special stress on rural reconstruction work, which was already being undertaken intensively in many constituencies.

A memorandum on women and child labour was submitted by the A. I. W. C. to the International Labour Conference at Geneva.

On the Education side, due to the activities of the Conference, a number of women teachers went for training to Whitelands College, London. The adult education movement, with the free schools started by the constituencies, showed considerable progress.

The advisability of making Hindi the common language for the Conference was discussed and it was decided to encourage speeches in Hindi as much as possible.

The next Annual Session of the Conference will be held in Karachi at the end of December next.

Bethune College Register of Old Students

The Principal of the Bethune College has invited the old students of the Institution to communicate to her at their earliest convenience their names, addresses and present occupations, if any, with the years of their stay in the College. This is in view of the compilation of a proposed College Register. The Bethune College being the premier institution for women's education on this side of India, the Register will be an important and useful work and a contribution to the history of female education in Eastern India. The "Old" Girls—not necessarily old in the usual sense!—of the college should heartily co-operate with the Principal in compiling the Register.

"How to Make a Riot"

By an accidental coincidence, we find today an article in *The New Republic* of America (June 27, 1934) with the heading, *"How to Make a Riot,"* and a news item in the dailies relating to the judgment delivered by Mr. Niblett, Magistrate of Ghazipur, in two communal riot cases. The article in the American paper begins :

> On May 26, police attacked a demonstration of unemployed in front of relief headquarters in New York City. The police got the worst of the battle. Headlines screamed of "Red Riots," but the facts peeped here and there from under reports of jobless "whipped into a frenzy by their Communist leaders." As one newspaper let slip, "Wall (the Deputy Inspector in charge) ordered the police into action, *and in two minutes the riot was in full swing.*"

This is one way "to make a riot."

The Ghazipur news item reads :

> Allahabad, July 28.
>
> Mr. Niblett, Magistrate, delivered judgment in the Ghazipur Riot case acquitting one Muslim and sentencing seven Muslims under section 147 I. P. C. (rioting) to 2 years' rigorous imprisonment each with fines and the rest to one year's rigorous imprisonment each. All the accused were further directed to furnish personal bonds of Rs. 200 and sureties of the like amount each to keep peace for one year after their release.
>
> The learned Magistrate acquitted all the nine Hindu accused in the cross-case holding that the charge of rioting against them was "utterly false and frivolous" apparently started by the police and that their prosecution was "merely to maintain a show of impartiality."—*United Press.*

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

This is another way "to make a riot," though in a sense different from the first one. The Magistrate has said in his judgment that "the whole trouble had been planned from beforehand," that "the Hindus were not assailants," and that "utterly false and frivolous charges were brought against the Hindus."

"A Search in Secret India" and Visva-bharati"

A book has come to our hands from England for review, named "A Search in Secret India." The author is Paul Brunton, an English journalist, who wandered through the heart of India and won "the confidence of those mysterious men—the *Fakirs* and Yogis."

"He beholds their astonishing feats, learns many closely-guarded secrets, lives in their secluded hermitages and jungle retreats—and returns to write this sensational record."

So the publishers, Rider & Co., ask the reader to—

"Read of the Yogis who can prolong their lives for hundreds of years, stop the heart-beating and put live, move solid objects without touching them, pass at will into trances where they sit like statues for hours or days, accurately reveal the past and future to a complete stranger."

But Sir Francis Younghusband, who has written a foreword to the book, says :

"These are all interesting enough in their way and are well worth study by scientific men interested in psychic phenomena. But they are not the real thing. They are not the springs whence spirituality comes gushing.

"They do not form the secret sacred India that Mr. Brunton was seeking. He saw them. He visited them. He describes them. But he pushed through them. Spirituality at its finest and purest was what he wanted. And this he found at last.

"Remote from the haunts of men, deep in the jungles to which—or to the Himalayas—the holiest men in India always return, Mr. Brunton found the very embodiment of all that India holds most sacred. The Maharishee—the Great Sage—was the man who made most appeal to Mr. Brunton. He was not the only one of his kind. Up and down India others—not many, but a very, very few—may be found. They represent the true genius of India, and it is through them the Mighty Genius of the Universe manifests Himself in peculiar degree. They, therefore, are among the objects most worth searching for on this earth."

We make no comments on these observations of Sir Francis Younghusband. The sages whom the author found may be real and he may have really discovered the secret sacred India he was in search of.

The *Vidyabhavan* or Research Institute of Visva-bharati has been for years engaged, through Professor Kshitimohan Sen Sastri, M.A., in a search for another secret India, the sacred India of the mediaeval age, which existed not merely in forest retreats or in the Himalayas but also, or perhaps mostly in the haunts of men. The mediaeval saints who represented this sacred India did not forsake the world. They were neither society-shunners, nor miracle-mongers and wonder-workers. They are springs whence spirituality still comes gushing. But these fountain-heads of spirituality are, for the most part, not to be found in printed volumes or pamphlets and in many cases not even in *pothis* or manuscript books. Printed books no doubt contain the teachings of such famous saints as Kabir, Dadu, etc., but not *all* their sayings. And there are interpolations and alterations, too. For their unpublished sayings, for their authentic sayings and for the teachings of many less known but not necessarily less spiritually advanced saints and sages one has to make persistent searches along the highways and byways of the country-side, in peasants' huts, in *maths* and temples, in wandering mendicants' retreats—in fact, where not?

Pandit Kishitmohan Sen Sastri, M. A., has been engaged in this kind of very valuable and very difficult *re*-search for years, appreciated and encouraged by Rabindranath Tagore and once in a way by the Calcutta University, which asked him to deliver the Adhar Chandra Mukherjee Lectures in 1929. He delivered them in Bengali, choosing as the general name for his lectures the title, "Bhāratîya Madhyayuge Sādhanār Dhārā," or the Course of Spiritual Endeavour in the Indian Mediaeval Age. When the lectures were published by the Calcutta University in book form, Rabindranath Tagore wrote an illuminating preface to it from which we reproduce only one paragraph in free translation :

> "India has a *sādhanā* (spiritual endeavour) of her own ; that is a possession of her inner being. Its stream has kept flowing in the midst of and through all political vicissitudes. It is a matter for surprise that this stream is not confined within the embankments of shastric conformity and approval ; if there is any influence of scholarship in it, that is very little. In fact, this spiritual

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

endeavour is in great measure unshastric, and not governed by social control. Its fountain is in the inmost core of the hearts of the people, it has gushed naturally pushing aside the stony obstacles of injunctions and prohibitions Those in whose hearts there has been a revelation of this spring are mostly men in humble walks of life, and what they have obtained is 'neither by the power of the intellect nor by much listening'."

The treasures which Pandit Kshitimohan has collected in Santiniketan by tramping through the country and mixing with all sorts and conditions of men, of which we do hope he has written a narrative which may hereafter be published, are such as are not perhaps to be found in any other single place or with any other single person in the country. And they are, if we are not mistaken, mostly in Hindi. It is perhaps strange that, though India contains many religious-minded men rich in this world's goods and many *Hindi-premis* (Hindi-lovers) equally wealthy, no one has endowed Visva-bharati with an adequate fund ear-marked for the permanent carrying on of the kind of "*Search in Secret India*" being conducted by a teacher at Visva-bharati. That is perhaps because sufficient publicity has not been given to this side of Visva-bharati's work.

That many do not flock to Pandit Kshitimohan's dilapidated thatched cottage is neither a grievance nor a disadvantage. For he should not be and does not want to be exploited by literary or spiritual or musical adventurers. Real seekers, we believe, have been and are always welcome as students.

Revolutions and Counter-revolutions in Europe

Mussolini seized the supreme power in Italy by a kind of revolution. Whether he will succeed throughout life in preventing a counter-revolution to establish real democracy in his country remains to be seen.

In Germany Hitler became dictator by a revolution, and he has claimed that recently by killing a good many men he has been able to prevent a counter-revolution.

In Austria there have been revolutions and counter-revolutions. And it is just possible that, from a republic, Austria may again become a monarchy.

A sort of revolutionary coup, which failed, was attempted in Lithuania.

In continental Europe some other countries also contain active revolutionaries. There is a struggle going on between the Haves and the Have-nots—call them Fascists and Communists or by any other name that may fit them. Britain is not quite free from this sort of struggle.

In connection with the political occurrences in Germany, we are reminded of the interview which Churchill (junior) had with the ex-Crown Prince of Germany. It was reported that the latter pronounced the opinion that Indians were unfit for self-government. It was a great discovery. When people are not in fact self-governing, it is quite easy, and perhaps not unfair, too, to conclude that they are not fit for self-rule. And when the rulers of these subject people are a powerful nation whom one may not like to offend, it is quite easy, too, to say that these subject people are not fit to rule themselves. For ourselves, long ago, perhaps eighteen years ago, we proved *on paper* to our satisfaction that we were fit for self-rule. But there was a fly in the ointment. We had to conclude our arguments by saying: It may be objected that, if we are fit for self-rule, why are we not self-ruling; that objection can be met only by becoming self-ruling.

There let it rest.

But the ex-Crown Prince may be asked whether his people, the German people, are fit for self-rule. If so, why are they ruled by a despotic dictator?

Similar questions may be asked about the fitness for self-rule of the Italians, the Austrians, etc.

All these peoples are at present not really self-ruling, and *ipso facto* not fit to rule themselves.

Nevertheless, a difference between them and peoples subject to foreign rule must be noted. The struggles in Italy, Germany, Austria, etc., are or were between groups of Nationals of each country. Their tyrants are their own countrymen. Of course, this does not mean that a man enslaved, killed, assailed or despoiled by a countryman of his, is any the less enslaved, killed, assailed or despoiled than if he were enslaved, killed, assailed or despoiled by a foreigner.

Indian Opinion of the White Paper Not Known, Not Understood, or Misrepresented in Britain

Among the batch of books received by us on the 28th of July last from England for review is one entitled, *Beyond the White Paper*, being a Discussion of the Evidence Presented before the Joint Select Committee on Indian Constitutional Reform," by Philip Cox. We have not had time yet to read any of the books received. But as this one has a topical interest we opened it and found that it has a "Summary and Conclusion" at the end, of which the very last paragraph begins thus :

"So far as I can estimate currents and forces, the way of the White Paper is the only direction in which one can look hopefully in India today. Through it only is it possible to seek a path out of the bog of suspicion and doubt that has surrounded Indo-British relations and engulfed inter-communal fellowship."

The author is entitled to hold and give expression to any opinion he likes. But the opinion to which he has actually given expression is not the Indian opinion. The Congress, the Indian National Liberal Federation, the Hindu Mahasabha, Nationalist Muslims would not agree with him. Even the communalist Muslims, with the Aga Khan at their head, would have joined the Congress in seeking substantial changes in the White Paper if only the Communal Decision had been left alone untouched. Nationalist Indians, who form the vast majority of politically-minded Indians, agree in considering the White Paper scheme a Black Scheme, through which no ray of hope shines. Instead of dispelling Indians' suspicion of Britishers, it has deepened that suspicion. Instead of helping India to shake off communalism, it has thrown India afresh into whirlpools of communalism.

The author proceeds to mention the evidence on which his opinion, quoted above, is based.

"That this is so is evidenced by a number of recent happenings, which would have been impossible without a growing conviction in India that the White Paper, with all its shortcomings in Indian eyes, has been conceived in sincerity, and represents a genuine attitude on the part of British statesmen towards India's legitimate aspirations."

It is not necessary to doubt that there are Englishmen who *sincerely* believe that India's *legitimate* aspirations should not go beyond a desire to be ruled for ever by practically autocratic Governors-General, Governors, and the steel-frame of the covenanted civil service. But whether British imperialists consider our aspirations legitimate or not, we have aspirations which cannot in the least be satisfied by the White Paper.

But let us come to the author's evidence.

> "The passing of the Reserve Bank Bill by the Indian Legislature during the early months of this year, the recent textile convention between Bombay and Lancashire, the inter-communal unity behind the Memorandum of the British Indian Delegates, and—in a quite separate sphere but no less significant—the enthusiastic reception of the English Test cricketers, are significant pointers to the mood of active co-operation, which is slowly revealing itself in the minds of some at least of India's leading citizens. It will rest with Parliament and the British people, to show by their attitude to the White Paper Scheme—the only concrete scheme with a measure of Indian support behind it that is in the field today—whether they mean to capitalize that mood and turn it to the advantage of both Britain and India, or whether they desire to thrust back this one chance of an honourable and workable settlement."

It is only when one remembers that the British are a nation not only of shopkeepers but of politicians as well that one can refrain from being astonished at the propagandist spirit which can make political capital out of the hospitality and courtesy shown to the English Test cricketers ! We fail to understand what that has got to do with the White Paper or the supposed mood of political co-operation even remotely. Even if Winston Churchill and any of his staunch followers came to India in a really non-political capacity, they would be met as human beings courteously, as Indians have no personal quarrel with Englishmen. Does the author think that even English cricketers ought to have been pelted by Indians with rotten eggs to prove to him that they detested the White Paper ?

The Indian Legislature was unrepresentative even when elected and has now become still more so. No legislature representing nationalist India would have passed the Reserve Bank Bill in the form in which it was passed. Even in the present subservient and effete Legislature there was strong criticism of and opposition to it.

The textile convention "between Bombay and Lancashire" may have pleased Lancashire,

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

but it has had a very hot reception in Bombay and throughout India. It was a convention, not between Bombay and Lancashire, but between Lancashire and one Bombay-man who acted in an unrepresentative and unwarranted manner.

The men from British India who appeared before the Joint Select Committee were not "delegates," they were not chosen by any Indian organization. They were nominees of the Government of India chosen by it to serve its own purpose. If the leaders of the Congress, the Indian National Liberal Federation, the Hindu Mahasabha and the Muslim League had been the delegates and if they had drawn up the Memorandum, then one could have rightly spoken of inter-communal unity underlying it.

"*Some at least*" (how many?) of India's inhabitants is delightful! But are they "citizens"? Are they really "leading" citizens?

"A measure of Indian support" is also enjoyable! But it is a microscopic measure.

The author may rest assured that the White Paper does not offer any chance of "settlement" with Indians. Indians do not consider it workable. And they think it would be the reverse of honourable for them to accept it.

British Opponents of the White Paper

Just as there are British supporters of the White Paper, who see or profess to see in it the salvation of Britain and India, so there are Britishers who oppose it, thinking or professing to think that it embodies the policy of "scuttle," of surrender, and of disruption of the British Empire, though it really does nothing of the kind. Both the parties are wrong and are probably acting a part. *The Morning Post* is one of the foremost Tory organs which oppose or profess to oppose the White Paper. Its political correspondent writes under date July 16th last:

> Opposition to the Government's White Paper Indian proposals has become so strong, both within the Joint Select Committee and in the country that the Government are now doubtful whether the Committee will be able to complete its report by the end of the year.
>
> This delay, together with the abandonment of all hope of an unanimous report, is causing serious anxiety among supporters of the White Paper policy.

Seven weeks will have passed to-morrow since the Chairman of the Committee, Lord Linlithgow presented his draft report. The belief in official circles then was that the draft report would have been forced through the Committee and published by the end of this month.

Within a few days it became apparent that the final report could not be expected before the end of October. It is now uncertain whether it will be available before the New Year.

A number of factors are causing delay. The most important is the fact that the draft report is being contested, line by line, from two sides—by the Conservative opponents of surrender and by the Socialists.

The course now being pursued by the Socialists on the Committee is no longer that of friendly co-operation with the Government which they have hitherto adopted in the House of Commons. The Government have, therefore, found themselves deprived of support which they have found valuable in fighting Conservative opposition.

Even without the support of the Socialists, however, the Secretary for India, Sir Samuel Hoare, commands a majority of nearly three to one against the Conservative opposition on the Committee. It is, therefore, clearly within his power to force a majority report through the Committee substantially unamended, should he deem it expedient to do so.

But when the proceedings of the Committee are published, showing the amendments which have been put forward, there is reason to believe that they will disclose two distinct sets of amendments, each amounting, in effect, to a minority report. In addition, it is expected, there will be the amendments of groups less distinctly defined than the Conservative and Socialist oppositions.

Should these anticipations be fulfilled, Mr. Baldwin's task when he consults the Conservative Party in accordance with his pledge, will be even more difficult than it at first appeared. For he will have to admit that the net result of the Select Committee's proceedings has been loss of Socialist support for the White Paper and a corresponding increase in the opposition to it.

It is further recognized in Government circles that the increasing delay of the Select Committee in producing a report in itself constitutes a serious menace to the surrender policy.

The programme of Parliamentary business has already been disturbed, and the Government have been forced to abandon their pledge in the King's Speech to introduce the Indian Constitution Bill in Parliament this session. It is now felt to be doubtful whether it will be possible to pass the Bill next session.

A period of at least four months, it is pointed out, will be necessary for drafting the Bill and subsequent consultation with the Government of India.

In addition, the revolt of the Conservative organizations in the country grows from month to month in strength, despite official attempts to "muzzle" the Party conferences. Every month of delay, it is felt, is increasing the prospect that the surrender policy will be rejected when Mr. Baldwin consults the Party.

It is a ridiculous travesty of truth to say or suggest that the White Paper "surrenders"

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

to the people of India a title of real power. Nationalist India will be delighted if it is scrapped lock, stock and barrel at the earliest opportunity.

New Vice-Chancellor of the Calcutta University

Power without responsibility is as bad an arrangement as responsibility without power. The best arrangement is the combination of responsibility and power in the hands of the same person. From this point of view the nomination of Mr. Syamaprasad Mukherji, M.A., B.L., Barrister-at-Law, to the Vice-Chancellorship of the Calcutta University deserves commendation. He has been the guiding spirit among the senators and syndics for years past, being the *de facto* head of the ruling party. It was, therefore, desirable that he should be made duly responsible for what the senate and the syndicate do.

But it is not merely from the point of view of the same person being vested with both power and responsibility that his appointment can be supported. He has sufficient intellectual equipment, driving power, leadership and ability, and he can devote, as he has been doing, sufficient time and energy to the work of the University, the details of which he has mastered. He has in him the making of an excellent Vice-chancellor. But beyond that we must not at present go in praise of the appointment.

It would not be right to judge him by his past, which is not of uniform character, one way or the other—for, though he is only 33, he has a past as a senator. Let him rise above his surroundings, whenever necessary.

It is to be regretted that one ominous thing has already happened—whether by chance or as the result of scheming we cannot definitely say. He is the Vice-chancellor and he has also become President of the Council of Post-graduate Studies in Arts. Is this the first step in the harmful process of concentration of all power in one hand? Surely, among the scholarly professors of the University who are eligible and other scholars who are eligible there were several men eminently fit for this office. Let Mr. Mukherjee beware of "vaulting ambition which o'erleaps itself,"—and of the flattery or silence of newspaper men enjoying or seeking patronage.

It is to be hoped that, in order to become Vice-chancellor, he has not committed himself in the matter of the officially proposed board of secondary education, or in the matter of the details of the scheme according to which the vernacular is to be the medium of instruction and examination up to the Matriculation, or in any other matter.

The Late Kaviraj Syamadas Vachaspati

In the late Kaviraj Syamadas Vachaspati Bengal, nay India, has lost an eminent Ayurvedic physician. He was as great a

Kaviraj Syamadas Vachaspati

Sanskrit scholar in some directions as he was a physician. His philanthropy was well known. A staunch and orthodox Hindu, he respected the religious views of other, and had a liberal religious outlook. He was a self-made man, and rose from poverty to opulence by sheer merit. Whatever help and sympathy he

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

received in the days of struggle he never forgot, but repaid with abundance of service and gratitude. He founded the Vaidyashastra-Pith for imparting education to students—to many *gratis*—in the Ayurveda, with a hospital attached for the relief and cure of sick men, women and children.

Kapurthala to have a British De Facto Ruler?

It is reported that the task of administering the Kapurthala State is to be entrusted to an officer in British India of the British race. No wonder.

For some reason or other, in recent years such appointments have been made in several States. And the number of Musalman Dewans in Hindu States is not small. British administrators in Muslim States and Hindu Dewans of Muslim States, if any, are not as plentiful.

Is this accidental, or the result of some Anglo-Muslim *entente* necessitated by the proposed federation of British India with the Indian States?

M. L. A.s and Zanzibar Indians

It is known to the public that there is going to be some very effective anti-Indian legislation in Zanzibar which will result either in the Indian settlers there being squeezed out of the country or being practically ruined and reduced to helotage. Most of these settlers are in religion followers of the Aga Khan. He sent a cable to Pandit Madan Mohan Malaviya to organize a nation-wide protest against the above-mentioned anti-Indian legislation. Pandit Madan Mohan Malaviya telegraphed to the leaders of parties in the Legislative Assembly to wait in deputation on the Viceroy and make a representation to him on the subject. Thereupon Sir Hari Singh Gour and Mr. K. C. Neogy decided to see Sir Fazli Hussain first in the company of some other M. L. A.s. to know the facts. But on the appointed day and hour none of these other gentlemen, Muslim or Hindu, turned up!

Devastating Floods

There have been devastating floods in some districts of Assam, east and north Bengal, and Bihar. There has been loss of many human lives, loss of cattle, great damage to crops and destruction of other property on a large scale. Altogether the sufferings of the people have been and continue to be indescribable. Without in any way suggesting any comparison with the catastrophic earthquake shocks in Bihar, it may be said that the floods too have been very destructive, and the sufferers, whose number is very large, deserve every sympathy and help. But unhappily no adequate effort is being made to help them. The earthquake engaged the attention of the most prominent leaders—from Mahatma Gandhi and Pandit Madan Mohan Malaviya downwards. A good many of them visited the affected areas. Nothing similar has been done by the public for the flood-stricken areas and people, particularly of Bengal. Is it because the areas affected are out of the way and rather inaccessible, not lying along the broad trade route stretching from Peshawar and Kalka to Howrah? Or has the succession of calamities made even our great men callous like us ordinary mortals? Or is political controversy engrossing all attention, leaving nothing to be devoted to human suffering? Or may there be some other cause?

Muhammadan Sporting Club's Achievement

For the first time in its history, an Indian team, the Muhammadan Sporting Club, consisting of players from different provinces of India, has won the Calcutta Football League championship, defeating European and other Indian Clubs. This is a feather in the Muhammadan Club's cap.

Indian Footballers in South Africa

The Indian Football Team which went to South Africa to play with South African Indian Teams has won laurels all along the line. When a South African Indian Team visits India they may have the same good luck. The Indian Team consisted of Praphulla Mukherji (manager), Srish Chakravarti, Naren Guha, Amiya Ganguli, Satya Majumdar, Sati Chaudhury, Manmatha Datta (captain), Karuna Bhattacharya, Prabhas Banerji, Akhil Ahmed, Nasim, Mir Hosain, Mohamed Hosain, Ramana, Lakshmi Narain, and N. Ghosh. They were

...ermany has invited the nations of the world ...participate in the Olympic Games of 1936. The ...rman gymnastic and sport movement knows ...e obligations which it has thus assumed. Not ...s is the task placed upon it of equipping itself ...r the contests with the best of the world, but ...so of demonstrating to the representatives of all ...untries in 1936 that the German nation, as host, ...s conscientiously and whole-heartedly prepared for ...e Olympic Games.

...e countries which have hitherto decided to ...rticipate in the next Olympic Games are: ...rgentina, Australia, Austria, Belgium, Bulgaria, ...nada, Columbia, Czechoslovakia, Denmark, ...onia, Finland, France, Germany, Greece, ...land, Hungary, India, Italy, Japan, Latvia, ...exico, New Zealand, Norway, Philippines, Poland, ...rtugal, Roumania, Spain, Sweden, Switzerland, ...key, Yugoslavia.

...e International Olympic Committee at its ...eting in Athens recognized the National ...mpic Committees newly established by Egypt ...d Palestine, so that these two countries have ...fulfilled the condition for their participation ...the Olympic Games. They have therefore been ...ended the same invitations as was issued at ...e end of last year to other countries by the ...n and Garmisch-Partenkirchen Organization ...mmittees. Good progress is being made ...especct of the new constructions required for ...e contests. The Berlin municipality has under-...en the task of extending the four main ...ghfares with two bridges, leading to the ...dium. This work will be completed by the ...mmer of 1935. The festive aspect of the ...mpic Games is under preliminary discussion: ...competition for an Olympic hymn, which ...s many poetic minds, has brought in so many ...oses that an exceptional result may be anti-...ted; Richard Strauss in the non-distant ...ure will receive the text to which he will ...t the music.

...e Olympic Art Exhibition, to be held in ...n, on the Fair Grounds, in addition to the ...s of all nations entered for the competitions ...include examples of German art outside the ...petitions. The best works of antiquity will ...be shown, some from German excavations ...in German possession, and others either ...ks or replicas loaned from abroad.

"Cultural Fellowship in India"

Years ago, in the now-defunct magazine *Welfare*, we wrote a note indicating how the appreciation of one another's music, painting, architecture, sculpture, etc., and of one another's ethical and spiritual idealism, by the different communities and races of India would be one of the most potent means of producing real inter-communal unity in the country. Such genuine mutual cultural appreciation should never be lost sight of. So when some two years ago Mr. Atulananda Chakrabarti showed us a paper in which he had brought together passages from the scriptures of different communities embodying similar ethical and spiritual ideals, we commended his endeavour. We are glad to find that he has since elaborated and expanded his theme and published a book on "Cultural Fellowship in India." It ought to find an adequate number of serious readers, and the subject at least a few more earnest researchers.

Tariff Board on Protection of Indian Steel Industry

Indians are unanimous that the Indian steel industry still requires protection. There is a difference of opinion as to how that protection should be given—by bounties or in the way in which it has hitherto been protected. But it is not the business of the Tariff Board of India or of the Indian Legislature to give protection and preference to British steel or steel products under the guise of protecting Indian steel. But if a subservient board and a subservient legislature choose to please their masters, surprise need not be felt.

The Committee of the Indian Merchants' Chamber has sent the following telegram to the Commerce Department of the Government of India *re* the Tariff Board report on protection to the Indian steel industry:

> "Committee Indian Merchants Chamber deplore the trend of the Tariff Board report on Steel Industry, because it puts forward proposal to reduce level of protection in spite of previous scheme having failed in its objective. They strongly protest against the Tariff Board going below line of revenue duties which will introduce vicious principle. The need for such course is not established and this becomes objectionable because it involves in present depleted state of India's finances direct sacrifice of taxpayers' money in the interests, not of Indian industry, but of the British manufacturer. Committee protest against the pro-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

posal for the introduction of excise duty on Steel for which direct taxation on production there is no justification as a normal expedient in Indian finance. The position of Indian manufacturer in the matter of tested steel is weakened by deliberate preference to Britain, while there is no guarantee that Britain will not dump on to this country untested steel at specially low prices. The proposed reciprocity through free entry of Indian Pig into Britain is unconvincing, as it involves preponderating advantage to British interests in low duty on British sheets. The Committee request Government to stand by this national industry and to devise scheme which will enable the existing company to prosper and induce new works to come into existence so as to make India self-sufficient."

"Protection" to Steel

As we go to press, the text of the Iron and Steel Duties Bill to be introduced in the Legislative Assembly has been published. The publication of the Tariff Board Report had prepared the public and the steel industry for what might otherwise have come as a bombshell. For the Board had shown little compunction in withdrawing at one stroke all the protection which the Tata Iron and Steel Co. had earned by a unique record of service alike to the Government and the people. They have carried a stage further the work of those economic counterparts of Clive and Hastings who gathered at Ottawa to fence the empire as a close preserve for the decadent industries of Great Britain. The Tariff Board has found, by a reasoning which betrays at every stage the anxiety for a specific conclusion, that in all cases of goods sold directly in competition with British products the Indian industry does not require any protection at all, or, if any is needed, not more than what is afforded by the normal rates of revenue duties. And they have gone to the length of specifically recommending that the revenue duties on a wide range of steel products should be removed.

The Government of India have naturally been quick to take action on such findings and recommendations. And it is significant that they have torn off the mask of protection, which the Tariff Board would fain keep to shroud their hideous scheme of Imperial Preference, and have called the new legislation the Iron and Steel Duties Bill. There is no doubt that the Board have emboldened the Government to be ruthless to the Indian Industry. In the place of the revenue duties, which are virtually done away with, come the countervailing duties against an imposition of an excise of Rs. 4 per ton as on all steel ingots produced within the country. The Tariff Board recommended the removal of revenue duties and they also suggested that, in case the Government are not in a position to sacrifice revenue, they might levy an excise and a countervailing customs duty. The result of the Government's adoption of the latter alternative is that the Tata Company would have to pay out in hard cash the excise duty on their total output at quite an early stage of the manufacturing process, while all that the Government has done is to weaken the position of the Company and endanger the prospects of the profitable marketting of the Tatas' products.

It is strange how a protected key industry comes all of a sudden to be denied even the advantage of normal revenue duties. All economists, including those of the Ottawa brand, are agreed that there can be no objection to normal revenue duties. And if India alone should proceed to demolish them and rear excise and countervailing duties in their place, it can be attributed only to the virus of Imperial preference which was injected into her at Ottawa. The poison is spreading every day. Is complete Self-government the only antidote ?

Dr. Hutton's Census Report and "Man in India" Special Number

In the special number (April—June, 1934) of *Man in India*, edited by Rai Bahadur Sarat Chandra Roy, M.A., B.L., the distinguished anthropologist of Ranchi, the theories of the origin of the *Varna* or caste divisions of Hindus which hold the field have been commented upon. One of the important pre-Aryan theories of caste is that formulated in the last *Census Report of India* by Dr. J. H. Hutton.

> "This theory traces the essential elements in caste to different pre-Aryan peoples,—Proto-Dravidian or as they have been termed 'Proto-Australoid,' Dravidian,—and Mongolian,—and credits the Aryan emigrants with merely describing in terms of an intensive Indo-Aryan society a social system really based on pre-existing conditions."

Mr. Roy has dealt with the supposed Dravidian element in caste in discussing Slater's Dravidian theory. He has subjected

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Dr. Hutton's arguments to a detailed scholarly examination which deserves the attention of anthropologists. We are not anthropologists; but it seems to us a little too original to suggest or assert that the Brahmans are descended from Dravidian witch-doctors. It is still more startlingly original to identify the Vedic *Brahma* with the *mana* of the Polynesian and other primitive races. This latter hypothesis has been subjected by Mr. Roy to very scholarly, able and elaborate criticism. By discussing the *mana* idea of different countries and races, he has attempted to show that even if the interpretation of the Vedic *Brahma* by European Vedic scholars be accepted, it is not the same as the primitive *mana* which Hutton and Pargiter would make it out to be.

Mr. Roy's criticisms ought to be seriously considered at the International Anthropological Congress, to which he was invited but which he could not attend.

Pandit Madan Mohan Malaviya's and Mr. M. S. Aney's Resignation

The circumstances under which Pandit Madan Mohan Malaviya and Mr. M. S. Aney have resigned from the Congress Parliamentary Board are much to be deplored. They resigned because of difference in principle between them and the majority in the Board. But of course, their future activities will be strictly nationalistic and in accordance with Congress principles, except in the matter of the communal "award." If they want to form a nationalist party in the next Assembly, their election manifesto may very well be based upon the Hindu Mahasabha's manifesto issued just before the last Karachi session of the Congress.

Congress Parliamentary Board's Election Manifesto

The following is the text of the Congress Parliamentary Board's election manifesto:

The Parliamentary Board appointed by the All-India Congress Committee at its meeting held in Patna on May 29, appeals to the voters of the Legislative Assembly at the ensuing elections to record their votes in favour of the Congress candidates.

CONGRESS POLICY

The Congress policy has been declared and the Board has received its mandate from the Working Committee in the following resolution passed by the latter body in Bombay on June 17:—

[Here follows the Congress Working Committee's resolution, published in our last number.—Ed., *M. R.*]

Though much has been written for and against the part of the resolution regarding the so-called Communal Award the line is absolutely clear so far as the Congress candidates are concerned. By common consent it is intrinsically bad. It is anti-national. But the Congress cannot refuse to take into account the attitude of the Mussalmans in general who seem to want the Award, nor can the Congress accept it as the Hindus and the Sikhs in general reject it. No other policy than that explained above is consistent with the aim and history of the Congress which has throughout stood for peace and unity and founded all its activities on the firm belief that the various communities in India will act justly and honourably towards one another. The only thing, therefore, that the Congress candidates and the Congress can do is to promote and assist in securing an agreed solution. Suffice it to say that we shall never reach such a solution by appealing to a third party or power. Then again those who have confidence about successful opposition to the White Paper proposals need not feel concerned about the Award. They should know that if the White Paper lapses the Award which was framed for the White Paper must automatically lapse. If the Award is bad, the White Paper is worse. The Parliamentary Board has therefore to concentrate the attention of the voters on the rejection of the White Paper and as only alternative to it upon securing the convening of the Constituent Assembly.

The White Paper is in no way designed to secure a complete or even partial independence. It can easily retard the Nation's progress towards it. It proposes a costly pretender of representative institutions in India with all real control retained abroad. The safeguards with which it bristles are not conceived for the protection of the interests in India. If the proposals contained in the White Paper are carried out, there will be no national control over Army or External Affairs and the burden of the military expenditure will remain what it has been and in effect the foreign control will continue over the finance and the economic policy of India. If it is said that the White Paper proposals at least seek to give complete autonomy to the provinces, it is hedged in by restrictions that make it a sham and a shadow. No wonder almost all the parties have more or less condemned the White Paper scheme.

What is the alternative? Though the Congress claims to represent the whole nation, in the opinion of the Government it is only one of the political parties, albeit, very powerful. Time will show what the position of the Congress is in the country. Votes at the ensuing elections may also show it somewhat. But it is clear that the Congress must not frame a constitution only to be rejected by Government. The Working Committee has, therefore, as stated above, suggested an infallible alternative—a Constituent Assembly to be elected on the basis of adult suffrage or as near it as may be. We know that such an Assembly can be convened by an agreement between the governing power and the people. We have this in contemplation. We do not despair of its acceptance, if the electors choose their representa-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

tives in forthcoming elections with a clear mandate that the Constituent Assembly is the only alternative to the White Paper. True, the existing franchise is narrow and, therefore, not truly representative of the masses. The constitution of the Assembly is further such that the members elected by the people cannot play an effective part in it. Nevertheless, if the verdict of the electorate is unequivocal it cannot be flouted.

If the voters reject the White Paper and insist on the Constitutent Assembly, it will no longer be said by the British Bureaucracy that people are quite satisfied with the methods and measures of the British Government and whatever they plan for them. It will be no small gain to have the illusion dispelled. Every vote for the Congress candidate, *i.e.*, for the Constituent Assembly in the place of the White Paper, will help to clear the atmosphere. We hope that all communities will unite on this simple issue.

The rejection of the White Paper and the acceptance of the Constituent Assembly is not all that the Congress representatives will attempt. They cannot be unmindful of the reactionary legislation passed during past few years, unhappily often, with the elected members' votes. Nor can they be unmindful of the way in which the non-violent struggle for liberty was met by ordinances of extraordinary severity or of the greatest sacrifices of the thousands of Congressmen, including many women who went to prison, suffered privations and lathi charges and submitted to heavy fines and confiscation of property. It will be the duty of those Congress candidates who will be elected to press for the restoration of, wherever possible, and repeal of repressive laws and of the ordinances now called Acts of the legislatures. Extraordinary drastic methods adopted towards the Congress organizations in the Frontier Province will also demand their special attention. It will also be their duty to demand an impartial scrutiny of the methods adopted by the Bengal Government to meet Terrorism and to take measures to give effect to public opinion in regard to them.

The Congress Parliamentary Party will miss no opportunity of rendering such national service, be it small or great as is possible through the legislatures. We are fully aware that the powers of the legislatures, provincial and central, are too small for our effort. The Nation must make for the realization of its goal of complete independence.

The constructive programme of the Congress the successful prosecution of which alone can make our demand irresistible, can be most effectively carried on only outside the legislatures. But there are matters which can only be dealt with through legislatures and which will engage the attention of the Congress Party.

Let the voters show unmistakably whether they stand for Congress method and objective, or whether they are satisfied with the bureaucratic rule and its methods.

ECONOMIC PROGRAMME

The manifesto also adumbrates the Party's economic programme on the lines of the Karachi Congress resolution on the Fundamental Rights since included in the Bombay A.I.C.C. resolution of August, 1931, in order to end the exploitation of the masses and providing for the real economic freedom of the starving millions.

The Congress Working Committee's resolution and its attitude towards the Communal Decision having been fully discussed in our last issue, it is not necessary to do so in this number. Other comments may follow.

Council Entry and the Congress

We have been repeatedly contending that the Congress could send some members to the Councils and keep others engaged in outside work—there being plenty of Congresswalas for both fields, and that if Congressmen had been in the Councils throughout they could have prevented certain things happening. Whether anybody supported us or not, we were perfectly right. Confirmation of this view comes from Gandhiji's speech at Benares on the 29th July, in the course of which he is reported to have said :

> Several things in connection with civil disobedience and other matters might not have happened, as they had happened, had there been Congressmen in the Legislatures. Even if civil disobedience had to be restarted, the Congress might not call upon Congress members of the Legislatures to come out, they could easily spare about a thousand Congressmen for work in the Legislatures. To-day the Government were enacting repressive measure after repressive measure, like the Bengal Act recently passed by the Assembly, and claiming before the world that they had the support of the elected members of the Assembly for the purpose. The Congress would be able to deprive the Government of that excuse.

Dr. Sir Upendranath Brahmachari as Bio-chemical Discoverer

At an evening party held by the Calcutta Medical Club Dr. Sir Upendra Nath Brahmachari was congratulated on his knighthood by the president Dr. Sir Nilratan Sircar.

> Referring to his services to the medical world Sir Nilratan said that it was perhaps not generally known that Sir Upendranath was the pioneer in the field of bio-chemical research in India. He recalled the history of the discovery of Urea Stibamina and said that notwithstanding many difficulties and disadvantages Sir Upendra succeeded in discovering a drug which saved millions of lives in India and abroad. He then mentioned how Sir Upendranath began his research work in a small room of the Campbell Hospital under a kerosene light, and said that he will be remembered by posterity as a teacher and research worker. The speaker was sure that his example would serve as a beacon light to young medical practitioners.

Perpetuation of Bengal Terrorist Act

We condemn the perpetuation of the Act for the deportation outside Bengal of Bengalis

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

imprisoned for an indefinitely long period without charge and without trial. If there is terrorism in any country, the people concerned are no doubt responsible for it, but its Government is also responsible. And a Government which has to try to fight the evil by the non-legal or extra-legal means adopted in Bengal unintentionally admits its failure and its lack of statesmanship.

Midnapur Allegations

The allegations to which Mr. S. C. Mitra called attention some months ago in the Legislative Assembly, relating to the conduct of some troops and of some other Government servants in the Midnapur district were replied to officially in the Assembly recently. It was stated in effect that on inquiry all the allegations had been found to be false! As such enquiries are *not open* to the enquiries by officials or non-officials or both combined, but are merely like asking the accused parties or their superior officers whether the allegations are true, we do not attach any importance to them, and do not, therefore, feel called upon to examine the official statement in reply in detail.

Division of Jobs on Population Basis

Recently at Noakhali it was declared in fact by His Excellency Sir John Anderson, Governor of Bengal, that the Government had never accepted the principle of giving each community appointments in the public services according to its numerical strength or percentage to the total population. This must be true. So one has to square it with the facts. Perhaps His Excellency was speaking for the Bengal Government, not the Government of India; for the latter *has* actually followed a certain percentage of jobs to certain communities. Or perhaps he was uttering the actual truth; for the allotment of jobs by the Government of India was not for *each and* every community, but only for some communities. In another sense also the Governor is literally right. For the jobs to be given by the Government of India to Muslims, Anglo-Indians, etc., were not in proportion to but in excess of their numerical strength. Even if His Excellency's words were uttered in relation only to Bengal, he was literally right; for the principle of assignment of jobs has been adopted only in the case of Muslims, not in that of each and every community. For example, it is shown in the *Government of Bengal Eighth Quinquennial Review on the Progress of Education in Bengal for the Years 1927-1932*, page 83, that Muhammadan teachers form 46.8 per cent and Muhammadan inspecting officers form 54.2 per cent of the total number. And it is observed on page 83:

> "It appears that the Moslems are well represented on the inspecting branch, but the number of teachers in secondary schools and specially in high schools is inadequate. No direct appointment to the general posts of Sub-divisional Inspectors, sub-inspectors, assistant headmasters of Government schools and normal schools, and English and Vernacular teachers, in any division, is ordinarily sanctioned if the strength of the Muhammadan educational officers in the division is below 45 per cent."

Moslems are 54.8 per cent of the population of Bengal. If Government had accepted the principle of division of jobs exactly according to percentage of population, then in the last line of the extract the limit prescribed would have been 54·8 per cent. So His Excellency was quite accurate in his statement.

No doubt at Noakhali His Excellency said that 53 per cent of the ministerial officers of the Collectorate and 41 per cent in the Civil Courts of the district were Moslems, and four out of five Deputy Collectors (80 per cent) and ten out of thirteen Sub-deputy Collectors (77 per cent) were Moslems. But these figures only bear out the correctness of his assertion; for in no case is the percentage exactly 54·8, being in two cases below and two cases above that figure.

Gandhiji on the Housing of Calcutta Harijans

Mahatma Gandhi in replying to the address given to him by the Calcutta Corporation rightly called attention to the disgraceful housing conditions of the Calcutta Harijans. They should be improved as rapidly as possible.

The Proposed Removal of Pusa Institute

We are entirely opposed to the proposed removal of the Pusa Agricultural Institute to

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

the neighbourhood of Delhi at a cost of from Rs. 36 to Rs. 50 lakhs. The arguments against Pusa are not cogent. No scientist can say that Delhi is earthquake-proof, storm-proof, drought-proof, etc. Nor can it be said that Delhi is more suitable for agricultural research than Pusa. The inaccessibility of Pusa has been vastly exaggerated. One morning we started from Muzaffarpur after 8 A. M., saw all the kinds of work being done there, returned to Muzaffarpur, had our bath and lunch and started for Calcutta the same day by railway train at noon. Nor does it at all matter that it is not centrally situated—for that matter Delhi, too, is not centrally situated. What matters is whether the researches carried on there about some crops are of advantage to the areas where these crops are grown. And it is well known, *e.g.*, that the improved varieties of wheat produced at Pusa have been of advantage to the Panjab, U. P., etc. Coimbatore is even less centrally situated than Pusa. Yet the superior type of sugarcane obtained at Coimbatore has been widely adopted all over India.

"India's Loyalty"

In a speech at Edinburgh Lord Willingdon paid a warm tribute to the loyalty of the people and princes of India. Whether Indians are spoken of as loyal or as disloyal, in neither case is it of any advantage to them. If they are spoken of as loyal, the average Britisher's conclusion is, "Then our rule must be very good and no change is necessary." If, on the contrary, Indians are spoken of as disloyal, the conclusion is, "Don't grant any boons to the ungrateful wretches."

The Army Bill

We are opposed to the creation of a class of Indian officers for the Indian army whose status and powers are to be inferior to those of British officers having the King's commission, as the Army Bill intends to do.

Mahatma Gandhi and the Indian States' People

Mahatma Gandhi's reply to Mr. N. C. Kelkar regarding the attitude of the Congress to the Indian States has produced discontent among their people. The Working Committee of the Indian States' People's Conference has passed a resolution of which we quote the following portion :

> (*i*) That Mahatmaji's view of the constitutional and legal position of the States is incorrect.
>
> (*ii*) That the States are an integral part of the political India as envisaged in the constitution of the Indian National Congress.
>
> (*iii*) That it is the constitutional duty of the Indian National Congress apart from its moral obligation, to render effective help to the people of the States, in their endeavours to secure freedom for themselves.
>
> (*iv*) That this Committee is of opinion that safeguarding of the interests of the people of the States should be one of the essential conditions to secure the consent of the Congress to any constitutional changes of the country.

In an article published in its issue of the 11th July last, *The Daily Sun*, the organ of the Indian States' People's Conference, stoutly assails the position taken up by Gandhiji, and not at all without success.

"A Bad Decision"

Advance, a Congress paper, says in its issue of the 31st July last that the Congress Working Committee's decision relating to the communal "award" is "a bad decision." It observes :

> "We are convinced that Panditji and Mr. Ane have made out an unanswerable case. All the logic and precedents are on their side and m unfortunately on the side of Mahatma Gandhi an the Working Committee."

We do not know what case the former have made out, but we think we ourselves made out a strong case against the Working Committee's resolution in our last issue.

Census of Overcrowded Houses in Madras

Madras, June, 2

According to the census of the overcrowd houses recently conducted by the corporation, which has just been published, the city has 4,470 house and huts with a total number of 71,380 inmate 2,588 houses are without water taps while 2,2 houses are without latrines. In Mylapore, the leas congested division in park town, 2,771 people a living in 23 houses.

Such a census ought to be taken in other big cities also, and overcrowding should be made a punishable offence.

THE MODERN REVIEW

SEPTEMBER 1934

VOL. LVI., No. 3 WHOLE No. 333

"I AM HE"

BY RABINDRANATH TAGORE

IN the Brihadaranyak Upanishad there is a remarkable verse :

अथ योऽन्यां देवाम् उपास्ते
अन्योऽसौ अन्योऽहम् अस्मीति
न स वेद, अथ पशुरेव स देवतानाम् ।

"A person who worships God as exterior to himself does not know him, he is like an animal belonging to the gods."

This statement may rouse angry remonstrance. Should man then worship his own self? Is it possible to offer oneself in self-devotion? Then the whole process of worship becomes a mere magnification of the ego.

The truth is quite opposite. Glorification of ego is the prerogative even of the animals, but it is only man who can realize *Bhumā*, immensity, within his own soul as detached from his ego. It is easy to place one's God outside and worship him through traditional ceremonies, observance of injunctions and taboos but the difficulty comes when we have to realize and acknowledge the divine man in our own thoughts and actions. Therefore it is said :

नायमात्मा बलहीनेन लभ्यः ।

"They who are weak cannot attain the truth of the Eternal Spirit."

स य आत्मा अपहत पाप्मा विजरो
विमृत्युर्विशोकोऽविजिघित्सोऽपिपासः
सत्यकामः सत्यसङ्कल्पः सोऽन्वेष्टव्यः स विजिज्ञासितव्यः ।

"The great soul who is within me, who is beyond age and death and sorrow, beyond hunger and thirst, He who is true in thought and in action, Him we must seek, Him we must know."

This seeking and knowing him is not seeking and knowing outside oneself. It is knowing through becoming, receiving through being true within.

As man is essentially a spirit this principle of unity holds good in all departments of his life. He must identify himself with his family and then in his service to it there can be no indignity. The mother is spiritually one with her child, otherwise she would become a maidservant. When our government is not foreign to us, when it represents our own will, then we are saved from humiliation in our relation to it. And in our Indian philosophy we realize the dignity of man in our spiritual identification with God himself, for it is truth, and man is never पशुरेव देवतानाम्, "like an animal belonging to the gods." The true freedom is not in isolation, it is in the profound union which is perfect.

I have already said that the knowledge of things which man attains by overcoming personal idiosyncracies and prejudices is called science. It is valuable, because it is acceptable to all men. Similarly, the self in man which transcends his self-interest finds its infinite truth in union with All. Its actions are विश्वकर्म्म, universal actions. The functions

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

of the isolated self are a bondage, the functions of the universal self are unfettered. The Upanishad has said :

युक्तात्मानः सर्वमेवाविशन्ति

"The individual souls united with the Supreme Soul enter everywhere."

And this is the freedom of spirit which we must attain.

The truth which has been acknowledged by our scriptures, known as 'I am He'—सोऽहं, sounds like a prodigious egoism but it is not so. It has not exaggerated the small self which is isolated but expressed the great soul which comprehends all. This word सोऽहं carries assurance of the truth of a grand unity which waits to be realized and justified by the individual.

Man's passions come in between and divide the realization of सोऽहं, "I am He", into a duality, and our ego becomes disproportionately augmented. Therefore the Upanishad says मा गृधः, "Covet not". Greed tempts the world-man and turns him into a worldly man. The enjoyment which is fit for human beings is an enjoyment which is shared with all, it is universal. It is expressed in man's art, his literature, it is manifested in his social doings, in the hospitality of his love. Therefore our scripture says अतिथि देवोभवः, the guest is divine. Because into the house of the individual man comes the guest, the representative of the universal man, he extends the limits of the home towards the world. If this invitation is obstructed, then it is penury even for a royal household. In this hospitality lies the philosophy of सोऽहं, that is to say, I am in union with him who is mine and who is more than me. In our country there are some *sanyasis* who translate in their lives the philosophy of सोऽहं into extreme inactivity and callousness. They torture the body in order to cross the boundaries of animal existence, they also discard the independent responsibility of man in their presumption to deny and transcend humanity. They give up the ego which is attached to materials, they also disregard the soul which is united with all souls. That which they call *Bhumā* is not the *Isha* of the Upanishad who dwells in the union of all, their *Bhumā* is divorced from all others and therefore has no responsibilities of action. They do not recognize him who is पौरुषं नृषु, who is humanity in man, who is mahatma and visvakarma, in whom work is not fragmentary work but world-work.

Man was once a barbarian, he lived on the plane of the animal; his mind, his work, then, were confined within the limits of his bare physical existence. And then he was पशुरेव देवतानाम्, "like an animal belonging to the gods"; he was in a servile manner afraid of his gods and tried to appease them with flattery and incantations; the divine in himself remained self-oblivious. When his mind was illumined his awakened consciousness journeyed along widening avenues of life, crossing the frontiers of individual life into the universal life of humanity. From my friend Kshitimohan's rich storehouse of medieval Indian poetry I have got these precious words of the seer Rajjab. He says—

सब साँच मिले सो साँच है ना मिले सो झूँठ;
जन रज्जब साँच कही भावइ रिझि भावइ रूठ।

—"That which conforms to all truth is truth, that which does not conform is false, this is wisdom, says Rajjab, whether it angers or pleases you."

It is evident that Rajjab knew that the majority of men would be angry at his words. Their opinions and customs were at variance with universal truth, yet they could claim them to be true and lie enmeshed in coils of unreality; indeed the very consciousness of an inner disharmony roused their excitement to an aggressive pitch. Trying to refute truth by angry remonstrance is like trying to pierce the flame with a knife. The knife cannot kill truth, it can kill man himself. Yet standing before that fury one has to say.

सब साँच मिले सो साँच है
ना मिले सो झूँठ।

"That which conforms to all truth is truth that which does not conform is false."

When one day a solitary scientist declared that the earth revolves round the sun through his own intellect he revealed the mind of the Universal Man. On that day millions of people were bitterly angry at his words, by the terrorism of force they want

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

to make him say that it is the sun itself which revolves round the earth. But however numerous those other people may have been, by denying truth they at once denounced their eternal humanity. On that day alone in the midst of fierce opponents the man of truth declared सोऽहं, "I am He", that is to say, my individual knowledge and that of the eternal man are one.

Even if many millions of men say that because of some special combination of certain stars and planets in the immeasurable distance of space some supernatural force is generated in the river of a particular province of this earth, and that by bathing in its waters sins of the bather along with those of his forefathers are washed away, then we must stand up and say—

सब साँच मिलै सो साँच है
ना मिलै सो झूँठ।

—With the universal mind of man this does not agree, therefore it is untrue.

But where it has been said—

"अद्भिर्गात्राणि शुध्यन्ति मनः सत्येन शुध्यति"

—"by water the body only can be cleansed, the mind can be cleansed only with truth," this conforms to the standard of the universal mind.

Similarly it has been said—

कृत्वा पापं हि सन्तप्य तस्मात् पापात् प्रमुच्यते
नैवं कुर्य्यामि पुनरिति निवृत्या पूयते तु सः।

—"If one is penitent after having committed sin and through that penitence the sin is purified; by resolving never again to repeat the sin man can again be pure."

By saying this man acknowledges in his own mind the truth of the universal mind of man, the God within us whom we know as our soul and who reveals to us our own truth.

One day the Brahmin Ramananda leaving his disciples went and embraced the *chandal* Kabha, the Mahomedan weaver Kabir, the weeper Ruidas. The society of his day made Ramananda an outcast. But he alone really rose to the highest caste, the caste of the universal man. On that day standing in the midst of the curses of his community, Ramananda alone had said सोऽहं, "I am He". By that truth alone he had transgressed the limits of petty conventions and contempt which cruelly dividing man and man in the name of social stability strike at the roots of social morality.

One day Jesus Christ said सोऽहं—"I and my Father are one." For, in the light of love and goodwill for all men, he crossed the boundary of his ego and realized himself as one with the supreme man.

Lord Buddha preached, "Cherish towards the whole universe immeasurable *Maitri* in a spirit devoid of distinctions of hatred, of enmity. While standing, sitting, walking, lying down till you are asleep, remain established in this spirit of *maitri*"—this is called ब्रह्मविहार।

Such great message can be given only to man, for deep in man lies the truth of सोऽहं, "I am He". The Buddha knew this in himself. That is why he has said that it is through immeasurable love that man reveals the immeasurable truth within himself.

The Atharva Veda says—

तस्मात् वै विद्वान् पुरुषमिदं ब्रह्मेति मन्यते

—"He who is wise knows man to be greater than he appears to be."

ये पुरुषे ब्रह्म विदुस्ते विदुः परमेष्ठिनम्

—"They, who know the Great in man know the Supreme Being himself."

It was because he realized the divine man in humanity that Buddha could say—

माता यथा नियं पुत्तं
आयुसा एकपुत्तमनुरक्खे
एवमपि सर्वभूतेसु
मानसम्भावये अपरिमाणं

—"Cultivate the spirit of immeasurable love within you even as the love the mother feels for her one child."

We should not by counting the number of heads try to find out how many men can actually follow this advice. In such computation does not lie the test of truth.

He who realized man's infinitude within himself never had to wait for statistical assurance. Without hesitation he demanded that man may reveal through immeasurable love the divine within himself. By giving this message with perfect faith to all men he offered his true reverence for humanity.

I have already referred to the saying of

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

the Atharva Veda that man is spiritually much more than his apparent self, he lives in his infinite surplus. In that surplus is all that is supreme in man, his ऋतं, righteousness, his सत्यं, his truth.

The atmosphere around the earth far transcends its mass in extension. Through that invisible atmosphere comes its light, its colours, flows its life. In this atmosphere gathers its cloud, showers its rain, through its influence the eternal mystery of beauty reveals itself on earth in ever-varied form. From this atmosphere comes that which is most glorious on earth, its loveliness, its life itself. Through the open window of this atmosphere comes every night crossing regions of darkness the messages of radiant kinship from the starry Universe. This atmosphere can be described as the surplus, the soul of the earth, just as the complete man has been described as "त्रिपादस्यामृतं"—in one part he is apparent, in the other three he is infinite. It is because this intangible atmosphere is so intimately an extension of the earth itself that exuberant wealth of life manifests itself on the very dust, a wealth which is immeasurably more precious than the dust itself.

The Upanishad says that when we know united in a completeness असम्भूति, the unmanifested infinite, and सम्भूति, the manifested finite, we know truth, in a reconciliation of the duality. He who is infinite in man must be expressed in the finitude of human life, of human society. Man must translate this idea in his action. So Isha Upanishad says, "You have to live a hundred years, you must act." Fulfil your hundred years of life by work, such work as can truly be claimed through belief and result to express the truth of सोऽहं, "I am He". Not by turning up one's eye-balls and sitting with closed breath and staying far away from man do we gain this Truth.

This work, this toil is not for earning livelihood. In which truth then is the source of its constant energy? What is it that gives man this strength to sacrifice his life, to embrace suffering, to defy ruthless power without material safeguard, to endure without submitting the constant torture of injustice and cruelty with such amazing fortitude? The reason is man has within himself not only life but immensity. From Kshitimohan's priceless collection we get this message of the Bauls "जीवे जीवे चाइया देखि सवइ ये तार अवतार"—"When I see through men I find in them the divine incarnation." Innumerable men in knowledge, in love, in self-giving, in various forms and ways are revealing the immeasurable within them. History does not record their names; from their individual lives they pour into the living stream of humanity the immortal energy of Him—

"यश्चायमस्मिन् तेजोमयोऽमृतमयः पुरुषः सर्व्वानुभूः"

—"Who is the immortal Purusha of inexhaustible light dwelling within our soul, who comprehends the All."

If through the plants the universal energy were not converted into the stuff of life then this living world would have been converted into a desert. Similarly if with or without our knowing men and women had not through the centuries, in different lands, transformed their indwelling, immeasurable energy of the Supreme Man into love and knowledge, work and welfare to be absorbed endlessly into the living texture of human society, their society being devoid of the truth of सोऽहं, "I am He," would have been reduced to the status of the animal world. Not only so, by being severed from its own truth, society would not at all be able to live. Physicians tell us that by infusion of animal-blood into human body we do not increase its life but cause death. Herds of animals can live for ever according to animal laws, but human society cannot live at all like animals. It may be said in contradiction that many brute-like men seem to thrive very well indeed in human society. Boils on the skin also thrive on the body, their growth is indeed more vigorous than the rest of their surroundings. If the power of health in the body does not transcend the boil, then it hurts and in killing the boil kills itself. Society in its normal stage can endure many sins but when its degeneration becomes emphatic, then by absorbing animal blood in its thought, behaviour, literature and art, human society seals its own death.

The greatness born of a vast surplus about which Atharva Veda has spoken is not in any particular kind of fulfilment. The greatness

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

comprehends all the efforts of humanity, all the bravery, grace and strength of man. Perhaps there is a deep self-forgetful joy in the ascetic when he succeeds in concentrating the various powers of his mind on one immovable point of his consciousness. But ततः किम्, "what then"? So long as there is any suffering and insult in humanity, no individual man can ever win his escape. Great men who have desired the freedom of humanity, have therefore told us सम्भवामि युगे युगे. From age to age indeed are they born in different lands. Today this very moment they are being born, tomorrow also we will see their birth. The stream of that birth flows through history, bearing this message "सोऽहं"। "सोऽहं" is the mantram of the united evolution of Man, not of one particular individual.

In the midst of the vast nebulae where new worlds are being fashioned appears from time to time a star; it clearly indicates the creative excitement of the vast fires which stir in the heart of the nebulae. Similarly in the firmament of history now and again we see manifestations of the Supreme Man. From them we understand that in the heart of all men is constantly working the urge of evolution. Man in human society is all the while striving to realize himself in the world-man by breaking through the shell of his ego. In fact, it is in this process that the whole cosmic universe seeks its own truth, the supreme truth of the ever-growing, ever-becoming Humanity. After millions of years since the beginning of the world first appeared man. Some scholars are overwhelmed by the mathematics of number and comparing the massiveness of time and space to the smallness of man indulge in the luxury of our humiliation. But it is a mere illusion to consider quantity to be greater than Truth, which cannot be measured at all by quantity. That which we call matter the unrevealed life, lay slumbering for innumbered Ages. But when one day a single cell of life appeared on this earth the whole evolution of the universe reached a great meaning. Amidst the externality of matter appeared the truth which is internal. For life is internal, organic. Who can despise the speck of life because it has been born recently after æons of time and because in comparison to the mass of matter it seems to be small? Man first realized the truth of infinite life when from the heart of the dumb matter comes the Great voice of life, यदिदं किञ्च सर्व्वं प्राण एजति निःसृतम्, "from life is born all-that-is and trembles in the vibrating life." Matter we know as a fact because it is external to us; but life we know as truth from within ourselves. The expression of life is internal, the whole of it is pure movement. Therefore the language of movement is immediately real to us, it is the language of our life. The reality of this endless movement we have known as truth in relation to our own inner self. The urge of incessant movement we may call heat or electricity or something else; yet all these are mere words. If we say that in this movement there is life, then we indicate something which has meaning in our immediate experience. At the same time we realize that this life of mine which is moving is also comprehended in the larger movement of Universal Life. That the urge of life's movement is nowhere else in the universe excepting, accidentally, only in living beings, is a statement which our mind cannot accept because our mind can offer its homage to truth only in its background of wholeness.

The Upanishad says—

"कोह्येवान्यात् कः प्राण्याद् यदेष आकाश आनन्दो न स्यात्"

—with what assurance would a single insect desire for life if the joy of life did not pervade the whole of the infinite space? How can the flame burn for a single moment on the tip of the match-stick if the whole sky did not sustain its truth of ignition? Within life we find an inner meaning of the entire creation—that meaning we call Will. Matter remained dumb—it could not express the language of will,—Life came and expressed its will. That message which was implicit so long found at last its voice.

The student after much effort and time first learns the alphabet, then the spelling, then the grammar; he wastes paper and ink scribbling incomplete and meaningless sentences, he uses and discards much acquisition of materials; at last when as a poet he is able to write his first utterance, that very moment in that composition all his inexpressive

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

accumulations of words first find their glimmer of a significance. In the great evolution of the Universe we have found its first significance in a cell of life, then in an animal, then in Man. From the outer universe gradually we come to the inner realm and one by one the gates of freedom are unbarred. When the screen is lifted on the appearance of Man on earth we realize the great and mysterious truth of relatedness, of the supreme unity of all that is. Only can Man declare that those who know Truth can enter into the heart of the All—Only man can open our heart with this aspiration

सब्वे सत्ता सुखिता होन्तु अवेरा होन्तु
अब्यापज्झा होन्तु, सुखी अत्तानं परिहरन्तु।
सब्वे सत्ता दुक्खा पमुञ्चन्तु। सब्वेसत्ता मा
यथालब्धो सम्पत्तितो विगच्छन्तु—

"May all beings be happy, may they have no enemies, may they be indestructible, may they spend time in joyousness. May all living beings be free from suffering and not be denied of their dues."

We can only pray, let sorrow come if it has to come, let there be death, let there be loss, but let Man declare across all space and time सोऽहं, "I am He".

This article is principally based upon my "Religion of Man" and the Kamala lectures delivered at the Calcutta University. In the translation of it, I have been greatly helped by Mr. Amiya Chandra Chakravarty. In the present revised form it was delivered at the Andhra University, Waltair, on the 10th of December, 1933, being the last of a series of three Readership lectures.

RABINDRANATH TAGORE

MORAL WARFARE

By RABINDRANATH TAGORE

BY segregating ethics to the Kingdom of Heaven and depriving the Kingdom of Earth from its use man has up to now never seriously acknowledged the need of higher ideals in politics or in practical affairs. That is why when disagreements occur between individuals, violence is not encouraged but punished, but when the combatants are nations, barbaric methods are not only not condemned but glorified. The greatest of men like Buddha or Christ have from the dawn of human history stood for the ideal of non-violence, they have dared to love their enemies and defied tyrannism by peace, but we have not yet claimed the responsibility they have offered us.

Fight is necessary in this world, combat we must and relentlessly against the evils that threaten us, for by tolerating untruth we admit their claim to exist. But war on the human plane must be what in India we call Dharma-Yuddha—moral warfare, in it we must array our spiritual powers against the cowardly violence of evils. This is the great ideal which Mahatma Gandhi represents, challenging his people to fearlessly apply man's highest strength not only in our individual dealings but in the clash of nation and nation.

In the barbaric age man's hunger did not impose any limits on its range of food which included even human flesh but with the evolution of society this has been banished from extreme possibility: in a like manner, we await the time when nothing may supposedly justify the use of violence whatever consequences we are led to face. Because, success in a conflict may be terrible defeat from the human point of view, and material gain is not worth the price we pay at spiritual cost. Much rather should we lose all than barter our soul for an evil victory. We honour Mahatma Gandhi because he has brought this ideal into the sphere of politics and under his lead India is proving everyday how aggressive power pitifully fails when human nature in its wakeful majesty bears insult and pain without retaliating. India today inspired by her great leader opens the new chapter of human history which has just begun.

WHY INDIA LIVES

By NAGENDRANATH GUPTA

THERE is a certain unconscious wisdom in some fables according to which the soul, or the vital principle of life, of some giants and magicians, was to be found outside the body. There was a jinnee who could not be killed because his soul dwelt in the body of a bird, but as soon as the bird's neck was wrung the evil spirit fell down dead. Among men the span of individual life is measured; so is that of nations, and just as the length of life varies in the case of individuals, so does it in the case of nations, and yet it would almost seem that there are instances of nations attaining an extraordinary length of life because of some persistent vitality outside of themselves.

Some instances readily occur to the mind. There is India in Asia and there are Greece and Rome in Europe. There can scarcely be any question that the ancient Aryans of India, the ancient Greeks and Romans belonged to the same stock of the human family. Their kinship is undeniable. At one time they might have had a common language; as they divided and went different ways dialectal differences must have sprung up and these ultimately grew into distinct languages. The similarity in the religious belief remained. The Aryan, the Greek and the Roman pantheons had nearly the same gods and goddesses. In India there was no other religion and no other civilization that could challenge the Aryan faith and culture. Near Greece and Rome was Israel with a more ancient civilization and a higher creed, the firm faith in one God. Israel had its period of magnificence and power, and perhaps no crowned monarch has ever had a higher reputation for wisdom than Solomon. The Jews were the chosen people of God but that did not help them when they were subdued successively by other nations who were idol-worshippers or pagans. A higher form of religion is not necessarily associated with political power though the rise of a new religious movement has undoubtedly more than once coincided with territorial expansion. In fact, it has been seriously maintained that the test of the truth of a religion lies in its ability to found and govern an empire. A more absurd theory cannot be advanced, for empires are founded only to be lost and Christian empires have been lost as well as pagan empires.

It is impossible to say whether Greece paid any attention to the Hebrew religion, but Rome took no notice of it. Palestine was part of the Roman Empire and it was a Roman Governor who condemned Jesus Christ to death. The early Christians were inhumanly ill-treated by Rome, and yet Rome was quickly conquered by the new faith. The earliest translation of the Old and New Testaments, it should be remembered, was made in Greek. Next followed a translation in Latin, and later on Hebrew was learned with the sole object of reading the Bible in the original. Although the Old Testament is an integral part of the Bible and forms part of the creed of the Christian religion, Judaism has not spread as a religion, because it carries on no propaganda and neither seeks nor admits converts. To be a Jew one must be born in the fold; there is no other entrance to the Mosaic faith.

Greece and Rome have done wholly away with the past. Not only are the modern Greeks and Italians entirely different from the ancient Greeks and Romans, but they are utterly detached from all past traditions. Greek and Latin are ancient classical languages that are studied in many countries. In the Roman Catholic Church and at the Vatican in Rome Latin is used as an ecclesiastical language and the ancient literature of Greece and Rome cannot perish, but there is no other living link between the ancient and the modern. While the ancient languages and literatures of Greece and Rome are admired and studied the ancient religions of those countries are scoffed at as superstitious paganism. When Mussolini strikes an attitude and thumps his breast declaring himself to be a Roman he is thinking of the Roman legions and the Roman eagles, and not of Roman temples and the gods and goddesses of ancient Rome The past of tradition is completely wiped out; the religion of the ancient Roman is an abomination to the modern Italian.

In India the present inhabitants are as unlike the ancient Aryans as the modern Greeks and Italians differ from the Greeks and Romans of yore. But there is a striking difference. The India of today has not shaken herself free from the past. From the remote past down to the present day there is an unbroken continuity of tradition. Every link in the chain has been tested and it has been found unbreakable. India has refused even under very trying conditions to break away from the past. She has clung fast to her ancient faith in spite of every effort to break her allegiance. In Greece and Rome, and generally throughout Europe Christianity spread only through persuasion. Even in the case of the Jews who were cruelly persecuted, no compulsion was used to convert them to the Christian faith. In India the tide of invasion and conquest was swelled by the zeal of proselytism and a fierce iconoclasm. Thousands of temples were

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

razed to the ground, hundreds of thousands of idols and statuaries were smashed or mutilated, and a senseless and wanton vandalism flung thousands of priceless manuscripts into the flames. At an earlier period there had been a grim struggle between Brahmanism and Buddhism. Buddha himself was not rejected in India. He was Sakya Muni and is now universally accepted as an *avatar* of Vishnu. Brahmanism had two serious reasons for a quarrel with the new religion. Buddhism refused to venerate the Veda and the Brahmin and it accepted converts, both utterly abhorrent to the Brahmanical creed. A day came when Buddhist monks in consequence of the decadence of Buddhism disappeared from India. The persecution and wholesale massacres of Buddhist monks at the instigation of Kumaril Bhatta are unfounded calumnies. But although Buddhism ceased to exist in India the teachings of Gautama Buddha have left an indelible stamp upon the Brahmanic religion now in existence in India. Christian missions have carried on an intensive propaganda in India and many converts have been made.

Three great religions of the world have tried, one after another, to uproot the ancient Aryan faith from India and they have failed. Millions have been converted to other religions, but more millions are left, and there is no fear that the Aryan religion will perish for lack of followers. The power of resistance displayed by the people of this country may be attributed to two causes: the Aryan scriptures and traditions of religion. The world is aware of the great literature and philosophy of Greece and Rome, but it has heard nothing about the scriptures, if any, possessed by those great peoples. They had no books like the Old and New Testaments, to say nothing of the extensive and profound scriptures of ancient India. It may be truly said that as mentioned in the fable the soul of India is to be found in her religion, and since that religion has not been destroyed India has not perished but has continued to live while other ancient nations have passed away.

By what name is the religion of India to be designated? As a matter of fact, the religion professed by the ancient Aryans of India had no name. In the case of other religions some are called after the founders, such as Confucianism, named after Confucius, Taoism, called after Lao-tsze, Judaism, named after Judah, a son of Israel, Buddhism called after Buddha, and Christianity named after Christ. Mahomedanism is a name invented by Europeans. The religion founded by the Prophet Muhammad is called Islam and it is so designated in the Koran. It is a beautiful name for Islam signifies complete resignation to the will of God and a man professing this faith is known as a Muslim. Zoroastrianism, which closely resembles the ancient Aryan faith, is named after the prophet Zarathushtra, otherwise known as Zoroaster. But the religions of other great ancient nations, such as the ancient Egyptians, the Greeks and the Romans, had no names. The religion of the ancient Aryans of India might be called the Vedic religion, but that would not exhaust the entire range of the Aryan faith and they themselves gave no special name to their religion.

Has it been ascertained how the word Hinduism came into existence? The notion that it is derived from the word Sindhu, which is the name of a river and a province in India cannot be entertained. If that were so, it would be found in some of the ancient Sanskrit books. The word Hindu or even Sindhu as descriptive of the country or religion of India cannot be discovered in any Sanskrit book. The word Hindustan is a Persian word and corresponds to such words as Beluchistan, Afghanistan, Waziristan, Kaffirstan, etc. All these countries, it will be observed, are named after the people inhabiting them. The word Hind is a Persian word, meaning black. It occurs in a famous poem of Hafiz, in which the poet offers to make a gift of the cities of Samarkand and Bokhara for the sake of a black mole on the skin of a youth of Shiraz. These are the well-known lines:

Agar an Toork Shiraxi badastarad dile mara
Bakhale Hindyush Bukshum Samarkand
Bokhara ra.

The real name of the Hindukush mountains is Hind Koh, the black mountain, *hind* meaning black, and *koh*, a mountain. It will scarcely be contended that the name of a mountain in Afghanistan is derived from a river in India. The early Mussalman invaders of India came from Central Asia and they were a fair-complexioned people. The Aryans in India had largely intermarried with the original inhabitants of the country and had become dark-complexioned, while the Aryan settlers of Kashmir remained a very fair people. The word Hindu marks a distinction of colour, and Hindustan is the land of the dark people. It may be noted that for a considerable period of time the people of north India did not call the new rulers of the country Mussalmans but Toorooks, or Turks. In course of time, the Mussalman conquerors, by large admixture of blood and intermarriage with converts to Islam, lost their original complexion and became indistinguishable from the mixed Aryans. These latter accepted the designation of Hindus without demur and their religion came to be known as Hinduism. The name of the people as well as of their religion is an imposition from outside. If an ancient Aryan were to come back to life and were greeted as a Hindu he would be utterly perplexed. Hinduism is an instance of an ancient religion being known by a modern and misleading name.

In the modern world detached from the distant past there is an air of smug self-complacency

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

There is a prevailing belief that in these twenty centuries of the Christan era the world has taken great strides towards the fulfilment of the destiny of the human race. Men have for their servants steam and electricity, djinn more powerful than the slaves of Aladin's lamp. Man has conquered the elements and flies through water and air with equal ease. But behind this incredible material prosperity looms a sinister apparition of terror—the shadow of desolation and extinction. At man's elbow stands the Tempter, whispering into his ears and urging him to invent infernal machines for the destruction of whole nations. Christ may be found in the Church and the cloister, but certainly not in the senates and chancellories of the Western World. Moloch still sits enthroned and claims innumerable human sacrifices.

India has fallen upon evil days. Shorn of her ancient glory she has known many masters and has been subservient to their will. There is a marked decadence in her ideals and institutions. The pristine purity of her ancient faith has been encrusted with the evil growth of many centuries. The ancient scriptures have been smothered under a mass of crude and primitive doctrines of worship and ritual. From the lofty heights of the Upanishads to the Brahmavaivarta Puran, which solemnly sets up the worship of the Salgram stone, it is a lamentable descent and degradation. Religion is ensconced in the kitchen; the priest has superseded the prophet and the philosopher. The right of worship in the temples is denied not only to strangers, but even to Hindus, who, by the accident of birth, belong to the lower strata of society. Rama, a Kshatriya King and an *avatar* of Vishnu, now worshipped by millions, had no hesitation in forgathering with a Chandala, but the caste Hindu of today considers himself polluted by the shadow of a pariah. The incident in the Ramayana of Rama and the Chandala is a parable meaning that Rama, who was God incarnate, treated an untouchable as a friend. It is true that untouchability has been known out of India. The Helots of Sparta, the Etas of Japan, the gypsies of Rumania and Eastern Europe, the Cagots of the French Pyrenees were untouchables. But while in other countries this reproach has disappeared, in India it continues to be an essential part of religion. So long as this canker is permitted to fester in the body-politic of India there can be no hope of the political emancipation of the country and the national well-being of the people. In spite, however, of the undeniable fall of India from her former high estate the past is neither forgotten nor ignored. The authority of the Veda is as absolute as it was thousands of years ago. The hymns of the Rig Veda and the songs of the Sama Veda are chanted on the bank of the Ganges at Benares as sonorously as they were intoned on the shores of the vanished Saraswati. The Upanishads, the Vedanta and the various systems of philosophy are studied as reverently as in the past. The mnemonic method of committing whole books to memory is still retained. Many sects and schisms have appeared, there have been many prophets and *avatars*, many creeds claiming originality, but high above them all stands the ancient teaching, the fountainhead of all spiritual wisdom and the spring of all inspiration. It is idle for any new sect or creed to claim to transcend the knowledge of the ancient Aryans and their exaltation and concentration of spirit. They tower high as Mount Everest, rightly named Gaurishankar, and they dwarf and darken all other claims to be their peers.

This steadfast faith has saved India from extinction. She is like a vessel that has held fast to her moorings in all weathers. She has been wave-tossed and storm-swept, but her cable has not parted, nor has her anchor been dragged about. In the Far East, China and Japan do not present a close analogy to India. Japan is probably the only country in the world that has remained inviolate through the rolling centuries. The foot of the invader has never been planted on her soil, no conqueror has ever deprived her of her sovereign independence. If China and Japan have accepted Buddhism they have done so of their own unfettered will and not because it was at any time the creed of a conquering race. The Buddhist missionaries were humble mendicants, who spoke ill of no other religion, nor boasted that the religion taught by the Buddha was best suited for governing an empire. The ordeal to which India has had to submit, time after time, has not been experienced by any other ancient people. Through all her weakness and degradation she has retained the strength of loyalty—loyalty to the scriptures and teachers of the past, loyalty to the glorious traditions of the past. She has run the gauntlet of conquest and bondage, she has been wrought upon by fear, persuasion and temptation to fling away her old faith and choose another, but she has refused to part with her religion, which is her soul. So long as that religion lives India will live and perhaps win back her self-respect and her old place among the nations of the world. The deep stirring that is moving India from end to end is a sign of returning life. Because India has lived in the past therefore is she living in the present and will live in the future. But before she comes once more into her own she will have to undo many evils of her own making.

Dead is Egypt, dead are her gods. Isis and Osiris are mere names. Hammon, Lord of eternity, has passed away into eternity. Ptah, maker of the world, no longer looks after the world. Thoth, god of wisdom and the inventor of art, science and letters, is forgotton. Where are the gods of the Amenti and the triads of

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

the Nomes? Equally remarkable is the fact that of the living magnificence of Egypt, the palaces of the Pharaohs and the pleasure houses of the wanton Cleopatra there are no signs, but the houses of the dead still reveal their treasures to the rummaging curiosity of modern Europeans. Truly are the dead greater than the living. The most valuable finds in the royal tombs are the Books of the Dead, for these are of some importance from a religious point of view. The pyramids, reckoned among the wonders of the world, are also the mausoleums of the dead. Most of the famous ancient races, with all their splendour of achievement, have utterly vanished.

And yet men dream of perpetual power and empires that will defy the ravages of time. They learn nothing from the signposts of the past, they are not discouraged by the wreckages of kingdoms and empires strewn all over the world. No heed is given to the lesson writ large over the history of the world that the thought of men endures longer than his handiwork. What appeals to the senses and eyes of men is objective accomplishment. The eyes are most pleased when they are dazzled; the ears are most gratified when they hear of great deeds of arms and feats of derring-do. The word immortal is bandied about thoughtlessly and used in respect of performances which are far from immortal. What would the ancient Greeks have thought if any one had ventured to assert that Homer was greater than Alexander of Macedon? Is there any difficulty in conceiving of a time when the Parthenon, the splendid temple at Athens dedicated to the goddess Athene, will be levelled with the dust but the teachings of Socrates will not be forgotten?

The human heritage that lasts longest comes from the intellect and the spirit. The least durable are the things fashioned by mere wealth. The pomp of power is no more than a showman's trick. The trappings of royalty are as ephemeral as a child's baubles. Yet men crowd round these trifles as moths buzz round a flame and perish in it. The slower and subtler influence of the mind and the spirit takes longer to make itself felt. Great teachers find disciples slowly; great truths take time to take root in the minds of men. Yet it is marvellous how, in the long run, the gold is separated from the dross and jealously treasured. The sieve of time is perpetually at work and winnows the grain from the chaff. In India there are no traces of any ancient Aryan monuments. European savants are indisposed to assign a great antiquity to Aryan civilization in India. That is a matter of no consequence. Only a few facts need be mentioned. The Aryans founded many kingdoms and many great cities; there is not a vestige of them left. Even the river Saraswati, famous in the Vedic period, has disappeared and no European antiquarian or geologist has ever advanced any theory on this important subject. All that can be traced is part of the dry bed in the Ambala district in the Panjab.

It is admitted that Buddha appeared five hundred years before Christ. At that time, the Vedic religion had established a firm hold over north India and was already recognized as an ancient religion. In Buddhist works it is mentioned that the Buddha met Nathaputra Mahavir the famous Jain Tirthankar, but there is no mention anywhere of any Rishi of the Vedic or a later period. The ancient Vedic Sanskrit had been replaced by a more modern form of that language. Sanskrit was no longer the spoken language of any part of India. The current lauguage was Prakrit of different kinds, derived and corrupted from Sanskrit. Buddha himself was profoundly learned in Sanskrit lore, but he never used that language in his sermons, or while instructing his disciples. He invariably spoke in Pali, a Prakrit dialect derived from Sanskrit and evidently understood by the common people. It is impossible to accept the theory that the Vedas had been revealed only a few hundred, or a thousand years before the birth of Buddha. The Vedas are not an isolated or a solitary proof of the antiquity of Aryan civilization in India. Between the promulgation of the Vedic religion and the preachings of the Buddha intervene several cycles of spiritual and intellectual evolution. Round about the Vedas grew up the multiple teachings of the Vedanga-lexicons of the Vedas, the intonation and singing of the hymns, the Vedic metres or *chhandas*, grammar, astronomy and astrology. The concluding parts of the Vedas, or the Brahmans, were condensed into *sutras* or aphorisms. The six great systems of philosophy were founded and elaborated. The unrivalled epics of the Ramayana and the Mahabharata were composed. In temporal affairs illustrious reigning dynasties had been founded and flourishing kingdoms and cities had been established. Of these there was no trace when Buddha appeared. And yet the world is seriously asked to believe that between the Vedic and the Buddhistic periods there was a space of only a thousand or fifteen hundred years.

Though there are no material relics of the Vedic era the monolithic edict pillars of Asoka are still standing, some of them as good as when they were chiselled by the sculptors. According to the computation of European antiquarians they are over twenty-two centuries old. The Aryan monarchs of an earlier period either did not raise monuments in stone, or they were of such an unsubstantial character that they have been obliterated in the course of time. The Aryans raised monuments of thought, they built on the foundations of spirit, and these cannot be effaced by time. Egypt embalmed the bodies of the dead, for whom they built houses more durable than the tenements of the living, but to the living spirit they gave little thought. As a distinguished writer* has said, Egypt had only

a 'funereal mythology' and she 'perished without having attempted to rise from her coarse animal-worship.' In India it is perfectly true that from the exalted monotheism of the Upanishads and the subtle and intricate pantheism of the Vedanta —there is no English word corresponding precisely to *Advaita*—to the diffuse image worship and widespread superstition of the present time there has been a marked decline of spiritual thought, but still there has been no complete rupture with the past. For instance, the Hindu marriage ceremony is essentially a Vedic rite, barring the fact that in many parts of the country the Salgram stone is introduced, though the *mantras* have no connection with it. The *Homa* is the essence of Vedic sacrifice and no Hindu religious ceremony can be performed without the sacred fire of the *Homa*. The past overshadows the present and holds it with grapnels which cannot be broken.

Today Hinduism has banged its door in the face of the stranger and the seeker. The temples will not admit even a lowly Hindu ; the priests will not admit a newcomer to the faith. It was not so in ancient times. The Aryans must have converted millions of people to their religion. The bulk of the indigenous population of India must have been assimilated with the Aryan conquerors and colonists. There is nothing suggestive of exclusiveness in the early Indian scriptures. The Aryans were an extraordinarily fine race, large of limb and keen of brain, large-hearted and liberal-minded, partaking freely of animal food, noted hunters and doughty warriors. They never claimed that they were the chosen people of God, or had a monopoly of wisdom. The Rishis were not all hermits, or recluses of the forest. How entirely free were the holiest and wisest Rishis from all prejudice is strikingly demonstrated by the story of the Rishi Gautama and the boy Satyakama in the Chandogya Upanishad. Satyakama wanted to become a disciple of Gautama and presented himself before the Rishi. As only Brahmin youths could be admitted as disciples Gautama asked the boy his father's *gotra*. This Satyakama did not know and he replied he would ask his mother and inform Gautama. Javala, Satyakama's mother, lived outside the village and when Satyakama wanted to know his father's name she replied she could not tell him, because as a newly-wedded wife she was busy in serving guests and forgot to ask her husband his *gotra*. And she became a widow while quite young. Satyakama went back to Gautama and faithfully told him what he had heard from his mother. Instead of turning him away the Rishi embraced the boy and accepted him as a disciple, remarking that since he had told the truth he must be a Brahmin. A much later instance is the reconversion of Indian Buddhists to the Vedic religion. After the decadence of Buddhism the Buddhist monks left India. There were, however, many thousands of Buddhist converts and these renounced Buddhism and were readmitted to the Brahmanic faith. There can be no question, therefore, that down to a time later than the appearance of Buddhism the number of the followers of the Aryan religion was augmented by conversion and readmission of those who had strayed from the fold. At some later period—it is impossible to fix the date even approximately—Hinduism barred its gates against all newcomers, and the sin of apostasy entailed permanent exclusion from the Hindu ritual and Hindu society. There is no evidence that the Aryans ever introduced mission work or carried on a religious propaganda. This was first introduced by the Buddha and the missionary monks of his Order of Bhikkhus carried the new gospel to the banks of the Oxus in the West and to China and Japan in the Far East.

Of the six principal religions of the world three, namely, Zoroastrianism, Judaism and Hinduism admit no converts. The only entrance to any of these religions is the doorway of birth. For the rest, they are fenced round by stone-walls which cannot be scaled or penetrated. If an outsider believes in any of these religions he may call himself a Zoroastrian, a Judaist or a Hindu, but he will not be permitted to enter the fire-temple, the synagogue, or the Hindu temple, nor admitted to the right of worship. The other three religions, Buddhism, Christianity and Islam, freely admit converts. Buddhism has ceased carrying on active propaganda, but the other two religions are zealously engaged in mission work. Every religion believes, more or less, that it is the only true religion in the world. The witty definition that orthodoxy is my doxy and heterodoxy is your doxy is perfectly true. Baldly and somewhat summarily put every religion claims a privilege denied to others. Every religion based upon revelation insists that its scriptures alone were revealed. It rejects the claims of all other revealed scriptures. Inside each particular religion is salvation ; outside, damnation. The prophet of every religion, every little sect, is the greatest that the world has ever known. If religion is truth it may be revealed in many ways and there can be no monopoly of truth. Alas, religions have died as well as races. There were great nations in the past as there are in the present. They had their own religions and these were believed to be as true as the present religions of the world. These have not only disappeared but the world knows scarcely anything about them, and it is only by patient and prolonged research that fragmentary knowledge about them has been obtained. Phoenicia, Babylonia, Assyria were all great in their time and famous world-centres. They have completely disappeared, leaving no heritage for the world and no legacy that has added to the knowledge of the world.

How is it that India has survived while other

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

nations that were her contemporaries in the past have been submerged in the unfathomed depth of oblivion? The only answer to this question is to be found in the unparalleled spiritual advancement of ancient India. She was not content with material prosperity, the accumulation of wealth and treasure, or even the cultivation of the graces and arts. Of her it may be truthfully said that she plunged in thought while the legions thundered past. While other nations contended keenly for the prizes that life has to offer the sages and thinkers of ancient India intently fixed their gaze beyond life and sought to distinguish the eternal from the ephemeral. Even the intellect alone does not ensure the longevity of a nation, for there were few nations among the ancients so intellectual as Greece, but in religion they made no advance beyond 'their castes of irresponsible gods', and hence Greece, perished. India built her house of life upon the rock of the spirit. 'And the rain descended, and the floods came, and the winds blew, and beat upon that house; and it fell not: for it was founded upon a rock.' This parable points the moral of the fable of the giant and his soul.

In the clash of creeds and contending claims to the sole possession of the truth it must be remembered that there can be no such thing as a chosen people of God, a solitary revelation of the truth, or a single path to salvation. There are many mansions of faith and many roads leading to them. There is no privilege and no disability anywhere. God's truth is for all, to be revealed to the seeker in various ways. There are no distinctions, no exclusiveness in the laws of nature. Under Providence there are no favours and no frowns. The sun, the *Ra* of the Egyptians and the *Savita* of the Aryans, gives heat and warmth to priest and pariah alike. The rain falls impartially upon the lands of the Christian and the heathen. Zoroastrian and Hindu, Israelite, and Gentile, Buddhist and Taoist, Muslim and Kaffir are all creatures of the same God and they are all equal before His throne.

CHINA'S RED ARMY

BY SURESH VAIDYA

[The following *Reuter's* telegram raises curiosity relating to the "Red" forces in China:

"HONKONG, Aug. 3.

The British destroyer *Witch*, a Japanese cruiser and an American gunboat have been despatched to Foochow, in the Fu-Kien province, to protect foreign nationals against a threatened invasion by Communist troops from the interior.

The 'Red' forces, estimated at 5,000, are advancing in an attempt to break the prolonged blockade of their strongholds in South Kiangsi enforced by Chinese troops.

It is reported that they have already captured Paisha which is only twelve miles from Foochow."

The article printed below gives some information. We have, besides, received a book, *viz.*, *Suppressing Communist-Banditry in China*, for review in which the Communists in China are described as "bandits."

—Editor, *M. R.*]

SURPRISINGLY little is known of the territory called Soviet China, its Red Army, its young commanders, and its people.

The size of the Chinese Soviet territory cannot be properly determined, its boundaries shifting with the fortunes of war. Roughly it can be estimated to be twice the size of England and Wales put together. On the whole, its boundaries rather expand than shrink.

The reason why the National Government at Nanking always seems to be busy to attend to other matters is because of the existence of a menacing neighbour like Soviet China. Only recently the exiled Chinese war-lord General Chiang Hsueh Liang was hastily summoned from his place of recluse at Brighton to help the National Government forces to organize a campaign for the purpose of crushing Soviet China. Chiang Kai Sheik is fully aware of the difficulties that lie in the way of his undertaking. The chances of failure are greater for the national forces than the hope of success. The reason is obvious: in matters of tactics, discipline, courage and determination the soldiers of the Red Army are unsurpassable.

Its regular forces number approximately 10,000. But as military training is prescribed for every citizen as a measure of self-defence the forces can be augmented at any given notice. Besides these, there are other irregulars organized of women soldiers which have so far proved no less efficient.

The equipment of the Red Army is, however, meagre. For it has mostly to rely for its supplies on the loot of the ammunition stores of the Nanking Army. The Soviet Army has no artillery, no tanks, no Air Force, only a few thousand rifles and hundred and fifty machine guns.

As against them the National Government have

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

all the latest equipment, including an Air Force manned by foreign experts.

The man supreme in command of the Red Army is the young President of the Soviet Republic Mao Tse-tung. Mao is a former Peking University man who on leaving college organized the coal-miners of central China and carried on a ceaseless war against the rule of the war-lords. When the present Nanking Government came into power Chiang Kai Sheik held high opinion of Mao. But when the latter attempted to stabilize the power of the workers in Kiangsi district he was declared an outlaw and a price placed on his head. Mao is in his early thirties.

His two commanders are Ho Lung and Chu Teh both of whom are well known all over China for their capableness as shrewd and valiant fighters. It is mainly due to the untiring efforts of these two men that the Red Army has been able to hold its own against an overpowering antagonist.

The tactics pursued by the Generals of the Red Army might sound peculiar to one accustomed to seeing wars in their European fashionableness. The instructions for the rank-and-file soldiers contain amusing clauses such as:

"Separate the Government (National) forces by making them pursue you, then turn and strike on the flank or rear.

"Utilize the population to harass the Government forces, for example, by displaying red flags on the hill sides or by continually repeating bugle-calls.

"Do not attack permanent defence works or be drawn into planned engagements...Undermine the morale of the Government forces with propaganda."

With these instructions to follow the Red Army never comes in violent conflict with the National forces. Thus the Air Force, the tank equipment, and other latest devices of warfare prove futile for the purpose.

Last summer the Nanking Government despatched 500,000 troops and 100 bombing planes to fight the Red Army. The expedition, however, was unable to achieve any success. Fighting took place on a front extending from Nanchang to the north of Kwantung, several thousand miles in length. In all, fifty-six battles were fought. Four divisions of the National army were killed, besides four brigades and a number of regiments having been wiped out. The Red Army captured 41,000 rifles, 50 machine guns, 82 light machine guns, 200 automatic rifles, 12 wireless sets, 3 aeroplanes and 3 field guns. 40,000 soldiers were taken war prisoners many of whom have now become subjects of the Soviet Government, land being given to them on basis of equality with other citizens. A Nanking Divisional Commander, 5 brigadier-generals, 9 regimental commanders and 20 captains, were also taken prisoners during the war. The Nanking forces captured or killed a divisional commander, four brigadier-generals, and thirty captains of the Red Army. Those who were captured were immediately shot.

The most important factor which accounts for the growing popularity and success of the Red Army is the support it receives from the Chinese peasants in general. At the beginning of the current year a big conference of workers and peasants was held in Soviet territory which was attended by delegates from all over China. Even Manchuria sent her representatives. Many of the elections of the delegates were carried out under adverse circumstances. How the elections were organized and the way the delegates reached the Soviet territory, is a story that has baffled the Nanking Government.

The fact is that Soviet China is a country having a stable Government and ruling over people who do not seem disposed for a change. The Lytton Commission which investigated Chinese affairs, says in its report:

> "The programme of action (of Soviet China) consisted of the cancellation of debts, the distribution among landless peasants and small farmers of land forcibly siezed from large private owners or from temples, monasteries and churches. Taxation is simplified: the peasants have to contribute a certain part of the produce of their lands. With a view to improvement of agriculture, steps are taken to develop irrigation, rural credit systems and co-operatives. Public schools, hospitals and dispensaries may also be established."

"Communication of life can only be through living agency. And culture, which is the life of mind, can only be imparted through man to man. Book learning, or scriptural texts, may merely make us pedants. They are static and quantitative; they accumulate and are hoarded up under strict guards. Culture grows and moves and multiplies itself in life."

THE SAAR AND ITS PLEBISCITE

By SANTOSH KUMAR GHATAK

THE peace of the world hangs today on a slender cord which may any moment be snapped by the slightest shock. One of the impending dangers that threaten Europe in the near future is the Saar and its plebiscite. Europe is ready for a combustion and only a slight spark is needed for a European conflagration. That spark might come in the shape of the Saar concussion. According to the Treaty of Versailles the fate of the Saar will be decided next year. The entire inhabitants of the Saar will decide by their votes whether they will remain with France or Germany or as an independent political entity. As there is no love lost between France and Germany in the present, there can be no doubt that there will be much heart-burning about the affair, and who knows it might end in a European Armageddon. "We look back in order to look forward" (Burns). The past is so entangled with the present that we cannot understand the political situation in civilized countries without continual reference to situations no longer in existence. The Saar has the root of its history buried deep down in the time-worn ages.

The Saar is a small buffer-region (to put it more correctly a buffer district) between the frontiers of Germany and France. It lies to the north-east of Lorraine (Lat. 49°-50½°, Long. 6°-7½°) approximately. It is bounded on the west by the Moselle River, a branch of the Rhine, on the east by the Rhine; and the Vosges forms its southern boundary. Saar with its surrounding countries, Alsace and Lorraine, had played an important part in the past history of Europe. It is, so to say, a pawn on the European chess-board that is moved to and fro by the victorious powers.

Terribly fond of war as he was, Louis XIV, the Great Monarch of France (1643-1715 A. D.), propounded a theory of "natural boundaries" to justify his aggressive actions. He maintained that every country should have such frontiers as nature had provided—mountains, lakes, rivers or oceans, and France was naturally provided with the frontiers of ancient Gaul—the Pyrenees, the Alps, the Rhine river, and the Ocean. All throughout his reign Louis XIV tried to reach the Rhine. By the Treaty of Westphalia (1648 A. D.) France received Alsace, and by the Peace of Pyrenees she was recognized as a protector of the Duchy of Lorraine. After the Dutch War Louis continued to occupy Lorraine. But by the Treaty of Ryswick (1697) he had to restore Lorraine to its duke. If the annexation of Lorraine had been a hard nut for Louis XIV to crack, it was however solved by Louis XV (1715-1774). It was formally annexed by the latter in 1766.

What was beyond the dream of monarchical France was achieved by Republican France. Eight decades elapsed after Louis XIV's demise before his ideal to reach the Rhine was realized in a manner which was beyond his fondest hopes. By the Treaty of Basel (1795) Prussia gave France a free-hand on the left bank of the Rhine. Almost the whole of modern Belgium, together with what is known as the Saar valley up to the Rhine river, came under the suzerainty of France.

The French Revolution, which had been raging at that time in Europe, brought about new ideas and new institutions. It turned over a new leaf in the European history. Alsace and Lorraine were imbued with a new spirit of national conciousness after the Revolution. They had become a part of the French body-politic. In 1871 Bismarck had unified Germany and had annexed the two above-mentioned countries (Alsace and Lorraine). The French had always regarded this anexation as a crime—"the brutal dismemberment of a nation", "the tearing of children from their mother". "History shows that it was worse than a crime,—it was a blunder". As it has been said, "Bismarck had mutilated

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

a living body and the wound would not heal; it was to remain an awful open sore, threatening the peace for forty years". It did threaten the peace of Europe in 1914. France had only one ambition from 1871 onwards, it was to take revenge on Germany. This desire for "revanche" was one of the main causes of the Great War. France actually paid back Germany in its coin in the Treaty of Versailles. If Germany had mutilated France in 1871, the latter also mutilated the former (Germany) in 1919. France compelled Germany to separate the Saar Basin, which is overwhelmingly German in thought, culture and nationality, from the German body-politic.

The Saar had played an important part in the industrial life of Germany. Her coal (for Saar is rich in coal mines) had helped the growth of German industries. By the Treaty of Versailles France recovered Alsace and Lorraine, but she wanted to occupy the Saar Basin. It would be an important acquisition, for the Saar coal would give an impetus to the French industries. And bereft of it the German industries would suffer greatly. But the annexation of the Saar valley was most vigorously resisted by the United States. When President Wilson declared that he could not agree either to the separation of the left bank of the Rhine or to the annexation of Saar, the French statesman, Clemenceau, dubbed him a pro-German, and melo-dramatically left the hall. The French claim to the district was vehemently opposed both by Great Britain and the United States, and was withdrawn. All acquiesced that France should have the Saar coal while her own mines were out of action; but while Mr. Lloyd George was willing to create an autonomous state under French protection, the President would at first approve nothing but a tribute of coal equal to the losses of France. The French showed their political foresight by renouncing the claim for the annexation of a German population. But they demanded a special political organization for the district which included the people of the mining area. A compromise was finally reached in an Administrative Commission of five, of which three were to be appointed by the League of Nations, one by the inhabitants and one by France. A plebiscite was to be held after 15 years, to determine whether the district should be annexed to France or to continue the existing regime or return to Germany. In the latter event Germany was to pay France the estimated value of coal mines at that date.

Fifteen years have elapsad since 1919. The proposed plebiscite will be held next year. The pelbiscite is one "in which a certain question is submitted to popular vote, the decision, while having no binding force, is intended as a guide to the policy of the government". In the present case the Saar people will be given the opportunity of expressing their opinion about the future course of their land, as to whether they would remain as they are, or they would like to join Germany or France. In anticipation of the plebiscite the Saar people are very much agitated, but more excited are the Great Powers, specially Germany and France. The Saar people, Germans as they are, are more intensely German in their culture and outlook. Wronged by the injustice of being separated under compulsion from their father-land, they are more anxious than ever to be again united with Germany. They leave no stone unturned to show their appreciation of Germany and demonstrate their willingness to go over to it. *Reuter* reports that on the afternoon of May 6, 1934 over 800,000 people crossed the frontier from the Saar into Germany at Zweibrucken to demonstrate their intention to vote for the return of the Saar to Germany next year, when the Saar plebiscite will be held. Dr. Goebbels, in a speech amid cheers, declared that the Saar would remain German despite terror and treachery. At the end of the speech a blonde girl presented Dr. Goebbels with a bowl of earth from the Saar. According to the version of Dr. Goebbels' speech published in Paris, he declared that Germany could now resist France and the League of Nations, come what might. He denounced the German "emigres" and Jews as traitors, and said that when the Saar was re-united with Germany, "they would be beaten by their co-religionists". The leader of the German Front is reported to have informed the League that 93 per cent of the Saar electorate are pro-Germans. Undoubtedly, the inflammatory speech of Dr. Goebbels

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

has created a flutter in the French dove-cot. The French can never brook the idea of the Saar being united with Germany. The union of the Saar with Germany will mean firstly an increase in the German population, secondly the extension of the German frontiers, and thirdly the economic prosperity of Germany. The first would give Germany increased man-power, the second would extend the German frontiers and bring Germany nearer to Paris, the heart of France, and the third means the greatest advantage to Germany and therefore the greatest menace to France. The Saar, when unified with the German body-politic, would undoubtedly place her coal at Germany's disposal; and the Geman industries would increase by leaps and bounds. The growth of German industries would mean her economic prosperity, which is concomitant to the strengthening of the power of the German nation. Germany has been bled white by the unjust war debts and reparations. If she can pay off all her debts and regain her economic prosperity, her power would certainly increase. The increase of the power of the German nation is the greatest danger to France. France would try her best to see that Germany ever remains weak. That is why she never agrees to give Germany equality with regard to armaments and that is why also France will prove a veritable stumbling-block in the way of Germany's acquisition of the Saar. That there will be great bickerings among Germany & France about the Saar affair is certain. One is oppressed with a vague fear now-a-days—when in the twentieth century one often hears of deadlocks and when nations talk with one another with "pistols bulging out from their pockets"—that the Saar affair might lead to a war.

Another problem, which confronts the League of Nations, is that many Germans and Jews, who have fled away from the Hitler regime have taken refuge in the Saar. If Germany occupies the Saar, the fate that awaits these refugees is neither promising nor rosy. The League of Nations wants a guarantee from the German Government—in case they occupy the Saar—that they will not maltreat these refugees.

The League of Nations is considering the problem of the Saar plebiscite. The League is also occupied in planning a method for conducting the Saar plebiscite in the coming year. The Rhinelands with Alsace, Lorraine, Saar etc. have always been a difficult problem for the European statesmen to solve. They are an open sore which had threatened the peace of Europe from the 17th century onwards and which is still threatening the peace of Europe. Let us see how the Doumergues, Roosevelts and MacDonalds cut the Gordian knot of Europe. The Saar problem will prove a veritable test to the efficacy of the League and also to the veracity—if there is any—in the vociferous declarations of the nations to maintain world peace. If it is settled smoothly it will justify the existence of the League and attest that the nations today are sincerely eager for the maintenance of the peace of the world.

HAGGARD SEEMING

By VERRIER ELWIN

Forgotten by the greater world,
The leper sits beside his fire;
The fragile smoke that upward curled
Is sign of his desire.
His hut is like the broken shell
His body has become, and well
It is for him his eyes are blind.
Stern nature can be sometimes kind.

His swollen limbs he cannot see;
The hideous sores, the filthy dress,
The ruin and the misery,
His sorrow's ugliness.
But he his wife's dear hand can feel
In his, and tastes his scanty meal;
While in the darkness every pain
He conquers to our human gain.

Son of an old noble race,
What dignity still rests in thee,
The patience in thy gentle face
Transforms thy poverty.
Thy wretched hut enlarges now
Into a palace; on thy brow
I see a crown; and thy poor dress
Becomes a king's for loveliness.

What secret elemental dream
Dost watch, what do those sightless eyes
Behold of sorrow's lofty scene,
What mystery surprise?
Perhaps the hands of Christ in thine
Thrill thee with ecstasy divine;
The kiss of Francis, or the arm
Of Damien shelters thee from harm.

RURAL INDIA,

THE NEST OF SINGING BIRDS

By Prof. DEVENDRA SATYARTHI

[The poet Rabindranath Tagore writes :

"I have been delighted to listen to Professor Devendra Satyarthi reciting and singing some of the folk-poems and songs which he has been collecting from all parts of India. It is a valuable work requiring delicate sensibility for the exploration of an obscure region of literature which is a spontaneous creation of the sub-conscious mind of the people. Prof. Devendra Satyarthi has evidently the gift of a sensitive imagination that has enabled him to do his work so thoroughly because he has enjoyed doing it.

"The creative aspect of the popular mind has its revelation which is of immense interest and I feel deeply thankful to Prof. Satyarthi for helping us to realize it."

Prof. Devendra Satyarthi has been very usefully occupied for some years in collecting the folk-songs of different parts of India in the languages spoken there. His collection is already rich, and I hope it will be richer as time passes. The work he has been doing is very important.

Folk-songs enable us to understand the mind and heart of the people. From similarities in the folk-songs of different regions we perceive the unity in diversity of human nature throughout India. And if the folk-songs of all countries could be collected and compared, it would be seen that there was one mind and heart, underlying there, common to all mankind.

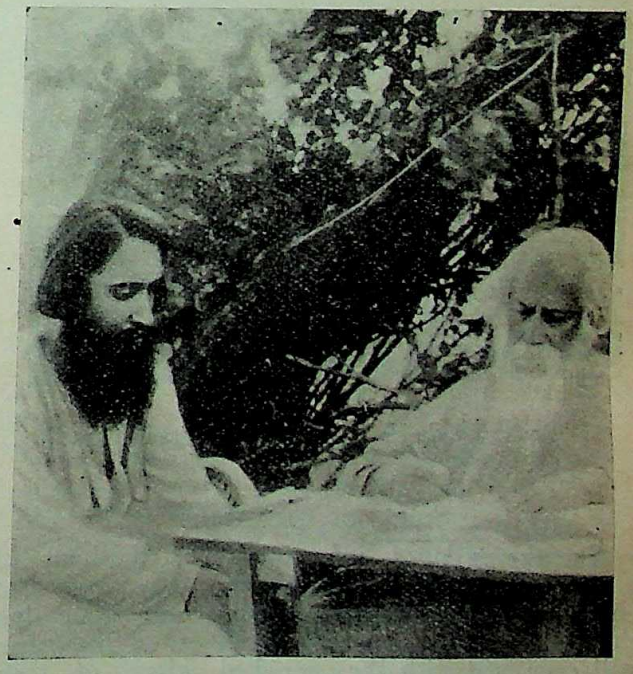
Prof. Satyarthi's collection, properly trans-literated and translated, should be of considerable use to philologists, anthropologists and educational psychologists, in addition to bringing a source of pleasure to ordinary listeners and readers.—Editor, *M. R.*]

LIFE is like a spontaneous and perennial song in Rural India, the nest of singing birds. Folk-songs pervade all walks of life; are deeply associated with various religious social ceremonies and all festivities of joy glee. All classes, all forms of occupation, and women, young or old, all alike, have s of numerous tones and tunes.

Since the very first dawn of the folk-songs of innumerable songs might have been born disappeared, as none cared to preserve them eautiful anthologies. Who can say that there no folk-songs in Vedic India and again in ays of the Ramayana and the Mahabharat ? ere are they all now ? Most probably many ose songs which disappeared from the living of the masses, might have been re-born at ous times again and again in different uages and dialects.

We must not forget that the folk-songs which come down to us breathe the life of the when they were composed. But it is very lt to throw upon them any light from e to fix the dates of their composition. ast possible that the origin of some of these ngs, inspite of all alterations and additions, at various times, goes back to the 10th 11th century. And who knows if many of ngs, current among the primitive tribes of country, go far beyond the above-said es, as life sings amongst them, moved little by time.

folk-songs of India are to be compared only songs of the birds ; they come as easy to country Muse as sweet coo-ings to the doves. of them are as beautiful and fragrant as the lotus flowers, most natural in their form and colour,—and most natural is their fragrance. They are of numerous variety ; as in expression so in substance they are simple and direct and



Author at Santiniketan with Poet Tagore

bring before us vivid pictures of the open-air country-life. There is scarcely any place in them for the day-dreams of intellect and convention. We are impressed by their spontaneity, freshness, and originality.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

There are songs of Love, Beauty and Youth, of the glories of the past and of the dreams of the future. The tears and smiles of the masses that are nourished in the country-atmosphere, their hopes and despairs, their joys and sorrows are all enshrined in these songs.

We hear in these folk-songs the very heart-beats of India ; through them vibrates the life-lit music of India's soul. No picture of India can convey more forcibly and clearly to our mind the manners, habits and the psychological depths of her inner life, than an insight into these songs.

Here we give a short study of the English renderings of some selected folk-songs of India.

An old lady sings in the Chakrota valley

Songs of Chivalry.

In the villages of Rajasthan, the land of heroes, the people still sing the songs of chivalry. Partaps and Sangas are gone but the hearts of the sons and daughters of Rajasthan will ever beat with the cherished glory of their heroic deeds.

The following are some specimens of these songs—

A Rajput hero is just ready to go to the battle-field. His sweet-heart instils courage into his heart and bids him farewell in the following vein :

Three things only will be in the field of battle,
A (stout) heart, a (sharp) sword, and a hand (to wield the weapon).
Which of them, O which of them, will be at thy side?
There, there, in the field of battle, my love.

Again she asks him to make haste :

Thy horse neighs at thy door,
Brave soldiers are waiting for thee, my love,
Here is the hero's bracelet, wear it and go to the war,
Dost not thou hear, the war-drum they are beating, my love.

In the following song, which may aptly be named 'desiderata', we come to know that Rajput damsels wanted to marry none but the heroes ;

The shell awaits the fall of the heavenly dew*
The bird 'Chakoi' † awaits the rising sun
The hero awaits the advent of battle
The damsel, O the damsel, awaits the hero.

Heroes are compared to lions in the following song :

No distinction have the lions
Between their own and others' land.
Any jungle where roams a lion
Becomes his own land.

Singing while Spinning
Inset : Grand-mother and grand-child singing in tune

The wounded hero lies on sick-bed. Suddenly a minstrel comes to him and begins to sing a life-lit song. The Rajput wife seeks entry in her hero's room and asks the minstrel to stop his song :

Wounded by swords, here lies my brave love,
Innumerable close stitches there are on his limbs,
Stop, stop, thy song of chivalry, O minstrel!
Lest my hero runs to the war with his green wounds.

* It is popularly believed that the heavenly dew deposited in shells form themselves into pearls.

† The masses suppose that a particular bird known as 'chakoi' is attracted by ties of love to the rising sun.

Very pathetic are the references to the lost ...ory of old Rajasthan in Nopla, a famous bard ...f the land. Thus in one of his songs we find :

The Rajputs of today, O the Rajputs of today
Have the same houses, which once their ancestors had,
Live in the same villages, where once their ancestors lived,
Eat the same food, which once their ancestors ate,
Worship the same God, whom once their ancestors worshipped,
But, alas ! what a pity, says Nopla, the bard,
No spirit, O no heroic spirit, have they today.

Songs of Pathos

Pathos pervades a large ...ber of Indian folk-songs. ...re are many human ...ings such as a childless ...her hankering to have an ...spring, an orphan shedding ...s, calling, 'mother, O ...ther, so dear,' a widow ...ping for her love with ...r bleeding heart, etc., but ...e most pathetic songs are ...se which are full of ...mpathy for the mute ...atures, who cannot speak ...themselves. This pathetic ...mpathy is time-old in India. ...e first poetic utterance of ...almiki, the primeval poet ...f the land, is traditionally ...d to have been due to the ...ght of a wounded and ...ng *Krauncha* bird.

In the villages of Tippera ...rict in Bengal, the ...queen of the peasantry sing ...song full of warm tears ...m beginning to end. The spontaneous flow ...Pathos makes it exceptionally tender and ...pressive. It runs as follows :

Lo ! there grazes the doe and the archer seeks for game,
Suddenly he hits her with his sharp arrow
Forth breaks forth the poor innocent doe—
What a deep wound, brother archer, thy arrow has given me !

I am but a forest-doe and owe to none
But my delicious flesh and blood
From the whole world against me,
What a deep wound, brother archer, thy arrow has given me !

Never have I trespassed into thy meadow to partake of its grass
Nor have I ever drunk the sweet water of thy pool
For no fault of mine am I struck !
What a deep wound, brother archer, thy arrow has given me !

My child remains unfed by my milk !
Never will his moon-like face be seen any more by me !
No words of endearment from me shall please him any more !
What a deep wound, brother archer, thy arrow has given me !

For my own death I am not at all sorry
But what answer, O brother archer,
Wilst thou render to the gods above
What a deep wound, brother archer, thy arrow has given me !

Whenever my child, aflame with hunger,
Will cry calling, 'O mother, mother dear !'
That cry will surely strike at the heart of the gods
What a deep wound, brother archer, thy arrow has given me !

Pastoral life near Missouri

O ye my comrades, tell my mate, my love,
To nurse my suckling child with love and care,
Tell him that we will not see each other any more in this life.
The archer's shot ends all my hopes and dreams
What a deep wound, brother archer, thy arrow has given me !

Who is that smith, O who is that smith—
Who manufactured this arrow that kills me !
Extinct, O extinct from the world,
May his whole family be !
What a deep wound, brother archer, thy arrow has given me !

(*A Bengali folk-song.*)

Again, in the United Provinces of India we come across a folk-song which well illustrates the pathetic tale of an innocent doe. Her mate is killed at the altar of sacrifice, but like a faithful wife she does not forget him at all. The village poet has very successfully given it a thoroughly human setting. We do not know why Queen Kaushalya's name is associated here. She represents a human figure whom the composer of

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

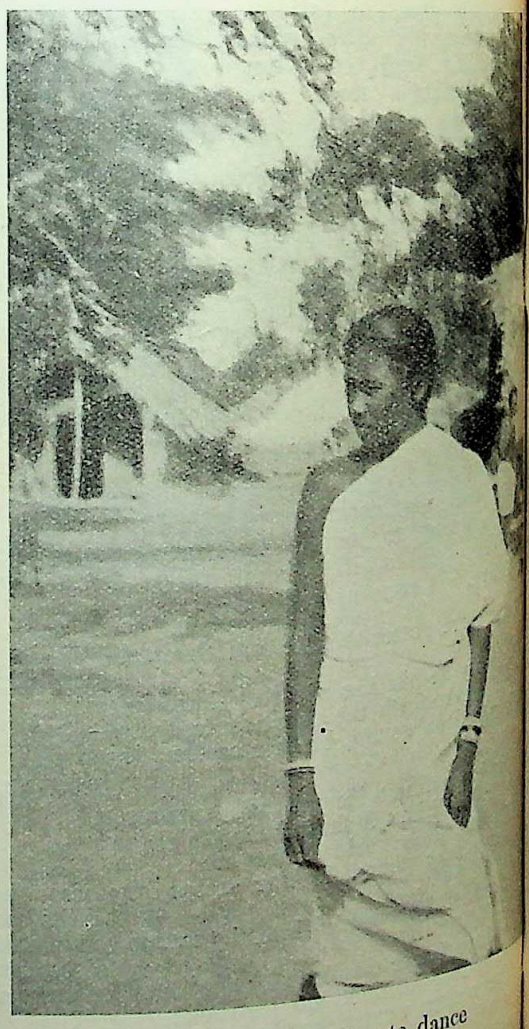
In the author's village. Peasant women singing while returning home after day's work

of the song has given this particular name. While the doe's request to get the deer's skin shows her extreme love for her mate, Queen Kaushalya's refusal to give it shows the intensity of human cruelty. The song runs as follows :

So small in size but full of leaves
Lo ! there we see a *Dhak* tree !
Beneath it stands an innocent doe
O see how sad is she.
Seeing her sad asks the grazing deer
So low in spirits, O what makes thee,
my doe !
Is it for thy meadow has dried up—
Or for that water is so rare, my doe ?
My meadow, O my meadow is green
And water too not rare, my love !
Today is the sixth day of the prince's birth
Alas ! they will take thy life, my love !
Here we see Queen Kaushalya,
On her *Machia* * sits she
Standing near her prays the doe :
'Hear me, O Queen, hear me.
'The flesh of the deer—my mate, O Queen
They are cooking in thy Kitchen :
Do give them order, O kind Queen,
To hand over to me his skin.
'On the *Dhak* tree will I hang it
Circling around, towards it will I always see
Some solace will I get and feel :
Here is the deer—my mate and that still
lives he.
'Skin of the deer', says the Queen
I will not give thee, O doe,
With it will I prepare a *Khanjri* † for my Rama
Go away, O go away poor doe,
Beneath the *Dhak* tree stands the doe
O, see how sad is she !
Whenever sounds the *Khanjri*, high or low,
For the deer longs the she.

(*A folk-song from U.P.*)

Those who sing and hear the above song melt into tears and their sympathy undoubtedly goes to the poor doe whose mate is no more on earth, and whose bleeding heart passion-



A Santhal girl going to dance

Pasture-land in the author's village, Bhadour, Patiala State. Cow-boys sing while cows and buffaloes graze and drink water. Similar scenes charmed the author in his boyhood

A Garhwali ploughman singing in the field
Photo by an esteemed friend of the author.

A coolie, though sufficiently loaded, sings

yearns at the vibrations of the *Khanjri* made of the skin of her dear mate.

It may not be irrelevant to note here that this sympathy for the mute creatures who cannot speak for themselves is also a particular note of the English romantic poetry of the early nineteenth century and is heralded in the following lines of W. Blake:

'Each outcry of the hunted hare
A fibre from the brain doth tear
A skylark wounded on the wing
Doth make a cherub cease to sing.'

Comic Songs

Inspite of the many sorrows to which the villager may be said to be born, there are moments of joy and gladness when life becomes as rippling as a laughing brook. 'No man who has once wholly and heartily laughed,' says Carlyle, 'can be altogether irreclaimably bad. In cheerful souls there is no evil.'

There is a large number of comic-songs in Rural India, sung at times of festal mirth. People sing and hear them and laugh to their heart's content. If the Italian saying, *viz.*, that 'Laughter makes good blood' be right, the gain to the people by these songs is not inconsiderable.

Here is a comic-song:

Very kind of you that you have come
But no room for you have I, friend.
Return, O return to your home
By the same way, you came to me, friend.
A drop of water I would have offered you
Sorry, no water in my cracked jar
Don't sit, make haste and see your way,
How long will you stand, O friend so dear.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

A fine seat I would have offered you
And could allow you to sit and take rest
Alas! some child has taken it for a while away,
It was the only seat I ever had, my friend,
Some Oil certainly I would have given you
On your body you could have rubbed it
It is your ill luck that some pepper is mixed in it
Your eyes will burn, friend, if you use it.
The tale of my joys and sorrows I could have told you
But, sorry, friend, from fever am I suffering
Don't sit, O don't sit near a sick person,
Make haste, friend, and reach your home.
A *pan** I would have prepared for you, friend.
But, sorry, no betel-nut is available
See, their lies the empty *pan-dan*, friend,
Nothing but stray tobacco leaves are in it.
With a sweet dish I would have entertained you
Yesterday if you were here, my friend
Its taste you could ever remember
So delicious was the dish, my friend.
So late it is turning, O friend so dear
At a long distance is your home from here
Make haste, stay no more and go away
With a happy heart will I welcome thee, some other day.

(*An Oriya folk-song from Puri District.*)

Numerous such songs are current in different parts of India. Amongst the primitive tribes, lovers serenade their lady-loves with such songs in which the untranslatable humour of the rustic folks finds an adequate expression.

Marriage-Songs

Songs are indispensable accompaniments of marriage-festivities. Women sing innumerable songs as they perform different rites of the ceremony. These songs are supposed to have an auspicious influence over the marital life of the couple.

Here is a song which the maidens sing in chorus on behalf of the bride:

The earth and the sky were the only things
At the dawn of our world, so pretty.
Sweet showers from the sky came
The earth received them with a dear embrace,
Hour of blessings there came. o maidens,
Hour of blessings there came.

A cow and a mare were the only creatures
At the dawn of our world so pretty
The cow gave birth to a bullock to serve in our fields
And the mare to her son to take us to far-off lands
Hour of blessings there came, o maidens
Hour of blessings there came.

A mother and father were the only living beings
At the dawn of our world so pretty,
The mother gave birth to me, o maidens
And the mother-in-law to my groom
Hour of blessings there came, O maidens,
Hour of blessings there came.

A father and a father-in-law were the only living beings
At the dawn of our world so pretty
The father brought me up with love and care
And the father-in-law blessed me with modesty
Hour of blessings there came, O maidens,
Hour of blessings there came.

The red spot of vermilion on the parting of hair is considered as a sign of married girl in Hindu life. When the proper marriage ceremony takes place the groom is asked by the priest to put some vermilion in the bride's hair in the presence of the sacred fire. Here is a song which pictures the pathetic mood of the girl who is nervous when her groom adorns her hair with vermilion as she thinks that now she will have to leave her mother's house, where she had lived so happily:

At Sreerampur, Bengal. Bengali fishermen singing while plying their boats

Photo by an esteemed frien of the author.

'Father, father,' do I cry
Ah, my father hears me not!
See, O see father, my groom by force
Puts vermilion on the parting of my hair!
Vermilion's price is rising in the market
And the bridal veil is beyond price
Ah me, father, the dear vermilion, put in my hair.
Makes me bid adieu to thy land, so good.

(*A folk-song from Bihar.*)

In the following song we find a bride at her toilet:

Most beautifully shall I comb and arrange my hair
And will adorn it with vermilion so auspicious
Today my Krishna comes to me, they say,
O let me dress myself just like Rukmini.

(*An Assamese folk-song from Shibsagar District.*)

* A typical preparation of betel leaf and nut for chewing.

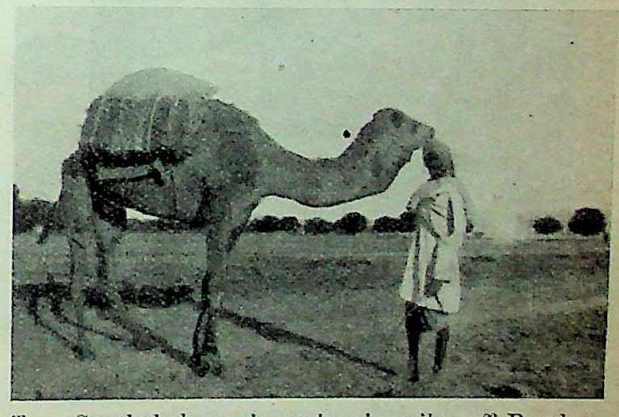
A rural Bard



Top : Santhal dance in *mela*, six miles off Barakar Bridge, Giridihi. *Middle* : Peasants singing while reaping harvest. *Bottom* : Near Benares, A camel-driver taking rest and singing.

As in the above song, Krishna is Beau-Ideal in many marriage-songs of India. We can see it in the following song, too, which is a beautiful colloquy between a father and a daughter about the choice of a groom for the latter :

'What makes thee stand thus dear daughter
What makes thee stand thus ?
Behind thy father's sandal-pillar, dear daughter
What makes thee stand thus ?'
'To knock at my father's door do I stand
(Make me a bride), father, and find me groom'
'What sort of groom dost thou wish to have,
dear daughter,
What sort of groom dost thou wish to have ?'
'Fair as the moon amongst the stars, dear father,
And lovely as Krishna amongst men
To knock at my father's door do I stand
(Make me a bride), father, and find me a groom.'
(*A Punjabi folk-song.*)

Deep and lasting is the pathos, created by the songs, sung to give a farewell to the bride when she accompanies the groom's party to reach her father-in-law's house.

Here is a song, sung to wipe the tears of the weeping bride :

Weep not, O weep not,
My darling, weep not.
They do not seize thee to tie thy hands and feet
My darling, weep not,
Nor do they seize thee to wound thy body,
My darling, weep not.
(*A Kachari folk-song from Assam.*)

In the following song the name of Rama, the great hero of the Ramayana, becomes typical for that of a bridegroom. The closing lines show how the bride, instead of rejoicing at her happy marriage, is sad at heart with the moving pathos of departure from her parental nest.

Above: Mother smiling and singing at the marriage ceremony of her daughter. *Below*: Author's wife. She sings as she grinds. She has supplied the author with folk-songs of various kinds current among Panjabi women. She has also toured many places with him.

Why did the betel-nut grow,
And why did blossom the saffron-flower ?
Why was my little daughter born !
Perform thy marriage-rite, my son.*
Run ye barbers and ye leaf-dish makers
Run and bring us the happy news
Search ye, the East, the West and Gujrat
O make a thorough search and bring us the news.

'Eighty on foot and a hundred on horse-back
Numerous in the marriage-party,' they say
It makes my father tremble and thus says he :
'A virgin wilst thou remain, daughter, what more should I say !'†

'Fear not, father, and grieve not at all.
Go and just lodge the marriage-party,
With sweets will entertain them my mother's brother
And my uncle will give me away in marriage.'‡
Rama, the son of Dasharatha, starts in his chariot
With the bride's palanquin by his side,
On the high-roads goes the bride's palanquin
And beside it go so many riders,
The nightingale gives out a sweet note
As the palanquin passes out of the garden.
'What singest thou, O nightingale, so dear,
To my father's sweet land and mother's sacred lap I bid adieu
Farewel, O ye the sweets prepared by my brother's sweet-heart.
Farewell, O brother so dear, ever-sad my heart will be for thee.
(*A folk-song from U. P.*)

In the following song of the departing bride there is a mixed feeling of gratitude for her mother's care and love, as well as a fling at her apparent cruelty in giving her away to the strangers :

To beautify the branches of their own trees
The birds bring their children up :
Ah me, with cherished love and care my mother brought me up
To adorn, O to adorn others' home.
(*An Assamese folk-song*)

These old old coo-ings of Rural India, the nest of singing birds, are fast fading out of the memory of the young ; their place is being taken by new folk-songs. Old men and women who often sing these traditional songs are being quietly removed from the stage and these gems of India's literature are also disappearing with them. Let us awaken to the duty of preserving these relics of the past, which have not merely intrinsic worth as being beautiful in themselves, but have a further historic value as the precursers of later literature. Let us learn to love them, to admire them and to preserve them in beautiful anthologies.

* Here it means a son-in-law.

† The father is afraid that if the groom's party, unsatisfied by his poor entertainment, returns away before the proper marriage-ceremony takes place, it will be a great insult to his family and moreover his daughter will remain a virgin.

‡ It is the function of the guardian of the bride to make a gift of her to the groom.

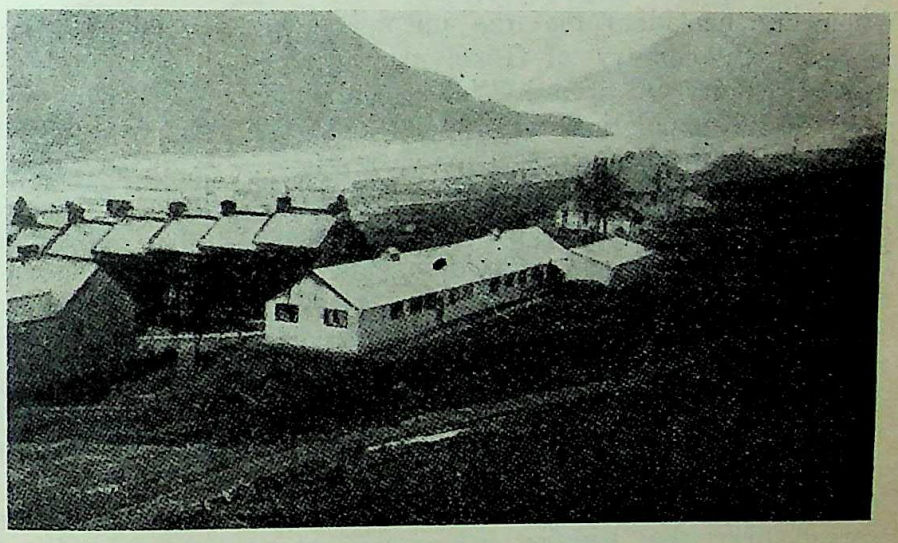
MAES-YR-HAF

By AMIYA C. CHAKRAVARTY

To a stranger passing by motor-car through the Rhondda Valley, the prospect that lies around seems to be one of great peace, beauty and plenitude. The idea that behind this screen of Nature's loveliness, poverty and extreme misery may lie hidden, would not occur to one unversed in the lore of modern industrial conditions. I have just been on a short visit to the unemployment centre in Rhondda Valley at Dinas in South Wales. As I said, I was struck with the extreme beauty of the scenery. As one left Cardiff, the rolling Downs, the shimmering trees along the winding roads and the groups of attractive cottages dotting the hill-sides conjured up an atmosphere of quietly gracious existence. Gradually one encountered more smoke in the atmosphere of the valley, and occasional aggregations of dwelling sites, but the effect of picturesque content remained undisturbed. It was when I had been for some time in the Maes-yr-haf Educational Settlement that I began to realize what depths of discontent and distress existed amongst the unemployed miners in that district. In the settlement of Maes-yr-haf itself I found tangible evidence of the most splendid constructive and educational work being done to relieve the minds of people who suddenly, through no fault of their own, discovered that not only had they lost all their resources but that evidently they were not wanted by anybody in the present arrangement of society. Here are people not only from the dales, but from parts of England, drawn to the coal district by the prospect of dependable work and good working conditions supplied at the beginning with high wages (up to £7 or £8 a week). In the days of industrial prosperity the big magnates found their labour useful and lucrative and so the arrangement seemed to work perfectly well; but as soon as the economic crisis began to make itself felt, down went the wages and gradually out went the workers so that the industrialists who had made great profits could save themselves from further loss. The real crash seems to have come a few years after the War, and it was then when almost overnight thousands of workers were disbanded and left to the mercies of unemployment, that the Maes-yr-haf Settlement itself came into existence. It was started by Mr. and Mrs. Noble, who felt that even if they could not solve the whole problem of the unemployed, they could perhaps create a little centre from which to radiate new hope, friendliness and means of providing people who had no work to do, with interesting and useful forms of occupation.



Treherbert Unemployed Clubhouse, opened February 1934.
The surrounding land is cultivated as a Communal Garden by the men

There are now thirty unemployed clubs with a total membership of between five and six thousand. The co-operation in the main-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

tenance of these clubs which is shown by the unemployed men themselves is remarkable and encouraging, and the activities of the clubs are flourishing and of great benefit. Both formal and informal educational work is carried on in them, including classes in biology, English literature, social philosophy, local government, ethics, psychology, political geography, and short courses and lectures on other varied subjects. Most of the clubs have libraries and facilities for distribution of useful books, while discussion classes are held revealing much debating talent. A successful singing festival has been held, also a football competition, and an inter-club paper launched and circulated. Handicrafts and women's and boys' interests receive full consideration, while holiday camps have proved a great success. When one considers that the unemployment figures for the country of Glamargan, the industrial county of South Wales (containing most of its population) are 84,500 of whom 4,500 are eighteen to twenty-one years of age. It is a matter of great congratulation to all concerned that so many of these clubs have been started and are developing in such an encouraging way.

Now, coming from the East, I must confess that even the spectacle of appalling poverty as it appears in this country does not seem so tragic or so extreme to an Indian eye as in a country where things are unorganized, where even the rudiments of industrial life have not spread over the country at large, and where poverty means complete helplessness and dependence on the vagaries of Nature or on charity, and on any chance developments that may occur to relieve distress. We have been for a very long time dependent (and still are almost wholly dependent) on agriculture. The system of our civilization is built on the village as the unit—unlike that in industrial Europe where the towns are like the brain-centres and are really the vital points of the whole of the social and industrial life of the race. So that when times of war and crisis occur, the first effort of each country is to get at these brain-centres—the big cities—and to attempt to crush them because by crushing them the whole nation—the whole country—can be completely ruined. India, however, has had its full share of natural and national calamities, invasions, pestilence, and exploitation of every kind; and yet—due to the diffusedly spread life of India's millions,—the amount of distress seems to have succeeded in completely paralysing our civilization. There is much to be said for basing one's civilization on the candid recognition of the soil, of the simple life, as the primary sources of human existence, and yet India is increasingly recognizing today that unless she benefits by the development of science, for bettering the conditions of human life through the application of modern systems of drainage and irrigation, and through electricity and so on,—we have no chance either of developing or of preserving our civilization in harmony with the modern age. The experiments that have been made in big cities like Bombay, Karachi and Amedabad have been indiscriminately imitative of the worst forms of industrialization in the West with the whole paraphernalia of slums and exploitation of labour, appalling working hours and completely inadequate methods of helping the workers in the amenities of insurance and medical help, and other essential needs of human welfare.

But fortunately, these experiments have not been, speaking generally from the point of view of India, either very significant or of great importance. They have hurt us by their power of mal-adjustment, but their evils have not penetrated the depths of our social texture. We are beginning now to realize that we have to adapt Western methods of production and distribution, the machinery of industrialization to the essential genius of India's agriculture civilization. As to how this adjustment best be made, we are not at all clear in mind; but it may well be (as Mr. Wells to me the other day) that India and other Eastern countries are in one way more favourably situated for making industrial experiments because of the fact that they can profit by the experiments, failures and the achievements, of the industrial technique in the West. India may proceed directly from the hand-loom to the electrified machine without having at to go through the coal and smoke stage with all the indignity and almost sub-human conditions that industrialization in Europe has more or less meant up to this day. There has been little to choose between primitive agrarian

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

conditions and the highly modern life of the slums. And yet it must be said that in Europe even evil has to reckon with movement so that there is always the prospect of better possibilities though these must be illusive and impermanent when they occur because of the unreality of their foundation in a disharmonious fabric of class inequality; while in the East, evils often take root and attain the dignity of fate immobility, which is hardly an attribute of life. The former explodes in wars, the latter revolves in an interminable round of misery and habitual chaos of petty contention. This is a larger aspect of the problem which we can now barely touch upon, but what is abundantly evident is that humanity has nowhere an exclusive monopoly of geographically isolated suffering or evils. One can only hope that the rich variety of common human misery may help us in better dealing with the problem of their eradication.

Looking at the conditions of the distressed areas, I often wondered whether the path to a rural solution of their problem did not lie in an understanding of the need of adjusting human life to the essential claims of kinship and co-operation with the soil. Here again, evidently, is a case for a better adjustment of life to industrial and agricultural conditions which cannot with impunity be maintained in their separateness. While the East has to master the movement of the machine, the West must learn to live closer to the durable basis of the earth, and come back to it for a new security of prosperity.

When I looked at the rolling Downs and the virgin fields, untilled and unused, whether belonging to the State or to individual landowners, I wondered why there was not that much-needed control over ownership of land which would make it possible immediately for the thousands of unemployed people in the valley to devote themselves to production of living wealth through intensive working up of the land. To a certain extent, I know, the land is used for the purpose of cattle-raising, and one hears increasingly of schemes of allotments. It seems to an Easterner that the path of sanity and well-being must evidently lie in that direction. Here are people with keen intelligence, with active minds and hands, waiting for a chance to be used. Here are families somehow maintaining their barest human needs of living through the dole, passionately looking forward to any opening that they can find of establishing their homes with security, and yet being unable to do so because of overwhelming social conditions and the tyranny of a dislocated industrial system. Overcrowding in houses, the feeling of complete despondency mixed with that very laudable spirit of pride and dignity which prevents the unemployed from airing his or her grivances, combine to produce acute tensions in the distressed homes, in the miserable minds of these humble and lovable people, which seem to be almost incurable if we have to depend purely on the maintenance of the present regime of the industrially mechanized civilization for a solution.

One comes up against such extraordinarily

A "Santa Claus" Workshop.
Putting the finishing touches to toys for X'mas at the Pentre Unemployment Centre

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

tragic facts as that of people with more families being compelled to live in smaller houses. It is only when the family is very small that they can afford a larger house, whereas when the family is large and really needs a bigger home, they have to go into even smaller houses in order to make it possible for them to pay the necessary rent. There is a complete lack of skilled occupations which would utilize the well-marked abilities of these workers. The industrial owners who reaped a rich harvest from an intense and short-lived prosperity have left these people after the flow of wealth had ebbed away, high and dry on the unworked soil, and retreated to their own offices in London and Sheffield and Mammon knows where else. There are one or two garden houses one finds where occasionally those profiteers who still have enough money to spare come with their friends for a week-end's revelry without dreaming of giving back some of the wealth which they had gained through the help of these thousands of honest workers who, through no fault of their own, are now left to the vagaries of circumstance.

I do not pretend for a moment that there is an easy solution for the complicated problems of industrialization and unemployment. Keen and able minds are tackling them in the most helpful and constructive manner all over the land, and the public conscience is awake to some of the inevitable evils of industrialization and of centralization of life in the cities and the wholly wrong emphasis that has been placed in recent times on the highly elaborated mechanism of life in Western cities. If the thinkers and sufferers direct their brains a little more to the reverse side of the problem, so to say, of agricultural civilizations trying to adapt their needs to modern possibilities and to the harnessing of Science for raising their standard of life, perhaps some indication of the happy golden medium can be found which may yet stabilize life more or less on the same kind of principles in the West and in the East. The Nazi movement has on its credit side an attempt to reach the soil in a scientific spirit of humanism; Italy has got some way towards the solution of the needs of earth-adjustments of their social structure; Russia, a blend of the East and the West, is a seething laboratory of experiments on every level, but being more Siberian than European, their civilization has first swung over to the imitative extreme of industrialization for hope of power and prosperity. All over the world today experiments, costing life and wealth and sanity, are being made unabated to the limits of ardour and ingenuity, to evolve a new technique of human existence harmonized with the foundations of earth-life. The solution, however, cannot be attained by zealous or militant exclusiveness of nations. Human civilization must solve its fundamental problems in the knowledge of basic unities and in co-operation. At each point, wherever we turn, in our agricultural and industrial problems, again and again we are faced with this inescapably interlinked background of our present human civilization.

The Maes-yr-haf Colony has tackled the local problems of unemployment from all the immediately necessary points of view. As already described, they have opened clubs or rather, inspired the workers to open their own clubs, all over the Valley. There are many other settlements which have done good work for a very long time. The Maes-yr-haf Settlement which is comparatively new, is providing first-class trained workers to explore the possibilities and the problems of the unemployed, and while dealing with their social life they are in a great measure providing skilled training in handicrafts, (the Weaving Department of Maes-yr-haf, with its fine success in reviving Welsh and Celtic designs is especially impressive), in carpentry, and other forms of skilled work which would enable many men and women in the neighbourhood to utilize their talents. Above all, the settlement is providing these simple and suffering people with that faith in life, that hopefulness of better prospects in the future, and that understanding of some of the abiding truths of human existence, which no circumstances of material world can affect. This goes beyond the immediate necessities of the people and yet there can indeed be no solution of any even our daily problems unless we have learnt to know them in the light of deeper humanity and with the clarity of sympathetic and precise intellectual cognition.

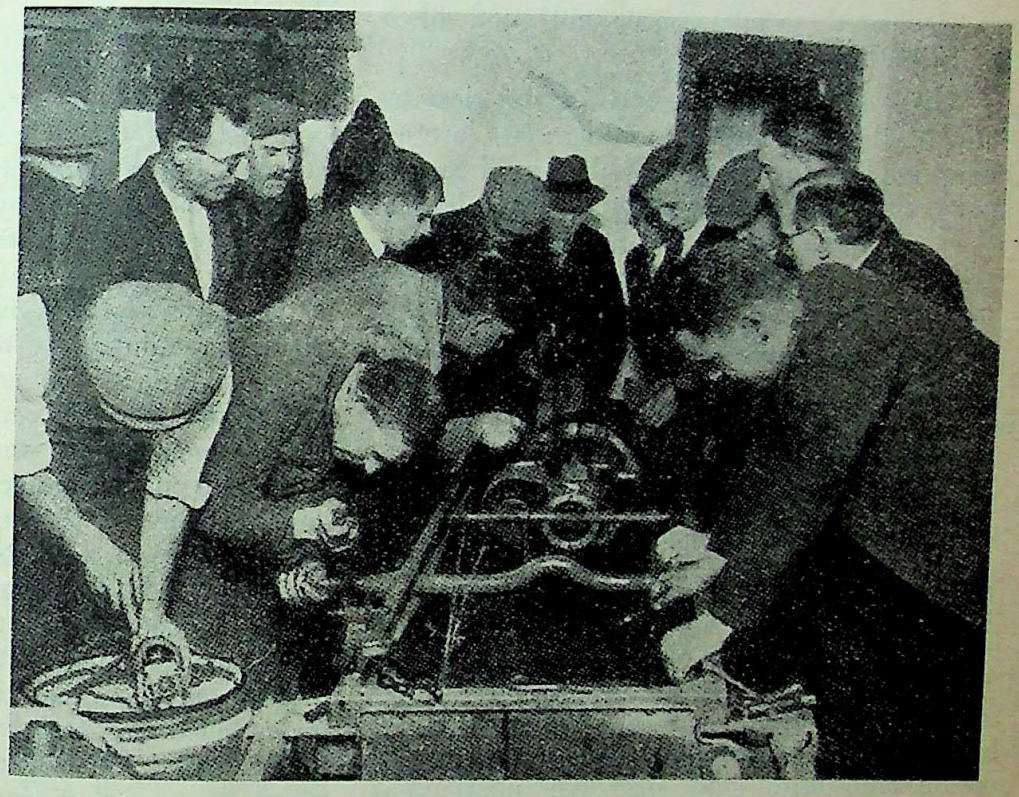
I have come back with a sense of de-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

happiness and inspiration from this Settlement, having seen with my own eyes what splendid work is being done there. Mr. Miles Davies and other friends of the Settlement took care to acquiant me with the varied activities of that area and provided me with a wealth of economic facts and knowledge of local social conditions. I was able to come in close touch with unemployed homes. The unemployed, as usual, are men who are used to honest work and have a commonsense way of dealing with facts. Dire distress has widened their range of sympathies even more, so that they begin to feel today that their distress is not something special and peculiar to themselves, but is a part of the general effect of disintegration of the social, political and industrial machinery which prevails all over the modern world. The lack of control over distribution and production, the possibility of exploitation and profit, the attitude of somehow "muddling through things" in the hope that some good results will somehow ensue, have landed them in a state of living burial, just as it has brought complete cessation of life to millions at one stroke during the War. These are all the inevitable effects ef an unorganized scheme of industrial and social life: lack of control, lack of sympathy, and dependence on mere technique and machinery to do the things which can be done by them only when it is the mind which is using the machinery and not *vice versa*.

I found in talking to members of the local "Dom Club" (one of the best-known clubs of the neighbourhood) how sympathetic they were towards the starving peasants in India. We all realized in a short time that, whether it was a foreign race exploiting a weaker one, or people in power exploiting labour at home, the results were very much the same; and the nature of the evil is not very different in either case. What we are up against, therefore, are evils which are a menace to humanity in the East as well as in the West. It is our common fight against exploitation, lack of sympathy, and the relentless greed and possessiveness of the powerful.



Unemployed's New Venture

After a term of tuition under a local engineer the members of the Ystrad Unemployed Club are putting their theory into practice and building a motor-car. The photograph shows members at work

At the end of our Sunday evening gathering the unemployed miners spontaneously gave me a message to carry home to my own people in India. Here are some lines from it:

"We would like you to know that our expressions are accepted and shared by all the thinking section of the working class of the country. It can be said that we, whilst sharing in the proceeds of world plunder, were

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

guilty of thoughtlessness regarding the conditions of those people whom we, with our Imperialist education, accepted as subject races. Altered conditions have forced us to think from a different angle; we have rid ourselves of the 19th century ideology—we can no longer be described as unstable and mob-minded in our attitude to our fellow-beings. Our minds have been disabused of the real mission of our national heroes of that period; they were conjured up to be all that was chivalrous, and whose whole lives we believed were dedicated to take peace and goodwill to all mankind.

"We are no longer dazzled by the glorious picture of mere Empire-building; we are no longer deluded by race prejudice, and cannot be depended upon to assist in the exploitation of any people in any part of the world.

"The name of Mahatma Gandhi is revered by all decent people in this country. His policy has perhaps not been understood, but he should know that which is best for India under the circumstances.

"The working class of Britain have everything in common with you; they are also being called upon to make sacrifices for greed by the same forces that have caused such suffering all over the world.

"There are developments to indicate tremendous changes in the character of Society; it must be, it shall be based on humanity and brotherhood, where nation with nation, land with land shall live unarmed as comrades, when every race shall be liberated to work out their own destinies in co-operation.

"Our message concludes by bidding the people to have patience and courage a while longer. The realization of their ambitions cannot possibly be delayed much longer. God speed the day—is the sincerest wish of,

Yours fraternally,
THE DON CLUB."

I shall certainly feel happy to tell my countrymen of this deep love which English men and women, so many of them, cherish in their hearts for their brothers and sisters in the East. Let us realize very clearly that it is not the peoples of the world who have anything against each other; given the proper opportunities, the normal possibilities of contact, it would be inevitable that they should discover their affinities and respect their differences. But between the peoples of the world stands the formidable machinery of national Governments who build walls between man and man and drive the peoples of the world into wars and into sub-human conditions of living. It is the nations which seize hold of the minds and the bodies of the people and whether a country is technically free or not, the lot of the citizens under such conditions is that bordering on slavery and serfdom.

The memory of the beautiful woods and green hill-sides glimmering in a summer afternoon remains with me, blended with the beautiful experiences of my contact with the members of the Settlement at Maes-yr-haf and the Malthouse: and at the very heart of all this remains imperishably in my mind the kindly and sympathetic faces of the many unemployed men and women with whom I had the honour to associate during my stay in South Wales. Suffering shared together, I felt, is one of the strongest of human bonds, but surely our pain is a prelude to that greater fellowship of freedom which humanity will create through the growth of knowledge and consequent readjustment of human and natural resources.

HOW MANY MUHAMMADANS PAY INCOME-TAX IN BENGAL

By JATINDRA MOHAN DATTA, M. SC., B. L.

THE Muhammadans form 55 per cent of the population of Bengal. On that ground they demand 55 per cent of services under the Government or under the Calcutta Corporation and other local bodies; they demand 55 per cent representation on the local bodies, in the University, assuming that the population strength is the only criterion. Let us see how many of them put anything into the coffers of the State for the general well-being by way of Income-Tax.

In the Bengal Census Report for 1911 subsidiary Table XI, castes of income-tax assessees are given at p. 586. We give below so much of it as is relevent for our enquiry

Income from—

Castes	Profession	Manufactures	Commerce & Trade	Owners of Property	Total
Maha Mussalman (unspecified)	—	—	25	—	25
Sayed	209	59	2,373	121	2,762
Sheikh	6	—	13	5	24
Total of all Mussalman groups	8	17	323	18	366
"Others"	223	76	2,734	144	3,177
Hindu Castes	124	137	1,111	208	1,580
Grand Total	(figures not given in this extract)				
	3,146	588	17,761	1,359	22,872

That the "others" do not include any Mussalmans will appear from a perusal of the Table, and from the context. Thus in 1911, the Muhammadans formed some 13 or 14 per cent of the income-tax payers. At that time Rs. 1000 was the taxable minimum.

In the Bengal Census Reports of 1921 and 1931 no such comparative figures of income-tax payers are given. But an estimate of the relative proportion is possible from the 1921 figures. In Table XX showing the distribution by Religion of Workers and dependents in different occupations, at p. 368 of the 1921 Report we find the number of "Persons living on their incomes" by communities. We give below the relative entries:

Distribution by Religion

Hindus	Muslims	Christians	Buddhists	Animists	Others
30,633	4,643	1,784	84	21	255

Total number of workers and dependents 37,420

All persons living on their incomes are not assessed to income-tax. Only these who have an income of Rs. 2000 or over are taxed (the minimum is now temporarily reduced to Rs. 1000). Further, agricultural incomes are not charged. Hence the figures quoted above give the upper limit of the possible number of assessees; and the Muhammadans form 12·4 per cent of such persons.

In the Census Report of 1931, the corresponding Table has been omitted—why? Sir Abdel Karim Ghuznavi, who was in charge of the Census Department and whose son has contributed paragraphs to the Census Report, can best answer the question.

The territorial distribution of these 37,420 persons is in Calcutta 11,450 and in the rest of the province 25,970.

From the Bengal Administration Report of 1920-21, we find that

> "the number of persons assessed to income-tax during the year was 37,598". "Only one person in 2,779 of the population outside Calcutta paid income-tax, and the average amount paid by each assessee was Rs. 174. In Calcutta, which for income-tax purposes includes the town of Howrah, the proportion was one person in 57 of the population and the average tax paid by each assessee was Rs. 2,139".

The population of Calcutta and Howrah was in 1921, 9,07,851 and 1,95,301 respectively. So the number of the income-tax assessees works out to 19,353. Having regard to the fact that many persons, who live in the metropolitan districts of 24-Parganas, Hooghly and Howrah, such as daily passengers &c., are assessed at Calcutta, there is sufficient correspondence between these figures and the territorial distribution according to the Census of 1921 to warrant the assumption that all those who live on their incomes generally pay income-tax.

We may, therefore, accept the relative proportion of the Muhammadan to the non-Muhammadan income-tax payers as that of the number of the Muhammadans "living principally on their incomes" to the rest of such persons under that head i. e., 4,643: (37,420-4,643)=32,777 or some 12 per cent of the total.

In 1927 the number of the Muhammadan and the non-Muhammadan (over 95 p. c. Hindu) Municipal voters of Calcutta was 9,586 and 57,493 respectively. In 1926, the respective numbers of Council voters were 4,446 and 32,619; and those of the Assembly voters 1,700 (an estimate) and 13,761. The estimate is based on a proportionate reduction in the number, as in the case of the non-Muhammadans

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

(for whom alone the absolute figures are available) an assumption greatly in favour of the Muhammadans, it being generally admitted that the curve showing the distribution of wealth, is steeper among them. (See *Mysore Economic Journal*, April 1934, p. 199.)

The respective main qualifications for a Municipal, Council and Assembly voter are payment of Rs. 12, Rs. 24 and Rs. 60 as taxes. Those who pay Rs. 60 as Municipal taxes must be the owner of premises of an annual value of over Rs. 300. Such an owner may be expected to have a gross income of over Rs. 2000 from all sources, taking the notional value of the house occupied by him to be some 15 per cent of his total income, as is usually done in demographical calculations.

So the respective number of income-tax payers in Calcutta may be taken to be proportional to the number of the Assembly voters, *i. e.*, 1600 Muhammadans to 13,761 non-Muhammadans.

In the mofussil of Bengal, all the income-tax payers may be taken to be congregated in the urban areas, especially as income-tax is not levied on agricultural incomes.

The number of the Muhammadan and non-Muhammadan urban Council voters outside Calcutta are 37,848 and 121,335 respectively. (The figures given in the Command Papers showing the Results of Election are generally smaller, and against the Muhammadans, for very many urban voters are included in rural constituencies.) In the absence of better materials, if we assume that the number of the Muhammadan and the non-Muhammadan urban Council voters is reduced in the same proportion as the number of the respective Council voters to the Assembly voters, the estimated numbers of urban Assembly voters become 4,700 Muhammadans, and 30,500 non-Muhummadans. (This again is greatly in favour of the Muhammadan, as the curve of wealth is steeper in his case.)

The main qualification of an urban Assembly voter is payment of Rs. 5 as taxes. In 1926, 76 out of 114 municipalities levied a "Tax on Persons" *i. e.*, an indirect income-tax on circumstances and means. At the usual rate it means a gross annual income of Rs. 500 and a tax of Rs. 20 would mean an income of Rs. 2,000—the ordinary taxable minimum of income. At this level, the estimated numbers of Muhammadan and non-Muhammadan income-tax payers become 2,500 and 21,250,

The respective totals of the estimated Muhammadan and non-Muhammadan assessees are 4,100 and 35,000. The grand total is 39,100. In 1926-27, the number of income-tax assessees in Bengal was 42,036. As we have made several assumptions, we find sufficient correspondence between the two figures to warrant us in thinking that we are right. The Muhammadans are some 10 per cent of the total of income-tax assessees.

In 1911, the Muhammadan income-tax payees formed 14 per cent of the total by actual count. (Then the taxable income was Rs. 1,000.) In 1921, they were estimated to be 12 per cent; and in 1926-27 they were estimated to be 10 per cent. As all these percentages sufficiently agree with each other we are not far from the truth. Taking the mean we take the percentage of the Muhammadan income-tax payers in Bengal to be 12 per cent.

TO MY MOTHERLAND

Blessed am I that I am born to this land
and that I had the luck to love her.
What care I if queenly treasure is not in her store
but enough is for me the living wealth of her love.

The best gift of fragrance to my heart
comes from her own flowers
and I know not where else shines the moon
that can flood my being with such loveliness.
The first light revealed to my eyes
was from her own sky
and let the same light kiss them
before they are closed for ever.

RABINDRANATH TAGORE

A PEEP INTO THE EARLY HINDU ARCHITECTURE

By Prof. P. K. ACHARYA, I. E. S., M. A. (Calcutta), Ph. D. (Leiden), D. Litt. (London),
Head of the Oriental Departments, Dean, Faculty of Arts, Allahabad University

THE idea of architecture in all countries and in all historical times has been associated, somehow, with public buildings, especially churches, mosques, temples and in some cases with forts and palaces of certain artistic shape known as style. In histories of architecture no special reference is found either to the internal arrangement of these public buildings of infrequent use or to the residential buildings and their internal arrangement of rooms where the most part of life is spent. When we speak of the Saracenic, Gothic, or English architecture of different periods the picture which arises in our mind is not of a residential house of the Muslims or Christians, but of the Mosques and Churches of certain external shapes and doors, windows, and arches of certain styles in palaces of Kings and chiefs and nobles. To exclude from the purview of architecture the dwelling houses, especially their internal arrangement, where we are born and brought up, where we get the joy and sorrow of living, and where we ultimately die, would be to reduce architecture to a mere study of comparatively little practical utility and importance for a vast majority of civilized people. This was, however, not the case with the Hindu architecture, which is known by the significant title of *Vāstu-Śāstra* or science of dwelling houses. The historians of Hindu architecture, on the analogy of Muslim and Christian architecture, have confined themselves to the description and discussion of the recent Hindu, Buddhist and Jain temples and the scanty remains of some dilapidated forts and palaces. In fact, no archaeological remains of dwelling houses are available for those historians who depend mostly upon such remains and do not consider seriously such evidences as can be gathered together from general literature and purely architectural texts numbering a few hundreds. The details in those architectural treatises as well as in Hindu and Buddhist Scriptures, epics, Puranas, Agamas and other literature are of such a nature as can hardly be expected from mere fanciful imagination.

The long controversy between Fergusson and Rajendralala Mitra on the existence of burnt brick edifices in the Vedic period is a matter of little worth in presence of the discoveries of cities and buildings built of stone and burnt brick at Mohenjodaro and Harappa, which must be placed long before the Vedic period. These discoveries have fully justified the conclusion (of Rajendralala Mitra) that the Vedic people were not ignorant of stone forts, walled cities, stone houses and brick edifices. At the period of Buddhist scripture the subject of domestic architecture became of such popular importance that Buddha found it necessary to conclude a religious discourse with a long lecture on architecture stating,

> "I allow you O Bhikkhus, abodes of five kinds—Vihara (monastery), Ardharyoga or Suvarna-Vangagriha (gold coloured Bengal house or Bungalow), Prasāda (long-storied mansion), Harmya (storied edifices), and Guhā" (cave houses)."*

These are expressly stated to be 'abodes' or dwelling houses, not temples. And the residence of a mere devotee (upasaka) contains a sleeping room, a stable, a tower, a one-peaked building, a shop, a *boutique*, a storeyed house, an attic, a cave, a cell, a store room, a refactory, a fire room, a kitchen, a privy, a place to walk in, a house to walk in, a well, a well house, a weapons-room (yantragriha), a lotus pond, a pavilion, and a bathing place for hot sitting baths. (Mahavagga III. 5. 6. 9.)

These hot-air baths are fully described in the Vinaya texts (III. 105-110, 297):

> "They were built on an elevated basement faced with brick or stone, with stone stairs leading up to it, and a railing round the verandah. The roof and walls were of wood, covered first with skins, and then with plaster; the lower part only of the wall being faced with bricks. There was an ante-chamber and a hot room, and a pool to bathe in. Seats were arranged round a fire place in the middle of the hot room; and to induce perspiration hot water was poured over the bathers. ...After the bath there was shampooing and then a plunge into the pool."

This advanced state of modern scientific achievements at such an early time in India has naturally puzzled the wit of those who can hardly believe in the ingenuity of early Indians. Thus Mr. Rhys Davids observes that "it is very curious to find at this very early age at the Ganges valley a sort of bathing so closely resembling our modern Turkish bath." "Did the Turks," he asks in utter confusion, "derive this custom from India?" (P. 74).

> "In the King's palace there was accommodation also for all the business of the state, and for the numerous retinue and the extensive harem."
>
> "The entrance to the great houses was through a large gateway. The gateway led into an inner

* Vinaya texts, Mahavagga 1. 30. 4, pp. 173-174, Chullavagga, VI. 1. 2, p. 158.

Digitized by Arya Samaj Foundation Chennai and eGangotri

courtyard round which were chambers on the ground floor. And above these chambers were a flat roof...where the owner sat usually under a pavilion, which answered the purpose at once of a drawing-room, an office, and a dining hall."

"The inner chambers of larger house were divided into three classes called Sivika-garbha (square halls), Nālikāgarbha (rectangular halls) and Harmya-garbha (state-rooms or round halls). The blessed Buddha says, 'I allow you, O Bhikkhus, covered terraces, inner verandahs, and over-hanging eaves.' Storeyed buildings were supplied with verandahs supported on pillars with capitals of elephant heads. There were stairs built of brick, stone and wood. They were furnished with balustrades. Each of the flights of stairs is stated to have posts or banisters attached to it, cross bars let into these banisters, and either a head-line running along the top of the banisters or a figure-head at the lower end of such a head line."

Doors were furnished with

"door-post and lintel, with hollows like a mortar for the door to revolve in, with projections to revolve in those hollows, with rings on the door for the bolt to work along in, with a block of wood fixed into the edge of the door-post, and containing a cavity for the bolt to go into what is called monkey's head, with a pin to secure the bolt by, with a connecting bolt, with a key-hole, with a hole for a string with which the door may be closed, and with a string for the purpose." (Chullavagga VI. 3.:8 ; 2. 1 and 17.)

"Windows of three kinds were made with railings, lattices and slips of wood as in Venetian blinds. The shutters were adjustable and could be closed or opened whenever required."

Five kinds of roofing are mentioned—brick roofing, stone-roofing, cement-roofing, straw-roofing, and roofing of leaves. The roof was first covered over with skins and plastered within and without; then follow white-wash, blocking, red-colouring, wreath-work, and creeper work.

The floor was coloured and with a view to removing dampness gravel was spread over it.

The epics also refer to dwelling houses in addition to temples and palaces. It is stated in the Rāmāyana (1. 5. 10-15) that

"The temples in the city of Ayodhya were as resplendent as the sky. Its assembly halls, gardens and alms-houses were most elegant ; and everywhere were arranged extensive buildings. The steeples of houses were as resplendent as the crests of mountains and bore hundred of pavilions... The rooms were...exquisitely gilt and decorated and seemed as charming as pictures ; and they were so arranged that men could pass from one room to another without perceiving any inequality (in the floor)."

The guest houses built in connection with the royal sacrifice (Rājasuya) are described in the Mahābhārata (B. II. c 34, A. S. rd. I. p. 354) :

"Those houses were lofty...most charming in appearance, and provided with excellent furniture. They were surrounded on all sides by well-built high walls of a white colour. The windows were protected by golden lattices and decorated with a profusion of jewellery. The stairs were easy of ascent...The houses were white as the swan, bright as the moon, and looked most picturesque even from a distance of four miles. They were free from obstructions, provided with doors of uniform height, but of various quality, and inlaid with numerous metal ornaments. They had by them charming lakes and ranges or ornamental plants."

"In the cities described in the epics special palaces existed for the King, the princes, the chief priests, ministers and military officers. Besides these and humble dwellings, the larger houses being divided into various courts, there were various assembly halls, courts of justice, and the booths of small traders with goldsmith's shops, and the work-places of other artisans."

Apart from such casual references found in all the Puranas, nine of them have treated the subject of arthitecture more systematically and have dealt with the technical details of plans, measures, classifications, pavilions, halls, storeys, steeples, etc. In the Matsya-Purāna pillars are divided into five orders, as in the western system and their component parts into eight mouldings exactly like those of the Greco-Roman orders. In this Purāna pavilions are divided into twenty-seven classes according to the number of pillars they are furnished with and may be triangular, quadrangular, octagonal, sixteen-sided, crescent-shaped, and round or circular. Buildings proper are divided into forty-five types under five plans, quadrangular, rectangular, round, oval and octagonal in the Agni and Garuda Purānas. In the Matsya and Bhavishya Purānas as well as in the Brihat Samhita buildings are divided into twenty types and described with minute details. Thus a type of building called *Meru* is stated to be fifty cubits broad, and is furnished with a hundred cupolas (Sringa), sixteen storeys, and many variegated steeples.

Similarly the extensive literature known as the Agamas deals with the subject in greater and more technical details. The Kāmikāgama devotes sixty chapters out of a total of seventy-five to architecture and its treatment of the subjects can hardly be surpassed by that of an architectural treatise. Just like a Vāstu-sāstra it begins systematically with the preliminary matters, such as testing and preparation of soil, selection of site, scheme of measurement, and orientation of buildings. Buildings are classified under twenty types and described with highly technical details of styles, shapes, genders, materials, situation and ultility.

The great popularity of the subject has induced the authors of other classes of literature also to deal with the subject. Thus we find a more or less detailed account of it but without technical details in the Arthsāstra, the Sukranīti, the Harsha-charita, the Rajatarangini, even in the astronomical works (as the Garga-sambhita, Lilavati, Suryasiddhanta, etc.), poetical works

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

(e.g. Vikramorvasi, Uttara-Rama-charita), romances, dramas and medical works.

So far as the avowedly architectural works are concerned it would be impossible to refer here to all matters discussed therein for the benefit and direction of the practical builders. The standard work, Mānasāra, deals with the subject of architecture and its hand-maid sculpture exhaustively in seventy chapters. The first eight chapters are introductory wherein full accounts are given of the system of measurements, the necessary training and qualifications of the different classes of architects, the testing of soil, the selection of site, planning, designing and staking, finding out of cardinal points for orientation of architectural objects, and astronomical and astrological calculations. In the next forty chapters are given all the architectural details of various kinds of villages, towns and forts; joinery, dimensions, and foundations not only of buildings but also of the villages, towns, tanks, etc.; pillars and their component parts such as pedestals, bases, shafts, capitals, and entablatures; storeys varying from one to twelve in ordinary buildings and to seventeen in gatehouses; the artistic arrangement of mansions in as many as ten rows; compounds and courts of edifices, their gatehouses, their attached and detached buildings; the doors, windows and other openings; the stairs and staircases for buildings, hills, rivers, etc.; the courtyards, quadrangles and arches; royal courts, palaces, thrones, and crowns; cars, chariots and other conveyances; articles of furniture such as bedsteads, couches, tables, chairs, wardrobes, baskets, cages, mills, lamps, various dresses and garments; and the personal ornaments such as various chains, armlets, bracelets, head-gears and foot-wears. In the concluding twenty chapters are given the sculptural details of idols of deities of the Hindus, the Buddhists and the Jains, statues of great personages, and images of animals and birds.

No proper elucidation of all these various subjects is possible here. The plates may give some idea. Of the preliminary matters attention may be invited to two things which have been specially emphasized in Hindu architecture. In the thirty-two illustrative site-plans, the area of the site selected for a village, town, fort, harbour, and residential buildings, after a thorough examination of the soil, the wind-direction, the humidity, salubrity of the air, and the sloping, e.g. for drainage, and the general aspect, is divided into as many as 1024 quarters (each one of which are named after the quarter lords numbering some forty-five). The importance of this device is that the exact situation of a particular spot where a certain structure is to be built can be most accurately ascertained. No other method can point to a spot with so much accuracy. The sites admit of all possible shapes, quadrangular, triangular, circular, semi-circular, etc. Before referring to the other preliminary matters, namely, the aspect and orientation which together with the scheme of arrangement of rooms in dwelling houses will be briefly elucidated in conclusion, it is proposed to refer here to the foundation to which the modern builders do not seem to have paid sufficient attention.

In the Mānasāra the foundation is classified under three heads, namely, for buildings; for villages, towns, cities, forts, etc.; and for cisterns, wells and tanks. So far as the modern Indian villages and towns are concerned, there is no trace of any proper foundation being ever laid. The recent earthquake areas in North Bihar where many villages and towns have been demolished do not show that in those settlements any foundation was ever laid for the whole areas. In the same areas the destroyed cisterns, wells and tanks also do not show any proper foundation. In fact, it is almost a general practice to dig the well and complete it by a sort of wall for the sides only, leaving the bottom more or less unattended to for supply of water like the tube-wells. In case of tanks there is no side-wall even. The Mānasāra has prescribed foundation for wells and tanks as deep as the joined palm of man (narāñjali). For villages, etc. that is for *grāma, nagara, pura, pattana, kharvata, Koshtha, Kola, etc.* foundations are stated to be of five kinds, and vary according to the size of the construction. The foundation of buildings is divided into two classes, as it belongs to human dwellings and to temples and other public buildings, for the latter of which a stronger foundation is prescribed. This would account for the lesser destruction of Hindu temples in North Bihar by the earthquake.

> "The best ground selected for foundations is excavated to the depth of man's height with uplifted arms. The bottom of the pit thus excavated is stated to end in rock or water. The depth of the excavation should be equal to the height of the basement. The four corners and sides, built of brick or stone, are stated to be equal. The pit is first filled with sand and water, which are closely pressed and hardened by means of (wooden) hammers shaped like the elephant's foot. From the bottom should be removed all water if there remains any. The floor of the excavation should be consolidated with seven kinds of earth, namely, from rivers, mountains, anthills, crab-holes, sea-shores, tops of trees, and cow's hoofs. Upon this earth deposit should be further deposited the roots of white lotuses, blue lotuses, water-lily, *saugandhi* grass, and Kākali (ganja) plant. Upon this should be placed in order the eight sorts of corn, namely, Sāli, brihi, kodrava (paspalum scorbi cultum), Kangu (panic seed), mudga (phaseolus mungo), Māsha (bean, phaseolustradiatus), Kulattha (dolichos uniflarus), and tila (sesamum indicum). Upon this finally depositing the other usual materials (concrete etc.) the foundation should be raised up to the upper surface of the excavation. The twelve kinds of dimensions of excavation to suit buildings of

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

one to twelve storeys are specified with various alternatives."

The plinth proper is also stated to vary in accordance with the number of storeys and size of the building. Pillars of five main orders are erected in suitable places. Halls of a thousand columns are also described. Walls which admit of various thickness and shapes are stated to be both solid and hollow, and external and internal containing paintings, doors, windows, lattices dormer windows, sky-lights and other openings are specified with details of measurement and designs even for the kitchens and privies. Steps and staircases of various designs including circumambulating ones are stated to be both fixed and movable. The floor is stated to be solid all over and coloured and decorated.

The roofing needs more than a passing reference. This is a matter like the foundation which distinguishes a cave-house from a free-building. The primitive people living in caves like animals to protect themselves from the inclemency of weather did not concern themselves either with the stability based on foundation and roofing or for the proper situation and thickness of the walls. The natural rocks supplied the models of all the three kinds of roof, namely, flat, pent and spherical. A scientific calculation of the strength of foundations, supports and walls, and roofs became unavoidable as soon as a free-standing building after the model of the caves at first was attempted by skilled men. The natural cementing of the layers of rocks must have supplied the idea of erecting walls by placing stones at first and bricks later on, one layer upon another, joining by concrete as was the case with the rocks. Thus, incidentally, stone and brick-built dwellings must have preceded the wooden and straw buildings.

Although the spherical roofing is the highest development in architecture both from the scientific and artistic point of view yet flat-roofing for the tropical countries like India is the most popular both in congested cities like Calcutta and in the country-side as it supplies an open-air space. The corrugated iron sheet which has been manufactured and introduced by greedy merchants for the roofing of dwelling houses fits in both for flat and pent roofs. The poor people of Bengal, who live on diets on which, it has been authoritatively stated, even rats cannot live long, have found it very convenient to build their houses with corrugated iron sheets both for roofing and walling upon wet earthen floor. The inside of these houses, the surroundings of which spread unbearable smell of jute-plants, and corns, and cow sheds, is like hell: it is sweltering in summer, leaks in rainy season and bitterly cold in winter. Who is responsible for this criminal device? Who should remove this widely spread practice and the appalling ignorance of its baneful effect?

The Mānasāra has described the roofing in great detail. It is stated to be built in flat, pent or spherical shape, not with corrugated iron sheets, but with wood, brick or stone. The Buddhist literature has suggested straw-roofing also, which is certainly much more salubrious than the corrugated iron sheets, which however last longer and are less ignitable. The Mānasāra has suggested paintings for the ceiling also.

The houses thus built comprise rooms which are luxuriously furnished* and are stated in all architectural treatises on Hindu architecture to be arranged in accordance with a definite principle. The Mānasāra has devoted a large number of chapters to articles of furniture and a detailed account of thrones, etc. The following particulars are supplied by the Buddhist canonical texts. . . .

> "Articles of furniture, which form an important part of the architectural subjects are also described elaborately in the Buddhist list. Benches were made long enough to accommodate three persons. The bedstead (pallanka) or divan was a separate piece of furniture. Large couches (Asandi) or chairs seem to have been important articles of furniture. Couches covered with canopies are also mentioned. Mention is made of a large variety of chairs, namely, rectangular chair (asandaka), armchair, sofa or sattango, sofa with arms to it, state chair (bhaddapitham), cushioned chair (pithika), chair with many legs (amalaka-vanika pitham), leaning board (phatakam), cane-bottomed chair (kochchham) and straw-bottomed chair. Mention is also made of the litter or the sedan chair."

Valuable carpets, rugs, pillows, curtains and such other luxurious decorations also are elaborately described. Thus mention is made of

> "coverlets with long fleece, conterpanes of many colours, woolen coverlets, white or marked with thick flowers. Mattresses, cotton coverlets dyed with figures of animals, rugs with long hair on one or both sides, carpets inwrought with gold or with silk, large woolen carpets such as the nauch girls dance upon, rich elephant housings, horse rugs or carriage rugs, panther or antelope skins, large cushions and crimson cushions."

Pillows are of various kinds; they are stated to be of both "the size of a man's head" and half "the size of a man's body." The Buddha allows the Bhikkus "to comb out the cotton, make the cotton up into pillows if it is of any of these three kinds—cotton produced from trees, cotton produced on creepers and cotton produced from potaki grass." The bolsters made for the use of high officials were of five kinds, as they were stuffed with wool, cotton cloth, bark, grass or leaves. There were also coverlets for them. The smaller articles like the floor-cloth, mosquito curtains, handkerchiefs and the spittoon did not escape the notice of the then house-decorators.†

Two small texts, the *Vāstutatva* (published

* See the writer's *Indian Architecture*, pp. 15-16.

† For detailed references see the writer's "*Indian Architecture*" according to the Mānasāra. Pp. 15-16.

from Lahore) and the *Grihavāstu-pradipa* (published from Lucknow), which have apparently drawn upon a larger and more comprehensive treatise like the Mānasāra supply the plan and arrangement of a sixteen-roomed dwelling house with the courtyard in the middle, which is typical and admirably suited to a middle-class family. According to this plan there should be in the north-east (1) the family chapel; in the east (2) the room for keeping all things, (3) the bath-room, and (4) the room for churning milk in; in the south-east corner (5) the kitchen; in the south (6) the Britashagriha (? washing room), and (7) the lavatory or latrine; in the south-west corner (8) the library room; in the west (9) the room for private study, (10) dining hall, and (11) the weeping room for receiving by the ladies the newly arrived relations; in the north-west corner (12) the granary; in the north (13) the bed room, (14) the store-room and (15) the room for the invalids (lit. Medicine).

It should be noted that in this plan the house faces the north, where the best residential rooms are located. The rooms in the south and the east are those which are not frequently required for residence. Here north is the best direction and the west is the next best, the east being the third in order and the south the worst. This plan is suitable for places in western and northern India, as indicated by Lahore and Lucknow wherefrom these texts are published, and where the northern and western wind from the Himalayas is the most salubrious.

Another similar text, the *Vāstu-prabandha* (II. 25-26) stated to be a compilation supplies the plan and arrangement of a smaller house with eight rooms. According to this plan there should be in the east (1) the bath-room; in the south-east (2) the kitchen; in the south (3) the bed room; in the south-west (4) the library; in the west (5) the dining hall; in the north-west (6) the room for the domestic animals; in the north (7) the store-room; and in the north-east (8) the family chapel.

In this plan the lavatory is missing, and apparently some public latrine, closed or open, is intended to be used. Here the bedroom is located in the south, indicating the southern aspect of the house, which is suitable for southern and eastern provinces where the healthy south wind blows from the southern seas and the Malay hills. The Matsya-Purana (Chap. 256, vs. 33-36) supplies a curious plan, which is also adopted in an architectural compilation, *Silpa-śastra Sara-Samgraha* (II. 24-28). According to this rooms are all built in the corners, the four main directions, north, east, south and west being left entirely vacant. Thus there should be built in the north-east corner (1) the family chapel, and (2) the bedroom; in the south-east corner (3) the kitchen, close to it (4) the room for storing water; in the south-west corner (5) the room for collecting the rubbish, beyond that and outside the house (6) the slaughter house (or confinement room) and (7) the bath-room; in the north-west corner (8) the granary and the store-room combined, and beyond that and outside the house (9) the workshop or the office room.

This plan is specially stated to bring peace, prosperity and health for the house-holders. This house faces the north-east where the bedroom is situated.

The Agni-purāna (Chap. 106, vs. 1-12, 18-20) makes provision for residential houses in cities in particular and recommends the four typical plans, namely, rooms being built covering the four sides with the courtyard in the middle, rooms being built on three sides and the fourth side in continuation of the courtyard being left free for the passage of light and air; rooms being built on two sides only, leaving the other two sides vacant, and the rooms being built on one side only, apparently without any courtyard, the purpose of which is supplied by verandahs and balconies both in the frontside and backside. The arrangement of rooms is illustrated by the plan of an eight-roomed house. According to this plan there should be in the east (1) the library or strong room (lit. for sree, learning or wealth); in the south-east (2) the kitchen; in the south (3) the bedroom; in the south-west (4) the room for weapons; in the west (5) the dining hall; in the north-west (6) the granary: in the north (7) the room for storing all things; and in the north-east (8) the family chapel.

This is also a plan with the southern aspect. The *Kāmikāgama* (XXXV. 177-191) also describes a house with southern aspect, but comprising some thirty rooms. This Agama which is directly indebted to the Mānasāra prescribes like its original alternative quarters for the same room. The Mānasāra appears to be an all-India work and does not prescribe any one aspect either for a house, or a village or town. It has, however, divided India into ten architectural provinces for which special directions have been given.

So far as the aspect and orientation are concerned the Mānasāra has discussed in great detail the exact situation of residential and public quarters in eight village schemes, eight town plans and fifteen fortified military establishments. The plates may supply an idea. A matter which deserves notice of the modern builders is the caste or sectwise partition of residential quarters. It cannot be denied that there is a special advantage of housing the people of the same caste, rank, profession, means and taste in the same quarter. Another important point to note is that in shopping centres it is directed that the houses should be built on one side of the road only, like the Calcutta Chowringhee Road. The object is to avoid congestion. The free passage of air is provided for by the straight and broad

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

streets and lanes running from one end to the other.

The internal arrangement of rooms in small dwelling houses is essentially like those described above. In the large edifices, palaces and mansions the buildings of various storeys are artistically arranged. There are stated to be one to seven enclosures in palaces of Kings of nine orders. These enclosures are surrounded by walls each of which is furnished with a large gateway known as the *Gopuram*. In the innermost court (antarmandala with the gateway called the Dvārasobhā) are erected the residential palaces of the King, queens and princesses, and would be analogous to the Muslim harem. In the second circle (antanihara, with the gateway called Dvāra-sālā) are built the edifices for the crown prince and other princes, royal priests, ministers and such other people. In the middle court (madhyamāhārā, with the gateway Dvāra-prāsāda) are built mansions for council halls, office rooms, and quarters for the resident members of the council, high civil and military officers, resident clerks and others. Within this enclosure in some properly secured lanes are built secret residences for the King. In the fourth enclosure (Prākāra, with gateway Dvāra-harmya) are quartered the foreign offices, for negotiating war peace and such other matters. In the fifth court (Mahāmaryāda, with the gateway called the great gate-house) are erected military quarters, barracks, and offices of smaller importance. The sixth and the seventh encloures, which are not included in the smaller palaces, are reserved for the defence forces, guards, royal stables, houses for domestic animals, zoological gardens, etc. which are sometimes accommodated in the fifth court also. Prisons, cemeteries, cremation grounds and temples of certain fearful deities are quartered beyond the palace compounds. Temples are built within each court. The pleasure gardens, orchards, tanks, etc. are suitably built within all the enclosures. In each of the enclosures mansions of one to twelve storeys are artistically arranged in rows varying from one to ten, while the gate houses are furnished with one to seventeen storeys.

The exact situation of particular private and public buildings is specified. Thus it is stated that the main royal chapel should be built in the central plot known as the Brahmapitha, and the public audience hall in the quarter of Yama, Soma, Vayu, or Nairrita in accordance with the situation of the palace in a particular province or city, and so forth.

These descriptions may make it clear that what the early authorities wanted most is to give a proper aspect to villages and towns and orientation of dwelling houses therein in order to supply abundantly salubrious air, light and sun for the rich and poor alike. It was also directed that in bed the head should be kept towards a certain direction in order to get the maximum benefit of pure air in sleep also. The Roman architect Vitruvius also emphasized the absolute need of keeping the proper aspect for Italian cities.

> "A city on the seaside," it is stated (BK. I. Chap. III, IV), "exposed to the south or west will be insalubrious; for in summer mornings, a city thus placed will be hot, at noon it would be scorched. A city also with a western aspect would even at sunrise be warm, at noon hot, and in the evening of a burning temperature. Hence the constitution of the inhabitants of such places, from such continual and excessive changes of air, would be much vitiated."

After citing opinions of physicians and historians and supporting by illustrations it is further stated

> "When, therefore, a city is built in a marshy situation near the sea coast with a northern, north-eastern, or eastern aspect...the site is not altogether improper, for, by means of sewers the waters may be discharged into the sea."

In other words, the errors other than those of the aspect, concerning equally villages, towns, and dwelling houses, can be corrected, while those of the aspect are incorrigible. A house at Puri facing the direction other than the sea wherefrom the pleasant breeze blows may serve as an illustration. The dwelling houses in Calcutta facing the north are extremely hot in summer in all hours of day and night, and bitterly cold in winter, while the houses in towns of the United Provinces, like Agra, Allahabad, Lucknow, Benares, etc. facing the west and the south are unpleasantly hot in summer and bitingly cold in winter.

Considering the present condition of our dwelling houses not only in modern towns, cities, ports, business centres, mill areas and factory quarters but also in villages, nobody can easily imagine that there were times in India when it was almost obligatory on the part of those who control public health and revenues not to be callous to the extent of denying even pure air to the poor and uneducated and reserve for the rich and those in power the healthier civil lines and cantonment areas.

It is, however, not difficult to follow the present state of things in the layout of our villages and towns and the orientation and arrangement of our dwelling houses therein. Following the break-up and disappearance of Hindu culture, not by bodily removal or modification for the better but by superimposition, first by the Persian, Grecian, Scythian, Kushan, and Hun invaders, and later by the Pathans, and Mughals and lastly by the European powers, the Hindu Sastras (or guide books) were all but lost, the Hindu traditions were forgotten, and the essentially Hindu habits and customs were materially changed. Thus a purely Hindu village, town, and house was built upon by a Buddhist one, upon which was imposed by turn a Persian, Grecian, Central Asian, lower Asian and modern European ones. The result

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

has been that in the orientation and internal arrangement of our houses we do not find the scientific principles of any one country or climate. A casual inspection of houses in cities like Bombay, the Panjab cities, U. P. cities, Bengal and Madras may serve convincing illustrations. Even the so-called business, and European and aristocratic quarters contain purely European style of houses in an entirely different soil, climate and weather. Not only certain quarters of Lahore, Delhi, Meerut, Lucknow, Benares, Patna, Calcutta are named after the Pathans and the Mughals, but there are actually houses with all the characteristic features of the Arabian deserts and the colder regions wherefrom the Mughals emerged. This inexplicable state of things seems to have been due partly to the natural desire of the conquerors to firmly establish their domination and culture by removing the custom, habit, and tradition of the conquered as far as possible, and partly due to the ignorance of the scientific methods of Indian architecture or to dislike to apply them in preference to their own.

Then in the times of certain invaders and rulers the protection of women and wealth became extremely difficult. Thus not only in towns but also in villages houses had to be built like dungeons removing all openings, windows, and verandahs, retaining only a single entrance and in some cases a small dormer window high up in the wall, not with a view to provide for the passage of requisite air and light, but rather to enable the inhabitants to listen to the noise of a passer-by, who might often turn to be an officer in search of young women and gold ornaments. In fact, in western and northern India where such state of things obtained for a long time, villages still exist which look like prisons, and in the cities like Lahore, Delhi, Agra, Allahabad, Lucknow and Patna, etc., even the parapets on the roof of storeyed houses are like the high solid walls and represent the tower of silence of the Parsees.

Since the establishment of the British government through a company of traders the security of life and property began to improve from the beginning because trade in a foreign country could never prosper except in peaceful conditions. But although our gold could be kept with more security in a British Bank and our womenfolk might be safer in the custody of a British family, yet in the meantime, in consequence of the experience of some seven hundred years, we have become slave to the habit of personal *purdah* and domestic seclusion, and have entirely forgotten the sanitary need and the principles of Hindu architecture. Unfortunately, however, the commercial feature of the British rule is responsible for criminally insanitary things like the corrugated iron sheets for the roofing and walling of our dwelling houses, waiting rooms in Railway stations, and sheds in mill quarters and factory areas. Moreover, we ourselves have developed, as the result of the mental or cultural conquest, an eagerness for blind imitation of everything western. The habit of using commode in the bed chamber by the educated rich may serve as an illustration. The Commode itself is an insanitary device to replace the water closet wherefrom the discharges are carried off by the flow of water, thus preventing the vitiation of the air of the surrounding places. This blind imitation is responsible for the introduction of dry commode in our villages and towns, where no flushing system is possible, and thus an unfortunate class of people had to be allured to take to the profession of carrying away nightsoil and helping some upcountry municipal boards in filling up pits and caves whereupon the so-called town Improvement Trusts supply so-called improved quarters for our residence. But either owing to the scarcity of this human career, or due to the desire of practical economy in many of our houses, the unclean commode placed in bed chamber or in a room close to it is used again and again. In most instances this commode room known as the bath-room is the place where we actually wash and bathe, and thus we gather together in one place the internal and external discharges of our body, and live the life of studied economy and purity.

Owing to economic difficulties and social habits the necessary food and clothes are not available for a large majority of our people. In addition to this pure air and water, the free gifts of God, are also denied to us as a result of the unscientific layout of our dwelling houses and the insanitary aspect of most of our villages, towns and cities. Due to our ignorance, indifference and reluctance we are unaware of the extent to which we have been sacrificing our national health and individual comfort and convenience.

Cinema shows, popular lectures, and architectural exhibitions of houses of all civilized countries with the latest improvements may possibly remove our appaling ignorance and rouse a public desire to improve the conditions of our dwelling houses.

THE WATERS OF DESTINY

By SITA DEVI

XI

OLD Delhi has been replaced by New Delhi, as the capital of British India. But the older city is still the capital of the land of romance. Its dead and gone emperors are still reigning supreme in that kingdom. There time has made no change.

A party of Bengalis had just got down from carriages and was about to enter one of Delhi's most picturesque old shrines, *viz.*, the tomb of the sage Nizamuddin Aulia. A private motor-car and a hackney carriage had conveyed the party thither. "Thank God, we have actually arrived," said a young girl, getting out of the car, "the way the carriage behaved scarcely left any hope in that direction."

"Really," said another girl. "I thought we, too, would have to take our last rest here, in the midst of this royal Moghul family. Our guide Kashinath prides himself on being a very good conductor; he was going to achieve supreme success by leading us to the doors of heaven."

The guide Kashinath was a real Delhiwallah. He was the descendant of a long line of guides and very proud of it. He felt himself insulted at this jest, and began a long explanation in faultless Urdu. He could not help it, if the horse of the hackney carriage suddenly went lame. Neither could he help the wheel coming off, and rolling away.

An elderly lady now intervened. "Please, Amitâ," she said, rather vexed, "tell your guide to cut short his peroration. It is already getting late. When do you propose to return? Remember that your aunt's bones are not as young as yours."

"Kashinath, stop at once," said Amitâ peremptorily. You can talk, all you want, when we are once inside. Why do you waste your words needlessly? Am I not right, Su? A person who lives by selling his words need not waste them unnecessarily."

"Well, as he canot talk when he is inside, he is doing his best to impress us outside," said Su, who was none else than our old friend Suparnâ. "You know this place has got its own guides and none from outside is allowed to act."

Nobody would now recognize Suparnâ as the oppressed and ignorant village girl Subarna. This was a slender and beautiful young woman, extremely well-dressed and self-possessed. Her talk, her manners, her appearance, everything had changed, and not a trace remained of the Subarna of old times. She had emerged a new being, during the course of these few years. She had tried her best to forget the cruel and fearful past, and had succeeded fairly well. Nothing here reminded her of those awful days. Her father, Pratul Chandra, came once a year to see her, and this annual visit was the sole link with her past life.

Amitâ's aunt had come here with all her children on a visit. They were going about all day visiting the show places of old Delhi. The party was a fairly big one, so their own car had not been enough and they had to hire a hackney carriage.

Nothing of the glorious architectural beauties of Nizamuddin could be seen from the outside. From here, you can only see only a few blackened domes. The party had to walk through knee-deep dust to reach the main gate. They all had to take off their shoes here, as to enter a shrine with shoes on was prohibited. A guide now approached them. He was so handsome and well dressed and his manners were so grand that he could easily be mistaken for a Moghul prince.

"But where is Sudarshan Babu?" suddenly asked Amitâ.

A young man came forward. He was rather dark, but very well-built and strong. "I am all right," he said, "I did not fall out of the carriage. I was looking out for another carriage to take us back. If we go back in the same carriage we came in, we won't get back before twelve o'clock at night.'

"Have you been able to secure another carriage?" asked Suparnâ.

"Not yet," said Sudarshan. "But I met a friend of mine here and asked him to get one for us. Let us go on now."

The party advanced. They came up to a well, which had a flight of stairs, leading down to the water. The water possessed the power of healing diseases, the guide informed them. It looked greenish in colour. Many people stood here bathing in that water.

"I don't know how certain places come to possess such reputation," said Suparnâ. "Sudarshan Babu, you are nearly a full-fledged doctor, can you tells us how it happens?"

"This is something outside medical science," said Sudarshan. But faith-healing had been practised in all climes and in all ages. The water, too, might possess some healing properties, I don't deny that. There are many springs of mineral waters in France and Germany which really do heal certain maladies."

"But you know how and why these cures are effected in those cases. Here you don't under-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

stand anything at all. In my childhood, I saw some cures effected in the villages, with water on which mantras had been muttered. The patients were really cured, though. How, I don't know to this day."

"I like to hear about your childhood. I have heard very little though. I am a Bengali, yet I have never seen Bengal properly speaking," said Sudarshan.

Suparnâ began to look a bit serious now. "But why?" she asked. "Did you not live in Calcutta for years?"

"But Calcutta is not Bengal", said Sudarshan. "You can find a city like that in any country. Only in its villages could a country be really recognized."

"I don't think so," said Suparnâ.

"Why?" asked Sudarshan.

"Those who have achieved eminence through education, wealth or success in any form, have all left the villages. Only those are left in the villages who have no option. They would die, if they tried to go away. Are these the real representatives of a nation?" asked Suparnâ.

Sudarshan was about to reply, but was interrupted by Amitâ, who cried out, "Su, what are you about? Are you discussing medical science or something else? See that you don't stumble."

They were just then entering a tunnel-like passage, which had scarcely any light. So Amitâ might have really cautioned her against a literal stumble. But Suparnâ evidently thought otherwise and blushed fiery red. She left Sudarshan and caught up with the rest of the party with a few rapid steps. Sudarshan smiled rather crestfallen, but he was himself again within a few minutes. He, too, joined the others and began to talk normally.

Sudarshan was the only son of an old resident of Delhi. He had just appeared for his final M.B. examination and had returned from Calcutta only a few days ago. The 'results' had not yet been published, but neither Sudarshan nor anybody else had any doubts about his success. He had always stood first in all the preliminary examinations.

It took a good few minutes for them to emerge out of the tunnel. "What a passage!" said Amitâ. "One never knows where one is being led to."

Suparnâ tried to smile and said, "Yes, really. If someone gives you a tap on the head here, you would not know who the culprit is, when you get out in the light."

"What if it is not a tap, but something nicer?" whispered Amitâ mischievously in Suparnâ's ear. "Would you be sure about the culprit then?"

Suparnâ pinched her hard and pushed her away. Sudarshan had heard only Suparnâ's words and he guessed that Amitâ was saying something witty. But he did not know at whose expense the young lady was waxing humorous.

As they came out of the tunnel, Amitâ's aunt said, "Thank God, we see the light of day again. I felt as if we were going down to the nether regions. What is this place?"

The guide began to explain. It was the family cemetery of the Moghul princes. Those who were buried here had not left their marks in history like their more glorious kinsmen. For them, huge edifices of marble had not been built. Like members of the same household, they had laid themselves down for their last rest, all close together. The guide went on enumerating, "This is the tomb of the last emperor of Delhi, this, of his brother, prince Jahangir and so on." There were innumerable small court-yards, enclosed by walls of marble and profusely decorated with mosaic. Each tomb stood within one such enclosure. Sometimes one courtyard held the tombs of an entire family. In death, too, they had not been divided. Everything was very neat and clean and time had not been able to tarnish their pristine beauty. The marble shone as white now, as when it was first used.

They came to the tomb of the famous poet Amir Khusru. Its royal magnificence seemed to mock at death. A dazzling white sheet was spread on the tomb and a mass of flowers were arranged on it. The air was heavy with the scent of flowers and of other perfumes. A chandelier of gold hung from the ceiling. The tomb of the holy sage Nizamuddin was decorated in like manner. The keepers here were generally rather troublesome. They pestered visitors for money. A few of these money-grabbers now closed round the party asking them to contribute something in the name of the holy sage. "Is not there any religion which is free from this taint?" asked Suparnâ.

"There are", answered Sudarshan. "But those religions have few followers. What is the good of a religion which does not enable you to make some worldly profit out of it?"

"So a religion is only necessary for the sake of profits?" asked Amitâ.

"What else?" said Sudarshan. "What shall a man do with a religion which does not help him to live? How many people can find strength enough to take to a religion which does not do so?"

"But does money alone help you to live, my dear boy?" asked Amitâ's aunt, smiling. "There come certain trials in a man's life, when money is not of the slightest help."

Before Sudarshan could answer, Suparnâ said, "Here lies one who found no consolation in wealth." They had arrived before the tomb of princess Jahan Ara, the daughter of Shah Jahan. Like the other enclosures, it, too, had walls of white marble round it. The tomb was of the same stone, and had a covering of grass on top. The grass was no longer green, but had dried up with the passage of time. There were no keepers here to tend

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

this bit of grass, perhaps because no money could be made here.

"Only the few who have enjoyed a superabundance of wealth, know that wealth cannot achieve everything in this world", said Sudarshan, "but these people are very rare. Jahan Ara knew the futility of wealth, because she was the daughter of a mighty emperor. If she had been the daughter of a common man, she would have thought that her life had become so barren on account of poverty."

"But some persons can understand that wealth is not everything, even if they are not princesses." said Suparnâ.

She uttered these words, in so low a voice, that only Amitâ and Sudarshan heard her. Sudarshan looked at her, trying to see through to her heart but made no remarks. The sun was about to go down and they had only finished seeing Nizamuddin's shrine. Everyone was now anxious to return home. "We shall go to see Humayun's tomb tomorrow," said Taran Babu.

"It would have been better, if we could have finished that also today," said Amitâ's aunt. "They ask too much for carriage hire here."

"Tomorrow, you won't have to hire a carriage at all," said Amitâ. "You can take our car. We are a big party today, because it is Sunday, but tomorrow, we two won't have any energy left for sight-seeing, after having attended college for five hours. I am sure I wont have, I cannot tell about Su."

"Have you ever seen me more addicted to pleasure of any sort, than yourself?" asked Suparnâ.

"Oh, I am a candid sort of a person, and I blurt out loudly anything I ever happen to feel; but you, being the wiser of us two, keep it locked up in your heart. That does not prove that you are less pleasure-loving than I am," said Amitâ.

"Your logic is marvellous, you can prove anything you want to, with its help", said Suparnâ.

They had come out in the open by this time. Sudarshan cried out, "Here is Ramrup, he is a real good fellow. You won't have to get into that marvel of a car again."

The driver of the car, referred to, started a row. But as he received nearly the same amount of money he was expecting and as he saw that none of the audience was prepared to take his part, he drove off at last. Sudarshan did not accompany them this time. "What would be the use?" he asked. "I shall walk a bit, then take the tram."

"You had better come with us," said Amitâ. "What would be the good of wading through knee-deep dust?"

"It is good to walk," said Sudarshan. Then turning to Suparnâ, he asked, "Shall I bring the notes to-morrow evening?"

Though he asked the question of Suparnâ, it was Amitâ who replied. "You had better come in the morning," she said. "Su returns very late from college. But she has got a few 'Tenchi' friends, who sometimes give her a lift, then she comes much earlier. It is a hard job, qualifying for a doctor."

"What is a 'Tenchi,' if one may ask?" said Sudharshan.

"Goodness, don't you know even that?" said Amitâ. "It is short for Feringhee."

Suparnâ now spoke. "Please come when it suits you best," she said. "I come home generally at five, unless something extraordinary happens."

"Amitâ is a happy young person," said Taran Babu. "Going to college is nothing but a recreation to her. She enjoys more leisure periods than she has to attend classes."

"That is very unjust of you, father," said Amitâ, "don't I have to work for my classes? Whatever the subject you study, you must spend time and energy on it, even if it is not medical science."

"That is true," said Sudarshan; "but we are given a thorough breaking-in, as we must work hard in after life, and make no distinction of day and night."

"Oh, that's merely a pose," said Amitâ. "The real fact is, doctors eat, drink and make merry like every other person."

"It might seem so to you from a cursory view," said Sudarshan. "But have you ever looked at a doctor's life, from close quarters? Successful medical men never have any time of their own. They become excessively addicted to money-making on the one hand, and, on the other, their friends and relatives never give them any respite."

"I think, a doctor is a very fortunate man," said Suparnâ.

"In what sense?" asked Sudarshan.

"He is of the greatest help to his fellow beings," said Suparnâ. "And he does not have to spend anything to be so. In some other professions you can but spend money for others, if you want to help them; you cannot be of service directly."

Their car started now. So the discussion was cut short. Sudarshan walked back slowly to his own home.

XII

The room in which Suparnâ lived, always struck the eyes of the beholder on account of its scrupulous cleanliness and neatness. The room was middling in size and full of light and air. It had two large windows and two doors, one of which led into Amitâ's room. It contained very little furniture and nothing decorative. There were only an iron bedstead, a dwarf wardrobe, a table and a chair and a clothshorse. The walls had no pictures hanging on them and the curtains were all of spotless white cloth. The

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

counterpane was white and most of her dresses on the clothshorse were white, though not cheap. Though white, they gave evidence to the wearer's artistic taste and love of dressing well. Everything, beginning from the roof to the floor, was spotlessly clean, and shone like polished marble. Not a speck of dust or dirt anywhere. You would know at once, that the occupant of the room had a distinctive individuality of her own.

After the party reached home everyone retired to his or her room to change and rest. Amitâ's aunt came in to Suparnâ's room and sat down in the chair. "Anybody would know that you are determined to be a doctor, from the sight of this room," she said.

"Of course, anybody would," said Suparnâ. "The number of medical books and medical charts are evidence enough."

"Not only for that," said Amitâ's aunt. "I don't know English, and I would not know whether all these books are fiction or medical books. There is only one medical chart. Still as soon as one enters this room, one feels that such scrupulous cleanliness can only be learnt at hospitals. The room is just what it should be, neither over-crowded nor over-empty, and everything in its place."

"No one ever noticed these things before," said Suparnâ.

"Youthful eyes overlook most things", said Amitâ's aunt. "Only those whose eyes have been looking at the world for years, can see beneath appearances. I don't think, many besides myself would know that this room belonged to a devotee."

"What a thing to say, aunt !" said Suparnâ, with a shy laugh. "If a room is not overcrowded and overdecorated, it does not necessarily mean that the occupant is a devotee. Why do you think, I am anything of that kind ? What is the difference between Amitâ and myself ?"

Just as she finished speaking, Amitâ ran into the room, with the end of her Kashmere silk Sari trailing behind her and her hands busy with the brooch on her shoulder. She had heard only the last words of Suparnâ and now began to comment on them, "Oh, isn't there any difference though ?" she asked, "Ask anyone and he will tell you that there is a good deal of difference."

"Well, I am asking, am I not ?" said Suparnâ.

"Very well", said Amitâ ? "I shall try to enlighten you, as far as I can. I have come to this world merely to enjoy myself, while you have come with a definite mission. Isn't it a great difference ? The world is for me, while you are for the world."

Suparnâ gave her a playful blow on the back and said, "Don't try to be clever for the benefit of aunt. In which way am I enjoying the world less than you are ? I am eating, dressing and going about just as you are. Then where does my likeness to a devotee come in ?"

"You may try to laugh away the whole matter," said Amit'âs aunt, "but there is some truth in it. We shall talk about it on some other day. Today I am extremely tired. All my bones are aching. Come along, my dear niece, and look after your old aunt for a while."

Taran Babu's house was not a big one, every room being occupied. So if guests arrived, they had to be accommodated in the rooms belonging to Taran Babu and the two girls. Amitâ's aunt had been put into Amitâ's room. Her sons spent the day in Taran Babu's bedroom and the night, in the drawing room. As Taran Babu remained out nearly the whole of the day, this arrangement was proving quite satisfactory.

Amitâ's aunt went and laid herself down in her niece's room. Amitâ had given up her own luxurious bed to the honoured guest, and now slept on a makeshift bed on a camp bedstead. "Why aunt ?" she cried out, "you have not changed your dress yet."

"I am too tired, my dear," her aunt replied, "I shall change after dinner. You have dinner quite early, so I won't have to wait long, I suppose ?"

"You won't have to wait at all," said Amitâ. "It is ready, and the servants are eagerly waiting to serve it.

"Your servants are lucky," said her aunt. "I have seen many households where they are never free before three in the afternoon and before eleven at night. No amount of scolding would make them expedite matters."

"Our servants are not built of superior stuff," said Amitâ. "But Bhaju is an old servant, he manages the rest. We have our dinner as soon as we get back from college and father also likes it. Nobody takes anything at night save a cup of milk or ovaltine. So they have to finish their work by the evening. Because you are here, they serve dinner a bit late."

Suparnâ now came in after changing and announced, "The dinner is served. Let us go."

Everyone proceeded to the dining-room. The family was rather westernized in manners, as is sometimes the case with Bengalis who live outside Bengal. How to remain a Bengali and at the same time modern, is a thing which is known only to Calcutta people. As Amitâ's aunt sat down, she began to push away the knives and forks from before her and said, "Why do you place these things before me, every day ? I can only cut myself with these."

"I, too, used to get very much frightened, when I first saw these," said Suparnâ, "I was so afraid of hurting myself !"

"But Su can learn things so quick, it is really amazing," said Amitâ. "During these few years, she has become a far greater Memsahib than I am. I like very much to eat with my

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

fingers. I enjoy it quite. But let Su once use her fingers, she will wash and wash her hands and never be satisfied till the skin is off."

"That is not because I like being a Memsahib," said Suparnâ. "I think it quite natural not to want to eat with fingers that had recently been dissecting dead bodies.'

"Good gracious!" said Amitâ, "I really fail to understand how people do these sickening things. Father wanted to put me, too, in the medical college. I told him plainly that it would not suit me at all. Amazons like Su alone find these things suitable."

Her aunt laughed and said to her brother, "Whoever else becomes a doctor, brother, your daughter will never become one. She is too fastidious and nervous. You should have seen her face when she accidentally crushed a cockroach to death."

"Her mother, too, was just as nervous," said Taran Babu. "I wanted to put her in the medical college, with Suparnâ, because I wanted to cure her of it. But she refused."

"Did you not feel any objection to becoming a doctor ?" Amitâ's aunt asked Suparnâ.

"No," said Suparnâ, "it was settled from the first that I was to study medicine. Don't you remember, it was settled in your house in Calcutta ?"

"So it was, said the lady. "Now I remember, your father first suggested it. Lord! who would guess that you are the same Suparnâ ? Even your appearance has changed. We believe you to be the same girl, because we know. No one else would believe it".

Suparnâ became a bit grave. Amitâ laughed and asked, "Why was your name too changed, Su ?"

"My father did not like my old name," said Suparnâ. Amitâ's aunt was about to say something, but she stopped, on hearing Suparnâ's reply. Perhaps the girl did not want to discuss her past.

As soon as the dinner was finished, all retired to their rooms. The sound of conversation was heard from Amitâ's room for a while, but the light in Suparnâ's room was put out almost at once. She was feeling very tired, both in body and mind and was in no mood for further conversation.

So she put out the light and laid herself down on her bed. The stars looked down upon her, through the open window, like so many bright eyes. What was she thinking ? Why were her eyes filling with tears ? Some pain, which she never felt in the daytime, had perhaps come out of the hidden depths of her being and was now standing face to face with her. Nobody would think that there was any sorrow or disappointment in her life. She lived like the daughter of a rich man and enjoyed life in every way. She was fully immersed in her studies and seemed to like it too. But why these tears, during the dark hours of the night ? Whence came this sorrow and pain in her life ?

After a while she wiped her eyes and turned round. She wanted to thrust away all these painful thoughts from her and to sleep. She fell asleep soon afterwards.

Except on holidays, the girls were busy from morning till evening. Supurnâ specially had not a moment to spare, as her studies took up far more of her time, than Amitâ's did. She rose nearly an hour earlier than Amitâ and finished her toilette and cleaned up her room, before the other members of the family were awake. Then either she sat down to her studies or gave orders for the day to the servants. As Taran Babu's wife was dead, the two girls took turns in managing the household. Amitâ supervised everything for one week, next week it was Suparnâ who took charge.

The whole family assembled together for tea. Then they went their respective ways and met one another next, at dinner time. They lunched separately, as each had his or her own hour. Suparnâ and Amitâ went out together, but returned separately.

Suparnâ was free this week. So she sat down to her studies. But she could not concentrate on it, she did not know why. She stared fixedly at the eastern sky, which had begun to glow in anticipation of sunrise. She tried again and again to fix her attention on the book before her, but her mind wandered constantly. She was eagerly expecting something or someone, perhaps unconsciously. One of the servants came up and announced, "The young doctor Babu has come."

Sudarshan was called the young doctor Babu here, in order to distinguish him from old Ramkamal Babu, the family physician.

Suparnâ hesitated for a moment, then she said, "Show him to the drawing-room, downstairs."

The drawing-room, the dining-room and Taran Babu's office room stood on the ground-floor. But the girls did not like to go down so many times for their meals, so they had converted the landing upstairs into a small dining-room, with the help of four chairs and a small table. Unless guests were present, they took all their meals up here.

As soon as the servant had gone down, Suparnâ pushed away her books and got up. She started to go down, but came back again. She went up to Amitâ's door and knocked loudly, crying, "Are you never going to get up today?"

"Why this unwarranted intrusion ?" said Amitâ from inside, in a drowsy voice. "I have given out the stores last night."

"But there might be other duties", said Suparnâ. "There is a caller, you must get up at once."

The sound of suppressed laughter was heard from within. Next moment the door was opened an inch and Amitâ peeped out. "You see the state I am in," she said. "You go down and

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

receive the guest. I shall be down within ten or fifteen minutes."

"But don't be later" said Suparnâ.

"Don't pretend to be so innocent," said Amitâ, as if I don't know that you want me to be as late as possible."

Suparnâ had actually advanced a few steps towards the stairs. She stopped dead on hearing Amitâ's remark. Her face became flushed with excitement and her eyes had a glint of anger. "Do you really think so ?" she said. "All right, I shall sit tight here, till you come out of your room."

Amitâ put out her face again. "Don't be silly", she said. "He will think we have all gone mad. We asked him to call, and we cannot all pretend to be asleep. Go down, I shall join you as soon as possible."

Suparnâ showed no sign of moving. Amitâ looked a bit alarmed now and cried out, "Please go there's a dear. I won't jest with you again, I promise you that. But all the same, you are overdoing the thing."

"Oh indeed," said Suparnâ. "You might say whatever you like, but one must not object." Saying this, she went down.

Sudarshan was pacing to and fro in the drawing-room. "I have come too early, I am afraid," he said on seeing Suparnâ. "I get up so very early myself, that I can never remember that other peoples' day begins much later."

"I, too, get up very early," said Suparnâ. "So however early you may arrive, you can never take me unawares. But Amitâ is not fully awake yet. I have called her. Please take a seat."

Sudarshan sat down and pushed a few books towards her. "These are the notes, we talked about."

Suparnâ drew them towards her and began to turn over the pages. "You write a very neat hand," she said after a while. "Most doctors write so clumsily that none but the compounder at the dispensary can decipher it."

Sudarshan smiled. "Let's wait and see," he said. "Perhaps when I am a full-fledged doctor, my handwriting also may change."

Amitâ came in with his last words. "That can never happen," she said. "A man can change everything, but not his handwriting."

"Don't talk nonsense," said Suparnâ. "I have kept a specimen of your handwriting of the period when I first met you. Do you mean to say, you write the same hand now ? Don't libel yourself, to that extent."

"You know very well that I did not mean that," said Amitâ. "A grown-up person cannot have the same handwriting as a child. But you will see that my handwriting will not change during the coming twenty years."

"I may not have the good fortune to see your handwriting fifteen years hence," said Suparnâ.

"You are very witty today," said Amitâ. "It remains to be seen who is fortunate and who is not."

"You are too busy discussing your future luck to listen to a bit of luck that has befallen me at present," said Sudarshan.

"Have you got the wire from Calcutta ?" cried out Amitâ.

"Yes," said Sudarshan, "I found it awaiting me last night, when I went home."

BOOK REVIEWS

Books in the principal European and Indian languages are reviewed in THE MODERN REVIEW. But reviews of all books sent cannot be guaranteed. Newspapers, periodicals, school and college text-books, pamphlets, reprints of magazine articles, addresses, etc., are not noticed. The receipt of books received for review cannot be acknowledged, nor can any enquiries relating thereto answered. No criticism of book-reviews and notices is published.—Editor, THE MODERN REVIEW.

ENGLISH

CAPITALISM, COMMUNISM, AND THE TRANSITION—*Emile Burns Pub. Gollancz. Pp. 287. Price 5s.*

Book-publishers are not philanthropists, and if publishers think that it is worth while publishing such a book it suggests clearly enough that though the Communist Party in Great Britain may be numerically small, yet there are a number of people who want to know what exactly Communism would mean. Mr. Burns is himself a Communist, and in this book he writes of the practical difficulties which would be experienced in transforming a Capitalist State into a Communist State. In this connection the words of Marx, written in 1848, are of interest.

"Finally in times when the class struggle nears the decisive hour, the process of dissolution going on within the ruling class, in fact, within the whole range of old society, assumes such a violent, glaring character that a small section of the ruling class cuts itself adrift and joins the revolutionary class, the class that holds the future in its hands. Just as, therefore, at an earlier period, a section of the nobility went over to the bourgeoisie, so now a portion of the bourgeoisie goes over to the proletariat, and in particular a portion of the bourgeois ideologists, who have raised themselves to the level of comprehending theoretically the historical movement as a whole".

Today in Europe the inability of Parliamentary Democracy to deal with the depression is becoming increasingly obvious, as is also the fact that Reformism is apt to fail at the decisive moment. On the one hand, there is growth of Fascism, first in Italy, and then as the depression has increased, and the weakness of the Social Democratic parties advocating Parliamentary Democracy in the face of ever increasing unemployment, becomes more obvious, in Germany, and also in other countries, people therefore are being forced to think out for themselves what solution is possible, and therefore books such as the above are to be welcomed even though one may not agree with the writer, since it is calm thinking, not sentimental emotionalism that is needed.

The book is intended primarily for that section of the British bourgeoisie who are inclined to study the theories of Communism seriously, and is divided into three parts. In the first part the present position of Capitalism is examined, and it is pointed out that the money power of the Capitalist class, especially the big industrialists and the bankers, enables them to become increasingly richer, and more powerful, and also to exercise greater and greater control over the State. There is a distinct tendency for such people to think that their prosperity is essential to society, and therefore they use the power of the State for their own advantage. In this connection one might mention in support of this contention such books as "*Upton Sinclair presents William Fox*", or "*They told Barron*", two books of fact, not fiction, which tell way in which such power is used. The recent revelations of the ways of bankers before the American Senate have led the Americans to coin a new word "bankster" or one who controls a bank. The second section of the book deals with the Communist ideal in which the prosperity of the individual will depend on his efforts to make society prosperous, and in which economic power will be vested in the society not as at present in the hands of individuals. The third section, which deals more especially with the peculiar problems of establishing Communism in Great Britain, discusses the Transitional Period when the Communists will try to take power from the Capitalists.

The Times Literary Supplement in reviewing this book remarked that it is easy to dogmatize about the benefits that will be enjoyed in a Communist Society, but it is also easy to doubt whether such benefits will materialize. It cannot be too often emphasized that Communism does not promise that the overthrow of Capitalism will establish a new heaven and a new earth. Before that can come about society must pass "through a long and painful process of transition" in the course of which "human nature has to be transformed". Some people therefore suggest that this "long and painful process" might be avoided by various reforms by which wealth might be better distributed, and until recently such people used to point to Vienna as an example of what can be done

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

these lines. Unfortunately, recent events suggest that such reforms cannot be permanent, and will disappear in the event of a severe economic crisis like the present depression.

CHRISTOPHER ACKROYD

RUSSIA TO-DAY : *By Nityanarayan Banerjee : with a Foreword by Dr. Kalidas Nag ; Published by J. N. Chatterjee, 120-2 Upper Circular Road, Calcutta. Pp. 173, illustrated, price Three Rupees.*

This is a pleasantly written book on Russia by a young Indian, a scion of one of the best known families in Bengal, who while touring on the Continent as a student of science of technology undertook a short journey to Russia last year. His stay in Russia, rather a short one, was made under the auspices of the Russian State Tourist Bureau, and it was a "personally conducted" tour, Russian lady officials of the Bureau, ardent and enthusiastic supporters of the prevailing political situation, acting as his guides. Russia because of big social experiment that is going on there has become almost a land of heart's desire for a good many of our young men, and as in all other countries there is a great deal of curiosity about the mysterious land of the Reds. Even Russia with her officially directed tours reacted upon two prominent Indians we know from the lips by Rabindranath Tagore and Jawaharlal Nehru. But in Mr. Banerji's book we have a plain, matter-of-fact narration. Mr. Benerji is a clever enough observer, and although we note in him plenty of admiration, there is no absolute surrender. His introspection, his knowledge of human frailities and limitations, and his acquaintance with some aspects of the life of his own country, enables him to see many a flaw in pictures held before him to admire and does not make him give himself away entirely at the shrine of Sovietdom. Yet he is receptive enough to all the redeeming features of the Russian experiment. The book should be widely read in our country, as it gives an idea of how Russia with her Five-Year Plans and her Socialism in practice strikes a commonsense observer from India who has the openness of youth and at the same time is keenly alive to the special problems of his own country.

SUNITI KUMAR CHATTERJI

DEVELOPMENT OF JOHN STUART MILL'S SYSTEM OF LOGIC: *By Oscar Alfred Kubitz. University of Illinois. Price $ 2.*

The present work forms Nos. 1-2 of Vol. XVIII of the series *Illinois Studies in Social Sciences* and is written not for the lay reader so much as for the specialist. The writer is to be congratulated on an excellent piece of research work and those teachers who have to teach Mill's famous book will have to refer to this work in future for understanding the position of Mill's position in his famous Logic. He has with commendable zeal collected materials for the present work from sources some of which are inaccessible to the ordinary reader. Mill may be said in one sense to have summed up all previous thinking on the subject and to have started a new era of logical thinking in his *System of Logic*. But the ordinary teacher of Logic has very imperfect knowledge of the forces at work at the time when he wrote his book. He has more often looked at his work with the eye of a critic than with that of a historian. The present book will serve as a helpful corrective to that attitude, for while it does not ignore the weak points in the synthesis which Mill sought to achieve it points out at the same time the circumstances under which Mill developed this or that aspect of his theory or modified his statements in the light of fuller knowledge.

The genius of Mill consisted in absorbing the current culture of the time not only in philosophical and logical matters but also in scientific and politico-economic thought. His father was a psychologist of no mean repute and some of the most famous Scottish philosophers who are now considered back-numbers in philosophical and psychological literature were either the immediate predecessors or the contemporaries of Mill, and were forces to be reckoned with at the time. Scientific discoveries on a scale unknown before were being made in the realm of both inorganic and organic things and theories propounded to assimilate them in a logical fashion. A careful study of Mill's book shows that he stood at the parting of the ways—it is enough to refer to his doctrine of natural kinds in this connection. The writer has very skilfully marshalled his materials and drawn out the significance of Mill's position in relation to the various scientific and philosophical theories of the time. In an investigation of this kind a certain amount of conjecture is unavoidable but the author has shown a commendable restraint in forming hypotheses.

The reviewer has no hesitation in recommending the book warmly to the teachers of Mill's difficult book as a specimen of sober thinking and wide reading in relevant literature. They will enjoy the light thrown by the author upon many obscure points in Mill's Logic from contemporary documents.

H. D. BHATTACHARYYA

SELECTIONS FROM INGERSOLL : *Vols. 1 and 2 : By Ramgopal.*

These selections from the speeches and writings of Ingersoll reveal a keen mind equally at home in the provinces of literature, sociology and politics. The observations are almost invariably striking and original and have been couched in terse and epigrammatic forms which tend to cling to the memory. The writings show the author as one of the keenest and most energetic minds of the age, fired as much by humanitarian zeal as by the ardour for scientific progress. The editor, Mr. Ramgopal, is to be congratulated on the taste and judgment with which the extracts have been selected and the fulness of light which he has managed to shed upon the character and personality of the author.

FLUTE TUNES : *By B. N. Bhushan.*

This is a book of short lyrics which have been managed with a pretty turn and a creditable command over language and metre. The writer shows a happy knack of versification and seems possessed of a genuine, if somewhat thin, lyrical vein.

SRIKUMAR BANERJEE

EUGENICS AND BIRTH-CONTROL: *By Mercia Heynes-Wood, Assisted by Cedric Dover. Price Rs. 3. Pp. 119.*

Miss Mercia Heynes-Wood who is now Mrs. Cedric Dover is a distinguished graduate of the Calcutta University. In writing the present volume the author has shown remarkable clearness of thought and a perfect grasp of facts. The book is an excellent guide to those who are interested in the problems of birth-control and eugenics. The author writes with practical

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

knowledge and has given illustrations of the different preventive appliances. She is all along conscious of the difficulties to be encountered in introducing contraception amongst the poorer classes in India. She has considered the different indigenous methods and has given useful formulæ for contraceptive ointments She has done a service to the public in warning them against quacks and charlatans. The book is an excellent one.

BEACON LIGHTS OF NEW INDIA—*Vol. I The "Sunday Times" Bookshop, Madras. Price As.* 8.

This little book belongs to "My Motherland" series, and it deals with biographies of eight eminent men, namely, Mahatma Gandhi, Sri Ramana Maharshi, Sri Arabindo Ghose, Ramdas and Shivaji, Ramkrishna Paramahamsa, Swami Vivekanda, Dayananda Saraswati and Swami Tirath. The main principles of teachings of these reformers have been included in this book. There are interesting anecdotes and quotations from newspapers.

THE EVOLUTION OF SEX AND INTER-SEXUAL CONDITIONS: *By Dr. Gregorio Maranon. Translated by Warre B. Wells—George Allen and Unwin Ltd., Museum Street, London. Pp. 344.*

Dr. Maranon is a professor at the University of Madrid. The original book is in Spanish and the present volume is a translation of the original by Mr. Warre B. Wells. The author is a distinguished worker in the domain of sexology and his views on sex and inter-sexual conditions have now been made available to English readers. They will no doubt be read with great interest by sexologists all over the world. The book is of a technical nature and is not meant for the lay person. The author has laid stress on the concept that the sex functions develop in every human being in the same direction "from the feminine towards the masculine—naturally with a rhythm, a duration, and an intensity which vary in the different phases of evolution in the case of the man and in the case of the woman." The author is quite right in believing that there is no sharp line of demarcation in nature between the faminine and the masculine. The different types of inter-sexual conditions have been very ably discussed by the author, who has confined himself mainly to morphology. Dr. Magnus Hirschfeld who is the greatest authority on inter-sexuality holds views similar to those of the author. The modern school of Psycho-analysis has proved that in the psychological sphere also there is an inter-mixture of male and female sexuality in every individual. One must, however, distinguish between functional homo-sexuality and morphological inter-sexuality. It is interesting to note that inter-sexuality, which has only recently been recognized as a distinct sexual state in Europe, was known to Indian sexologists as early as the third century B. C. It has been called the *Tritiya Prakriti* or the '3rd sex'. The book is bound to be appreciated by all serious students of sexology. There is a fairly complete bibliography.

THE EVOLUTION OF MODERN MARRIAGE: *By F. Muller-Lyer. Translated by Isabella C. Wigglesworth, George Allen & Unwin Ltd., London, price 12s 6d net. Pp. 248.*

At the present time when the whole question of marriage has gone into the melting pot, and when the general impression seems to be that modern marriage has been a failure it is refreshing to find the distinguished author, who is now unfortunately dead, discussing the evolution of modern marriage from sociological and sexual standpoints and coming to the conclusion that the "new marriage in process of becoming evolved today is the ordered outcome of past and present conditions, and that in the future it may become a fuller and more beautiful relationship than it has ever been before." The author has laid down for himself a systematic plan of investigation which includes the questions of sexual relationship between man and woman, the relations between the old and younger generation and the relations prevailing in a particular clan. The author has indicated three phases in the evolutionary history of these relationships. The present volume is closely connected with two other books of the author published previously in which the three phases, namely, the clan epoch, the family epoch, and the individual epoch have been reviewed. The different sub-divisions of the three phases have been taken up for discussion in this book. There is a wealth of detail rarely to be found in other books of a similar type. The author has throughout discussed the problems of sex and marriage as well as the position of women in society in an unbiased manner. The author believes that militant feminism is a passing phase in the evolution of women's life and is soon to be replaced by a healthier and a saner view when the woman achieves complete economic independence and "feels the responsibility of contributing to the marriage not wages in the best economic sense." The work is a fascinating study and will appeal both to lay and to technical readers.

LIGHT ON THE ANAND-YOG: *By Maharishi Shew Bhart Lal Ji, M. A., The Maihotra Printing Press, Lahore. Price Rs. 2. Pp. 233.*

The book is an exposition of the Radhaswami faith which aims at the attainment of the Kingdom of God in this very life. The Radhaswami teacher believes in "yoga" but not of the usual type. Pranayama according to his view is unnatural. "Mental recollection, mental meditation, mental audition of the holy name, form and sound" are the different parts of the "yoga" recommended by the author. The Radhaswami sect holds peculiar views on the doctrine of sound. The book will be useful to believers.

THE ANAND GITA: *By Gagandus H. Jasinghani, 1933. Pp. 333.*

This is a collection of poetical thoughts on the eternal problems of life. Arthur Young in his preface says, "The Anand Gita or, as we would call it "The Song of Joy" is really the music of understanding soaring with Omar Khayyam, Tagore and the Indian nightingale, Sarojini Naidu, all rolled in one". There is genuine poetry and philosophy in some of the pieces although the book is a little bit heavy reading.

GITA SANDESH: *By Ramdas, First Edition 1933. Price As. 12. Pp. 222.*

This little book is an excellent running commentary on the Gita. The style is lucid and clear and the author except for his great faith in "yogic acrobatics" does not hold any sectarian view on the Gita.

THE KATHOPANISHAD AND THE GITA: *By D. S. Sarma, M. A. Publisher: M. R. Seshachari, Triplicane, Madras. Pp. 99. Price Re. 1.*

Prof. Sarma as usual has done his task very creditably and he has given us a comparative study of the Kathopanishad and the Gita. The translation of the Kathopanishad is excellent. The notes at the end of the book will be found useful to the reader. Prof. Sarma has the rare gift of clear expression.

THE MYSTERY OF THE MAHABHARATA: *Vol. II: By N. V. Thadani. Bharat Publishing House, Poona; Price Rs. 8. Pp. 371.*

I had an occasion to review the first volume of this book in this journal. To quote the Bengali comic ... D. L. Roy, the book is a curious hotchpotch of ... Sankhar, Huxley and the goose." There is plenty ... pseudo-science to be found in this book. The ... philosophical interpretation of the Mahabharata is throughout fanciful. I wonder which class of readers this book appeals to.

G. BOSE

CITY OF BIRMINGHAM HANDBOOK, 1934. *Compiled and edited by W. S. Body, Chief Clerk, Town Clerk's office, Birmingham. Published for the Corporation by the City of the Birmingham Information Bureau by direction of the General Purposes Committee. Royal 8vo., pp. 304. Ninety-eight illustrations. Price not mentioned.*

This review of the civic administration of England's second and most prosperous city is interesting reading and has an educative value for all municipal authorities and dwellers within municipal areas. It is divided into 19 sections: History and Civic Administration; The Amenities of Life, such as Museum and Art Gallery, Public Libraries, Parks and Recreation Grounds, The Town Hall and City of Birmingham Orchestra; The Social Services, such as Public Works and Sewage Disposal; Town Planning; Public Health Service, Public Assistance, Mental Hospitals, Mental Deficiency; The Education Service (Nursery Schools and Elementary Education. The Critical School-leaving Age, Physical Training, Organized Games, Playing Fields, School Medical Service and Dental Responsibility, Provision of Meals, Provision for the Blind, Deaf and Physically Defective, Open-air Schools for Weakly Children and Special Schools, Residential Homes, The Shawbury Approved School, Facilities for Higher Education, A Comprehensive Education Process, Secondary School Accommodation, Junior Technical, Art, and Commercial Schools, Senior Elementary Schools, Continued Education, Technical and Commercial Colleges and Schools of Art, School-Leaving Conference on Future Employment, Vocational Guidance Tests, Voluntary Care Committees, Evening Schools, Evening Play Centres and other Social Activities, Secondary Schools, University Education, Junior Commercial Schools, Birmingham Municipal Technical College, Aston Technical College, Handsworth Technical College, City of Birmingham Commercial College, Evening Institutes, Central School of Arts and Crafts, and other educational Facilities (those offered by the university of Birmingham); The City Estates, Small Holdings and Allotments; The Fire Protection; The Salvage Service; Weights and Measures, Motor Car Parking Places; Public Baths; Finance; Gas Light, Heating and Power. Water supply; Electricity—Light, Heating and Power. The Transport Service; The City Markets: The Municipal Bank; Other Points of Interest, The British Industries Fair, Hotel Accommodation.

The above list will give an idea of the range of activities of the Birmingham Corporation. There is no space to give details. Considering that neither Calcutta nor Bombay, the two biggest cities in India can claim rival, if not surpass, Birmingham in population has made only slight, if any, satisfactory progress to house the poorer section of the public, I read with pleasure that "Seven years ago Birmingham broke all records with the erection of 18,433 houses for its artisan population. By 1934 the number has increased to no less than 40,000."

GOD—OR NO GOD? (*A Rationalist Looks at Life*). *By Herbert Devas Everington, M. B. (Lond.), M. R. C. S. (Eng.), L. R. C. P. (Lond.), with a foreword by Sir Oliver Lodge. Williams & Norgate Ltd., 28-30 Little Russell Street, London, W. C. 1. 2s. 6d. Net.*

The publishers say that this book is not meant for those who have what is called the "Religious experience". "They have already made up their minds upon this subject. Mainly it concerns those who frankly say they do not know but are perplexed by the problem. The Religionist has his own sufficient reasons for being convinced of the Reality of a God. The reasons here given for the belief in a God are for the Rationalist."

Sir Oliver Lodge writes in his Foreword: "It is sometimes said that to prove the existence of a God is logically impossible. I know that it is difficult; but contemplating all the beauty and adaptation by which we are surrounded, especially in organic nature, we feel impressed with the idea of some controlling power, some mind, at the back of it all; while at the same time we feel that any mind of which we have knowledge, any human mind, is pitifully incompetent even to understaud, and entirely impotent to manage and arrange, the details of the growth of a flower or an insect. So let the attempt be made." And the author has made an attempt on rationalistic lines—quite a laudable attempt.

He is convinced that the more the Rationalist studies what Science is able to reveal in the superlative Beauty and Excellence of Nature and the Exquisite Harmony of the Universe as a whole; and the more he thinks upon that intuitive urge which Man ever has, impelling him towards the attainment of Ultimate Truth, and upon those other Wonders which the author has inadequately attempted to describe—the more acutely will he (the Rationalist) feel that by no other means can all this be explained than by postulating a Controlling Mind.

THE ENGLISH WORKS OF RAJA RAM MOHUN ROY (*Social and Educational*). *Sadharan Brahmo Samaj, 211 Cornwallis Street, Calcutta. For subscribers, Re. 1 and 1-4; for others, Re. 1-8. Pp. xiv+186+30.*

This volume of the Raja's works contains all his writings on "Suttee," and on matters educational. and his "Bengali Grammar in the English Language". It is prefaced by a critical study and estimate of his works by Dr. Sir Brajendranath Seal, M. A., PH. D. The "Notes" at the end consist of four papers: (1) "Rajah Rammohun Roy's Tracts on Sati, I," by Rai Ramaprasad Chanda Bahadur, B. A.; (2) "Rajah Rammohun Roy's Tracts on Sati, II," by Mr. A. K. Sen, M. A. and Dr. J. T. Majumdar, M. A., PH. D.; (3) "Rammohun Roy's Letter on English Education," by Mr. A. K. Sen, M. A.; and (4) "Rammohun Roy as a Grammarian," by Dr. Suniti Kumar Chatterjee, M. A., D. Litt.

It is not necessary to commend these writings of the Raja to the reader. Apart from their historical value, they have their own intrinsic worth. Dr. Seal's introductory "study and estimate" is a scholarly and thoughtful piece of work worthy of its writer. The four papers appended to the volume have been carefully written. The get-up of the volume is neat and the price moderate.

INDIAN CURRENCY AND EXCHANGE: *By S. B. Sen Gupta, Esqr., M. A., B. L., Principal, Khalsa College, Lyallpur. Pp. 306. Price Rs. 3.*

This book like a few others of its kind affords a historical and partially critical study of Indian currency and exchange, principally as a guide to university students. Although in the preface the author claims to have traced the history "chronologically from 1835" to the year 1932, the book deals with the period 1893 to 1931 when Great Britain went off the gold standard and the rupee was linked to sterling. The author has faithfully recorded the various stages in the development of Indian Currency and Exchange policy and has noted the controversies on the subject from time to time. In this respect, it must be admitted to his credit, the author has maintained an impartial and non-partisan attitude.

It is a happy sign that scholars in different parts of India have begun to take active interest in our currency and exchange questions. Although Mr. Sen Gupta's book does not provide all that an advanced student requires, it may well serve as a compendium of events in connection with India's Currency and Exchange.

INLAND TRANSPORT COSTS: *By Dr. F. P. Antia, M. Com. (Bombay), Ph. D. Econ. (Lond.), pp. 304. Price Rs. 3. only.*

This is a very useful publication demonstrating with the help of carefully collected figures of costs of transport in different parts of India at different periods the close relation between them and economic development. The remarkable expansion in India's foreign as well as home trade during the last three quarters of a century has to no small degree been due to the reduction in transport costs, the index number of which in 1930-31 was as low as 6 only, taking that in 1830 at 100, within the railway era itself, *i.e.*, from 1871, when railways were sufficiently extended as to get closely identified with the trade of the country and 1930-31, the average ton-mile receipt on the E. I. Rly. was brought down from about 1·24d to ·50d, a reduction in proportion of 100 to 40. The increase in the total traffic originating only over class I Railways during the same period was by about 2,500 per cent, and the progress achieved in the economic life of the masses was reflected in larger production of exportable crops and in rising prices, these facts are very suggestive and the railway administrations today have much to learn therefrom. Dr. Antia's thesis unmistakably goes to prove that at the present moment of general economic depression it is a wrong policy of the railways to try to balance their budget by enhancement of rates and fares. The short-sightedness of such a policy is self-evident and it is bound sooner or later to have adverse effects not only on the finances of the railways but also on the entire economic life of the country. "The cost of transport being a certain proportion of the price," says the author, "it is obvious that a change in the price-level would disturb that proportion." "Broadly speaking—other things being equal, and the prevalent cost of transport having been found eminently suitable to the traffic the railway manager would feel justified in increasing his rate when the price rose and decreasing it when the price fell, so as to maintain the ratio at an even level." Nay, "each fall in prices," that the railway manager "omits to adjust his rates to, by means of a decrease, contracts the margin for the businessman, to that extent curtailing the inducement towards production or exchange of commodities."

With reference to the influence of transport costs on industrial development, Dr. Antia controverts the belief that reduced transport costs were responsible for the decay of many of the country's industries. "It is obvious," says the author, "that such decay must necessarily occur before development in the modern sense can take place." But, in the making of railway rates in the past, greater attention has been paid to the movement of agricultural and mineral produce to the ports, and "this seems principally accountable for the tardy industrial growth of the interior, which was not only neglected but even hampered." With recent developments after the report of the Acworth Committee, however, the author confidently looks forward to a better policy towards industry."

The book is replete with a number of graphs and statistical tables, many of whom may provide good material for further study of the subject. In fact among the literature on Indian transport problems Dr. Antia's book will occupy a place of abounding interest for all time to come.

NALINAKSHA SANYAL

BUSINESS ORGANISATION AND PRACTICE OF COMMERCE: *By Messrs. Sourindra Mohan Sen and Ananta Kamar Banerji. Publishers The Book Company Ltd., Calcutta. Price Rs. 4.*

Of late our students have become attracted to various examinations on commercial subjects, and the absence of a suitable book from the point of view of Indian conditions was a great handicap. This new publication will, we believe, remove the difficulty in the way of such examinees. The authors have comprehensively dealt with all important subjects that may come under the syllabus of a commercial examination. We would suggest to the authors to make the book more useful by recasting it to suit the requirements of the General Commercial Knowledge Paper of the R. A. Examination.

S. C. RAY

WORLD - CRISIS — UNDER ORIENTAL SEARCHLIGHT: *By M. J. Kanetkar, B.A., Nagpur. Pp. 90.*

If anyone thinks that it is a scientific study of the present crisis he will be sadly disappointed. The author no doubt trots out Malthus and other doctrines here and there, but all the same it is only a common sense criticism of the modern civilization. Multiplication of wants is the root cause of all our troubles and in renunciation as preached by the Rishis of old, in our salvation—is the sumtotal of his philosophy revealed by his oriental searchlight. The author and those of his way of thinking should not forget the wonderful achievements of the West cannot be pooh-poohed so cheaply and that the remedy for the present serious maladjustment does not lie simply in dream of the golden age.

The author, however, has an easy good style and though his views are highly amusing at places his advice of little or no value to the Modern Economists of Economics who are trying to pull the machine out of the quagmire, his chastisement of the present selfishness and individualistic tendency of the present day civilization is well-deserved and we can endorse much of what he says in this connection.

THE METAPHYSICS OF BERKELEY: *by W. Kameshwar, M.A.. Published by Mrs. Ashavati Kameshwar, C-o. Mr. M. K. Bakshi, B. A., Headmaster, Government High School, Khandwa, C. P. Pp. 360 (with Appendices & Index.)*

The author is not always careful in his statements. For instance, on page 27, we have: "As Spinoza's extreme Monism resulted in an equally onesided extreme Rationalism of the Rationalism of Leibniz, the extreme Rationalism of the latter was followed by a strong revival of Empiricism which was followed by the famous Essay on Human Understanding by John Locke." Is it quite correct to say that Locke *revived* Empiricism as a *reaction* against the extreme Rationalism of Leibniz?

The arrangement of chapters and topics in the book is also somewhat cumbrous. And in a book of 360 pp. three Appendices alone take up nearly 30 pages, or just one-twelfth of the whole book.

But for these defects, the book would have been a good introduction for College students to the study of Berkeley.

U. C. BHATTACHARJEE

THE A. B. C. OF CIVICS: *By Prof. Beni Prasad. The Indian Press, Allahabad. Pp 157. Price* [illegible]

Professor Prasad should be congratulated on a simple and helpful treatise he has brought out on an important subject. It is evidently intended to be a text book for the beginners. The style is easy and the exposition clear and lucid. Boys of the Inter-College classes will profit by going through the book. The printing and get-up are most attractive. The bibliography attached to the work will be of great use to those who would like to go into details in respect of the subjects which have been tackled in the book.

TEXT BOOK OF MODERN INDIAN HISTORY: *Part III and II, Part I. By Prof. S. C. Sarkar M.A., K. K. Dutt. Bihar Publishing House, Patna. Rs. 4-8.*

Some time ago we reviewed in these columns the first volume of this Text book which has been written jointly by the two professors named above of the Patna College. The quality which was evinced in the first volume has been maintained in these subsequent volumes as well. The book is sufficiently elaborate to be useful to the advanced students but at the same time it is not infested with those technical details which make a work uninteresting and dull to the general reader. The distinguished authors have taken advantage of all the recent researches on the subjects that are dealt with but have steered clear of those unnecessary controversies that make a book heavy and unreadable except by specialists. Vol. I, Part III deals concerned with the system of administration during Moghul times and the social life and the art and culture of India during this period. Within a space of 112 pages the authors have done ample justice to these important topics. Vol. II, Part 1 gives a survey of the political history of India from the beginning of the Governor-Generalship of Warren Hastings to the present day. The treatment is the same as in the Volume which dealt with the Moghul period. This volume should be read not only by all students of history but it should be read and digested by all our public men as well. The historical background of many of the important problems of the country has been carefully and exhaustively delineated. We congratulate the authors upon the production of this painstaking as well as truly helpful book.

NARESH CHANDRA ROY

THE INDIAN FOLK-DANCE AND FOLK-SONG MOVEMENT: *By G. S. Dutt, I.C.S., Founder-President: Rural Heritage Preservation Society of Bengal, Indian Folk Dance Society, Delhi. Double Crown, pp. i-vi+1-18. Chukerverty. Chatterjee & Co. Ltd., 15, College Square, Calcutta. Price Four Annas.*

The folk-dances and folk-songs which even in their present moribund condition are found to enjoy not little popularity among people still not so familiar with modern culture and civilization have been carefully studied and minutely observed by Mr. G. S. Dutt for a pretty long time. It is not only their scholarly anthropological interest that has attracted his attention but he has been struck by their immense aesthetic value and educational importance. This latter aspect of the thing has led Mr. Dutt to set on foot a movement for the revival of these songs and dances among the student community of the country. The booklet under review traces the history of the movement and refers to the hearty appreciation it has met with from different and important quarters. The short descriptive notes on some of these songs and dances of Bengal given at the end of the book are expected to rouse the interest of the public. Besides the dances described here there are many more which are well known and interesting. I should draw the attention of Mr. Dutt to at least one *e.g.* the vivid war-dance of Faridpur—the *paik dance* which is still displayed and highly appreciated on festive occasions like marriage ceremonies.

We hope Mr. Dutt will soon come out with a bigger and a comprehensive book giving detailed description of all known dances with illustration and satisfy the curiosity of the people roused by a perusal of this booklet.

CHINTAHARAN CHAKRAVARTI

HAND-BOOK ON INDIAN COMPANY LAW: *By Indrasen Verma, M.A., LL.B. Kotah Rajputana. Pp. CXXVII+272. Price Rs. 3-8.*

This is a small book on a great subject, which may be useful to students and lay-readers, but whether it will be of any great help to the "promoters under-writers, commission agents, share-holders, secretaries, managers and directors and debenture holders etc." for whom the author has intended it. is doubtful.

J. M. DATTA.

THE GHOST CITY: *G. K. Chettur, Basel Mission Bookshop. Mangalore, S. K.*

A Collection of ten short stories previously published in some Annuals. The reprint has been amply justified by the delightful way in which the stories have been told, containing good humour with a certain graceful manner which never fails to please.

THE CURSE OF SOCIETY: *Umrao Bahadur. Printing and Stationery Department, 375, Jama Masjid, Delhi.*

This is a novel of widow re-marriage. Saraswati, a girl of exquisite beauty, is married to a dissolute young man who neglects her, but she goes on loving

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

him according to Hindu custom. Her love and loyalty meet with no response and she suffers shipwreck in the sudden death of her husband brought on by a reckless course of debauchery. Hari, a distant relative, loves her and, what is more, wins her love, but she does not like to break away from her people. The intense suffering during indefinite waiting results in a sudden illness for Hari and his parents, learning the secret by chance, manage to bring her to the sick bed. Her nursing soothes and cures Hari, but Saraswati is not taken back by her father whose mind has been poisoned meanwhile by interested gossip. She feels herself to be "the curse of society" but Hari marries her. More stress has been laid on events than on ideas, but in a psychological novel, as this pretends to be, in this the author has not been well advised.

PRIYARANJAN SEN

GERMAN

GOETHE UND SEINE AUSLAENDISCHEN BESUCHER: *By Hugo Landgraf. Publication of the Deutsche Akademie, Munich, 1932.*

On the occasion of the hundredth death anniversary of Goethe the Deutsche Akademie of Munich, which needs no introduction to the Indian public today, published this beautiful volume and carried the gratitude of all lovers of Goethe. At the side of Eckermann's immortal work the present volume will certainly prove to be indispensable to those who want to understand the great personality of Goethe.

Goethe spent all his life at Weimar. Although an ardent admirer of French civilization and culture he had never visited Paris. Neither had he seen Vienna. Goethe crossed the frontier of Germany only once in his life for his "Italienische Reise" which he has immortalized. And yet Goethe in his days was undoubtedly the centre of cultural activities all over the world: if a true history of mankind is ever written, the first three decades of the nineteenth century will be called in it "the age of Goethe". The greatest creative artist of the modern world, Goethe was an internationalist in the truest sense of the word. To him internationalism was a sublimated form of nationalism, and the real problem for him was to achieve a higher synthesis of the two. That is why Goethe refused to condemn French culture even when his fatherland was devastated by the French and that is why Goethe at the same time encouraged national culture in every country.

This aspect of Goethe's personality is however not so well known as it should be and Herr Landgraf in the volume under review has undertaken the arduous task of setting forth in details particularly this side of the character of the sage of Weimar. After a thorough sifting and detailed study of the whole Goethe literature our author gives here an estimate of the number of foreigners who came to visit Goethe in his old age and brought to this ever inquisitive child of the Muses information about various subjects from every part of the world. We find here that an Italian professor brought to him rare specimen of small reptiles all the way from Padua: the professor put his specimen in a glass of water and held the glass in his hands all the way to Weimar so that the reptile might not die on account of the jerking of the road! All his visitors were equally devout in their homage to Goethe, and Goethe too was equally gracious and kind to his visitors. Rude Australian settlers who had something to say on the primitive conditions of life on a distant continent were as much welcome to his table as the most brilliant scholars of Europe. Characteristically enough Goethe, as a rule, does not mention the names of his visitors in his diary but regularly notes down what he heard from them. Thus when the Governor of Dutch East Indies, aged with experience, entertained him with interesting cenversations on those distant regions Goethe did not consider it necessary even to note in his diary that a high official had been at his table that day. On the other hand, Goethe cannot repress his childlike joy when the widow of General Reynier brought to him the autograph of Napoleon from Paris.

Goethe had to sacrifice much valuable time to his visitors, and yet, in drawing up the balance, Goethe declared that not his visitors but he himself had been the gainer. In a letter to the Baroness of Chassey Goethe writes, in spite of the evident danger of being misunderstood and misrepresented, there is always a positive gain on his side, so that unless it is physically impossible for him to receive, he cannot deny an interview to his callers. And towards the end of his life he wrote to Soret: "I collected and turned to account all that I perceived through my eyes and ears and intelligence. Thousands of individuals have contributed their shares to my works,—fools and sages, intellectuals and block-heads, children and grown-up people: they all came to me and brought me their thoughts, their powers and their experience, their life and their being."

Dr. Franz Thierfelder has appended to the volume a short account of the Goethe celebration all over the world on the occasion of the hundredth death anniversary of the poet.

BATAKRISHNA GHOSH

SANSKRIT

SAMSKRITABHASAPARICCHEDA, OR NAYA-YASAHASRI: *By Pandit Rajendranath Ghosh, 6, Parsibagan Lane, Calcutta. Published by Babu Kshetrapal Ghosh, 6, Parsibagan Lane, Calcutta.*

It is a new venture in the field of Nyaya-Vaisesika philosophy. It is an enlarged edition of the well-known manual of Logic, Bhasapariccheda by Visvanatha. Mr. Ghosh has incorporated a large amount of information into the body of the fact, placed within crockets, which he has collected from various sources. The original Bhasapariccheda consists of 168 verses, whereas the present work comprises 1066 verses. This will give an idea of Mr. Ghosh's achievement. It is a matter of felicitation that not a single line has been added which can be deemed unessential. Bhasapariccheda is a book of universal interest and has attracted commentaries from all parts of India and though an excellent introduction to the study of Navya-Nyaya, it can be hardly regarded as a comprehensive survey as it leaves out much that is essential and usetul. The result has been that students of Navya-Nyaya, who have neither time nor faculty to carry their studies further into the old classics remain ignorant of a large portion of Nyaya-Vaisesika philosophy. The present venture of Mr. Ghosh is calculated to remove this desideratum. We would request the author to bring out a fresh edition in Devanagari Script with a commentary, which will make it accessible to students of Nyaya all over the country. The Bengali Script of the present edition would

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

are afraid, tend to shut it out from the wide world, which will be regrettable for its universal interest.

SATKARI MUKERJEE

INDEX TO SRIMAD BHAGAVATAM : *By Pandit T. R. Krishnacharya. Published by T. K. Venkobacharya, Madhva Vilas Book Depot, Kumbakonam. Pp. 187.*

The author has laid all serious students of the Puranas under a great obligation by the publication of this very useful volume. In the first part of the index the author deals with the different stories in the Bhagavata. This will enable readers to locate and identify any tale in reference to "skandha" and "adhyaya", that is, cantos and chapters. The second part is an alphabetical index. It will be of the greatest use to scholars. The work has been very ably executed and the printing is in bold and clear Devanagri type. I wish the author would attempt a similar indexing of the other Puranas.

G. BOSE

SANSKRIT—ENGLISH

RĀMĀMĀTYA'S SVARAMĒLAKALĀNIDHI : *(a work on Music) edited with an introduction and translation by M. S. Ramaswami Aiyar, B. A., B. L., L. T. Published by the Annamalai University. Pp. lxiii—66.*

The classical forms of music in every country have definite technique behind it. This is established after a fair amount of development and stability of the various forms. The technique is to maintain the beauty and dignity of the style. The musicians have to refer to the standard forms. This does not mean that the books of reference hamper in any way the beauty and retard the progress and culture but on the other hand, they help to retain the previous acquisitions. The controversies and various styles supported by different teachers show the tendency towards progress.

A full appreciation depends upon a certain amount of technical knowledge on the part of the audience. Music has at least twofold aspects, the technical side—the grammar, as well as the artistic side—the development of emotion in the individual. A harmonious combination of both the aspects seems to be the proper aim of the artist. An extra tendency to show the technique prominently seems to depreciate the effect of the *raga* while one-sided tendency to show the variations in the intonations does not seem to please trained audiences.

In South India the connoisseurs of Indian music are keen in their enquiries into the history of classical music, and this publication bears a testimony to that. Rāmāmātya lived in the middle of the 16th century in Vijaynagar and was associated with Rāma Raja who belonged to the royal family of Vijayanagar and as is apparent from the text itself Rāmāmātya composed this treatise on music at the latter's request. Rāmāmātya was eminently fitted for the task for the following reasons : (*i*) He had studied the secret of music, (*ii*) he alone of all others knew both the theory and art of music, (*iii*) the traditional lore of music inherited from his grandfather, Kallapadesika, evidently Kallinatha—the commentator of *Sangitaratnakara*, palpitated in his pulse.

The treatise is a short one and contains besides the Introduction, a chapter on *svara*, a chapter on *mela* and a chapter on *rāga*. The learned editor has fully discussed the theories of Rāmāmātya in the Introduction and has noted their differences with the ancient theories as expounded in the *Sangitaratnakara*.

The editor in his Introduction gives a clear exposition of the definition of 'Mārga and Gandharba sangita' as distinct from the 'Desi' *i. e.*, the modern forms of music. There is the recognition of the different methods and systems of expansion or elaboration prevalent in different part of the country. The South Indian music (carnatic music) has its peculiar charm and is appreciated by the followers of Hindustani music. He naturally puts a stress to the methods of classification of the melodies (*rāgas* or *melas*) prevalent in South India and does not state the corresponding music intervals with their nomenclatures that are current in North India.

The fore-part of the Introduction is not very clear with respect to the proper position of the different tones although there has been used certain terms to indicate their position. The conception of the '*srutis*' is really useful in the theoretic understanding of the *ragas* but there seems to be no gurantee of the perfect exposition of the specified forms of the '*srutis*' during the actual performance of the music. So it is not out of place to draw attention to the fact that a simpler conception of '*srutis*' and tonal intervals helps a great deal to understand the *rāgas* properly.

The musical public ought to be thankful to the editor for his bringing into light views of old and famous musicians and writers that are apt to be ignored or forgotten by the rising set of youthful musicians and lovers of music in general.

It is doubtful whether the book can be safely recommended to all those concerned in music because it contains the exposition of the classical problems and the difficult technique of music but it may be pointed out that the book will be of immense help to those who want to use it as a book of reference.

M. GANGULY

UNIVERSAL PRAYERS : *Selected and Translated from Sanskrit Religious literature. Published by Sri Ramkrishna Math, Mylapore, Madras. Price One rupee and four annas only.*

This is a collection of Hindu hymns and prayers of non-sectarian character gleaned from various Sanskrit Scriptures and their English translation. In addition, there is a valuable introduction dealing briefly with the Hindu philosophy of *bhakti* and love and of prayer and meditation. The anthology is well prepared, the texts are well chosen and the translation carefully done. It will be of help to the lay reader as well as the devotee who wants to understand some of the deeper and universal aspects of Hinduism. We congratulate the editor and the publisher for bringing out this beautiful collection. The printing and the get-up leave nothing to be desired.

ANATH NATH BASU

SRI GITAHRIDAYAM

The book is a selection from the Gita consisting of 78 verses. There is an English translation of these slokas at the end of the book. The author says that Miss Lilian Edgar, M. A, has looked over the translation but I am sorry to say that the English rendering has not always been faithful. The word "adhikara," for instance, has been translated as "concern". The meaning of certain slokas has been considerably altered by taking them out of their context, for instance, the first sloka which is the 32nd sloka of the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

first chapter of the Gita contains a passage "what need have we, Oh, Govinda, of kingdom, of enjoyment, nay, even of life itself". The next line in the original which has been omitted from the selection says "when those for whose sake we desire all these are arrayed in battle here wanting to sacrifice their lives". Without this missing portion there is a chance of misinterpretation of the text. There is the usual picture of the serpent "Om".

BENGALI

KALIDASER PAKHI: (*'The Birds of Kaliadsa'*) *By Satyacharan Laha, M. A., Ph. D., F. Z. S., M. B. O. U. Gurudas Chattopadhyay and Sons, Calcutta. Pp. X+291. Foolscap Quarto. Cloth-bound, with pictures of birds, printed in black and silver, on the front cover. Thirteen illustrations, two of them in colours.*

This is a book in which the author has given an account of the passages, in which various kinds of birds have been mentioned, in the poetical and dramatic works of the poet Kalidasa. Dr. Laha is the greatest authority on birds and bird-life on our side and has an excellent aviary of his own. The subject treated of in this book he has made his own. More than fifteen years ago he contributed four articles to the Bengali monthly *Prabasi* on the birds of Meghaduta and Ritusamhara. The work under notice is a more extensive survey. Dr. Laha has shown therein from his own knowledge and by quoting from European scientific writers, how accurate was the observation of Kalidasa of the appearance and habits of the birds referred to in his works. The book is written in elegant Bengali in an interesting manner. The paper, printing, illustrations and binding are excellent. The detailed index has added to the usefulness of the volume.

VIDYASAGAR-CHARIT: *a biography of Pandit Iswarchandra Vidyasagar. By Sarat Chandra Roy. Ray and Co. 220 Cornwallis Street, Calcutta. Pp. 134. Six Illustrations. Price Re. 1. Cloth-bound.*

The author has written several handy lives of other celebrities. This, like his other books, is on the whole written in chaste literary Bengali. It gives an account of the great Pandit's life and his achievements as an educationist, author, social reformer and philanthropist. The manhood of the hero stands out in clear outline. The get-up of the book is commendable.

C.

HINDI

RUBAIYAT UMAR KHAYYAM: *Translated by Maithili Sharan Gupta. Published by the Prakas Pustakalay, Cawnpore. Pp. XXVI+56. Price Rs. 3.*

The old poet of Persia stirred up the heart of Europe in the last century and he has come to do the same in India in the present one. There have already appeared Bengali, Gujrati and Hindi versions of his poems. Mr. Gupta, the celebrated Hindi poet, has now translated 75 pieces and the publishers have produced them in a sumptuous edition with 12 illustrations in colour. The translator has followed the English version of Fitz-Gerald and his rendering is generally happy. We hope his attempt will be valued by the Hindi-knowing public. The introduction discusses about the original and translations. The illustrations are by the well-known artist of Benares, Mr. Ramprasad, who comes of an old family of painters of the Mughal School, and the appreciation by Rai Krishnadas is quite justified in most of the cases.

RAMES BASU

MANGAL-MOD: *By Sjt. Annapurnanand. Published by 'Rachana-Niket', Benares. Price Re. 1-4. Pages 128.*

It is gratifying to learn that after a spell of silence Sjt. Annapurnanand has again started his literary activities. By his three previous books Mr. Annapurnanand has already secured a very high position among the humour-writers of Hindi. 'Mangal-Mod' is his latest contribution to our light literature.

The present volume is a collection of ten short stories and sketches, written in a witty and charming style. The most praiseworthy thing in Mr. Annapurnanand's humour is this that it is absolutely free from any kind of vulgarity. He can make the reader laugh without appealing to his lower tastes. The illustrations given in the book add more to the charm of the stories. A perusal of the book will give the reader perfect enjoyment for an hour or two.

B. M. VARMA

GUJRATI

(1) VANTHELĀNANE BIJI NĀTIKĀO, (2) JAIL OFFICE NI BĀRI: *By Jhaverchand Meghani,* (3) JALIANVALA, *by "Darshak:" All three published by Amratlal D. Sheth of the Saurashtra Karyalay, Ranpur, Kathiawad, pp. 172: 166: 110. Cloth bound. Price Re. 1-0-0, Re. 1-0-0, As. 8 (1934).*

The first book contains the first attempts from Mr. Meghani's pen in the writing of plays. The title means, Villains and other plays. One of these "other plays" portrays the miseries of the wife of a pseudo-social reformer, who, though at heart is a tyrant, wants to show to his friends that he believes in the freedom of women. This particular one as well as the others are written with an eye to their being put on the stage. The language used is homely and the setting is familiar to Gujaratis. The plays therefore are likely to succeed. The second book, which means "the window of the prison office" tells in the most effective and therefore pathetic way the experiences of those who come to interview their relations interned behind the prison-bars, the tribulations of the interviewer and the interviewed, the oppression practised by the prison martinets and similar other distressful items. The author has had personal experience of everything he writes and therefore the exposures are not imaginary. As usual Mr. Meghani has succeeded in making his characters living and vivid, the third book dramatizes the sad Jallianvala Bag incident of 1919 at Amritsar in a series of twenty "scenes." They are so arranged as to cover all the different phases of the event, and make it live over again. The pictures on the jackets of this as well as the Prison-window Book are very suggestive.

TWENTY YEARS AFTER

By Major D. GRAHAM POLE

THE Divinity that shapes our ends seems to be determined that 1934—the twentieth anniversary of the outbreak of the Great War—shall not pass without its lesson. History is repeating itself or stirring up echoes in the most uncanny and unmistakable fashion.

The war began in Austria with Germany as the attendant evil genius and Russia watching Germany. This year war has very nearly begun again in Austria and again Germany is lurking in the slips. The only change in the scene is that Austria is no longer the great unconsolidated Austro-Hungarian Empire. Some of her territories and peoples have been lopped off to form the countries of Jugo-Slavia and Czecho-Slovakia or have been added to Italy and Roumania. And from this it arises that Russia is no longer interested in the scene—and the "mighty opposite" to Germany is not Russia but Italy.

As if this were not enough to remind us, this twentieth year since the War is also the year in which its two outstanding figures have died. Early in the year died King Albert of the Belgians, a moral victor for all time. Now, on the very anniversary of his country's declaration of War (August 3rd) has died Field-Marshal von Hindenburg, the greatest general the War produced.

The Great War was a war of waiting and wearing down and attrition. There was but one sensational victory in the old style and that was won by von Hindenburg. In 1914, he was a sixty-seven year old nonentity who had made a hobby of the strategical problems of East Prussia. In 1914 the Russian Armies began to roll over East Prussia and he was sent for and given his chance. For years he had studied the marshes in that district and planned the doom they could be to men and guns. Now that study bore its terrible fruit. The result was the slaughter of (1,000,000) Russians—the "famous victory" of Tannenberg.

The victor of Tannenberg became the hero of Germany and, unlike our own Duke of Wellington, showed himself as good and better a man in peace as ever he was in war. Although he was a monarchist he put his duty to his country above his personal predilections, and for years he did stand for something stable and good in German life. Unfortunately, in his old age, there was a falling off in his grasp of public affairs. Dr. Bruning, the last German Chancellor before the Nazi deluge, had a scheme which would have shown up a public scandal in which the Prussian landlords were involved. These landlords got at their old chief, played on his fears and loyalties, and persuaded him to get rid of Dr. Bruning. Accordingly the president appointed instead his friend von Papen. But von Papen could not stand up to the Nazis and became their prisoner—which he was never more so than at the present day.

Well, Hindenburg is dead and Herr Hitler rules, in his place. While the President lay dying it was bad taste to discuss the succession and one Nazi newspaper that did so was suspended for a week. The same considerations of taste, however, did not obtain amongst the more exalted. Twelve hours before the President died the Hitler Cabinet passed a law, to "enter into force from the moment of the death of President von Hindenburg", combining the offices of President and Chancellor and conferring them upon Herr Hitler. The old title of *Reich President* is to go and he will be known as *Leader* (Fuhrer) *and Chancellor* or more probably, by the short title *People's Leader*. Thus he becomes both head of the Executive and head of the State. And perhaps it is worth noting in passing that there is only one other European Dictator who has done this: Mustapha Kemal.

Of course, if the ordinary procedure had been followed, the President of the Supreme Court would have become President until a new election should have been held. But in March of last year the Reichstag passed an enactment giving the Hitler government "full power" to do anything on earth it liked. Accordingly true to type, and regardless of wider considerations, the Nazi regime decided to use the death of the President as an opportunity for a Hitler holiday. The Fuhrer became the Head of the State all right without waiting for an election—without waiting, indeed, until after the dead President's funeral. Germany was told to go into a fortnight's mourning and the poor musicians were told not to play during that time in the cafés. But again there was one law for them and another for the Nazi leaders. For on August 19th the German people are to be asked to endorse what has been done: to say "yes" all together and give yet another demonstration of their solidarity. And to work them up to the required pitch they are to suffer eleven days of intensive propaganda from 200,000 loud-speakers!

The reason for all this is that the Nazi regime never stood in greater need of boosting. Though the German people cannot read in their censored Press what is happening at home or thought of them abroad, they must be aware that Hitlerism has a lot to explain away. In the first place there are the political murders of the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

week-end of June 30th. They must have disillusioned many and especially the young people who thought of the Nazi movement as one of national regeneration. With them it is probably a case of "Never glad confident morning again."

Then there is the plight of Germany's trade with its background of unemployment and misery. There is a general shortage of foreign currencies and raw materials. Only today it is reported in the Press here that German importers are at a loss to know how to pay for their orders of Lancashire yarns. It is said that Germany cannot get through the winter without the aid of foreign loans.

Some idea of the shrinkage in Germany's exports can be gleaned from the figures published in respect of her trade with the Baltic countries. With this, incidentally, our going off the gold standard has had much to do. In 1929, Germany's exports to the seven Baltic countries (Denmark, Norway, Sweden, Finland, Esthonia, Latvia and Lithuania) totalled 1,563 million marks. In 1933 they had dropped to 507 million marks !

But the worst blow to the Nazi regime is, of course, the miserable failure with Austria. It set out with the declared intention of uniting the two German-speaking peoples. All it has achieved is the murder of Dr. Dollfuss—a murder the full story of which, to quote the *Times*, "is making the name of Nazi to stink in the nostrils of the world."

It is indeed a well-nigh incredible story ! Nothing more reveals the weak and clumsiness of Herr Hitler as a Dictator. And when one reflects that this bungler in Austrian affairs is himself an Austrian by birth it passes all understanding. No wonder he has been called a Mussolini out of the bargain basement.

The story of the Austrian plot is being unravelled and when it is completed there will be an indictment of Germany. Already the Austrian Government claim that they have proof that, in its main outlines, it was known in Germany.

The plot was a simple one. One band of Austrian Nazis was to seize the Chancellery and the members of the Dollfuss Government. Another to seize the Vienna Broadcasting Station and announce that the Dollfuss Government had fallen and Dr. Rintelen taken over. The broadcast was to be the pre-arranged signal for a rising of the Austrian Nazis all over the country. Following the lead in Vienna, they also were to rise and take over the local government buildings. It failed, of course, because although there was a serious situation in some of the outlying provinces, and especially in Styria and Carinthia, there was no general rising—and above all not in Vienna.

At this point it is necessary to say a word about the moment chosen for the Nazi putsch. For some reason which it is hard to understand all the apologists for Dr. Dollfuss speak of his being *forced* to adopt harsh methods of repression. He first adopted these harsh methods in February when he suddenly swooped on the Social Democrats, forced them to give up their arms, battered down their homes with machine guns, and put all their leaders in prison and concentration camps.

The excuse given was that the Social Democrats were armed. But the answer to that was that all Parties in Austria were armed: the Social Democrats, the Fascists and the Nazis. And the Social Democrats, in any event, had agreed to support Dr. Dollfuss against the Nazis. Moreover, Dr. Dollfuss put himself out of court so far as that argument was concerned, because he himself employed a private army, that of the Fascists, to destroy the Socialists.

Why did he do that ? Who "forced" him to employ harsh methods against the Socialists? It was noticed at the time that the Fascist forces were wearing Italian steel helmets. Ever since February Dr. Dollfuss has been acting in close association with Signor Mussolini. At the time of his murder, his wife was the guest of Signora Mussolini. It thus became ever increasingly clear that the price of Italian support against Nazi-ism was the repression of the Austrian Social Democrats.

Austria might have struggled on against the Nazis without playing Italy's game. Perhaps, if the League of Nations had given her more support she would have. But unfortunately it has to be remembered that last winter, when Austria wished to make an appeal to the League, we and Italy refused to support it.

Our "National" Government never will move a finger to assist the League of Nations, except to use our "commitments" thereunder as an excuse for increasing armaments ! And, as usual, such timidity only resulted in a worsening of the situation. Not until February of this year, not until Austria had thrown herself into the arms of Italy, would we make a statement of policy. And then we made it not through the League but as a Great Power acting in conjunction with other Great Powers—with France and Italy.

"The Three Powers," it was stated, "take a common view as to the necessity of maintaining Austria's independence and integrity in accordance with the relevant treaties." No wonder, Germany, however much she deserved the reproof, felt she was returning to the old pre-War isolation.

The inevitable result, of course, of Dr. Dollfuss's calling in Italy to aid her against the Nazis was that the Nazis grew desperate. Gun-running from Germany and acts of terrorism were intensified until, in the middle of July of this year, Dr. Dollfuss decided that the time had come to try conclusions with them once and for all. A Commission for Security was set up and thereforward "political acts of violence were to be

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

punishable *exclusively by death.*" And it was ...ing out of this, because several of their ...ers were awaiting trial and probably death, ...ers the Nazis retaliated with their putsch. ...the impending trial of Nazis, the plan to seize ...Dollfuss Government, the pre-arranged signal ...the broadcast—all these were essential features ...the Austrian rebellion and all were known ...beforehand in Germany. But the amazing part ...it all is the total lack of discretion, the utter ...incompetent bungling, with which Germany con...trolled the situation she had helped and hoped to ...bring about. It reads more like a Russian novel ...than a chronicle of contemporary happenings.

First of all the German Ambassador in Vienna, ...Herr Rieth, actually tried to negotiate a safe ...conduct for the rebels. For this he has been ...censured by the German Government. But it ...must only be said that, unlike the German ...Government, he did not desert his confederates ...merely because they had failed—and, in any event, ...his indiscretion has been totally eclipsed by ...German officials across the border.

The principal indiscretion was on the part of ...the official German news agency in Berlin. On ...the very evening of the murder of Dr Dollfuss, ...Wednesday 25th July, it published a "report" ...of the rebellion. But it was not a report of ...events as they had really happened. It was a ...report of what would have happened had the plot ...succeeded. So they revealed to everyone that ...Germany was in the know . . . What a clumsy ...indiscretion.

It is even stated by Strasbourg newspaper, the ...*Dernier*, that on July 22nd, three days ...before the rising, they received from a Berlin ...news photo agency five pictures which could be ...published after the impending revolt. And all ...these five pictures were wish-fulfilments of the ...rebels of the rebels! They were of the Vienna ...Broadcasting Station "which has been blown up." ...the Chancellery "which has been occupied by the ...insurrectionaries." Major Fey "who has been placed ...under arrest." Dr. Rintelen (the hope of the Nazi ...Party) who is now under arrest and who attempted ...Chancellor Dollfuss "forming a new Government." And ...Chancellor Dollfuss "who received fatal injuries." ...even that murder was a foregone conclusion.

How thorough and how German to try to have ...pictures all ready. How clumsy not to realize ...the shock of such prevision to the world outside ...that has no part in the Nazi murder club. No ...wonder Herr Hitler dare not let the German ...people read the foreign press comments. No ...wonder he is trying to give them a new ...version.

But Germany cannot escape indictment. The ...Fatherland Front in Austria (the party created by ...Dr Dollfuss to combat the Nazis) has plackarded ...Austria with the poster: "We indict the real ...murderers across the frontier." And the Vienna ...Government is busy collecting all the evidence. ...It is said that Dr. Rintelen, the Nazi rebels ...Chancellor-designate, has threatened "to tell all he knows." But already the Government has enough to establish Germany's guilt. On July 28th, they arrested a Nazi courier trying to cross the Bavarian frontier. On him they found documents, partly in cipher, in which the whole course of the rebellion was mapped out. Everything was provided for leading up to the formation of a new Government under Dr. Rintelen. And these documents, it is said, "remove any doubts as to the putsch in Austria being directed and prepared by the Nazi leaders in Germany, and particularly in Munich.

It is useless for Germany, now, to try to wash her hands of the Austrian murder and rebellion. It is too late now for such measures as the dismissal of the head of the Munich broadcasting station or punitive action against indiscreet Ambassadors and Press Agencies. These do not convince anyone. They only inspire contempt for a regime that tries to save itself by throwing its servants to the wolves. Why did Herr Hitler allow the long months of provocative broadcasting from the Munich station? Why did he ever appoint an "Inspector for Austria"? Why did he allow an Austrian Nazi Legion to grow up on the German side of the frontier? As the Austrian Home Front says in its poster: Germany threw oil on the flames. Germany put arms in the hands of youths who did not know any better. (In this last connection, of course, Switzerland has recently sent a Note to Germany protesting against the smuggling of German arms to Austria *via* Lake Constance.)

But what emerges from all this? Surely the conclusion that Austria must look neither to Italy nor to Germany for her independence—nor to a Hapsburg restoration—but to the League of Nations. Critics in this country may scoff at the League, but the fact remains that if the League won't support Austria, Italy will. And Italian intervention means uneasiness in Jugoslavia and a return to the old Balkan tension. In the recent rebellion, for instance, it is believed in Germany, and probably with truth, that if the Austrian Legion had marched across the frontier into Austria, the Italian troops would have done so also. And if Italy had taken this action, Jugo-Slavia would have followed suit. In other words —War.

Jugo-Slavia was profoundly agitated by Italy massing her troops on the Austrian border. A dispatch from Zagreb in Croatia, dated 29th July, reported: "There is considerable excitement throughout Jugo-Slavia and much military activity near the frontier. The Italian troop movements have caused irritation in Croatia, where the newspapers accuse Italy of arrogance in interfering in Austrian affairs, and claim there was no need for it. The Italian actions are described as 'provocative'."

As to the possibilities of a Hapsburg Restoration, it can only be said that Austria

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

which cannot support itself can hardly support a Restoration. And as to the suggestion that Austria and Hungary should unite and make it feasible, the Little Entente—Roumania, Czecho-Slovakia, and Jugo-Slavia—will go in fear for their territories should that come about.

In the words of an official communiqué issued by the Jugo-Slav Legation in Berlin, ". . . the Jugo-Slav Government is of the view that the League of Nations solely and exclusively has the right in case of special complications to make decisions upon the Austrian question as an international problem. Every other unilateral measure, such as intervention, would be an infringement of the peace treaties and *could bring about other consequences.*"

But let those nations who imposed the Peace Treaties remember that they condemned Austria to an impossible existence, to an existence in which she can never be self-supporting—and the outward and visible signs of which are beggars at every street corner and, indeed, these terrible political conflagrations. Same day perhaps, when the present tyranny in Germany is overpast, and Europe has lost its fears of Germany, Austria may unite with the rest of the German-speaking peoples. But the insane tactics of the Nazis have put that clock back for generations and meanwhile Austria cannot wait. If and when the Austrian question comes before the League of Nations, efforts must be made to break down economic barriers amongst the Danube countries —to free her trade and find her markets.

It is something to be thankful for that the new Austrian Chancellor, Herr Schuschnigg, shows some signs of seeking to return to the situation before February, before Dr. Dollfuss attacked the Socialists and threw Austria on the protection of Italy. Nothing can be said in condonation of the treatment which the Austrian Government meted out to the rebels. There is no getting away from the fact that safe-conducts were promised and the promise was broken. At the trial both Dr. Fey and Herr Neustaedter-Stuermer admitted that the safe-conducts were promised irrespective of the fact Dr. Dollfuss had been killed. "It was only on receiving this promise on behalf of the German Government that we surrendered, and Fey twice gave me his word of honour as an officer in spite of the fact that Dollfuss was dead"—said one of the rebels at the trial. But since that trial, there are signs that the Austrian Government may be more anxious to conciliate than to punish. After all, as history teaches us, there is no such thing as treason really. Treason is only treason when it is unsuccessful! When it succeeds, it is the new government—and the supporters of the old one are the traitors. Personal loyalties there certainly are but they belong to a different plane. At all events, to return to the new Austrian regime, they have, since Thursday, released Herr Seitz, the former and much-loved Socialist Burgo-master of Vienna, and also other Social Democrat leaders. They had been in prison since the events in February—and, as a report from Vienna states, "this is regarded as a clear attempt to end the fight with the Socialists and conciliate the working classes."

Will the new Austrian Government, can the new Austrian Government, make any similar attempt to end the fight with Germany? It seems impossible, since, if they are going to forgive their own hotheads, it can only be because they realize that Germany was more than half the instigator. And the tactless Germans, if they continue in their present mood, will doubtless only interpret any attempt at a new understanding as signs of weakness.

But something must be done about Germany. Her enemies may rejoice that she has so utterly put herself in the wrong, may take comfort from the reflection that she has scarcely a friend in Europe or the world. But, if they don't do something about it, they may soon find themselves trying to derive comfort from a Germany in a state of revolution.

Decent people, everywhere, cannot rejoice at that prospect. What, for instance, will be the plight of the workers? The International Labour Office last month published an article on the effects of the Depression in Germany. It analysed the German "dole" and its purchasing power. Since the investigations were made in Germany that dole has been reduced. Yet even on the former figure the conclusion reached was that "there is therefore every justification for asserting that a great number of the unemployed in Germany are exposed to the danger of underfeeding."

What can the winter hold in store for Austria and Germany and all of us?

Parliament has just adjourned for the summer holidays and the only thing for which the past session will be remembered is the National Government's re-armament programme and Mr. Baldwin's extraordinary speech in support of it. In it he went back on all his peace on earth sentiments and warnings to the younger generation.

The outstanding passage in that speech was that in which he said:

"When you think of the defence of England you no longer think of the chalk cliffs of Dover but of the Rhine."

Such a remark can only be a calculated indiscretion. It has been described as the most sensational statement on British foreign policy made by any British statesman since Mr. Asquith twenty years ago made his historic announcement of our entry into the War. What does it mean?

Germany, naturally, takes it to mean that England is expecting another war and that in that war she will be fighting against Germany. Not for a moment does she imagine that Mr. Baldwin was thinking of Locarno—and

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

sibility of England fighting either on the side France or on the side of Germany, according which of the parties was the aggressor.

Mr. Baldwin's remark", says the *Berliner Tageblatt*, "lets the cat out of the bag . . . The Commons debate was aimed at Germany Britain's potential enemy." And another Berlin paper, the *Boersen Zeitung*, pointedly adds that the speech shows "to what extent Britain is subjected to the influence of the French General Staff."

There is, indeed, more in that remark than at first meets the eye. Let us turn, for instance, to the current issue of *The Fighting Forces*. There the point of view is adumbrated, and there can be little doubt that it is the War Office view, that our new air defence policy must begin on the Continent. There an understanding is negotiated with France and the Low Countries with the object of securing facilities for British aeroplanes in aerodromes in those regions! (We went into the last War, officially, to preserve the neutrality of Belgium . . .)

In this article Germany, as in Mr. Baldwin's speech, is envisaged as the enemy. And "To fly from Germany to London," writes the Editor, Lt.-Col. R. M. Raynsford, D. S. O., "if one takes anything in the nature of a direct course, it is necessary to cross Dutch, French or Belgian territory . . . Our real air defence must inevitably be situated in France and the Low Countries"!

Sinister support to this outrageous proposal is to be found in a *Reuter* message published on 1st August. That message states: "It is recalled that at the London Economic Conference the British plan for establishing neutral (!) zones in Belgium and the Netherlands to prevent air attack on the British Isles was explained to Mr. Cordell Hull, the American Secretary of State."

The truth of that *Reuter* cable is denied in British official circles, but it all hangs together with Mr. Baldwin's remark about the Rhine frontier and with the article in *The Fighting Forces*.

In any event, it is deplorable that a British statesman should have in peace-time named an enemy. Deplorable that he should in that irresponsible fashion give colour and support to the jingoists and alarmists who delight in playing to the tunes piped by the armament manufacturers. It is incredible, for instance, that the Air Defence League should be allowed to issue, as they are at the present time, leaflets urging the creation of *A New Winged Army Of Long-Range British Bombers to Smash Foreign Hornets in their Nests*, and that on the back of this leaflet they state who the "enemies" are in the following screamer:

"Why wait for a bomber to leave Berlin at 4 o'clock and wipe out London at 8 ?"

But beneath all this scaremongering the National Government may be hatching some scheme and all lovers of peace should keep their eyes open. There has been general surprise, for instance, that Mr. Baldwin has never said anything more about his famous promise, should disarmament have to be abandoned, to get to work next morning to secure some kind of an Air Convention.

Is the truth of the matter— the explanation —that the National Government's idea of an Air "convention" is an Air alliance directed against Germany? Are we in for a military alliance with France and the Low Countries, an alliance masquerading as a Convention?

The strangest feature about our new re-armament programme is that the National Government has no mandate for it whatever. The only mandate they have received is from the Conservative Party Conference. The so-called National Government is being driven by the Tories and the Service Members. No one, says the *Manchester Guardian*, can read Mr. Baldwin's speeches on armaments since the Conservative Conference at Birmingham last October without feeling convinced that if left to himself he would have deferred re-arming until the Disarmament Conference was a proved failure or there was demonstrable external justification for it.

The least ingenuous part of Mr. Baldwin's speech was the attempt which he made to justify re-armament on the grounds that our stronger arms would assist in the cause of "collective security". As one critic observed, if his Tory colleagues had taken him seriously they would have called for an immediate Cabinet meeting!

It is not too much to say that the British Government's determination to have nothing to do with collective security has been the principal cause of the failure to date of the Disarmament Conference. They would not give any definition, as the *Manchester Guardian* points out, of even the mildest guarantees of a Disarmament Convention. And it adds: "If there is one thing that can be confidently asserted about the foreign policy of this Government from China to the Rhine, it is that it has been resolutely determined to avoid any and every situation in which the idea of 'collective' security' could be put to any sort of test."

The one thing that is certain about that famous re-armament speech is that Germany thinks we are in France's pocket and America is going to follow our bad example and join in the Air Race also. A report from the United States, following on Mr. Baldwin's speech, stated: Britain's expanded air plans, it is believed, will stimulate the United States Government's determination to have Congress approve the Baker report recommending that "2,320 aeroplanes is the minimum considered necessary to meet peace-time army requirements."

Peace-time?

AN INDIAN COLONEL IN ROUMANIA

By SUBHAS CHANDRA BOSE

DURING my recent visit to Roumania I came across in Bucharest a very interesting personality. He is Dr. Narsing Mulgund, a Lt.-Col. in the medical department of the Roumanian army. I became so interested in him that I obtained from him the particulars of his early life which I am now writing for the information of my countrymen.

A Maharashtrian by birth, his home was in Taluka Bhuvanagir, sixty miles from Hyderabad city in Deccan. He had his early education in Bombay and after matriculating, he went over to Calcutta.

Lt.-Col. Narsing Mulgund

In Calcutta he joined the Scottish Churches College and studied for the F. A. Examination. Simultaneously, he studied at the National Medical College of Dr. S. K. Mullick. Among his teachers at the latter College were Dr. S. K. Mullick, Dr. Y. M. Bose, Dr. B. C. Ghosh and Dr. M. D. Das. He duly passed the F. A. Examination from the Scottish Churches College and the M. C. P. S. Examination from the National Medical College. In 1912, he went over to London and took the M. R. C. S. Diploma. About this time the Turko-Balkan War broke out and Dr. Mulgund volunteered for service in the Red Crescent Mission in Turkey. There were two medical missions, one led by Dr. Ansari and the other by Dr. Abdul Hossain and Dr. Mulgund joined the latter. He worked for six months as a surgeon with the Turkish army at Shatalja. There he got the Order of Commander of Majidia from the Turkish Government. In the Turko-Balkan War Greece, Serbia and Bulgaria fought against Turkey. This war came to an end soon, but a fresh war broke out in which Serbia and Greece attacked Bulgaria. Roumania also joined in the fray. Since Bulgaria had grabbed a lot of territory from Turkey during the Turko-Balkan War, Turkey took this opportunity of regaining some of her lost territories. When Roumania declared war against Bulgaria, the mission went over to Roumania. In Roumania Dr. Mulgund worked in Zimnica, where there was a field-hospital. Cholera then broke out in the Roumanian army and the medical mission proved to be of great assistance. As a reward for his services, Dr. Mulgund got the Order of Military Virtue from the Roumanian Government. This was in August 1913. At the end of the second Balkan War the other members of the medical mission returned to India, but Dr. Mulgund stayed on. He felt a strong impulse to carve out for himself a career in Roumania.

But who would help him was the problem. Fortunately, about this time Dr. Lupu, a well-known politician, and Professor Stanculeanu took a fancy for him. His future career depended on his becoming a naturalized subject. With the help of his two friends and through the strength of his war-services, he was able to become a naturalized subject long before the usual term. Soon after this he obtained a job as an assistant in the Eye-clinic, attached to the University Hospital. He then passed the State Examination in Roumania. After passing his examination he was able to obtain an appointment as a Sub-lieutenant in the medical department of the Roumanian army.

This was in April 1915. On August 15, 1916 Roumania declared war against Germany. In 1917 Dr. Mulgund became a Lieutenant and in 1918 a Captain. In 1926 he became a Major and in May 1934 a few days before I came to Bucharest, he became a Lt.-Colonel.

From the left: Elder daughter, Mrs. Mulgund, younger daughter, Lt.-Col. Mulgund, a girl friend of the daughter

Dr. Mulgund, or rather Lt.-Col. Mulgund, is one of the best Eye-specialists in Roumania. From 1919 to 1922 he was chief of the Eye-Hospital in Oradia and from 1922 to 1928 he was an Eye-specialist, attached to the military hospital in Bucharest. During my stay in Bucharest he was asked by the War Minister to open a new Eye Hospital for the benefit of the army.

Lt.-Col. Mulgund married a Roumanian lady and they have two children, both of them girls. They are a happy family. He is quite well known in Bucharest and even before I met him I came to hear of him from several Roumanian friends. During my stay in Bucharest I had the pleasure of spending much of my time with him. From the way he used to be accosted by the Roumanian gentry and by military officers whenever we went out together, one could see, that he was not only well-known there, but much esteemed also.

Though he has been away from India and though he is now a Roumanian subject, he has not forgotton his own language. Besides Marathi, he can speak Hindi fairly well and still retains a fair knowledge of Sanskrit. He is very fond of quoting Sanskrit maxims and verses from the Gita. It was a very great pleasure and honour to meet Lt.-Col. Mulgund in Bucharest. And I have no doubt that those of my countrymen who read this, will be equally pleased and interested. Lt.-Col. Mulgund lives at Strada Canzasi 14, Bucharest.

INDIAN WOMANHOOD

Mrs. JAYASHRI NAISHAD Raiji has been elected a member of the Senate of the Bombay University to represent the registered graduates constituency.

Mrs. AMRIT KAUR of Bombay resolved and actually began to fast unto death if her fellow-patriots in Bombay failed to come to the relief of the Assamese in their distress caused by devastating floods. She, however, postponed her fast on the persuasion of leaders. The *United Press* reported from Bombay on August 21 last:

"Tears rolled down the eyes of Srimati Amrit Kaur this evening when she was informed that Bombay contributed Rs. 20,000 in cash and kind for Assam flood relief, thus fulfilling her vow of providing clothing for 20,000 women. Ten thousand *saris*, each costing Re. 1 and 10,000 clothing, each costing 4 as., and Rs. 9,000 cash were collected from Bombay. Practically all clothing was despatched to Assam and the cash was remitted to various relief agencies.

Mrs. Jayashri Naishad Raiji Mrs. Amrit Kaur

The most remarkable fact of the collection is that not a single volunteer was engaged for

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

it and not one person was personally approached to contribute.

Mrs. Amrit Kaur has also appealed to the Panjab to contribute at least Rs. 2,000 to clothe 2,000 Assam sisters."

MRS. PRABHAMAYI MITRA is an artist of considerable merit. Her paintings were exhibited in Calcutta early this year along with those of others of her own sex and highly spoken of by experts. She has introduced new techniques in the village domestic arts, such as, *alpana* painting (painting the floor with the rice-powder mixed with water), etc. She also knows photography.

Mrs. Prabhamayi Mitra

Miss. Sita Bai More

MISS SITA BAI More won many prizes in sword and *lathi* play in Bombay.

NEPAL AND ITS RULER

BY S. P. THAPA, B. SC.

THERE are times in the history of a nation when great souls are born to guide its destiny on its onward march. The canvas of time paints many a towering personality who acts as a beacon light to guide and to inspire his generation with the light of faith and hope. Verily, His Highness Projjwala Nepaltara Atiprabala Gorkhadakshinabahu Prithuladhisa Maharaja Sir Judha Sham Shere Jung Bahadur Rana Grand Croix De La Legion de honneur, G. C., Santi Marijio Elaro. G. C. I. E., Hon. Lt.-General British Army, Hon. Colonel of all the Gurkha forces (Indian Army), Prime Minister and Supreme Commander-in-chief of Nepal, belongs to this small band of supermen. Even during the brief span of a year-and-a-half's administration of his he has shown that catholic liberality and broad-mindedness which in themselves go a great way to evidence what stuff his heroic soul is made of. A little pen-picture of this great man would be illuminating as a setting and a mould in which this heroic soul is cast.

The one fact that comes out prominently in his life is that he came under the stimulating influence of his mother under whose strict discipline his early life was moulded.

Born in 1875 he was brought up in strictest discipline along with his brother Maharaja Sir Chandra Sham Shere by his father General Dhir Sham Shere, the then Commander-in-chief of the Army. The morning shows the day and even in his early life His Highness exhibited those signs and capacities which were the precursor of his future greatness.

It was in his capacity as a senior Commanding General under the rule of Maharaja Sir Chandra Sham Shere that his high talents and organizing capacity were put to the test and he was found equal to every great task that was entrusted to him. It was during the Terai shooting of H. M. King George in the year 1911 that he showed his capacity for efficient organization that marked in his later life. He was in charge of the whole arrangement in connection with the shoot. It may be said to his credit that every thing passed off as it should have, and his work received the highest approbation of his brother.

The European tour of Maharaja Sir Chandra Sham Shere in the year 1908 whom he accompanied as chief of the staff was more than anything else a real eye-opener to this great mind and the great ideas he imbibed then have borne fruits of far-reaching possibilities now.

It was during the Great War in which almost all the European Powers were involved that His Highness was in charge of the Nepalese war office, being Senior Commanding General of the Army. He played his part well and with ability. During those critical times he worked indefatigably day and night so that the Government of Nepal might be in a pasition to render the highest service to the British Government with whom the Government of Nepal is connected with the indissoluble tie of staunch friendship. It was through the effort of the late Maharaja Sir Chandra and His Highness that the British Government could get so many Gurkha recruits during the War. Several trained Nepalese regiments were sent to guard the Indian forntier.

During the Prince of Wales's visit to Nepal Terai also His Highness was in charge of the whole arrangement of the shooting camp.

Since the accession of H. H. to the Prime Ministership of Nepal he has introduced several reforms which go to show that His Highness' one supreme object in life is the amelioration of the condition of his subjects and the improvement of his country.

His Highness is always untiring in his attempts to introduce reforms in any shape which would be likely to be conducive to the general well-being of the people. Agricultural indebtedness has been the one problem the solution of which has been taxing the ingenuity of many a ruler. With that end in view His Highness has risen to the height of the occasion by making a beginning in the way of establishing co-operative credit societies at the very commencement of his rule whereby it is hoped the material condition of the poor cultivating classes would be much altered for the better.

His Highness is always keenly alive to the need of industry and its organization without which no nation can hope for material prosperity. Industrial improvement has been the one absorbing passion of His Highness. He has been trying to find out possibilities of developing trade and industry. The establishment of the Nepal Trading Company with Nepalese capital is a move towards the same end. Many a contemplated reform in this direction, such as the establishment of a bank in Nepal and carrying out of an industrial survey, will soon be taken up and before long reforms in the direction of trade would be accomplished facts.

The question of good roads and hospitals and municipalities is also engaging His Highness' attention. There have been several reforms in the military and civil offices. His Highness has opened a provident fund for military officers and soldiers who now in the evening of their life would have sufficient provision to make their life of retirement one of ease and comfort. An additional new electrical power house is being constructed at Sunderjal for the purpose of facilitating trade and manufacture and Lt. General Krishna Sham Shere Jang Bahadur Rana who is in charge of the work is working very hard to complete it at an early date. The whole code

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

of the law is being revised so that it may be made up-to-date having in view the immemorial traditions and custom of the country.

Two recent happenings in Nepal have still more immortalized His Highness' name. Certain administrative changes have also been necessary and the following principal promotions have been made by His Highness in consequence of the removal of the third category from the roll of succesion. H. E. Supradipta Manyabar Commander-in-chief General Sir Padma Sham Shere Jang Bahadur Rana, G.B.E., K.C.I.E., Supradipta Manyabar Senior Commanding General Sir Mohan Sham Shere Jang Bahadur Rana, K.C.I.E., Supradipta Manyabar Commanding General Sir Baber Sham Shere Jang Bahadur Rana, G.B.E., K.C.S.I., K.C.I.E., Hon. Colonel British Army, Nepal Pratapbardhak, Supradipta Manyabar Nepal Tara Prasidha Prabala Gurkhadakshinbahu Commanding General Sir Kaisar Sham Shere Jang Bahadur Rana, K.B.E. Grande officier de la legion de honneur, Supradipta Manyabar Prasidha Prabala Gurkhadakshinbahu Commanding General Bahadur Sham Shere Jang Bahadur Rana, Supradipta Manyabar General Singha Sham Shere Jang Bahadur Rana are all highly educated and experienced Officers and as they have been given charge of important departments so the country's prosperity is further assured under His Highness' benign rule.

But unfortunately Nepal suffered irreparable loss and damage by the recent earthquake of January 15, 1934. At that time His Highness the Maharaja was away from the capital at Nepalganj where His Highness was busy looking after the welfare of his subjects. Immediately on receipt of the news of the damage done by the earthquake in Katmandu and in many districts of hill and Terai His Highness sent long telegraphic messages to all the officers giving them strict order to spend necessary money to help the distressed people.

On the opening of the railway line His Highness hurried to the capital and immediately on reaching there made a provisional grant of four lakhs of rupees. His Highness also opened a relief fund with a capital of rupees fifty lakhs to be given free of interest for four years. Nowadays in the work of relief His Highness' time and attention are so much occupied that he has hardly breathing time. Daily on horse-back he is visiting the devastated town and makes personal enquiries into the conditions of his beloved subjects.

Another landmark in Nepal's history is the establishment of an Embassy in London and His Majesty the King Emperor of India has received one newly created highest Nepalese title. His Highness the Maharaja's eldest son, Commanding General Bahadur Sham Shere Jang Bahadur Rana, is now in London as the head of the Nepalese mission.

In conclusion, we hope his life would be long and prosperous so that His Highness may see the fruition of his efforts.

THE MESSAGE OF LIFE*

An Appreciation

By R. C. SEN, I. C. S.

In social maladies as well as those that are physical, diagnosis is often half the cure. Yet in the various forms in which the demand for happiness is finding expression in the present-day world, this aspect of things does not always receive the attention it deserves. A growing awareness of this situation has perplexed the modern world. There is too much disparity between the practice and the knowledge of life. Not indeed there are who, like ostriches burying their heads in sand, think of annihilating the facts by refusing to see them. Some build utopias with their foundations in the air. Some again repeat the jest of Pilate and show the thinness of the line between the apparently profound and the extremely shallow. Life with all its manifold urgencies is there to be lived. It can neither be ignored, nor explained away.

In the community of Sciences, Sociology is the latest arrived. As a pure science it has got the same detachment and the same ethical neutrality as the other sciences. But, as has been well said, 'a scientific method of sociological analysis may serve the same purpose for society as a psychic analysis may accomplish for the individual by unveiling the causes of latest conflicts and repressions and by making society conscious of its real ends and motives of

action,' and this attitude is also adopted by the author of the book under review. A life-long student of anthropology in which he has made many notable original contributions, he brings to the study of the social problems of the age a mind rich in the wide knowledge of biology and kindred sciences, and in the passion for truth that follows the logic of facts without fear or prejudice; and in spite of the intricate nature of the questions that are discussed, the book has a literary grace rarely found in this class of writing.

The book is written for the young—the young in whose hands lies the salvation of each age and in whom humanity renews its hope in each generation. The author assumes no previous training on the part of the public he addresses and is careful to present the data he bases his conclusions on, however elementary some of them may seem to advanced students of science. For the same reason he avoids those results of scientific investigation that are still highly controversial. Yet the book is not written down to the level of the casual student of social phenomena who is not prepared to undergo the effort of hard thinking. It is in no sense a popularization of currently accepted views. Nor is it a mere study of origins, for the author shows what lines of approach to the problems before him emerge from that study. For much of his scientific data the author is necessarily indebted to others, although in those that relate to anthropology there is a good deal that is original. But he has co-ordinated them in his own way and made out a position for his own. This is not the less so because in many of his conclusions he is supported by other prominent thinkers throughout the world. It would have been surprising if it was the other way. Taken as a whole, it is probably the first book of its kind in Bengali.

Throughout the essays that make up this book the author wages a relentless battle against slovenly thinking and the habit of making fetishes of tall words. To those unused to the sense of the new horizons revealed by the progress of science, some of his conclusions may seem unpalatable. The author realizes this risk and relies on the love of freedom of thought which has been a characteristic of the Indian mind throughout the ages. It is to be hoped that he does not rely in vain. In three essays the author discusses the problems of life, immortality, mythological morality and the origin of the moral sense. Their main argument is based on two leading ideas, which to use metaphysical terms, are those of continuity and immanence. It is not glorifying God to conceive of Him as a *deus ex machina*, constantly intervening to set things right, or as a mason busy repairing his architectural faults. If He is, He is active in the processes of the Universe. There is thus an unending continuity between the electron and the proton, and man in whom evolution at last becomes partly conscious. There are indeed gaps that have not yet been bridged by science, but to explain them by miracle or cataclysm is only to indulge in intellectual indulgence.

The author briefly describes the atomic theory and postulates that given this cosmic dust with its inherent properties, the rest of inorganic nature is a matter of development. Following the same line of thought he opines that somewhere in the course of the history of the earth, under a convergence or suitable conditions, life originated from the inorganic. Then began the course of evolution wherein mutations and variations were the raw material and the agent Natural Selection, until the process culminated in man when matter flowered in mind. Science describes the process, but does not explain it. Neither matter nor mind can be thought of without its inherent laws of development. Creation, if that term may be used, is, therefore, eternal.

The above view has certain important implications which are developed by the author.

1. The popular idea about matter which is found to be the source of life has to undergo important modifications; life with its properties of self-reproduction and self-regulation may be qualitatively different from matter. But there is an organic relationship between the two. Every single thing in the universe has its mystery but life is no more mysterious than matter.

2. The particular configuration of matter which yields self-consciousness in man also gives him a sense of free choice of alternatives but consistently with the theory of immanence, the correct lines of man's development are to be found in his nature, although he is at liberty to ignore them and make a wrong choice to his cost.

3. The structure of the human mind sets certain limits to its capacity for investigation. The mind which cannot get out of itself, can never be equal to explaining itself. The laws that prevail in the inorganic domain also obtain in the realm of life, and a time may come when it will be possible to describe all human activities in physico-chemical terms, but this will not explain life. Material processes and consciousness, though they are two different aspects of the same reality, are yet different qualities of being.

The author then takes up the question of immortality, and finds the basis for a widespread belief in it in the will to live that dominates Animate Nature. The meanest amoeba has its reaction to stimuli that are injurious to it. The normal man in his search for things that death may end for ever for him, faces all the miseries and trials that life brings in its train. Nature, as Goethe said, is continually taking advantage of her children's 'capacity for forgetfulness'. The author notices the same phenomenon and he urges the practice of this forgetfulness in which, according to him, lie the springs of life.

If death is inevitable, the problem of immortality is scientifically insoluble, and will remain so for ever. But the author believes that personality survives death. Matter and energy are never destroyed, and the author's argument about the conservation of personality is the converse form of this scientific argument. In a universe where nothing ever goes to waste, it is hardly likely that self-consciousness, its highest product, is alone doomed to extinction. While he holds this belief, he is careful to add that any dogmatic representation of after-life can only provoke ridicule.

The theory of rebirth raises more difficulties than it solves. As an explanation of differences found amongst men, it is uncalled for, as similar differences are found in the animal and plant worlds where there are no souls. In some ways it is also a mischievous theory, for philanthropy, according to its strict logic, is immoral interference with the moral justice of the universe.

It will thus appear that the above view has nothing unspiritual in it. To call evolution the method by which God works, is only to substitute orderliness for the catastrophic theories of divine activity which are still extant in some circles. Then again whatever criticism the idea of emergence may be open to, very few serious thinkers now believe in a 'supernatural hiatus

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

between the organic and the inorganic. Then again without denying continuity between man and the rest of the animal world and some kind of mental activity to the latter, it is possible to hold that man with his conceptual reason, his language and social tradition has his differences also. As Pringle-Pettison says, 'it is a case of the little more and how much it is and the little less and what worlds away.' Matter with its potencies takes on a new meaning. But such a view does not destroy any values. As Lloyd Morgan says, "Of protoplasm we may likewise say that under certain conditions at present unknown it appeared." Those who would concentrate the mystery of existence on the pin-point of the genesis of protoplasm do violence alike to philosophy and religion. Those who would single out from among the multitudinous differentiations of an evolving universe this alone for special interposition would seem to do little honour to the Divinity they profess to serve. Theodore Parker gave expression to a broader and more reverent theology when he said, "The Universe broad, deep and high is a handful of dust which God enchants. He is the mysterious magic which possesses" not protoplasm merely but "the world."

The author's conception of self-consciousness takes us point out of the age-long antithesis between the body and the mind. Man may be a machine, but he will himself never realize that it is so. His awareness of himself is inseparable from his sense of free will. The author then distinguishes the question of the survival of personality, which may be held as a reasonable belief, from detailed presentations of after-life which involving, as they do, the difficulties of translating eternal life into terms of duration, are found to be full of absurdities and he shows that in popular pictures of the life beyond the grave there is much that belongs to the infancy of mankind.

Flaubert in his 'Temptation of St. Anthony' shows the procession of the gods made by man, and Rhys Davids in his American Lectures on Buddhism conceived of a book on 'The Birth Days of the Gods'. This is the task which the author accomplishes on a small scale in the essay on mythological morality. The first reaction of the early man to the universe consisted in a sense of wonder and awe. It may be noted that some writers have described the feeling as 'theoplasm', the stuff out of which gods are made. From his dream-experiences and his observation of his own shadow the early man has the idea of a detachable ego with which he ultimately connects the phenomenon of death. This ego is invested with supernatural powers from the analogy of freedom of movement possessed by the ego in dreams. Thus are born spirits which are later believed to be capable of introducing themselves into anybody. This gives rise to fetishism which through polydemonism develops into polytheism. The power of a body receptive of spirit-influence becomes a natural intermediary between the spirit-world and man. Thus arises the priestly class. The idea of possessing a spirit leads to the construction of the first amulet.

But there are other sources of the origin of gods. The only source of activity known to the early man was his own will. All unusual material objects and phenomena are thus endowed with will and personality. Later the material object is not itself considered as alive, but its controlling force alone is believed. At this level of culture there also grow up magic and fetishism of a different sort, e. g., talisman or amulet which owes its efficacy to power transmitted from without.

In the contact of early religions is to be found another cause of the birth of gods. The problem arising from a clash of the gods is solved either by syncretism or the creation of a pantheon. The author then explains what is now described as monolatry, a phase in the development of the early monotheistic systems.

The description of this development the author supports with a wealth of facts, some of them being observations of his own. It, however, seems that these different stages of development are more logical than chronological. The two main points that the author makes as a result of the above study are the following:

Early religion consists in propitiating, cajoling or deceiving the deities. It discloses no evolution of the ideals of conduct. There is no real communion between the worshipper and the worshipped, or the joy that is born of such communion. It may, however, be argued that, relative to the age, this was the development that was to be expected. The human conception of the Deity cannot transcend the current ideals of moral excellence and in these primitive conceptions of the life and the world are to be found the first beginnings of religion, philosophy and science. This lends special weight to the author's second point, *viz.*, many of these superstitions are to be found in the present civilizations filling life with unnecessary gloom. He refers to the present agitation for temple-entry and shows that the concession of this right to certain classes is worse than useless until they have been educated out of some notions that have survived from primitive times.

The author then shows that the idea of a Supreme Being behind the universe is not of late appearance in culture. He himself found it among the Kols and other anthropological investigators have found it among many tribes throughout the world. Some of them are democratic, so that the idea is not borrowed from monarchy. According to the indications of the myths it does not appear to be a later development either. The author then explains why the development of religious thought did not take the line of monotheism from the start. This Supreme Being was remote and not localized. He did not intervene in human affairs. The spirits and the gods did intervene, and were accessible through gifts and prayers. It is they who, therefore, came to be sought after.

The question that now suggests itself is where then is to be found the basis of true religion and true morality. The author asks man to look inside himself. The individual is in a certain sense an abstraction. There is no 'I' without a 'Thou'. The individual cannot be conceived of except as a member of a species. The motive-power behind all his activities is the supreme desire to live, to have more life both in quantity and quality, and early in the history of life it is found that in the higher reaches the interests of the organism and the species it belongs to are identical. In the love for the mate, in the parental care for the young and in the mutual aid among the members of the same species, are to be found the rudiments of the moral sense. The individuality of all animals thus completes itself in the larger life of the race. Moral sense is thus innate in man although moral codes may vary in space and time. It is on what Nature has bestowed her greatest approval, *viz.*, survival value. The author then points out that no philanthropy, no social endeavour is genuine until it is realized that man is organically

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

interested in working for his species. Morality is both difficult and unsatisfying so long as it is taken as an imposition from without.

It may, however, be argued that the biological argument is based on selected facts. What about the race being to the swift and the battle to the strong, the picture that is associated with the idea of Struggle for Existence? The author does not touch the point probably because to a great extent it is an obsolete picture. The competitions that is in Nature is chiefly amongst different species. Further, competition and mutual aid are alternative responses of the organism to the environment. Progress in biology has confirmed Herbert Spencer when he said, 'Self-Sacrifice is no less primordial than self-preservation'.

But man is also organically connected with the Infinite. He is not a finite being in any ultimate sense. The processes of his mind, his ideals and aspirations, his sense of incompleteness that carries him forward are inexplicable except for the felt presence of the filaments that bind him to the Infinite. This Supreme Reality, God of Religion, whose existence is neither proved or disproved by science, is the 'Beyond that is also Within'. It is in his longing for the Infinite that one finds the true sources of religion, literature and art. The latter aspect of this view the author develops in a beautifully written essay entitled 'The Ideals of Literature'.

The universe is, however, governed by laws. No development of the individual could take place in a world ruled by caprice. Prayer is thus of value as submission of desires to God for purification, and repentance as the sign of a moral rebirth. Goodness is conquered evil, and power is transmuted pain. The meaning of life cannot be reached by a refusal to face it. Systems that rely on esoteric practices or seek escape in the belief that the world is an illusion, are thus fundamentally misconceived.

The author thus does not formulate any creed. There are enough creeds in the world; Religion has survived and will survive many creeds, and the ultimate facts pointed out by the author will probably remain true for ever.

In a set of three essays the author then takes up the question of heredity, caste and marriage. In the space at my disposal it is difficult to give even a bare outline of these essays, written as they are with a rare insight into the fundamentals of the problems. He explains the chromosome theory of inheritance and points out that it is the germplasm that binds the generations. Somatic changes that do not affect the germplasm are not inherited. But although acquired characters are not inherited in man, the situation is complicated by the existence of the social tradition which Thomson describes as the 'Eternal Heritage' So far as mental qualities are concerned, what is inherited is capacity or general intelligence, its development being directed by the social tradition. He refers to the case of the Gonda tribe near Sambalpur which has been found to be extremely criminal. Researches into their early history disclosed that they were at one time the frontier guards of aboriginal kingdoms, and the successful commission of crimes against their enemies brought credit to them and not disgrace. Conditions have changed, but the tradition has persisted and every Gonda child is born into it. It is impossible to reclaim them unless children can be separated from their parents at a very early age, but this has its difficulties. Their only hope of salvation, therefore, lies in their being absorbed by people with a different external heritage.

From the above facts the author formulates two general laws: (1) Every human being is born into a social tradition in which is included the traditions of his family and this has important effects on his development. (2) The more isolated, the more inelastic a society is, the greater is its chance of degeneration. This he attributes to two causes: (a) the intellectual stagnation that results from lack of cultural contact with other peoples and (b) the evil effects of interbreeding.

He also refers to the growth and decay of elect castes and points out that the decay is usually the result of some social vices that almost inevitably spring up in such stocks. Among the factors that make for this result, the author emphasizes the enforced sexual union with people to whom, from early familiarity, the whole emotional attitude is different. Thomson is inclined to think that the failure in reproductive power which characterizes such stock is 'an expression of Nature's verdict against dis-social isolation of privileged classes, against every self-contradictory denial of the solidarity of the social organism''.

The author accordingly advocates out-breeding, but points out that its usefulness also has a limit. Too great a difference in the external heritage between husband and wife does not conduce to a happy marriage or the successful rearing of children.

He then turns to Hindu Society. Caste, as is well known, is both an exogamous and endogamous group, the caste as a whole being endogamous, the *gotras* inside the caste being exogamous. The author then points out an important fact which is likely to escape observation. This compulsory marriage outside the *gotra* leads to inbreeding and thereby defeats the very purpose for which the system was consciously or unconsciously adopted. The *gotra* does not really indicate common descent. As marriage has to be contracted outside the *gotra*, it often takes place among closely inter-related families and thereby results in inbreeding.

There is a good deal of free social intercourse among the higher castes of India but that they do not yet show the evil effects of inbreeding is due to the fact that the rigidity of the caste system is of recent origin. The author is inclined to think that they are high-mortality groups. He accordingly advocates inter-marriage among them as they have more or less the same social background.

As regards caste he points out that it is a growth and not an imposition either by the Brahmins or anybody else. He also points out the factors responsible for social grouping and makes the interesting observation that there is lack of commensality among the different aboriginal tribes also. It is the belief in the hereditary transmission of qualities which is the earliest factor in producing social rigidity. The Indian system is, however, peculiar and for this peculiarity the author advances a theory which is original and instructive, although it is reasonable to hold that so complex a phenomenon cannot admit of any one explanation. The author points out that life in India has always been easy and that Indians, unlike the nations of the West, had never engaged in any commercial enterprises. Those who emigrated, left India for ever. Few of the wars that took place were wars between nations. The sense of solidarity was therefore never strong enough to overcome

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

tendencies that went to the formation of the caste system. He also points out that during the rise of the Marhattas, whose activities were chiefly directed against the Muhammadans, caste restrictions were, as a matter of fact, relaxed. It may be noted that a similar phenomenon due to similar causes is observable in Japan.

As regards the future of caste the author does not think that any serious disintegrating tendency can be detected now. The agitation against it is largely conducted by people who had never been really within it. The social aspirations in the lower castes, their desire for a higher status, is in essence an acceptance of the system. Yet the author is of opinion that its ultimate disappearance is now largely a question of time. The whole world has gone back on the apotheosis of the Nation-State which resulted in the last Great War, and which is the logical development of the ideas underlying the caste system. And although in the idea of Nation there is probably something that is too precious to be wholly sacrificed, the forces making for human unity are too strong to leave it or caste unaffected.

The desire to avoid technicalities has made the author omit all reference to the Mendelian Laws of inheritance, in the section on heredity. Yet a short description of them and the subsequent work on those lines would probably have been useful. A reference to Mendel's Laws would also have explained why inbreeding, not an evil *per se*, has usually such undesirable results. The human race at large is of such mixed origin, that inbreeding sooner or later ensures the release of undesirable recessives.

Turning to marriage, the author is of opinion, which he supports by a wealth of facts, that the earliest form of marriage was exogamous monogamy. Anthropologists are not agreed on this subject, but the balance of authority appears to be in favour of the author; for in the earliest stage which is the selecting stage, families must needs have been small and mates must have been sought outside their limits. Later variations such as polyandry were either perversions or adaptations to particular circumstances. While it may be argued that the earliest form is not necessarily the best, the author refers to the prevalence of monogamy in the animal world and urges that there are in human nature innate forces that make for this form of union (exogamous monogamy). They are :

1. An almost instinctive repugnance to incest. There is, however, something to be said for the view that this repugnance and the severe taboos prevalent in savage society against this kind of union are the effects of an original attraction.
2. The need for prolonged parental co-operation for the rearing of the offspring which can be best achieved by persons in love with each other.
3. The needs of the emotional life which demand this kind of union, and the author in a separate essay advances certain psychological and physiological reasons in favour of this argument.
4. The fact that man is not handicapped by a sexual periodicity. The author points out that in animals with mating seasons, sexual union often lasts beyond the period of the needs of the offspring. The argument would, therefore, apply with greater force to human beings who have no such season.

To these it is possible to add the fact that normally the sexes are approximately equal in number.

The author emphasizes the essential necessity of the child being brought up by the parents, and doubts if these nurseries can ever replace the home. It may also be reasonably urged that parents need the society of children, as much as the latter need the society of the parents. The author admits that the present marriage systems may be unsatisfactory in many ways, but all that he is anxious to establish is that there are in this matter certain permanent factors that cannot be ignored. Even where the marriage has not turned out what it was expected to be, he advises restraint.

It would be mistaking the intention of the author to think that he advocates any particular legal system of monogamy nor do I understand him to mean anything beyond the fact that monogamy is the norm round which there are the oscillations. But his general conclusions are beyond dispute and are welcome in an age when there is so much slipshod thinking about sexual morality. There is no promiscuity anywhere among the savages. In societies where group-marriage or some forms of sexual communism obtains, the limits within which such relations can take place are rigidly fixed. The psychic and the physiological barriers of personality cannot be thrown down at random without damage to the finer expressions of sexual life. As has been said by Julian Huxley—"To love one woman fully is to wish not to love any other woman fully. If a philosopher existed who was both purely rational and had also never fallen in love, this would doubtless seem to him very absurd—how could one limited human female, when so many and such diverse types exist, satisfy the mind's craving for variety? The answer is that it is so; but also that as a matter of fact this complete giving of the self in one way to one person makes it possible, so is the mind constructed, to give and receive more freely, but in a different way, to and from other beings; whereas an attempt to love many completely is impossible in practice, and with no single one does the love attain fullness."

Yet it may have been necessary to reprove the old, for the old system contained much that was cruel and unjust and suffering beyond a certain point may be sterile or degrading. The form was exalted at the expense of the spirit. As has been well said by Havelock Ellis, "it is the reality of the marriage which sanctifies the form." The author has wisely refrained from telling us how such marriage is to be achieved. The happily-married have not left us their secrets. Such secrets cannot be told.

It is not my intention to exhaust the contents of the book. The teaching that is to be found there, cannot be given in a summary. In the discussion of every problem that the author takes up, he preserves an admirable detachment and uses his wide vision of the solid biological facts of life and his consummate grasp of the streams of tradition in finding out the true lines of advance. He is no scientific Chauvinist or a despiser of social tradition. Again and again he emphasizes the need of both knowledge, without which emotion is pregnant with mischief, and emition, without which knowledge is sterile, in studying social problems. God to him is not a theological mystery. He is to be found in the very texture of human experience. He is not remote and unfriendly, but His ways have to be understood. He may be inexhaustible but He is not unknowable. In a certain sense nothing in the world, says the author, is fully known, a view that reminds one of Tennyson's famous lines on the "flower in the crannied wall". For man to try to understand the ways of God is to realize his own potentialities, and that realization has its own inspiration. It is, therefore, not for man to retreat before the complications of the world that science reveals.

The author's combination of scientific knowledge with expository and literary ability equips him eminently for the task he has undertaken in the book. In an appreciation written in English, it is difficult to do justice to its style, its illustrative brilliance, clearness of exposition and lack of special pleading The book is easy reading, but the very simplicity of its style conceals its strength. Although the book is primarily intended for the young, every class of reader will find in it a very valuable intellectual discipline. For lucidity of exposition, the tone that is adopted is sometimes of the class-room, yet he will have read the book in vain, who does not realize that the aim of the author is to provoke thought and inspire the reader 'to learn what none may teach, to seek what none may reach.'

COMMENTS AND CRITICISM

"Relative public spirit and enterprise of Hindus and Muhammadans in Bengal"

The number of Muhammadan magazines in Bengal is not six, as stated by Mr. J. M. Datta, and that of Hindu ones eighty. In *the Calcutta Gazette* of 2nd August 1934, ninety-four Bengali periodicals have been noticed of which only four are conducted by the Muhammadans. The maximum circulation of a Muhammadan magazine is 1,000, while that of some conducted by Hindus is 15,000.

Sukchar P.O.
24 Parganas — HARI DHAN GANGULY

"Relative public spirit . . ."—Mr. J. M. Datta's Reply

Please allow me to reply to Mr. G. Murtaza's comments on my article "Relative Public Spirit and Enterprise of the Hindus and the Muhammadans of Bengal". He has accepted my facts and figures, but he imputes me motive and challenges me to prove something else. The real facts and figures bear rather hard against Mr. Murtaza's community; so he has invented facts and based his arguments on them.

Let us test the truth or otherwise of his facts. He says that of the Rs. 12 crores of provincial revenue, Rs. 6 crores goes to the Hindus and about Rs. 1 crore to the Muhammadans in salaries. It is not a fact that the Government spends as much as Rs. 7 crores in salaries. It is well known that the Government effected 10 per cent cut on all salaries of over Rs. 40 per month. This cut included H. E. the Governor, the Members and Ministers of the Bengal Cabinet, and the I. C. S; I. P. S; I. E. S; I. M. S. &c. The net annual saving was less than Rs. 37 lakhs The Hon'ble Mr. A. Marr in presenting the Budget for 1932-33 before the Legislative Council on the 22nd Feb., 1932 said:

"The savings due to the 10 per cent cut in pay during the 3 months in which this was effective in 1931-32 are estimated at Rs. 9,10,000 while the savings anticipated on this account during the next 12 months are estimated at Rs. 36,98,000." [*Bengal Council Proceedings* Vol. 38, no.2 p. 31.] Therefore the total of all salaries over Rs. 40 comes to Rs. 370 lakhs. Let us calculate the total of all salaries below Rs. 40. The actual number of workers including working dependants of all religions in services under the state is 38,769; and that of those who serve the state as a subsidiary occupation is 1,658. These two total 40,427; deducting therefrom the number of persons working in the Post and Telegraph Departments, numbering 23,843 we get the maximum possible Bengal Government servants to be 16,584—maximum because we have not deducted the number of government employees in the customs etc. for example. If we assume every one of them including the peons and chaprassies getting Rs. 40 p. m. the total of their salaries do not exceed Rs. 80 lakhs. So the Governments' salary bill cannot exceed Rs. 450 lakhs; but Mr. Murtaza makes the Hindus alone get Rs. 600 lakhs!

Mr. Murtaza says his figures are not imaginary, for he has consulted the Government budget of 1932-33, and has made a rough calculation out of them. I too have gone carefully page by page through its 321 pages, but nowhere have I found any mention anywhere of the religion of the government servants. If Mr. Murtaza ever publishes the bases of his calculation, I shall try to meet him.

As for the proportion of the Hindus and the Muhammadans, it is generally conceded that in the lower ranks the Muhammadans predominate, and the higher you go, the less the number of Muhammadans. The proportion of Muhammadan to Hindu Deputies and Sub-deputies (in spite of the fact that many Hindus joined service before 1912 and the Muhammadans cannot compete freely with the Hindus) is 42:100 and 41:100 respectively. If there is any preponderance of Hindus, it is because of their superior merit and in spite of the favour shown to the 'favourite wife' by the British Government.

The Hindus took to English education, but that is no fault of theirs. And it is not true that the Hindus acquired wealth and influence by means of Government service alone. Keshub Ch. Sen had influence over Queen Victoria herself, but he was not a government servant. Sir Surendra Nath Banerjea acquired wealth and influence not as a Government servant, but as a public man. Both Sir Rash Behary Ghosh and Sir Tarak Nath Palit whose munificence goes to benefit the Hindus as well as the Muhammadans, were never Govertment servants. To give one example from among the living, Sir Rajendra Nath Mukherjea's vast wealth and still greater influence is not due to any Government service. But Mr. Murtaza in his prejudice cannot think of any other means by which the Hindus have acquired wealth and influence. Will he kindly explain why almost all the endowments and charities of the Muhammadans are communal in character? Why in cases of floods and famine relief, there is a dearth of Muhammadan volunteers—to be a volunteer does not require much money. The same causes—one of which is narrow selfishness, which encourge the Muhammadan to make his charities communal, often

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

vent him from making any even when financially
e is able to do so.

Assuming for argument's sake that the Hindus get
Rs. 6 crores in Government service, may we not retort
that they get Rs. 6 crores, because they pay at least
per cent of Rs. 12 crores *i. e.* Rs. 960 lakhs in
overnment-revenue and taxes, while the Muhammadans
do at most pay Rs. 2 crores, (leaving bare 40 lakhs
for the Europeans, Anglo-Indians, Buddhists and
Parsists &c.) get back about Rs 1 crore in salaries,
and another 30 or 40 lakhs in special educational
facilities?

Mr. Murtaza's facts are of the same order of truth.

J. M. Datta

[As we could not give more space to Mr. Datta, we have cut out the remainder. Ed. *M. R.*]

Mr. Shyam Sundar Misra, M. A., writes :

"Perhaps unknowingly you have committed a mistake in your Notes on 'Oriya Poets Honoured' in the last May issue of your *Modern Review*. There, while speaking regarding the akinity of the Oriya and the Bengali language, you have mentioned that though you delivered all your speeches except one in Bengali, none objected to your doing so except a young man who you say is a Telugu-speaking gentleman from Ganjam. But the young man who objected to your speaking in Bengali is not a Telugu-speaking gentleman. He is—myself—a genuine Oriya and a resident of political Orissa."

DR. HIRALAL

By K. P. JAYASWAL

THE death of Rai Bahadur Dr. Hiralal, which occurred at Nagpur on the 20th August last, causes a gap in the ranks of Indologists. Rai Bahadur Hiralal was a great figure amongst Indian scholars. He was the leading authority on the ethnology of the Central Provinces and Berar, and on the various dialects of Hindi prevalent in the former. He was similarly one of the foremost epigraphists, and the Kalachuri period of Hindu history was largely elucidated by him from inscriptions and other sources. At the same time he made very useful contributions to Hindi literature in the form of a number of books of the nature of scientific Gazetteers on the Central Provinces. In addition to being one of the leading Indologists he was one of the ablest writers in Hindi, noted for his chaste style. He conducted searches for manuscripts in Sanskrit for the Benares Nagari Pracharini Sabha, of which he was president for a number of years. His catalogue of Sanskrit manuscripts in the Central Provinces brought to light a new class of Prakrit literature of the ninth and tenth centuries, which is written in proto-Hindi.

By profession the late Rai Bahadur was an executive officer. In the Executive Service of his province he rose from the humble post of a Naib Tahsildar to the highest open to men of his generation, namely, that of a District Magistrate and Collector. He had started life as a sub-inspector of schools. Census operations of the Central Provinces were carried on more than once under his superintendence.

He was a silent worker, and of retiring nature. For over three decades he had silently worked in the field of original research when the late Mahamahopadhyaya Haraprasad Sastri proposed him to be elected as the President of the Oriental Conference, the highest office of honour open to an Indologist. He presided over the sixth Oriental Conference held at Patna in 1930.

For his scholarship and services the University of Nagpur conferred on him the honorary degree of Doctor of Letters last year. Dr. Hiralal was 70. He always enjoyed good health, walked erect in his seventieth year and looked about twenty years younger than his age. A short ordinary illness, causing his removal from his home at Katni to Nagpur, ended his earthy career.

Dr. Hiralal was always a pleasant and popular man in every walk of life, and earned the highest respect of all who knew him for purity of character and devotion to duty.

FOREIGN PERIODICALS

Seeing God

Of Beatific Vision we have no knowledge, though some of the ancients experienced this phenomenon. But the writings of the Basil King show a departure from the traditional way of seeing the Almighty Father face to face. We quote the following extracts from the philosophic contemplations of the Basil King published in the *Message of the East* :

We see God by what we understand of Him ; we understand Him by His attributes, and we measure His attributes by their beauty and goodness and practicality. Whenever there has been a blessing for you to enjoy ; you have seen God. Whenever love has cheered you or kindness helped, you have seen God. In sunrise and sunset and moonlight and starlight and trees and fields and harvests and flowers and ice and snow and air and health and beauty and generosity and friendship and all that gives pleasure to existence, *you've seen God.* He hasn't been invisible. There is not one world in which God is seen and another world in which He is not. There is not a life with God and another life away from Him. There is only *one* world and God fills it ; there is only *one* life to which God is All-in-all. There is no beyond ; there is only a universal *Here.* There is only an ever-present *Now.*

To the true Son of man who is also the true Son of God, heaven is not another world or an afterworld ; it's the only world. It's a state of consciousness He never leaves and of which He never loses assurances. He has the highest authority for knowing that in it His angels do always behold the face of His Father.

Angels are messengers and messages. In yearnings and prayers and aspirations and hopes, and a thousand other impulses of your being, what have you been doing but sending troops of your angels to see His face?

Abandon the inverted reflection on the mortal retina as a necessity for sight, and you see him at once. Jesus has said, "To know God is eternal life" and that they who possess even the rudiments of that knowledge, can never die. What the end of that knowledge will be surpasses our capacity to guess at, as God Himself surpasses it.

For the present, we are the inheritors of love, joy and peace, and in proportion as we have them—whatever the stage of our progress out of material beliefs—we see at least the fringe of the robe of Him whose qualities they are.

—

Menace of German Cæsarism

The following editorial comment on Hitler's Germany appears in *The Inquirer*, a British weekly journal :

Germany is losing one by one the support and respect of doughty champions who for fifteen years have unflaggingly espoused her cause. Men like J. L. Garvin, Robert Dell, and others who for years have exposed the injustice of the Versailles Treaty, have been moved by recent events to set their faces against this people whose soul is ravaged by a venomous poison—the poison of a febrile racialism fostered and enfiamed by a malefic dictatorship.

This new Germany is not the nation which they and we have loved of old, to whose genius in religion, philosophy, science and art all the world is debtor ; it is not the authentic Germany of Lessing, Kant, Goethe and Beethoven that forever glorifies the human race, but a Faustian Germany whose soul has been given to Mephistopheles. Myrmidons of the Prince of Darkness hold in terrible thrall this fairest of lands that gave Luther to the world : almost everything that is creatively lovely in the Commonwealth of Man writhes and dies under the blight of their policy and creed.

Man, says Oswald Spengler (Nazidom's dominant philosopher) is "a beast of prey." And one cannot nourish beasts of prey on the milk and water of Christian romance and sentimentalism! What nonsense is this—this morbid idea of reforming society! Only Cæsar can conquer the world—only a cæsaric, "prussianised" Germany, fettled in iron and nourished on other men's blood. That is Spengler. Lesser men, even Hitler himself, may quail at the vociferous metallism of this gospel but they cannot deny its logic. Not Hitler's Reichstag speech, prepared for a listening world, but Spengler and his like reveal the inner nature of the Nazi creed—and the impending clash of arms to which it inevitably leads.

Explain how we will this dehumanising of the spirit of man—this renascent Medievalism equipped in the technological accoutrements of the modern age—as explanation in psychological terms (over-compensation of a national inferiority complex consequent upon defeat ?) can minimise the brutal facts. The German spirit, twisted and torn, is betrayed for a mess of pottage to pagan, blood-lusting gods. Germany has put the clock back.

Germany's present mood—her revival of the gospel of Might—constitutes the world's direst peril—and warning. Either Cæsar will prevail, or Christ. Cæsarism means war. The way of Christ means international and peace, a peace founded upon the collective security of the solidarity of the nations. It is for the world to choose ere it be too late.

Britain's Colonial Trade-War With Japan

British Government imposed import quotas on Japan's export trade in cotton and rayon to British Crown Colonies. This drastic order will cut Nippon's textile exports to English Crown Possessions and may also have effect of reducing Oriental Power's American cotton purchases. The following extracts are quoted from *Literary Digest* :

This new policy was announced in the House of Commons by Walter Runciman, President of the Board

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

of Trade. Previously Mr. Runciman had handed what was called a "commercial ultimatum" to Tsuneo Matsudaira, Japan's Ambassador to England. He waited for a few days in the hope that some word would come from Tokyo which would make restricted action unnecessary. But Japan stood pat.

In the House of Commons Mr. Runciman explained that the basis for apportioning the quotas would be the average of the foreign textile exports to the Colonies from 1927 to 1931 inclusive, Japan's average for that period was 87,670,000 yards of piece-goods, but in 1932 Japan's exports to the Colonies amounted to 205,000,000 yards and last year they were considerably more.

In England *The Manchester Guardian*, as shown in an editorial cabled to "The Literary Digest", seemed distrustful of the effect of the Runciman order. It supposed the Government had concluded that Great Britain had pursued a conciliatory policy toward Japan long enough, and now must try other methods but it warned against indulging illusions as to where trade discrimination might lead Britain. The measure, the paper said, was "hardly a crippling blow to Japan." The loss of 100,000,000 yards would mean about 5 per cent of her trade of last year, but *The Guardian* could not assume that what "Japan lost, Lancashire would gain."

In Japan the powerful Osaka *Mainichi*, whose Tokyo edition is the *Nichi Nichi*, declared that, "in view of Great Britain's favorable trade balance with Japan the British people should consider deeply before imposing quotas on Japanese goods." Tokyo United Press dispatches reported that the Japanese Government and textile leaders maintained an attitude of watchful waiting and hinted that the United States might be a sufferer from Britain's procedure. If Japanese exports are confined under import quotas in the British Colonies, it was pointed out, the first effect would be a reduction in mill orders and a consequent reduction in purchases of raw cotton—most of which came from the United States.

The Japanese Government held that the British Dominions, which mostly enjoyed favorable trade balances with Japan, would only hurt themselves by cutting down their Japanese imports. Japanese textile leaders said they would seek an outlet for their products at Canton for the southern Chinese trade if import quotas were imposed at Hongkong. Hongkong's important importations of Japanese goods were mostly for re-export to China, it was said, and the result of quotas would be to reduce Hongkong's trade, not China's.

—

Is Religion a Private Matter?

It is often whispered that religion is an individual's private affair. Mr. Kenneth C. Walker's bold challenge to this age-old doctrine, and his expression in an editorial article in *The Christian Register*, part of which we quote before:—

We often hear it expressed, when we challenge some specific religious doctrine, that religion is a private affair. Until we learned more of the true nature of social life this may have been true, or appeared to be true. Today the facts reveal that there is no longer any such thing as a strictly private life. This holds fully as much for faith and morals as it does for economics, politics, and other aspects of our societal life. We are beginning to see now that we have not had a sufficiently adequate social morality. That we have been so long in discovering this is due very largely to the fact that we have thought religion was a private affair, something between an individual and his God, or a sect and its God. What an individual thinks and does, or *does not think and does*, sooner or later has consequences beyond his own private life.

This being true, the time is fast approaching, if indeed it is not already here, when the community has a right to challenge the private beliefs of its members on matters concerning faith and morals, if it is discernible that the carrying out of these beliefs will result either in the lack of a complete and satisfying life in that individual, or will obstruct the highest spiritual and cultural development of the community.

Just as we are beginning to socialize other aspects of our common life, *e. g.*, industry and politics, we must socialize religion. Religion is no longer, in this modern day of ours where human life is so interdependent in every aspect, an affair solely between a man and his God. It can never cease being an affair between ourselves and our fellow men. The day has come when the individual or the sect can no longer hide behind the flag of religious freedom in order that it may continue to propagate and maintain its own private, obsolete, anti-social, irreligious teachings. Every sect must serve humanity first, last and always, or be challenged as to the propriety of its existence.

—

Bulgaria's New Dictator

The following editorial comment appears in *The New Republic*:—

A Correspondent in Bulgaria sends us some news of the new dictatorship there, which indicates that Prime Minister Kimon Georgieff is a skillful politician as well as the ruthless engineer of a *coup d' etat*. One of his first acts was to intervene in a strike of 3,000 workers at Plovna, who were asking that their wages be increased from 40 to 45 cents in the case of men, and from 25 to 30 cents in the case of women. Georgieff ordered the industrialists to accede in full to the demands of the workers. He went on to appoint several "former" Communists—there has been no recognized Communist party in Bulgaria since 1924—as mayors of cities. While these developments are not important in themselves, they constitute the only victories labor has had in the Balkans in several years, and have been received with proportionate acclaim. At the same time, Georgieff is popular at the moment with the bourgeoisie, largely because they hope he will settle the perpetual problem of the Macedonians. If he does so, it will be at the expense of the Michailovists, the Bulgarian branch of the Imro, the International Macedonian Revolutionary Organization. Suppression of the Imro would mean better feeling between Jugoslavia and Bulgaria which, in the complicated politics of the Balkans, would be a diplomatic defeat for Italy. Cafe gossip in Sofia suggests that with these developments, Italy may turn for a new ally to Greece. Of politics in this part of the world it is true, as it is of so many other things, that the more it changes, the more it remains the same.

—

The Balkan States

Mr. Max Fischer takes a prospective view of the situations of the Balkan Territories, which, in the near future, will bring forward some

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

political changes of considerable importance. A keen-eyed political observer of South-eastern Europe will, in the mean time, find a delicacy to appease his intellectual appetite in Mr. Fischer's article, published in *The Commonweal*, a portion of which is quoted below :

The Macedonian question has been the lever used by interested parties in trying to undermine the preponderance of Belgrade influence in the Balkans. A glance at the map will show how difficult it would be to defend the territory involved, lying as it does like a narrow wedge between an Albania controlled by Italy and a Bulgaria strategically dominating it, if the greater part of the Macedonian people really detested Belgrade and loved Sofia.

Today the chief political difficulties of Jugoslavia grow out of conditions in the Slovene and Croatian districts of the country. The political evolution of the Jugoslavian nation was for a long time a matter of the mind, even as was the German effort toward unity or the Italian *Risorgimento*. But when the time came to proceed from the realm of idealistic vision to that of plain, ordinary *Realpolitik*, there presented themselves a row of problems growing out of regional differences still sharper and more complex than those which sundered the various provinces of Germany and Italy Granted that the Slavs who joined hands to create a new state were a single people, there was nevertheless an important difference between those sections of the population which had for centuries enjoyed self-rule and those which had lived either under the yoke of the Turks or inside a modern culture nation such as Austria-Hungary was. The resultant situation showered the government of Belgrade with tasks the difficulty of which has not been sufficiently appreciated by the world at large. Take one example : as a result of the various cultural and political influences under which the people had lived, there existed in Jugoslavia until 1930 (when Minister Srskic instituted a reform) no fewer than six different codes of law, each in force in a given district. Since standardization always results in an average product, the result has been that regions formerly belonging to Turkey have profited, while those once incorporated in Austria-Hungary have suffered. The older generation in Croatia or Slovenia nurses its resentment of what is defined as a triumph of the "barbarian East" over a western civilization and is often also unjustly proud of its own traditions.

Yet in spite of everything a large part of the younger generation has come to understand the fact that there is now a Jugoslavic nation, the tasks and problems confronting which are the concern of all. "One people and one state" is a slogan which today has a very real significance for the regions which look to Belgrade for leadership. Some are not content with thinking of the nation as now defined, but dream of the union of all Slavs in the Balkans through the union of Bulgaria and Jugoslavia - an ideal the realization of which is hindered not only by the bitterness which has grown out of the World War but also by the irreconcilability of the two reigning dynasties. At least there is no doubting that a desire to bury the hatchet and to achieve some measure of political and economic co-operation is present in influential circles. Unquestionably the fruition of this wish would be a good thing. It would mitigate the dangers of conflict in the Balkans, and would gradually serve to emancipate the entire region from subservience to French and Italian ambitions. The Macedonian problem would thereby also be definitively settled. Of course all this may seem to belong to a far-distant future, but the political observer must note the probable weather of tomorrow as carefully as he observes the winds and storms of today.

—

Don't trust the honest

We are inclined to believe that giving certain modes of conduct sanction, whether it be moral, religious or scientific, makes them light. But it is the consequence of our acts that are really important than the phantom symbols we use to give them proper moral sanction. The following extracts, from the pen of Mr. Swan Hartley published in *The Modern Thinker* may be interesting to our readers :

What is right ? It is most difficult to determine and it is no wonder that most people have recourse to phantom morality and set up symbols to indicate the righteousness of their intents and motives. If no indication given, that Sabbath decorum observed, we bother also to do what is right. Man hates responsibility anyway. He is always looking for ulterior sanctions, exterior to himself, to determine his conduct; he is always fashioning symbols to indicate to others that what he does is right. It thus saves time, thought, and uncertainty. Thus he erects any method or form into an independent value and the concept or mental picture of right behavior begins vicariously to do the work of real behavior in ordinary life.

It is forbidden for Mohammedans to drink intoxicating liquors. It is therefore neither right nor moral for them to do so. But Persian Mullahs drink arrack which is ferociously authoritative, out of tea pots and in tea cups. It thus becomes cold tea; they get the drink and the gesture preserves their moral integrity. Other Mohammedans heat wine ever so slightly, but not enough to drive off any of the alcohol, and then after imbibe it freely on the assumption that it has thus become another substance. The proper decorum is again preserved. Pious Dutchmen chew the coca bush in the East Indies, so that native labor may be debauched with cocaine for the enrichment of revenue coffers, but they call the bush an ornamental hedge and thus preserve the moral values.

In a certain primitive community a certain man added his stone to a pile of stones dedicated to a local big-shot spirit, took out the jawbone of an ass, mumbled a few incoherent but mystical words over it, ate the hind leg of a porcupine which happened to be his totem animal, and then went home and kicked his wife's teeth out one by one. The next day he brought surplus child the family had somehow accumulated and then ate it to manifest his love and affection. Thereafter he interred his grandfather alive and, in the afternoon, he went forth head hunting, which was an innocent hobby and diversion.

In our less tolerant moods we may be inclined to think that this savage was rather a wicked sort of person. But he was not. The first ceremonial act performed so suffused him with righteousness, and transcendental decency and morality, that each of his later acts partook thereby of moral sanction and became both meritorious and hallowed. Thus morality made him wholly good.

In Defence of Peace

In view of the present political situation in ... Mr. Frank Coleman has chalked out a ... me of peace activities in *The Inquirer*, ... is reproduced below and may be adopted ... uring nations :

What are the problems that make the present ... so serious ?

1) The failure of the Disarmament Conference to ... agreement and the resultant threat of the British ... ment to increase the Air Force, with also ... rumours of a demand for a large increase in ... strength. As late as June 11 British delegation ... joined in passing a resolution which it had ... to draft, "expressing the necessity of this ... continuing its work with a view to arriving ... General Convention". Further, that resolution ... upon the Air Committee of the Conference to ... work on the prohibition of air bombardment, ... regulation of civil aviation and the limitation of ... aircraft. What has happened since June 11 to ... this work unnecessary ? The fact is that our ... has gone over to the militarists. The ... of our Ministers is exposed. Our duty is to ... known to the public what has actually happened. ... the proposals of Russia, Germany, America, ... Spain and even France with our own Govern- ... stand with regard to the use of bombing planes ... districts.

... League of Nations Union Council at its recent ... passed with enthusiasm a resolution, parts of ... quote. After deploring the declaration of the ... for Air it recalls

Mr. Baldwin's repeated declarations that Air Forces ... this country no protection from air bombardment ... that which results from the power to bombard ... destroy the cities of foreign countries. It also ... demands that the Government, before they ... upon a renewed Armament Competition of the ... that led to war in 1914 should put forward ... proposals of the kind, which the Disarmament ... has had under consideration : for the total ... of all National Air Forces, combined with ... safeguards against the use of civil aircraft ... disloyal aggression and pledges to resist by all ... in its power a policy of Armament increase ... such proposals have been made to the Con- ... by the representatives of Great Britain."

... Professor Noel Baker in moving this resolution ... that :

"It remains true today as it was true in 1933 that if ... Government accepted the International solution of ... the problem that problem would be solved and the ... Disarmament Conference would succeed in a week. ... there be no mistake, this is our biggest task and ... lover of peace of whatever kind will be unworthy ... name if he or she does not take his full share ... every constitutional means to prevent this ... fatal folly of a new and more disastrous race in ... ments."

"We must expose the iniquitous arms traffic. ... is no side issue. We have to remind the com- ... that there are those who are making a *profit* ... of war and war scares. The Prime Minister wants ... to date facts. Well we can provide them, but let ... not imagine that private manufacture is the only ... Abolish this, and still we need international ... We need to emphasise (i) our bitter opposition to ... increase in armaments ; (ii) the abolition of all national air forces and the internationalisation or international control of civil aviation ; (iii) the elimination of private profit in the manufacture and sale of armaments and all manufacture of armaments to be brought under international control.

—

Pottery Industry

Mrs. R. Copeland, M. P., in the course of a lecture on the romantic art of pottery, has traced back its history down to the pre-historic ages, when such works were created and remnants of which can be still visible. We quote below the introductory portion of her speech from the *Journal of the Royal Society of Arts* :

In the old days the potter could only work with the clay found near at hand, but in these days of international commerce and quick transit, the finer plastic white burning clays from Southern Europe and the hard flints from the French and Northern coast and China clay from Cornwall ; can easily be conveyed to any country in the world, so that the potter need no longer rely solely on the particular clay or marl found in his own district.

There is, however, one thing which cannot be dispensed with even by modern civilization, and that is the potter's wheel, which, from time immemorial has been used by all makers of pottery.....

I will now show you the picture of a master potter or "thrower" in India sitting simply on the ground and using a potter's wheel. His large stock of pots is explained by the fact that an eclipse of the moon was due at the time the photograph was taken, and, according to Hindoo custom, all household utensils must be broken at that time and new ones bought the following day—a custom I would like to recommend to my listeners to-night, so that the pottery trade in this country might be placed in a more affluent position !

Next I will show you the "potter" of to-day—the same wheel. only instead of its being spun round by hand or foot, an electric belt does the spinning, thus allowing the thrower as much comfort as possible, as well as absolute freedom of hand to concentrate on his work.

Doubtless the early potters quickly discovered that different clays did not fire the same colour, and so colour decorations first arose by a rude daubing of a brighter red or buff clay on one of a duller hue. For over 4,000 years all the known civilizations such as Persian, Cretan, Egyptian, Etruscan and Greek evolved schemes of glowing colours and glazes fired on objects of which examples are to be found in all museums. We all have admired the lovely Egyptian blue-glazed pottery, the beautiful shapes and geometrical patterns of Cyprus, the black and red vases of Etruscans and Greeks.

Later, as the Roman Empire grew and conquered the nations around, she absorbed their crafts and spread them over Europe, so that when Rome invaded Britain she brought with her much Samian pottery from the Rhine, and it is easily conceivable that our native British potters sought to emulate these specimens in the local clays, on the Medway, in the New Forest, at Colchester, and at Castor in Northamptonshire, and other parts of England.

The Roman Empire passed, and in Europe the Byzzantines and later on Moslems kept the pottery craft going.

It was from the Far East—from China—that the finest potters the world has yet produced were to discover the secret of making that marvellous translucent porcelain which became the wonder of the world. So zealously, too, did all these potters of Kang-hi guard their secret that it was a century later before we, in Europe, were able to begin to find out how it was made.

—

Philippine Independence

An observer, with a keen eye on the present political situation in British India can not ignore the much commented topic of the Independence of Filipino with which we have a great deal of political affinity. The islands are the centre of the disturbed scene in the affairs of the Pacific regions and the Far East. Sir Frederick Whyte raises this controverrial issue in the *Pacific Affairs* :

Philippine independence is capable of many interpretations ; and to the eye of the observer and still more to the watchful eye of the observer and and still more to the watchful eye of Japan, the recent negotiations in Washington look like an American withdrawal from the Far East. Whether the withdrawal be partial or total, a distinctly new situation is being created. During the ensuing period of uncertainty it is worth while to consider all that is involved, so that we may realize in time whither the Far East may be led by the decisions about to be taken in Washington. The Philippine Islands are no more an isolated problem to be solved by an unnatural alliance between American altruism and certain interested lobbies in Washington, than Manchuria can be regarded as a *chose jugee* merely because the Japanese Army has put K' ang Te on a new throne.

There are two aspects of the American people who have the obligation to solve the domestic problem in the Islands by some form of self-government, either under continued American tutelage or in a complete form of domestic home rule. No one, least of all a British observer, with the problem of British India in mind, can fail to be deeply interested in the design adopted by Congress for this purpose ; but our interest in the internal side of Philippine affairs is only relevant with respect to its effect upon the position of the Islands in the disturbed scene of Far Eastern affairs.

We may therefore pass to an attempt to estimate the external consequences of contemporary American policy. In some form or other, limited or complete, this policy is a withdrawal, creating a partial vacuum in a region where great pressure surrounds the vacuum and will naturally seek to fill it. It is obvious that the experiment of Filipino self-government can have little chance of undisturbed success unless the integrity of the Islands is protected from the impact of this pressure. By what guarantee will Philippine independence be maintained ? The history of the world since 1914 forbids us to rely on the paper protection of an international guarantee, and therefore the security of the Islands would seem to rest upon an American determination to say "hands off" to any other Power. In the absence of the readiness of the American people to guarantee to the Filipinos a reasonable opportunity to solve the problem of their own self-government, it seems likely that Japan will take an active part in deciding the fate of the Islands. Will the United States forbid Japan to interfere, and if so, at what stage ?

There is little doubt that in the first place Japan will seek to extend her trade and to extract special concessions, both by tariff agreements and by actual participation in Philippine enterprise. Upon this foundation a superstructure of Japanese interest will be raised, of the same kind which Japan created for herself, first in Koria, and then in Manchuria. In this process the moment will arise when Japanese interests will conflict with Filipino domestic policy, and the Japanese will then claim that their interests are being imperilled by political interference or by the incapacity of the Filipino government to protect legimate foreign rights. A case for intervention will be seduloussly prepared ; and once these forces are set in motion we shall witness a developement of the same process which has transformed the Three Eastern Provinces into Manchukuo. At what stage, if at all, will the United States act ? If she does act, will she be prepared to support any necessary protest by force ? If she does not act, she will be compelled to acquiesce in the absorption of the Philippine Islands within the economic and political orbit of Japan : and in that case it matters little whether Japan annexes the Islands outright or not.

This appears today to be the almost inevitable consequence of present trend of affairs. While these events are in progress other nations will be bound to take note of their significance. England will watch, Holland will grow nervous, Australia will re-arm and New Zealand will use all her influence to persuade Great Britain to take more an active share in Pacific affairs.

At some point the British Government must then decide how to meet the new situation. Will England be tempted to intervene in order to protect her Asiatic interests ? Will she fight Japan or come to terms in a new Anglo-Japanese alliance ? England wants none of these. But the renewal of the alliance might appear to a Conservative government to be the least of many evils involved. If England were driven to renew the alliance as an assurance of her Eastern interests, the consequences would be far-reaching. Anglo-American relations would undoubtedly suffer, and the Dominions of the British Commonwealth might feel that their interests demanded a closer association with the United States than with England. A new alliance might seem to offer security to the British Empire in the East for a time, but the price would be high and the security weak. Japan would know that England had made her choice from weakness and not from strength. Her people would feel contempt for America and England alike, and the whole East would draw the conclusion that the Western Powers were liquidating their responsibilities in Asia, and that the West had become effete.

—

Proposed Indian Reforms

'I have always deprecated the attempt to divide the world into those who support and those who oppose the White Paper'; with these words Mr. B. C. Allen I.C.S. (Retd) opened his speech on the Proposed Indian Reforms. Critics of all shades of opinions present were almost unanimous that a solution of this problem was necessary in order that a better order may prevail in both the countries. We quote below the speaker's criticism of the Indian Opinion regarding the White Paper from the *Journal of the East India Association* :

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

My critics will tell me that my proposals will not commend themselves to Indian public opinion. I am very well aware of that, but what proposals do? The White Paper certainly does not. (Read Record No. 10) If the amendments set out therein were to be adopted, most of the White Paper safeguards would disappear. I have not time to enter into the details, but here is a statement I have prepared giving chapter and verse for what I say.

Well, if the White Paper in its present form is rejected by India, why should we not introduce modifications which would make it possible to set up a stable Government? Why should we not say that we feel it is impossible for us to leave the country and that so long as it is necessary for us to remain we must have a real share in the Government? It must be a real union of Britain and India—a real partnership. I have had some experience of political agitation, and I have always found that public opinion tends to rally to sympathetic but firm Government. This is the case in England (witness the General Strike and the election in 1931), and even more the case in India. "He who is Raja his subjects are we," said some villagers to me at the time of the Gandhi agitation, and these words, I believe, represent the real soul of India.

What is the present situation in the great dependency? There is no money to finance the White Paper; practically every section of the political world rejects it; there are bitter protests against the communal award; the British trader in India is called an alien, the British Indian Government an alien Government. We have tried concession and it has not succeeded. Two alternatives remain. If you think that we can leave our Eastern Empire without serious prejudice to its fortunes, let us go. But if you feel, as I feel, and Mr. Sastri feels, that the presence of the British Army is still essential, then set up a Constitution under which we can remain in safety and in honour.

It must not be supposed that I do not fully appreciate the excellent work done by many Indian Ministers during the past few years. But conditions under the Constitution envisaged in the White Paper will be much more difficult than conditions in the past, and it is the duty of all lovers of India to do anything which they can to help them in their difficult task. It is not only old Anglo-Indians who are nervous of the future. "You cannot avoid the reforms in the same way that you may try to avoid measles or meningitis," said Sir N. N. Sirkar. "We have asked for the reforms and we are going to have them, but whether we survive them or succumb to them remains to be seen. I may not live to see their burial, but I shall not be surprised if I see that undertakers are given notice to get ready."

—

Child Labour in India

In 1930 and 1931 Dr. Rajani Kanta Das of the International Labour Office, Geneva, contributed articles on labour legislation in India and woman labour in India to the *International Labour Review*. His study on the question of child labour in India was published in the same *Review* in December, 1933 and January, 1934. In it :

"He shows that in India as in all predominantly agricultural and relatively little industrialised countries, the labour of children is an important factor in production; indeed, owing to the shortness of adult life as compared with Western countries, as well as the absence of compulsory education and the earlier age at which children begin to work, the burden of producing the national wealth falls heavily on the younger generation. Nevertheless, the adoption of protective legislation and the increase of industrial efficiency have greatly reduced the amount of child labour in organised industries. The vast mass of working children are engaged in assisting their families in agriculture, which is followed in order of importance as regards the employment of children by the traditional handicrafts and those numerous small undertakings that are not at present covered by the Factories Acts. The widening of the scope of the Indian Factories Act is now under consideration by the Government and Legislature of India and this is without doubt the most urgent immediate task for the protection of Indian childhood. But both the problem of restricting the employment of young children and that of the more efficient utilisation of juvenile labour call for the extension of compulsory primary education and the development of vocational training. It is only by progress in these directions that the wider problems of the employment of children in India can be met. Meanwhile much has been done for the restriction and protection of child labour in factories, mines, and plantations; the extent of child labour in these industries in the British Provinces of India, the systems of regulation, and the more immediate problems both in these industries and those which are still unregulated are the main subjects of this article" [of Dr. Rajani Kanta Das].

INDIAN PERIODICALS

The Motive Spring of Caste

Various theories have been put forward to explain the origin of caste in India. A probable explanation is however, found in the primitive *mana*-philosophy. Rai Bahadur Sarat Chandra Roy of Ranchi discusses various theories on caste in his *Man in India* and comes to the following conclusions:

Dr. Hutton and some other writers, however, see the motive-spring of caste in a primitive *mana*-philosophy. Taking Handy's definition of "the concept of *mana* as a manifestation of dynamic, psychic energy, derived ultimately from the Supreme Being and permeating all other beings and nature," it cannot be said that this sense of supernatural presence in the universe is the monopoly of primitive man alone. In fact if the concept of *mana*, or, as it has been called by some writers, 'power-life-will', is understood in the Atharva-Vedic sense of *bramha* or divine power, it may be said to constitute the basis of all religion and of such social and political systems as have any religious associations or flavour in them, including the Varna system of the Hindus.

According to Hindu ideas the more of *sattva guna* or 'goodness' a person has evolved, the clearer is the manifestation of *bramha* or the *divine within him*, and the worthier is he to be called a true *Brahman*; in the man in whom *rajas* or passionate activity predominates the *Brahma* within is partially veiled so that he becomes a *Kshatriya*; the man in whom *tamas* or darkness more completely veils the *bramha* or good *mana*, is called a Sudra.

Thus, the progressive manifestation of *mana* or *bramha* in any person depends on the degree of development of the *sattva guna* in him. Association with persons having *sattva guna* helps the promotion of that *guna* in the person; and intimate association with persons of lower *gunas* may impair a person's *sattva gunas*. Similarly different habits in life, even in food and drink, foster respectively the different *gunas* and thus help or hinder, as the case may be, the development of the spiritual nature of man.

This development of the inner man by stages would appear to be the dynamic cultural ideal,—a resultant of the race psychology and ethnic history of the Aryans in India,—which originally inspired the *Varna* system. The modern caste-system with its two thousand or more rigid divisions and a larger number of sub-divisions (sub-castes) and its legion of intricate taboos and perversities would appear to be its degenerate foster-child which has long outlived its usefulness. The fact that not many Brahmans now-a-days act up to the old Varna ideal does not, however, affect the question of caste origins.

This view of *brahma-mana* would appear to bring into one connected system most, if not all, beliefs of a religious, quasi-religious, magical, and 'superstitious' nature, both of civilized and uncivilized humanity. In this view of it, the scope of the *mana* philosophy or the *Bramha* concept ranges from the primitive man's dim sense of the presence of supernatural powers in different beings and objects up to the sublimest philosophy which regards the world as a manifestation of Divine Power and each man as a spark or fragment of that Power, capable of becoming devine by realizing the Divine within him through gradual spiritual unfoldment, or, in terms of the *mana* concept, by gradual acquisition of higher and still higher *mana*.

—

Women and Labour

It is a good sign that Indian women are engaging themselves to the study of labour conditions in the country. *The Social Service Quarterly* writes editorially:

A few recent developments in regard to women and labour deserve special mention in this journal. In 1930, the National Council of Women in India formed a Standing Sectional Committee on Labour to collect information pertaining especially to conditions of women and children workers in India. In addition, this Committee requested all the Branch institutions to form local Labour Committees in order to get into touch with the local questions relating to industrial workers. This is how the Bombay Presidency Women's Council Labour Sub-Committee came into existence, meeting for the first time on March 10th, 1933, under the convenership of Mrs. Wagh. An All-India Conference on Labour was suggested, but owing to the unsettled condition in the country at the time, it was proposed to make this Conference a Provincial one, and the Bombay Sub-Committee agreed to take it over. The entire attention of the Committee from its inception was centred on preparation for the Bombay Provincial Women's Conference on Labour which was held at the Wilson College, Bombay, on the 25th of September, 1933, under the presidentship of Lady Vidyagauri Nilkanth of Ahmedabad, experienced in practical social work, and well known for her interest in the economic and social welfare of the labouring classes. At an informal discussion group held, a few important suggestions were made of which two seem to be deserving of special notice. (1) To form a study circle in order to study labour problems and to take part in the serious labour problems undertaken by the Government, employers and labour leaders. (2) To persuade the employers to engage educated women in place of the Naikins in the mills, with decent salaries, after a few months' training of the work, in order to create better atmosphere in the women's departments and to get rid of the Naikins' power to which the poor women workers are very often subjected. A Labour Study Circle under the leadership of Miss Hawkins has been formed. Visits were made to various chawks in the city in order to ascertain conditions at first hand.

Bombay Infant Welfare Society

Other presidency towns of India should emulate the activities of the Bombay Infant Welfare Society as summarized in the same paper :

The Committee of the Bombay Presidency Infant Welfare Society in their report for 1933 state that with the means at their disposal they had tried to make their maternity and child welfare organization as useful and serviceable as possible. Ante-natal work was one branch of their activities of which they were truly proud. Their wholetime lady doctors conducted these clinics at the centres of which they were in charge. One afternoon in the week was set apart for these clinics at each of the seven centres. These clinics had not only considerably checked maternal mortality but had enabled mothers to give birth to babies in healthy condition. The number of new expectant mothers admitted in 1933 was 4,80`, as against 4,232 in the previous year, while the total attendance of expectant mothers at ante-natal clinics was 18,171, as against 16,159 in the previous year. The number of new expectant mothers visited at their homes was 7,997, as against 7,312 in the previous year, while the number of revisits paid to all expectant mothers was 44,412. The number of maternity cases directed to hospitals through the efforts of their doctors and nurses had risen from 2,271 in 1931 and 3,378 in 1932 to 4,265 in 1933. The ante-natal and maternity figures showed that the mothers were taking advantage of the up-to-date amenities of the hospitals and homes in the city to an increasing degree, and that the efforts of the Society's doctors and nurses to educate mothers in the directions had borne fruit. The Society had co-ordinated the ante-natal clinic with the anti-venereal clinic. Mothers also took advantage of the centres for instruction and advice on child hygiene and management, and for early detection and treatment of minor ailments. The total attendance of babies for milk and medicine was 354,306, while the total number of new babies admitted was 6,110. The average daily number bathed at the centres was 381.

—

Carey—the Giver of the Bible to India

Much is being written of William Carey this year, it being the centenary of his death. The following from *The National Christian Council Review* will no doubt prove interesting :

'Blessed is the man who has found his work,' says Carlyle, 'let him seek no other blessedness.' What that work was for Carey, we know. When Dr. Thomas, fresh from Bengal, met the committee for the first time in January, 1793, he read a letter from some Indians there, asking for preachers to be sent, and 'such as will forward translations.' That was the call to Carey. He had cultivated a natural aptitude for the acquisition of languages. He could eat them as other men eat bread. Here, therefore, was something he could do. He immediately volunteered, and was appointed to go out with Thomas.

Before leaving London, he met a young printer named Ward, and telling him of his intention to translate the Bible into Bengali, bade him be ready in four or five years to come and print it. Ward arrived in December, 1799, went up to Carey's indigo factory at Madnabati, and found the New Testament all translated and wtitten in the strange Bengali script, by Carey's own hand, as also a large part of the Old. The mere physical achievement is amazing when one knows that it was all done in the afternoons and by candle light in the evenings. There was a press bought from Calcutta also ready, waiting to be used. But the Danish governor had offered a sanctuary for the msssion settlement at Serampore, and Carey now joined the new recruits there. In a little while they were planning 'within fifteen years' to translate the Bible into all the languages of Hindustan, and the task was practically accomplished.

—

Indians in South Africa

As a member of the Paddison Committee Sir Deva Prasad Sarvadhikary had opportunities to get first-hand knowledge about the conditions of Indian settlers in South Africa. So what he says on the subject deserves careful consideration. He writes in *Prabuddha Bharata* :

The attitude of the authorities is not firm and determined in the interest of the Indian Settlers. Including the colonial-born, they did not exceed a lakh and sixty thousand when I was there in 1925-26. Births are slow, deaths are rapid. No outside accession is allowed and rapid repatriation and expatriation are the order of the day. Successive High Commissioners are frankly out to help in this and even some from Indian Settlers favoured the bodily transplantment of the remnant to some bleak inhospitable and unfamiliar island in the Pacific or the Atlantic. The average Indian settler, particularly the colonial born, who have built up the prosperity of South Africa, naturally cling to what they have won and earned. They and their forbears have given the lie to the defamation that the stay-at-home Indian will not take timely to colonization. Those who have colonized in Malaya, Singapore, Borneo, Java, Sumatra, and the smaller islands of the Pacific archipelago had not given such lie with insistent consistency that is proving amusing to those who research about Greater and Further India in ancient and mid-ancient times. The recent investigations of Harvard Professors have brought out a chapter of Indian culture in the Philippines.

The plight of these people is that of the Potter's Clay—as a Bengali adage is—carried on the head and kneeded with the feet. Bharat is anything but Prabuddha in regard to the Indian Colonial question. I made a strong appeal for inclusion of suitable provisions for prytection of Indian interest abroad and our colonizing rights in the new constitution. This would be the first step of protection not only of Indian interest but of Indian prestige, always a first lank in the nation-building platform.

—

The Art of Letter-writing

Letter-writing is an art, and Prof. B. Tandon, M. A., writes in *The Indian Review* :.

And what are letters without personal element ? In the words of Herbert Paul : "They are like history without events, poetry without invention, Blue Books without dates, or novels without love." A good letter is "an easy and agreeable talk on paper." It is the nearest approach to drawing-room conversation. Leigh Hunt knew it and this is how he begins an intimate epistle to Mr. and Mrs. Shelley :

"Whenever I write to you, I seem to be transported to your presence. I dart out of the window like a

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

bird, dash into a south-western current of air, skim over the cool waters, hurry over the basking lands, rise like a lark over the mountains, fling like a swallow into the vallies skim again, pant for breath, there's Leghorn—eccomi ! how d' you do ?"

And who can improve on the receipe of that delectable English essayist, Alpha of the Plough ? Here is his advice."

"You must be personal, not abstract. You must not say : 'This is too small a thing to put down.' You must say : 'This is just the sort of small thing we talk about at home. If I tell them this, they will see me as it were, they 'll hear my voice, they 'll know what I m about."

—

Islam's Contribution to Science and Civilization

Maulavi Abdul Karim writes in *The Hindustan Review* :

Canon Taylor, after a careful study of the history of Islam, came to the conclusion that "Islam has done more for civilization than Christianity." If Europe's indebtedness to Islam for the extraordinary progress it has latterly made in science and civilization were adequately known, it would have astounded the modern civilized world. "During the darkest period of European history," writes Bosworth Smith, "Arabs for five hundred years held up the torch of learning to humanity." Arthur Leonard has truly said, "Islam, in fact, has done a work. She has left a mark on the pages of human history which is so indelible that it can never be effaced.. that only when the world grows wiser will be acknowledged in full." That the early Muslims made an ineffaceable impression on the cultural development of the world cannot but be admitted by every unprejudiced and fair-minded critic of Islamic history. It is a religious prejudice and an overweening sense of racial superiority that have stood in the way of acknowledgement and appreciation by the West of the glorious achievements of the East. Draper is perfectly justified in deploring "the systematic manner in which the literature of Europe has continued to put out of sight our scientific obligations to Mahommedans. Surely they cannot be much longer hidden. Injustice founded on religious rancour and national conceit cannot be perpetuated for ever."

Before the advent of Islam, the cultivation of science was condemned as heresy.

—

Is Meat a Dietetic Necessity ?

Charles H. Wolohon, M.D., writes in *The Oriental Watchman and Herald of Health* :

Meat may be indicted on many scientific counts and abundant evidence produced to sustain the indictment, but I shall have to content myself with discussing only two points, the first of which is that *meat is not a dietetic necessity* and second, that *meat eating is productive of positive harm*. As a by-product of these, there naturally follows the corollary that vegetarianism is the diet of choice.

The science of dietetics informs us that there are the following classes of foods : Proteins, fats carbohydrates, vitamins, and mineral substances. The average calories of our diet are divided as follows Protein, 10 per cent; fat 25 per cent ; carbohydrate 65 per ceut. The carbohydrates (starches and sugars) and fats are the heat and energy foods. It is these that need to be increased or decreased in proportion to the amount of muscular effort and the climate. The protein is repair material and the requirement remains quite constant for an individual of a given weight, whether lying in bed or sawing wood. The average amount needed is one gram (1-30 oz.) per kilogram (2.2 lbs.) of body weight. Thus, an individual of 165 pounds would require 75 grams, or 6 ounces, of protein as a daily ration.

For decades flesh foods have been invested with mysterious attributes as to strength and health-given qualities, which science cannot sustain. Meat is just one kind of protein food. The flesh is built of nothing other than the grains upon which the animal subsisted during life. Then meats are just second-hand or animalized grains, with nothing desirable added, and much that is unwholesome in the way of wastes contained in the carcasses. In analyzing the protein foods a little further, we find that flesh foods as well as nuts, milk, and cheese are molecular in composition. In the molecule there is about 120 amino acids, and it is the work of digestion to break down the protein into these amino acids, in which form they are in small part utilized in the body and the rest excreted in the urine, chiefly as urea. The amino acids differ from other acids in that they contain nitrogen; it is this that makes them capable of being used in the repair of our tissue proteins, the basis of which, too, is nitrogen. There are fifteen to eighteen different kinds of amino acids, among which some are very important. For instance, one, called tryptophane, is necessary to life, and lysine required for growth. I say these amino acids are essential ; but it does not necessarily follow that one requires a flesh dietary to obtain them, for nuts, milk, cheese, or eggs may be substituted for flesh, and all the necessary amino acids obtained. In fact Dr. Sherman of Columbia University, in his book, "Food Products," page 400, says: "It might be more logical to speak of meats as nut substitutes' rathes than nuts as meat substitutes,"

It follows therefore that meat is not a dietetic necessity.

—

Indo-Javanese Literature

Dr. R. C. Majumdar in an important paper in *Indian Culture* traces the relation between ancient Indian and Javanese literatures. He writes in part :

The class of poetical works we have hitherto described is called Kakawin. They are all written in Old-Javanese language and their subject matter is derived mostly from Indian epics and Puranas. In addition to the works mentioned above there are many other Kakawins, which however, cannot be dated even approximaiely. We give below a very brief account of some of them :—

1. Indrabijaya—story of Vritra's conquest and death followed by that of Nahusa who secured the position of Indra for a short period.

2. Parthayajna—It describes Arjuna's asceticism by means of which he obtained weapons from Siva.

3, Vighnotsava, written by a Budhist, describes the exploits of a Yaksa king named Vighnotsava and particularly his fight with the *raksasa* king Suprasena.

4, Bratasraya is a later development of the same theme.

5, Harisraya. It describes how the gods, threatened by Malyavan, king of Lanka, seek, at first the help of Siva, and then of Visnu, who kills Malyavan

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

esses to life, by amrita or nectar, the gods who perished in the fight.

c. Hari Vijaya.—It describes the churning of the ocean by gods by means of Mandara mountain.

7. Kalayavanataka.—It describes, after the story given in Visnupurana, how Kalayavana invaded Dwaraka, to avenge the death of Kamsa, and was ultimately reduced to ashes by Mucukunda, with whom the fugitive Krisna had taken shelter. It also describes how Arjuna carried away Subhadra when the Andhakas and Vrisnis were celebrating a feast on Raivataka.

8. Ramavijaya.—Its theme is the defeat of Sahasravahu Arjuna by Parasurama, son of Jamadagani and Renuka.

9 Ratna Vijaya.—It describes the fight between Sunda and Upasunda over Tilottoma.

10. Parthavijaya.—It is based on an episode from Bharatayuddha, *viz*, ; the death of Irava, son of Arjuna and Ulupuy, and of Nila.

11. An unnamed and incomplete Kakawin gives the story of Udayana and Vasavadatta in a modified form. Sahasena of the lineage of the Pandavas had two sons, Udayana and Yugandarayana. The abduction of Angaravati, princess of Avanti, by Udayana forms the plot of the Kakawin.

—

Inter-tribal Absorption—a Phenomenon of Hindu Society

In his essay on "Caste as a Social Phenomenon" in *The Calcutta Review* Mr. Nirmal Kumar Bose writes:

It must be taken as a historical fact that Hindu society had been absorbing various tribes within its fold from the earliest times onward. Proofs of this are not lacking in ancient records, while, at the same time, the process can be seen in operation in some of the outlying regions of Hindu culture up to the present day.

The Magian cult of the sun-god Mithra was introduced from Persia into India sometime about the beginning of the Christian era. Although they were considers, the priests of the Mithra cult were regarded as Brahmins, it being stated that they were the Brahmins from Sakadwipa. Accordingly, when they came within Hindu society they were accorded a place in the first *varnas*, but their status was lower than that of the native Brahmins of India.

To take an example from modern times, we may refer to the case of certain Mundas of Chotanagpur, who have recently been incorporated into Hindu society by virtue of the adoption of certain religious rites. These particular Mundas have given up eating beef and drinking intoxicating liquors. They put on the sacred thread for one month in the year while celebrating the *Manda Parab* in honour of the Hindu deity Siva. A Hindu priest officiates for them during the above celebration. On that occasion, he is even allowed to ride upon his clients' shoulder as a mark of special honour.

Hindu society has, in this way, been incorporating tribe after tribe within its fold from the most ancient times to the present day. The theory of four *varnas* has failed to fix a status for these tribes in the social scale in accordance with the nature of their predominant occupation as determined by the Brahminical law-makers.

—

Income and Expenditure of Universities in England and Wales

The Government of Bengal contribute about 14 per cent only of the total income of the Calcutta University at the present moment. In the light of this, the following facts about the income and expenditure of Universities in England and Wales given by Mr. J. M. Datta in *Teachers' Journal* will be of much interest.

There are 19 Universities and university colleges in England and Wales. An analysis of their sources of income and the heads of expenditure would be *useful to us in Bengal*, in view of the *niggardly attitude* of the Ministry of Education *towards the Calcutta University*.

Sources of Income	Total of the 19 Universities
Endowments	£648,084 12 p.c.
Donations & Subscriptions	£116,541 2·3 p.c.
Grants from Local authorities	£554,781 11·0 p.c,
Parliamentary Grants	£1,743,242 34·8 p.c.
Tuition fees	£1,179,853 23·5 p.c.
Examinations, Gradution, Matriculation, Registration fees	£374,637 7·4 p.c.
Other income	£391,635 7·8 p.c,
Total	£5,008,773

Heads of Expenditure	Total of the Expenditure in 19 Universities
Administration	£430,190 8·0 p.c.
Salaries of Teaching Staff, Superannuation & other Expenditure	£3,111,437 63·2 p.c.
Maintenance of Premises	£528,439 17·4 p.c.
Fellowships, Scholarships etc.	£849,910 17·2 p.c.
Total	£4,919,976

The figures are for the year 1931-32.

—

Worse Future for the Excluded Areas

Angul is an excluded area in Orissa. Deputy Commissioners are all in all in these areas, and this has been recently more than proved by an executive fiat by prohibiting a house-owner from quartering Mahatma Gandhi. Mr. A. V. Thakkar writes in *The Ashram Review* (formerly *C. S. S. Review*):

What is far worse than the present state of thingss is that even in the 1933 proposals for constitutional reforms, unsatisfactory as these are, there is not the ghost of a chance of the areas coming into their own for a long time to come. Sec. 106 of the reforms proposals lays down that "His Majesty will be empowered to direct by Order in Council that any area within a province is to be 'excluded area' or 'partially excluded area' and by subsequent Orders in Council to revoke or vary any such Order." Thus it lies within

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

the discretion of his Majesty by an Order in Council to create many more Anguls than at present. At present Angul is fully excluded from the operations of the ordinary constitutions. Further under sec. 108 the Governor will be empowered, at his discretion, to make regulations for peace and good government of any excluded area and will be competent by any regulation so made, to repeal or amend any act of the Federal Legislature or of the Provincial Legislature which will be applicable to the area in question. Thus the Governor can supersede any Act of the Legislature at his sweet will without assigning any reason or without allowing any question in Council to be asked. In other words he can arrogate to himself the powers not vested even in His Majesty in Council and may act as a most irresponsible potentate.

Sec. 109 of the proposals is even still more dangerous. It contains a provision prohibiting the discussion in the provincial legislature of, or the asking of questions on, any matter arising out of the administration of an excluded area. Thus if a crowd is fired upon by the police in any part of Angul, or if any massacre, like the Jallianwalla Bagh, takes place in Angul, say, in the year 1950, even the asking of questions about the event will be prohibited in the Orissa Council or the All-India Assembly. In short, the whole chapter in the White Paper on Excluded Areas consisting of four clauses from 106 to 109 is pregnant with forebodings for the aboriginal tribes of India, who number as many as 25 million people, and who inhabit such wholly or partially excluded areas. The Santhals of Chhota Nagpur, the Gonds of the Central Provinces and the various tribes of the hills bordering the Brahmaputra Valley are probably for ever to be kept in non-regulated areas under the direct administration of the Governors; and to be kept absolutely unaffected by a democratic constitution.

Ideals that Girls Should Follow

The Poet Rabindranath Tagore delivered an address to the girl students in which he laid down the ideals that they should follow. We make the following extracts from it published in *Visva-Bharati News*:

It is needless to say that our girls should have perfect manners in their behaviour towards each other and in their dealings with outsiders. It is ugly to be unmannerly and particularly for women it is unpardonable.

Moderation in behaviour, in social communication, in expressions of emotion, is an essential part of good manners. We should remember that boisterousness must never be mistaken for exuberance of spirit. Good manners should be an outcome of good nature which reveals itself by willingly respecting others' legitimate claims, even going out of one's way to look to their convenience. It is positively objectionable to be noisy in the neighbourhood when someone is studying to disturb one who wants to go to bed when it is due time and to enter somebody else's room without permission, ransacking her things, making her bed untidy, looking into her papers or letters, taking away books or articles of use. To get addicted to the pernicious habit of enjoying and circulating scandals and mischievous gossip breeds in one's character a vulgarity of a malignant type which must be completely eradicated from our nature.

Cleanliness and orderliness should never be neglected. There are some who seem to take pride in displaying slovenliness as a protest against indulgence in luxury. But well-dressed tidiness and foppishness do not belong to the same class. Attractiveness in one's dress may show a high quality of æsthetic sense and go hand in hand with a beautiful spirit of simplicity. It necessarily need not be for ostentation but for taking trouble to offer our respect for others. If we are careless in our dress when meeting people, we rudely show that we do not care for them.

—

An Ideal Mother

The following occurs in *The Young Men of India, Burma and Ceylon*:

There will be sympathy for Mr. Daniel Swamidoss from his friends in all parts of the world on the loss he has sustained in the death of his mother on July 12th. The news is conveyed with sorrow and pride in a letter written from the Y. M. C. A. Community Centre at Indukurpet: "To-day there has passed away a Christian woman who is no less than my dear mother. Next to God I owe her everything that makes life worth living. I am not sad, for she has gone home to be with our Heavenly Father and our Lord Jesus Christ. Through her I have learned the blessedness of poverty, and therefore I am in the service of the poor."

The story of the blind mother and her boy has been told in many lands, and has been given a place by Arthur Mee in his unique anthology, *One Thousand Beautiful Things*, chosen from the life and literature of the world:

"Outside a bungalow in India, squatting on a verandah, pulling mechanically at a rope which worked the fanning punka inside, a blind woman spent hour after hour, day after day, year after year. She could live on a handful of rice. She had no wish for fine clothes. But her son whose face she could never see was everything in the world to her. All the money she earned by pulling the punka, this blind woman spent on her boy. A day came when the boy, after four years in a university, has tened to his village with the tremendous news that he had been offered a Government appointment. She said to him: 'If you accept it you will break my heart.' He was astonished. She told him she had dedicated him to God. She wanted him to teach the outcaste people of India the love of the Father of us all."

We are glad to think that she was not disappointed in her son.

—

Fichte's Contribution to Modern Educational Philosophy

Dr. Debendra Chandra Das-Gupta, M. A., Ed. D. writes in *India and the World*:

According to Fichte the ultimate aim of education, whether cultural or vocational, was citizenship. This ultimate aim had three important aspects or intermediate aims, namely, political solidarity, economic independence, and moral character. To these might be added a fourth, namely, general culture.

Political Solidarity. Fichte regarded the individual citizen as the smallest unit in the nation and maintained that national security depended upon the intellectual and moral improvement of this smallest unit. Hence to make of the German people a strong

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

powerful nation each individual member of the nation, irrespective of social rank, must be made to feel that his own interests were bound up with the common interest, and must receive such an education as would enable him to contribute to the prosperity and welfare of the nation as a whole. This goal of national unification could be achieved, Fichte maintained, only by abandoning the old educational system with its class distinctions and tendencies toward disunion and establishing in its place a new system of education which would afford equal educational privileges to every member of the nation regardless of class or condition.

Fichte, like Pestalozzi, advocated literary and technical education to be given in a common school. In Fichte's plan, however, this common school was to be attended by the future scholars destined for leadership in the commonwealth as well as by the great masses of people destined for manual work. All alike were to receive the rudiments of cultural and vocational training in this common or universal school. The future scholar's technical education would be general in character, designed simply to give him a reasonable familiarity with the processes of trade and industry while those not destined for the scholar's career would receive a trade and technical education that would be vocational in a strict, modern sense of the term. Fichte assumed that every body must work and that no one had a right to be a parasite on society.

Moral character. In addition to the economic aim vocational education was to be motivated also by a moral aim. Fichte maintained that moral development was undoubtedly dependent upon vocational efficiency. Honesty, for example, could be developed to a great extent only by increasing the earning capacity of the future worker and thereby raising him above the temptation to dishonesty. This could be accomplished by a thoroughgoing system of vocational training.

Fichte believed that all education, both cultural and vocational, should result in better citizenship through achieving national unification, economic independence and moral character. He suggested that the technical education of scholars should be more general in character than that of the workers. That is, for the worker's trade and industrial education was to be strictly a matter of vocational training in the narrower sense of the term while for the scholar it became more or less a matter of general culture.

The trade and technical training given was to be such as might be put to immediate use in their daily living. Moreover the working people were to be furnished with such occupational information as would enable them to make an intelligent selection of a life calling.

At a time when Germany was devastated by the fortunes of war Fichte, one of the leading thinkers and philosophers of his day, was foremost among the patriotic Germans to advocate education for all, rich and poor alike, in a common school as a means of national rehabilitation. In this school all were to receive both literary and technical training. The brilliant students, capable of becoming scholars and leaders in the state, were to receive technical training for cultural purposes while the students of lesser ability were to receive intensive training in various gainful occupations as a preparation for their life work. Through education Fichte aimed to make Germany commercially and industrially supreme. Hence he advocated an educational system that would produce good citizens, conscious of their interdependence, economically self-sustaining and of sturdy moral fibre. Fichte's theory had much in common with the theory of Pestalozzi and shows the influence of the Swiss reformer. Both aimed at the social and moral regeneration of the individual and of society through education. Both attempted to rejuvenate national prosperity through education. Both advocated an elementary education consisting of literary and technical training as indispensable to the good worker. Fichte's theory does not advance beyond Pestalozzi's except in advocating that not only the working people but all the people of every class and rank should receive the education which he proposed.

THE OTHER SIDE OF THE MEDAL

By J. T. SUNDERLAND

AT last we possess, for the first time, adequate histories of British Rule from the side of the Indian people. This is a matter of great importance, not only for India but for the world.*

British rule in India is not something small or in a corner. Consisting as it has done, and does, of conquest, and for two centuries of the domination, of a great civilized nation, the second largest in the world, it is, in its very nature, one of the major, one of the most commanding and important sections of modern world history. Yet the anomaly exists, that vast section of history has not been known to the world, except from *one side*, and that the side of the *foreign conquerors* and *rulers*.

One of the tragic features connected with subjection everywhere is the fact that the channels of communication with the world are all in the hands of the ruling power.

This has been conspicuously the case in India from the beginning of its subjection. Great Britain has had the ear of the world. All mail lines and telegraph lines have been, and are, under her control and subject to her censorship. She is great and powerful; every-

thing that she sends out is accepted as true. On the other hand, India has control of no means of communication. Whenever anything reaches the world from her, it bears on it the stigma of a subject and therefore supposedly inferior people. Who could believe their word as opposed to that of the ruling and of course superior English people?

The British rulers of the country have flooded the world with books, as also with articles in the leading periodicals of all nations, giving their side of the Indian situation. The libraries of all countries have been, and are, full of these.

Of course, readers everywhere finding these, and finding practically nothing on the other side, have taken it for granted that the British picture is true, that India is not in bondage at all, but that British rule is a great boon to the Indian people, a great blessing, something which is lifting them up and gradually "civilizing" them, and, with all the rest, something which they like.

If readers in libraries and elsewhere could have had India's side put before them, they would have obtained a different picture.

These British presentations of conditions in India would not be so bad if they stopped with British writings—with British books and periodicals. But they do not. Britain's great influence in the world carries them everywhere. And the fact that they are not contradicted tends to make everybody accept them as true. Edmund Burke once said in the British House of Commons: "If an idiot told me the same thing every day for a year, no matter how foolish or false it might be, and I heard nothing to the contrary, I suppose I should end by believing him."

The world believes these British presentations because it has always been hearing them and has never heard them disputed.

I find these present, more or less fully, in nearly all our American literature regarding India. They are in our popular writings and general histories; they are in our college and school histories; worst of all, they are in our cyclopaedias. I have examined them all, and have not found one that is free from serious British bias. The great and honoured Encyclopaedia Britannica leads off, and our writers follow essentially in its track, even if not always consciously so. That is to say, every article on India, or on Britain's relations to India, even if stating individual facts accurately, is written from Britain's side, does not recognize that there is any other, and portrays everything from that standpoint.

It is as if all the information we were able to obtain (through histories and cyclopaedias) of the conquest of Italy by Austria and of Poland by Austria, Germany and Russia, came to us through authors belonging to the conquering nations. It is as if all the histories (and cyclopaedia articles) possessed by the world, of the American Revolutionary War, were written from the British side to show that the British were right and the Americans wrong.

Of course, the fact that from the beginning of their career in India the British, as has been said, have had the ear of all nations, and have been able, through a hundred, a thousand, channels, to justify themselves, while the Indian people have had practically all avenues of utterance closed against them, making it impossible for their voice to be heard by many, if by any, beyond their fellow-sufferers by their side—of course these facts add much to the bitterness as well as the wrong of India's subjection.

Fortunately, as said in the beginning of this article, at last something better is appearing; at last we are getting histories which tell the story from the side of "*the toad under the harrow*".

The appearance of Mahatma Gandhi on the scene has done much. His extraordinary genius and character, the unprecedented hold he has obtained on the imagination, the love and the veneration of the Indian people, and the enormous following he has attracted in his daring and ethically noble movement to secure India's freedom by non-violent non-cooperation with the British govenment—these have called the attention of the world to India and its government by Great Britain, as it was never called before.

All this is very important. And yet, it is coming to be widely seen that it has not been enough. It has created very great admiration of Mahatma Gandhi and profound sympathy with him in his self-sacrificing and unparalleled efforts to help his people. But, unfortunately, it has left almost wholly unanswered some of the deep questions, some of the vital questions, which arise in the discussion of whether or not Britain should grant India self-rule—questions which are constantly emphasized by British writers—namely: Are the Indian people ready for self-government? Do they not need training for it, and is not England giving them exactly the training they require? With all its faults, is not British rule better than any they could give themselves? It is claimed that British rule has impoverished the Indian people. On the contrary, has it not increased their wealth? However imperfect that rule may have been in this particular or that, has it not been a great benefit to India, and will it not be a great benefit if continued for an indefinite future?

I say, these and such as these are the questions that Great Britain keeps constantly before the world, which thoughtful minds in America and all other nations want to find answers for, but which Mahatma Gandhi, with all his noble qualities, does not seem, to many minds, to have answered. Can they be answered?

India replies with practically a united voice, Yes! they not only *can be*, but they *are* answered, every one, and beyond denial or rebuttal *by the whole story of British rule whenever that story is truthfully and daringly told, from the side of the Indian people.*

Is the story anywhere told? Yes, at last! The four books named at the beginning of this article tell it.

Let us look briefly at the books—first at those of Mr. Dutt, because his were the earliest in time. Mr. Romesh C. Dutt was a distinguished Indian statesman and scholar, living and doing his work late in the nineteenth century. Besides other high positions held by him, he was a member of the Legislative Council of the Province of Bengal, Finance Minister of the State of Baroda and Lecturer of University College, London. He wrote other works on Indian subjects, but the most important for our purpose are the two already mentioned, namely, his *Economic History of India*—from the Rise of the British Power in 1757 to the Accession of Queen Victoria in 1837, and his *India in the Victorian Age*.

It should be clearly understood that these books are *economic* histories, *not political*. Of course, therefore, they do not cover the whole ground. But in their sphere they are in the highest degree important. They are luminous expositions of the effects of British rule on India's finances and industries, and on her extensive manufactures. They cannot

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

...too highly praised for their accuracy and the ...ness of their spirit.

...ther, as already suggested, economic history is not ...ficient; the political history of India under British ...le is even more important, indeed it is absolutely ...essary for a full understanding of the economic ...tory itself.

For this we must turn to the masterly historical ...rk of the late Major B. D. Basu,* also mentioned ...the beginning of this article. Major Basu, long ...nected with the British-Indian Medical Service, ...s a scholar of extraordinary attainments, who for ...re than forty years had devoted himself to the ...dy of his country's political history since the ...ming of the British, under conditions which gave ...m full access to public records and documents, as ...ll as much important assistance from other scholars. His history is in two large volumes. The first ...led *Rise of the Christian power in India*—...ok of more than 1,000 pages, richly illustrated—...s published in 1931. It tells the story of the ...uest of India and its administration by the ...sh East India Company, from the company's ...anization in 1600 down to the surrender of its ...ter, and the transference of its vast Indian ...ssions to the direct government of the British ...iament, in 1858, at the close of the "Indian ...my". Major Basu's second volume, entitled, ...a *Under the British Crown*, a book of nearly ...large pages, also richly illustrated, appeared at ...beginning of 1933. It takes up the story where ...e earlier volume leaves off and brings it down to ...ctically the present time. Thus it covers the story ...the *later* administration of India, *by the British ...rnment itself*, through *Viceroys* appointed by ...iament and responsible to *Parliament*, as dis-...guished from the *earlier* administration of the ...try through *Governor Gererals* appointed by and ...ponsible only to the *East India Company*. In ...er words, the volume begins with the administra-...n of Lord Canning, the Governor-General, who ...nd himself confronted with the difficult task of ...uring tranquillity after the Sepoy Mutiny, and ...es the history of India, as seen and experienced ...the Indian people, through the administrations of ...teen viceroys, down to and including that of ...d Reading, which terminated in 1926.

Both these volumes of Major Basu, not only reveal in every part a care, patience and thoroughness of research that leave little or nothing to be desired and a spirit of fairness and candour that everywhere impresses the reader, but they tell their story with a graphic clearness, a simple picturesqueness of style, and a forcefulness that grip and fascinate.

It was hoped by many that the transference of the Government of India from the British East India Company to Great Britain itself would result in closer and more sympathetic relations between England and India, and more freedom and justice to the Indian people. But the hope was not realized. The change in the *form* of the Government proved to be little more than a *mere* change of *form*. The spirit of the government remained essentially the same as under the East India Company, and the practical administration of affairs in India was carried on almost exactly as before. Indeed, in some respects conditions became worse as the result of this change of government from the East India Company. Under the former regime, the charter of the Company had to be renewed every twenty years. This meant that once in two decades the Indian situation came before Parliament and the entire country for careful investigation. Under the new form of government, all this passed away. No provisions were made for future investigations, and, as a consequence, none was ever made except at very rare intervals when some alarming crisis arose. The Government of India became more and more a cold, hard, self-centered and self-managing bureaucracy, removed farther and farther from the knowledge or real interest of the British people—as a fact their interest becoming less and less in the Indian people, and more and more confined to the one matter of holding India securely under British control, for Britain's advantage. Although the Indian people today are granted a considerable number of minor liberties and privileges of kinds that do not interfere with British interests, as a matter of fact the exploitation of the country goes on as at any time in the past. The sfory of all this is told by Dutt and especially by Basu, with a clearness, a fairness and a fullness of documentation which puts it beyond refutation.

Since the publication of the works of these two scholars, there can be no excuse whatever for writers on India, whether of histories or cyclopaedia articles, for not giving the story of British rule *intelligently* and *justly*, from the *side of the Indian people* as well as from that of their *foreign rulers*.

* Died on September 23, 1930.

THE SECONDARY SCHOOLS IN BENGAL

By BHUPENDRA LAL DUTT

THE list of students who have been awarded scholarships on the results of this year's Matriculation Examination of the Calcutta University has just been published. It shows the schools in their true colour to a great extent. The University is not responsible for the actual teaching in the schools recognized by it. The august body has a prescribed syllabus on each subject for examination. It selects and recommends text books and once a year it sets common questions for all examinees who sit for examination in numerous centres throughout the area under its jurisdiction. This year the number of examinees exceeded twenty three thousands.

The actual teaching is conducted by two different classes of schools, *viz.*,

(1) Government schools, *i. e.*, schools maintained by the Government with funds out of public revenue. They are under the direct control of the Education Department. The teaching staff consists of the members of the Provincal and Subordinate Educational Services.

(2) Non-Government Schools of two different groups:

(*a*) Aided-Schools, *i. e.*, schools which are fortunate enough to secure grants-in-aid from the Government.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

(*b*) Unaided schools, *i. e.*, schools which do not receive any aid from the Government.

The annual expenditure in these schools is shown in the following table made out from the *Report on the Public Instruction in Bengal for the year 1932-33.*

Class of Schools	Number of Students	Expenditure (in rupees) from Government fund	Fees	Board and Municipal fund	Other sources	Total
For Males						
Government	13,663	6,95,511	4,35,587	—	5,382	11,36,482
Aided	124,167	9,98,989	35,87,266	26,351	7,86,602	53,99,208
Unaided	1296,45	—	31,00,027	—	6,41,466	37,41,466
Board & Municipal	1,834	9,930	50,754	4,172	—	64,856
For Females						
Government	1,791	1,65,041	89,434	—	—	2,54,475
Aided	13,492	3,60,072	4,96,769	67,766	1,67,306	10,91,913
Unaided	1,002	—	28,350	—	3,312	31,662

Calculating from the above table we find the cost per student to be as follows (in rupees):

	Male	Female
Government school	83	142
Aided school	44	82
Unaided school	20	31

Of the nine First Grade scholarships of Rs. 20 a month, only one has been secured by a Government school,—a Calcutta school—while the rest have all been carried off by non-Government schools, two belonging to Calcutta, both unaided, and six to the moffussil. Be it noted here that the boy who secured the highest total marks was sent up by a non-Government unaided school.

Out of six Second Grade scholarships of Rs. 15 for the city of Calcutta a Government school has secured only one, Non-Government unaided four, and aided the remaining one.

Of the twelve Third Grade scholarships of Rs. 10 for the city of Calcutta, the Government schools have failed to secure a single one, non-Government unaided schools have secured nine leaving one for an aided one.

The following table shows the distribution of scholarships :

	Number of scholarships	Secured by Government schools
First Grade Scholarships of Rs. 20 only	9	1
Second Grade Scholarships of Rs. 15 only		
Calcutta	6	
Presidency Division	6	1
Burdwan ,,	6	2
Dacca ,,	5	1
Rajshahi ,,	6	1
Chittagong ,,	4	2
Third Grade Scholarships of Rs. 10 only		1
Calcutta	12	
24-Parganas	3	0
Jessore	2	1
Khulna	3	0
Murshidabad	2	1
Nadia	2	1
Bankura	1	0
Birbhum	1	0
Burdwan	3	0
Hooghly	2	0
Howrah	2	1

Malda	1	1
Pabna	2	0
Rajshahi	1	0
Rangpur	2	1
Chittagong Hill Tracts	1	1†
Chittagong	2	1
Noakhali	1	1
Tipperah	3	0

Are the Government schools still to be classed as model ones? Are they still to be maintained at an enormous cost, when really good schools struggle for their very existence with a band of hardworking and painstaking teachers on starvation wages? The lamentable failure of Government schools should not be overlooked, specially when we see that they recruit boys from that grade of society where the very environment and heredity go a long way to push a boy onward and that their cost of education is much higher than that of other schools.

The Government schools for girls fare no better than those for boys. The two scholarships of Rs. 20 have both been secured by two non-Government schools—moffussil schools to boot. The five scholarships of Rs. 15 have been shared among two Calcutta and three moffussil non-Government schools. Of the ten scholarships of Rs. 10 only three have been secured by Government schools, three Calcutta and four moffussil non-Government schools securing the rest.

It is really gratifying that the special scholarship for aboriginal student goes to a girl and that of a non-Government moffussil school.

* There is no Government school in the District of Dacca within the jurisdiction of the Calcutta University.

† There is no other High school except a Government one in this district.

No Muhammadan boy has been successful in securing a scholarship of Rs. 20. As far as second grade scholarships are considerd, we are sadly disappointed in Dacca and Chittagong Divisions, where the Muhammadans greatly outnumber the Hindus. It is in the Rajshahi Division that we find the names of two Muhammadan boys in the list—one from a Government school and the other from a non-Government. Of sixty two second grade scholarships of Rs. 10 Muhammadan boys have been able to secure only six—one from a Government school and five from non-Government ones.

The picture as shown in the Scholarship list is really deplorable. What is the remedy? Secondary education requires overhauling. The Government Schools have forefited their right to exist as a privileged class. The granting of aid at the whims of the Inspector of Schools is too old a procedure to suit the present state of affairs. One hundred and eighteen scholarships open to twenty thousand candidates (leaving out as many as three thousands for Assam province) is simply ridiculous.

INSURANCE NOTES

Foreign Insurance

British Insurance in 1933

"There was some general improvement in 1933 although there is a time lag in the effect general conditions on insurance results, the provement was reflected in 1933 insurance ults," writes the *Statist* in summing up the rking of the British Insurance Companies in 33. In some branches there was a "look-up" more is expected in the future.

Life Assurance new business figures showed very satisfactory advance, having increased m £161 million in 1932 to about £180 lion. The chief problem of the life-offices as before, the earning of high rates of erest on the funds, for during 1933 prices nearly all investments suitable for life-office ds advanced, and the interest which it was sible to earn on existing or new funds fell. is estimated that at the end of 1933, British Offices had a premium income of more £75 million, paid away £58 million in ms and annuities and had a fund of £816 n, the ratio of expenses to premium income as low as 14.3 per cent.

The results of the British Fire Offices were altogether bad. There was a slight reduction the premium income owing partly to deteriora- of foreign exchange and partly to the tement of insurance rates at a lower level. effects of Government restrictions, growth tionalism and of other such factors are also felt abroad by the British Companies. Accident and Marine Departments there a decline in premium income, but Aviation rance gained in popularity.

What a vast influence is exercised by rance Offices on national finance will be parent from the fact that at the end of 1933, r assets amounted to £1420 million distributed mortgages, loans, Government and nicipal Securities, Debentures, Stock, Shares,

Earthquake Insurance In Japan

The recent earthquake at Hokodate in Japan has brought about disastrous effects. The losses of life and property have been immense, and the losses of the insurance companies have provisionally been estimated at over 28 million Yen. The Earthquate of 1923 brought still larger havoc and resulted in a loss of 100,000 lives and ten billion Yen worth of properties. To provide against this terrible casualty even to the small extent that may be possible, the Japanese Government, who performed magnificent relief work during the 1923 disasters, now contemplate to introduce a scheme of compulsory earthquake insurance. The details of the scheme are yet under consideration. But the broad principles on which the scheme is likely to be based are that (*i*) the business will be handled by companies as Agents for the Government; (*ii*) the rate of premium will tentatively be about 2 Yen per thousand; and (*iii*) no single earthquake policy shall be more than 300 Yen. Such compulsory earthquake insurance is unique of its kind and is yet another evidence of the solicitude of the Japanese Government for the welfare and well-being of the people.

Group Life Insurance

The history of group life insurance affords interesting reading. An American Insurance man, as a result of patient research, has propounded the theory that the germ of group life business was contained in the slave insurance business which was introduced in 1823. Slave insurance which was an important branch of the business in the forties and fifties of the last century included the safe conveyance, from one place to another, of the slaves whose lives were insured in a group.

The modern system of group life insurance dates from 1912 when a policy was issued to the Montgomery Ward & Co. of Chicago covering several thousands of its employees. This may truly be said to be the beginning of present-day

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

group-life business, for the premium was to be paid by the employer, and the coverage was offered without medical examination on a yearly term basis—the main factors that form the basis of group insurance as we understand it today

The National Industrial Conference Board recently made an enquiry of a large number of manufacturing and other companies asking them the reasons for adopting group schemes. It appears from their replies that most employees are conscious of the fact that an effective elimination of the financial worries of the machine operator decreases labour waste by increasing morale and good-will and this is the main reason for their adopting group insurance for their employees. It is no exaggeration to say that Group Insurance "makes the business relations between employer and employed closer and more permanent and it is the one form of co-operative effort whereby the employer may be of real benefit to the employee and his family.

Indian Insurance

Oriental Valuation Results

The results of the valuation of the assets and liabilities of an insurance office afford the best criterion by which to judge of its progress and solvency. The twentieth Triennial Valuation of the Oriental, the report of which has just been published, adds one more feather to the cap of this great Indian life office. The period covered by the Report has been a period of "going ahead and gaining strength." The New Business has aggregated Rs. 18¾ crores during the period compared to Rs. 17¼ crores in the period preceding. The income from premiums at Rs. 605½ lakhs showed an increase of 26 per cent on the Premium Income of the previous triennium, and the Net Interest Income at Rs. 182¾ lakhs recorded an increase of 29 per cent. The rate of mortality continued to be favourable, the ratio of actual to expected claims being only 53 per cent as compared to 61 per cent in the previous triennium. The "death-strain", measured by the difference of the amount that the company is called upon to pay under policies becoming claims and the amount held in reserve under such policies disclosed handsome profits. The net rate of interest earned has, however, moved downwards from 5·56 per cent in 1931 to 5·20 per cent in 1933, owing to the investment of new funds at higher market values during the triennium. But on the other hand, the market value of company's investments in Stock Exchange Securities exceeded the Book values by over Rs. 266 lakhs, exclusive of the Investment Reserve of Rs. 25 lakhs. A revaluation of these securities, which was made on the basis of gross interest yield of 5 per cent, resulted in an appreciation of Rs. 52 lakhs which was taken credit for in the accounts on the express condition that the whole amount should be utilized to strengthen reserves. After this operation, the Market values were still in excess of Book values by Rs. 24 lakhs which is a sufficient guarantee for the company's continued financial stability. By so strengthening the reserves, it was possible to pass from a 3¾ per cent to a 3½ per cent valuation basis, and a Special Contingencies Reserve of Rs. 28 lakhs could moreover be set up to maintain the present rate of bonus in the near future. Interim bonus has been declared at full rates, namely Rs. 25 per Rs. 1000 per annum on Whole Life Policies, Rs. 20 per Rs. 1000 per annum on Endowment Assurances. It is much to be appreciated that in spite of its expansion in business, the expense-ratio is being systematically brought down so that in the triennium under review, it averaged 21·36 per cent against 23·36 per cent in the triennium preceding.

A Timely Legislation

I have had occasion to refer to the growing menace of Provident Societies in India which has been proving immensely harmful and highly prejudicial to the development of true and scientific life insurance business. No effective legislation has yet been passed to check the mushroom growth of the Provident Societies which go under the flamboyant name of Insurance companies. These societies need not put up any deposit with the Government so long as they issue policies for fixed sums assured not exceeding Rs 500, with certain other restrictions as to the maximum amount of yearly premiums; nor are they are required to have their affairs subjected to periodical actuarial investigations. In absence of these legal restrictions, the Provident Societies, most of them, have their own way in carrying on their business and playfully handle the savings of the unsuspecting public who soon find themselves victims of foul play. It is high time that the public should be afforded protection by bringing these societies under the purview of the Indian Life companies Act or some such legislation as may be considered adequate to deal with their activities. It may be noted in this connexion that the Jodhpur State has recently passed the Provident Societies Act which requires every Provident Society which intends to carry on the business of insurance within the State, to deposit Rs. 50,000 as security with the State Auditor, the deposit being liable to a maximum increase of Rs. 25,000 by annual instalments. It is reported that the legislation has already achieved the desired result in a large measure.

THE PRESENT STAGE OF INDIANIZATION

By NIRAD C. CHAUDHURI

I

THE controversy in the Assembly over the status of the new Indian officers to be turned out by the Dehra Dun Military Academy shows once again the constancy of the Government's policy where the Army is concerned. One face of this policy is never to take Indian opinion and public men into confidence, never to discuss or explain fundamental principles and motives, never to face Indian objections squarely and straightforwardly, yet always to appeal to Indians to take everything on trust and believe that nothing is being left undone to bring close at hand the day when the British commanders of the Indian Army will be happy to make over their charge to the Indian officers of an Indian national army. The other face of this policy is always and almost unctiliously to seek the legislative or administrative assent of some prominent Indians to matters of detail and thus get them to sanction by implication broader principles and policies which Indian opinion would never tolerate if the full scope and effects of these details were plainly stated.

This is exactly what is happening with the new policy of Indianization to which the last legislative touches will be given if the Army Act amending bill, now before the Assembly, passes into law. But in order to see the process clearly at work it is necessary to go back three or four years when the new policy was announced by the Commander-in-Chief as a result of the discussions at the first session of the Round Table Conference.

As is well known, the Sub-Committee No. VII of the Conference went at some length into the question of Indianization, but could not arrive at a unanimous decision on the question of the pace of Indianization. While one section of the Sub-Committee was in favour of a strong affirmation to the effect that the complete Indianization of the commissioned ranks of the Indian Army should take place within a specified period, the majority considered it impossible to lay down any definite rate of Indianization or anything of a precise character that might in any way embarrass those responsible for the defence of India and fetter the judgment or discretion of the military authorities. The difference between the views of the two sections was thus fundamental. It was therefore decided to incorporate both in the report, and at the same time the chairman of the Sub-Committee, Mr. J. H. Thomas, undertook "that when, in pursuance of the resolutions of this Sub-Commitee, expert committees were appointed these expert committees would as a matter of course take into consideration the proceedings of previous Committees and in particular the proceedings of the Military Requirements Committee of 1921 and the Committee on the Indianization of the Indian Army of 1922."

This was definitely a promise to set up an expert committee to settle the question of the pace and extent of Indianization. Unfortunately, however, the resolution which was finally adopted by the Sub-Committee (only Mr. Jinnah dissenting and wishing for a clear indication of the pace of Indianization) was disconcertingly vague, and thus, when in pursuance of this resolution the Indian Military College Committee met in May, 1931, it was found that by the terms of its reference it was only a committee appointed "to work out the details of the establishment of a college in India to train candidates for commissions in all arms of the Indian defence services," the question of the pace, extent and method of Indianization being placed entirely outside the scope of its activities. This was neither a rational nor a comfortable position for some of the Indian members of the Committee, who felt they could not make even a beginning in their specific work without a clear preliminary understanding as to the number of trained Indian officers the college would be

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

called on to supply, which in its turn would necessarily depend upon the pace and extent of Indianization. In the circumstances, two possible courses were open to the Committee. It could either postpone its work till another committee appointed for the purpose decided the question of the pace or discuss the wider question itself. What took place in actual fact was, however, quite different. The appointment of another committee to discuss the policy of Indianization as hinted in the Defence Sub-Committee's report was not contemplated. At the same time the Committee was not allowed to discuss the question. As the Commander-in-Chief argued in a minute : "the decision of all such questions rests with those responsible for the defence and safety of India, namely, His Majesty's Government on the advice of the Committee of Imperial Defence, and the Government of India on the advice of the Commander-in-Chief. These questions are not within the terms of reference, and have accordingly not been discussed by the Committee, nor dealt with in the Report." Yet inconsistently enough the leaders of Indian opinion were asked to settle the details of a scheme which when carried out into effect would commit themselves and the country to a policy of Indianization wholly unacceptable to both.

The same manœuvre is being repeated three years later. The "Bill further to amend the Indian Army Act, 1911, for certain purposes," to give it its official title, is a measure dealing with minutae of military discipline. Its full meaning would be unintelligible to any one who is not an expert on military law. But lying at the back of the whole measure is the same unsatisfactory policy of Indianization put forward by the Commander-in-Chief and forced upon the Military College Committee in 1931. The inocuous looking details of the bill are based upon principles wholly unacceptable to every shade of independent opinion in the country, and if passed into law will perpetuate trends extremely dangerous to Indian self-government. It is, therefore, perfectly legitimate to bring into the discussion the whole policy of Indianization adopted by the Government. Here again the attitude taken up by the military authorities is characteristic and illuminating. In replying to the debate on the motion to refer the bill to a select committee on July 16, Lt.-Colonel A. F. R. Lumby, the Army Secretary, said :

> "If in my speech this morning I gave the impression that this Bill dealt with the policy of army administration, I must apologize to the House. What I wished to convey was that it dealt wholly and solely with discipline. The Indian Army Act is the Act which at present governs the discipline of the Viceroy's Commissioned officers, warrant officers, non-commissioned officers and other ranks of the Indian Army, and now it is proposed to include the new type of officer coming out of the Dehra Dun Academy in the Act as well. The first batch of these Indian commissioned officers will be leaving Dehra Dun at the end of the year, and it is essential that some arrangement should be made for their status and discipline."

One only wonders why the legislature which is to have no say as regards the policy of army administration, should be asked to endorse measures which will give practical effect to it.

II

Enough has been said to prove that while the Government is always seeking the co-operation of the legislature where it is compelled to do so by statutory rules, there has never been any disposition on its part to take Indians into confidence where questions of military policy are concerned. It is now time to discuss the short-comings of the scheme of Indianization adopted by the Government and the disabilities which the Indian officers will suffer under it. In doing so it would be the wiser course not to confine oneself solely to the specific provisions of the bill now under consideration but take up the policy of Indianization in force since 1931 as a whole. For, as has been explained above, the bill is a more or less restricted measure dealing with discipline. The fundamental principles underlying it have already been decided upon by the executive authorities and its future application to the detriment or otherwise of Indian aspirations will also depend on the wishes of the executive authorities. The real object of Sir Abdur Rahim's amendment is to limit this untrammelled freedom of the army authorities by inserting a statutory provision guaranteeing the status of the future officers of the Indian Army and thus recovering some of the ground lost at the time of the discussions at the Round Table Conference and the discussions in the Indian Military College

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

committee. It is therefore essential to look at the whole question from a stand-point broader than that of the amending bill now under discussion.

It is, of course, true that the plan of Indianization now being carried out by the military authorities is an advance on what went before. Even since the Mutiny, it has been one of the cardinal principles of British military policy in India that not only should Indians never be allowed to occupy positions of responsibility and power in the Army but that they should never also be taken in all its arms so that they might be able to constitute a self-contained fighting formation by themselves. The present scheme is certainly a partial abandonment of this principle inasmuch as it is now proposed to create at least one complete and self-contained Indian fighting formation. But in every other respect it falls far short of what is claimed by Indian opinion; and what is perhaps more important the scheme of Indianization now being tried would not lay the foundations for future development on the soundest and the most desirable lines.

In the first place, the pace of Indianization remains very unsatisfactory. The scheme, if fully worked out, will affect, at the end of half-a-generation, only one of the four divisions constituting the Field Army in India, which in turn comprises less than half of the total strength of the fighting troops. If the process were extended to the whole of the Indian Army, its transformation from British to Indian footing would take more than a century. But as at present there is no intention of making even this fairly cautious experiment on the whole of the Army. It is confined to a small division, numbering about sixteen to seventeen thousand men.

Secondly, the scheme continues the principle of segregating the Indian officers in certain specified units and formations which was one of the worst and most unpopular features of Lord Rawlinson's proposals. This principle which has been recently condemned by so eminent an Indian soldier as General Sir George MacMunn who can by no means be described as over-sympathetic to Indian aspirations, was hit upon to avoid the difficulty of making British officers under Indians. From the very inception of the idea of Indianization about sixty years ago it was frankly recognized that one of the greatest obstacles in the way of giving commissions in the Army to Indians was what Lord Kitchener described as "the deep-seated racial repugnance to any step which brings nearer the day when Englishmen in the Army may have to take orders from Indians." The only way to avoid this eventuality was to create a separate corps for the Indian commissioned officers. As Sir George Chesney, one of the earliest advocates of giving commissions to Indians, wrote in 1868:

> "In the beginning no doubt, all that could be done is the appointment of a native, here and there, to the effective establishment of the officers of a regiment; but, in course of time, it might be expected that some regiments would be wholly officered in this way;... Let me add, in order to guard against being misunderstood, that it is not contemplated that Europeans should be called upon to serve under natives. To do so would be to create a perfectly needless difficulty."

The idea apparently took root. In 1907, Lord Morley also suggested to Lord Kitchener that a certain number of regiments should be officered chiefly by natives. But the most outspoken admission of this difficulty and a suggestion as to how to get over it, is to be found in a letter written by Lord Rawlinson just before he came out to India as Commander-in-Chief in 1920:

> "People here are frightened by this talk of 'Indianization,' and old officers say they won't send their sons out to serve under natives. I agree that the new system must be allowed to take its course, but it will require very careful watching and cannot be hurried. The only way to begin is to have certain regiments with native officers only."

There is no denying that the divisional scheme of the present Commander-in-Chief stands in line with previous policy, and that the cloven hoof of racial prejudice is still there, even if it is not wholly at the bottom of the scheme. So, it is not absolutely unwarrantable to fear that when the completely Indianized division comes into being, it will be looked upon as a poor relation, as a formation commanded by officers of an inferior caste and professional competence.

III

This impression is deepened when one takes into account two features of the scheme, connected with the principle of segregation.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

They are, first, the lower rate of pay proposed to be given to the new officers, and, secondly, their relatively restriced powers of command. Both of these points deserve a few words.

As regards pay, theoretically speaking, there is no reason why a lower scale based upon a less expensive but not a less rigorous standard of education should carry with it any suggestion of inferiority. But in practice its effects are certain to be so. Money enters a good deal into the standard of values of an Englishman. For him are not the beauties of plain living and high thinking, above all when he is living in India. As an acute observer of English social life has observed, every Englishman who strives after social recognition, displays a luxurious standard of dress, diet, travelling, amusements and personal services, whether he can afford it or no, and the very first thing a social upstart can do in England is to show by an affectation of luxury that he wants to be classed as a gentleman. To deny the means of indulging in them on an equal—and possibly irrational—scale to an Indian would be to draw upon him the condescension, if not actually the contempt, of his English colleagues.

The distinction in respect of the powers of command is even more serious. Under the present scheme of Indianization and the bill which is meant to give legal sanction to it, the Indian commissioned officers will not automatically have the same powers of command over the personnel of the British Army in India such as are possessed by the British officers, but it will be left by regulations (and not by law) to the commanders to appoint the occasions on which the Indian officers may exercise these powers. This is only an application of the principle of confining Indianization to one division. But the divisional scheme when fully worked out would still have involved a serious limitation of the Indian officer's status and curtailment of his usefulness. In the existing conditions his position would be still worse. At present all the formations, *i.e.*, divisions, brigades, etc. in India are composed of British as well as Indian troops. The stations and areas of command also have an assemblage of soldiers both Indian and British. Any officer who is fitted by his rank to do so can now command these formations, areas or stations irrespective of the fact whether they contain Indian or British troops. But under the provisions now contemplated, the Indian officer will not be entitled to command by virtue of his rank alone and without special executive sanction any formation, area or station which may, by any chance, contain British troops. It is a serious limitation of the powers of the Indian commissioned officer, and under the stress of war when it may not prove practicable always to group Indian or British troops in exclusive formations the handicap would be still worse.

It has been sought to justify this arrangement by the argument that the Indian and British troops of the Army in India belong to two different legally constituted bodies, the British Army and the Indian Army, and therefore the laws enacted for the one cannot affect the other. This is a purely legal objection without any practical significance. Even now there are in the Army in India two bodies of officers distinguished from a technical point of view, *viz.*, Indian Army officers, and officers of the British service. They, however, equally take their chances for regimental, staff, or administrative appointments, because though distinct as regards the terms of their service, they are one from the purely military point of view. The Army in India today constitutes one unit as an instrument of war. No hard and fast distinction can be made in the powers of command of the bodies of officers who lead it without destroying this unity and giving to India two armies instead of one it has today.

This, however, seems exactly to be the end contemplated by the policy of Indianization now being followed by the military authorities. The deliberateness with which a distinct status is being conferred on the Indian commissioned officers, and the unwillingness which the Government spokesmen display to state their real motives show the bill to be the part of a well-considered and far-reaching plan of whose goal the army authorities are perfectly conscious. This end is, as has been already stated, to create two distinct armies in India, one to be composed solely of Indians commanded by Indians, and the other consisting of both British and Indian personnel to be absolutely under the control of Imperial military authorities.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Everything in the recent trends of army organization both in England and India points towards such a splitting up of the Army in India. The segregation of Indian officers in a particular formation, which was originally advocated as a solution of the difficulty of placing British officers under Indians, has now become necessary in the interests of Imperial strategy. The altered defensive requirements of the British Empire after the War imperatively demanded that an efficient and powerful military force should be stationed in the East to protect British interests and to serve, if necessary, as an expeditionery force, and for that it should be under the absolute control of the Imperial military authorities without any constitutional limitations which might possibly restrict its unfettered employment. Neither the constitutional position nor the resources of the Dominions of Australia and New Zealand permitted their use for this purpose. The choice, therefore, fell on India, in whose favour it was an additional argument that the cost of maintaining such an army would not fall on the British tax-payer.

This in itself would have been an absolute bar to the Indianization of any part of the Army in India, had not insistent claims and previous political undertakings made the position of the military authorities extremely uncomfortable. So, they have obviously hit upon a device to solve the problem by dividing the Army in India into two parts—one to be composed entirely of Indians and employed for local defence, the other to be an Imperial army under even stricter Imperial control. The scheme of transforming one complete division to Indian footing and the Imperial contribution to the cost of Indian defence, both of which have been offered to India, and are acclaimed by some, as great concessions, are only steps towards that end. Though it is by no means possible that Indian opinion would have effectively killed them, all these proposals should have been opposed by Indian opinion long ago. Now, the policy underlying them is in full swing and makes the position of Sir Abdur Rahim's amendment unassailable.

NOTE.—For the convenience of readers a portion of the note of dissent of Sir Abdur Rahim and four of his colleagues on the Select Committee is reproduced below:

"It has been made clear in the Note under clause 12 that, so far as command of the Indian Army personnel is concerned, the status and opportunities of the Indian commissioned officers will in no way be inferior to that of "British" officers....But in respect of command of mixed formations and in relation to British personnel of the British Army in India, there will be a difference in the prospects of the two classes of officers as pointed out in the Report. The Indian commissioned officer will not automatically have the same powers of command in relation to the British personnel of the British Army in India such as are possessed by "British" officers, but it will be left to the commanders "to appoint the occasions" in which Indian commissioned officers may exercise such powers of command. This distinction has, in our opinion, a serious significance in the Defence Policy of India, apart from the practical difficulties which it is likely to give rise to in the Army administration as well as in actual operations. If this be the inevitable result of an Indian commission, it only tends to confirm the belief which is widely prevalent in the country that the position of Indian commissioned officers will be something intermediate between the Viceroy's commissioned officers and the "British" officers and more or less analogous to that of the officers of the Provincial Civil Service in the civil administration, their chance of attaining a higher command will be like the prospect of a Provincial officer obtaining a District charge, or rather will be confined to occasions. Another anomally in the position of this new class of officers which, we happened to discover in the course of discussion in the Select Committee, is that even if they are in command, they will not be eligible to sit in a Court Martial on a British soldier.

Granted the necessity of a self-contained Indian Army Act, with the necessary regulations and rules, we fail to see why an Indian commission should necessarily be of a more limited scope than the commission which an officer from Sandhurst or Woolwich holds. The assumption throughout has been that the Military College in India would be a replica of Sandhurst and Woolwich and it will be a great disappointment to the Indian public if the graduates of the Dehra Dun Academy are accorded a status inferior in any way to that of the graduates of the British Military Colleges.

We suggest that a statutory provision be inserted in the Indian Army Act laying down the general principle that the status and opportunities for promotion, the powers of command, rank and precedence of Indian commissioned officers in the Indian Army will be the same as those of "British" officers in the Indian Army in all units and formations."

ART IN ORISSA

The Journal of the Royal Society of Arts of August 17, 1934 contains a detailed account of Rai Bahadur Ramaprasad Chanda's lecture on "Art in Orissa" delivered in a meeting of the Royal Society of Arts. In introducing the lecturer Sir Edward Gait, the Chairman of the meeting, said that

"the Rai Bahadur Ramaprasad Chanda was for many years a member of the Archaeological Survey of India and had taken part in the excavation of Taxila and other ancient sites. About 12 years ago he was deputed to explore Khiching and other little-known sites in Mayurbhanj, and this afternoon he was going to speak about the art of the mediæval temples of Orissa on the basis of his experience there and in other parts of the Province."

Vajrapani from Nalatigiri
Indian Museum, Calcutta

The lecture was illuminating, and highly appreciated by the distinguished audience present. In it Mr. Chanda gave a detailed comparative critique of the sculptural groups in Orissa of which the following summary is given :

THE INDO-ARYAN SCHOOL OF BRAHMANIC ART

In mediæval India, that is to say, in India in the period beginning from the fifth century to the thirteenth century A.D., there flourished two great schools of sculpture. From the beginning of the Christian era, or from a time a little earlier, the sculptors of Mathura and Gandhara began to carve images of the Buddha and the Jinas.···The images of the Buddha and the Jinas produced in the first two or three centuries of the Christian era at Mathura in the posture of *yoga* are blank in expression.···From about the beginning of the second century A.D. the Buddhists, and probably also the Jains, of Central and Eastern India, began to import images of Gautama Buddha and the Jinas from Mathura, and from the fourth century local artists of these areas began to carve such images themselves. By the fifth century A.D. the Buddhist art reached its culmination, not only at Mathura, but also in other parts of Northern India. Indian sculptors began to carve Brahmanic images about the same time. The most typical among the surviving Brahmanic sculptures of the Gupta period are the three sculptured panels of a temple at Deogarh (about 600 A.D.) in the Jhansi district in the United Provinces.···These three panels are the works of a master who had not only clear conception of forms in the round but also of co-ordination of forms....

JAJPUR MOTHERS

In the post-Gupta period the Indo-Aryan artists appear to have undertaken the task of restoring balance between the spiritual and the formal elements. Among the provincial schools of sculpture that gradually emerged in different parts of the Northern India in the eighth century A.D. perhaps the most vigorous was the school of Orissa. As Orissa is cut up in smaller divisions, more or less isolated by intervening hills and forests, there arose in course of time minor local schools of art with distinct individual traits. Four such schools, one at Jajpur, a second in the Cuttack hill tracts, the third in Southern Orissa including Bhuvanesvar, Puri and Konarak, and a fourth in Mayurbhanj, may be clearly distinguished. . . .

As becomes a holy place dedicated to Durga, the most remarkable among these sculptures are the images of the mother goddesses. The mother goddesses are seven in number. Two of these are animal-headed—one having the head of a pig and the other that of a lioness. The other five mothers have regular female form; one of these is four-headed, and each of the rest has one head only. At present relics of two sets

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

seven mothers survive at Jajpur. Of the first consisting of colossal figures, only two, Chāmuṇḍi and Indrāṇi, survive. There was another of life-size figures of the mothers, five of which are now installed in a modern shrine on Baitarani. All these images are carved of chlorite schist, a material that lends itself to delicate treatment of the surface....

The Mahayana Remains of the Cuttack Hills

In the eighth century A. D. a line of Buddhist kings belonging to the Bhauma dynasty, which probably originated in Kamrupa Assam), ruled over Utkala (Northern Orissa). Extensive Mahāyāna Buddhist remains dating from the same century are found on three of the hills in the Cuttack District—the Nalatigiri, the Udayagiri and the Ratanagiri. The absence of carved building stones on the ruins indicates that the temples were simple in design with otherwise bare walls decorated by superb images of the Mahāyāna gods and goddesses fixed in niches. An unfinished temple on the Nalatigiri rebuilt with old materials later on enables us to form an idea of the original position of the sculptures. The most notable remains on the three hills are the over life-size images of the Mahāyāna Buddhist gods and goddesses. ...

Bhuvanesvar and Konarak

At Bhuvanesvar there are still in existence a large group of magnificent temples of Siva, including a few dedicated to Vishnu, that date from the ninth to the twelfth century A. D. These temples are richly decorated with pilasters, geometrical designs and scroll works animated by figures of animals and human and divine forms. These sculptures are subordinated to the scheme of decoration, and, in most cases, carved on the building stones after the erection of the structure of the building. The Lingaraja, dating from about 1000 A.D., is the largest of these temples, and bas-reliefs in its panels are of considerable size. These reliefs show vitality and comprehension of plastic form. ...

The Southern school of Orissan art survived about the middle of the thirteenth century when King Narasimha I caused the great temple to the sun-god to be erected at Konarak. As existing remains, including the *mandapa* (hall), show, the temple was much larger than the Lingaraj, and the decorative sculptures on a larger scale. Purely decorative figures, including male and female figures and animals, are of decomposed khondalite and show dramatic vigour...

The Great Temple of Khiching

Like the temples of Orissa proper, this great temple of Khiching was Indo-Aryan (Nagara) in style; the sculptures that embellished it were Indo-Aryan in spirit; and the carvings on its walls were Orissan in pattern. But the donor whom I should like to identify with Satrubhanja) who dedicated the temple, and the sculptor who designed the scheme of decoration and carved the images, followed independent lines in all other respects. Unlike the temples of Siva at Bhuvanesvara, probably unlike all other temples of Siva at Khiching, this great temple enshrined an over life-size image of Siva, and not the

Siva at Khiching

phallic emblem of that deity. Some fragments of this cult image have been recovered from the debris and pieced together and installed in the local museum established by the present Mahārājā of Mayurbhanj. The main figure of this composition, the cult image of Siva, is not very satisfactory as a work of art. But the pair of attendant female figures show superior workmanship. Though bending a plant with one hand and plucking a flower with another, they are both absorbed in meditation. Their graceful bodies are suggestive of feeling for the round. The bull on the base, though in relief, is

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

conceived in the round and his body is palpitating with life. Indian convention required that in carving images consisting of the god or goddess with attendant figures the subordinate position of the latter in the composition should be indicated by their smaller size. In such compositions usually little freedom of movement is allowed to the subordinate figures. But in this image of Siva the two attendant females and the bull show considerable freedom of movement.

Images of different forms of Siva in standing posture were installed in the main niches of the great temple of Khiching instead of the images of Durgā, Kārttikeya and Ganesha, invariably found in the niches of the temples of Siva at Bhuvanesvar. ...

The images of the dancing Siva and of Durgā were installed in the smaller niches of the temple. The dancing Siva of Khiching, even in its present mutilated condition, appears to be one of the best specimens of the type that has come down to us in the Indo-Aryan world including the colossal dancing Siva in a niche of the great cave temple of Elephanta. . . .

So far, I have dealt with the formal meaning of some of the mediæval Brahmanic and Mahāyana Buddhist sculptures from Orissa. But it is their striking psychological meaning that gives Indo-Aryan sculptures a very prominent place among the works of man. I have repeatedly pointed out the lack of harmony between the facial expression and the gesture and movement of the limbs of these sculptures. But this facial expression has a deep psychological meaning. It rouses our spirit of dispassionate contemplation, *dhyāna*, and nothing can promote peace and equanimity better than *dhyāna* or *jhāna*.

In the discussion that followed Mr. R. L. Hobson (British Museum) said :

"It must be a very rare occurrance to have a lecture on Indian sculpture by such a pioneer of excavation, and the Society were to be congratulated on obtaining the Rai Bahadur while in this country. Also he would like to add a personal word of thanks to him for the work which he had done at the British Museum. He had been spending his time in the Indian Gallery working through the sculptures very thoroughly and had left behind his notes, which would be very useful. He was sure the audience would be interested to know that the Rai Bahadur contemplated publishing an illustrated monograph on the Indian sculptures in the British Museum quite soon."

Regarding the subject-matter of the lecture Mr. Hargreaves (late Director-General of Archæology in India) remarked :

"Hitherto archæologists had devoted their attention principally to the identification of images and their classification into schools, but that the Rai Bahadur had in this lecture drawn attention to their artistic qualities."

THE HEAD OF SHIVA

This is a novel fountain design done by Mr. Sudhir R. Khastgir, the young sculptor-artist of Bengal. This fountain design is erected in the front garden of Scindia (public) School, Gowalior.

NOTES

The Congress Nationalist Party

In previous issues, before the announcement of the Nationalist Conference, we have commented upon the Congress Working Committee's resolution on the White Paper and the Communal Decision. We have shown that the Committee, by neither accepting nor rejecting the Communal Decision while at the same time condemning it, has adopted an illogical, inconsistent, un-national, if not anti-national, and undemocratic attitude. It has been a departure from the principles for which the Congress has all along stood. Therefore, a party was required which would stand for those principles. Such a party has come into existence under the name of the Congress Nationalist Party.

The need of such a party was felt by many distinguished men. Sir P. C. Ray has never been an active politician, though he has been known to be an ardent patriot and a thorough-going nationalist. As chairman of the reception committee of the Nationalist Conference he said that "when the very foundations of nationalism were being threatened by surrender to diplomatic opportunism, Bengal would not shirk her opportunity." He proceeded to observe :

> Friends, there will be men here and there who may go about misleading our people and telling them that the present move is a revolt against the Congress organization. Let me assure you, and here I have the backing of a solid majority of Bengal Congressmen, that it is nothing of the kind, and it is rather a move for the rehabilitation of Congress principles and the restoration of Congress prestige. The Working Committee of the Congress raises its battle-cry against the reactionary constitution outlined in the White Paper but adopts an attitude of neutrality in a matter like the so-called Communal Award—a decision of the British Government which is calculated to divide India into perpetually warring communal camps. The resolution of the Congress Working Committee on this point marks a striking departure from the principles laid down by the Congress in 1931 and is nothing but a surrender to a short-sighted policy of expediency. And I have very grave doubts in my mind as to whether this resolution can be justified even on the ground of expediency. If we are to be true to ourselves, we cannot give the go-by to the principle of joint electorates, which alone can unite India and raise her to real nationhood. The number of seats allotted to a community is, to my mind, a matter of secondary importance and I would urge you to avoid a clouding of issues by raising a controversy over this question.

The speaker wanted the new organization to be a party within the Congress, and hence said :

> Friends, I should be failing in my duty if I were not to remind you that this Conference has been convened by tried Congressmen and that it ought not to make any move which may split the great organization built up by the life-blood and the heroic sacrifices and sufferings of our countrymen. And I do hope and trust the Nationalist Party which is going to be formed today will be a party within the sheltering bosom of the Indian National Congress, a party which by its fiery zeal and enthusiasm, by its fearless championing of truth, by its uncompromising rejection of weak-kneed compromises, purge the Congress of all wavering and half-hearted tactics and raise once more the National Institution to its position of undisputed authority in the country.

According to the desire expressed by Sir P. C. Ray and by all those Congressmen who wanted to become members of the new party, it has been made an organization within the Congress and named the Congress Nationalist Party. We would have preferred the name "Nationalist Party." But we are not sticklers for names. The object and principles of a party are what matter most.

In his reasoned speech Pandit Madan Mohan Malaviya also, like Acharya Ray, said :

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

It has now become necessary to organise a party in order that the Congress may be placed on its pristine glory and its former strength and serve the country on all the nationalistic lines it had indicated.

Messrs. Malaviya and Aney had tried to avoid a split. But their attempt was unsuccessful. The Pandit said :—

> The resolution of the Congress Working Committee on the question of the so-called Communal Award was the cause of this dissension. When that resolution was framed Mr. Aney and he objected to certain portions of it. They had failed to convince their colleagues in the Working Committee of the force of their objections. About a month and a half passed in considering the matter as to whether it would be possible to come to an understanding. But they had failed. He and Mr. Aney wanted that the Congressmen should be allowed to vote on the Communal Award according to the mandate of their constituency. They suggested that freedom might be given to candidates who were elected on Congress tickets to vote on the Communal Award in this manner. But that was not done. Next they suggested that every one elected on Congress ticket should be given freedom to vote according to his own conviction. These were the proposals they put forward before the Working Committee for their consideration. Were these proposals unreasonable? But these were not accepted. Of course the members of the Working Committee were good enough to allow him and Mr. Aney the freedom to vote according to their own conviction. The members of the Working Committee said that others might also be given the same freedom, if the Committee were satisfied that those people had genuine grievance against the Communal Award. But they did not consider this proposal of the Committee to be fair, because they felt that to put a ban on the Congressmen not to speak against the Communal Award, when they felt very strongly against it was wholly unfair.

What was wanted was, *not* that a few *select* persons should be *conceded* the right to vote according to their convictions against the Communal Decision which the Committee itself has condemned, but that all Congressmen should have freedom to work against it both within and outside the legislature. That freedom the Committee did not and would not give. Hence the formation of the new party.

The Congress and The Congress Nationalist Party

It has been pointed out in the manifesto of the Congress Nationalist Party that the object of the party is the same as that of the Indian National Congress, namely, the attainment of complete independence by the people of India by all legitimate and peaceful means. In the pursuit of this object, it will strive to the utmost to strengthen among the people of India—

(1) the habit of looking at and deciding public questions from the point of view of true nationalism which would serve the best and the largest interests of the country as a whole ;

(2) an active desire for communal unity, based on reason and justice, with a view to arrive at a communal settlement between the various communities on the basis of joint electorates which the best and the most far-sighted leaders of Hindus, Musalmans, Sikhs, Christians, Parsees, etc., have advocated and pressed for ;

(3) a determination to fight the most retrograde and obnoxious proposals for constitutional reform contained in the White Paper including the Communal Award, and

(4) to prepare the people for a country-wide movement for the establishment of Swaraj at the earliest possible date ; also

(5) to help to convene at an early date a National Convention which will draw up a constitution for the country based on an agreed solution of the communal problem.

Inside the legislature also the Party will work for the fulfilment of this programme, and, besides opposing the White Paper and the Communal Decision, will take every step possible to expedite the establishment of Swaraj or full responsible government. The Party will promote every measure calculated to advance the interests of the people in all the departments of national life and activity and will oppose every measure designed to injure these interests in any manner whatsoever.

The question before the voters, therefore, will be quite a simple one. As between the candidates set up by the Congress Parliamentary Board and those set up by the Nationalist Party, the only difference will be that while both will generally press and fight for the same political programme the former will be compelled by the decision of the Working Committee to remain neutral regarding the Communal Decision while the latter, i. e., members of the Congress Nationalist Party, will oppose it tooth and nail. The success of a Nationalist Party candidate will mean that the electors are opposed to the provisions of the Communal Award and that they support the principles and policy pursued by the Congress until that policy was unfortunately departed from by the present Working Committee in June last at Bombay.

It has been contended, therefore, that the difference between the Indian National Congress as represented by its official executive body, the Working Committee, and the new party, lies only in their respective attitudes towards the Communal Decision.

It is perhaps not yet possible to say definitely whether between the two there is any difference as regards their attitudes towards untouchability and legislation in relation to what are called religious and socio-religious matters. In the course of his concluding speech at the Conference on the 19th August

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Pandit Madan Mohan Malaviya is reported have stated :

Personally he was of opinion, that there should be no legislative interference in religious matters though he had every sympathy with his friends of the depressed classes in the matter of having free entrance into the temples for 'darshan.' But there were others in the Conference who thought otherwise and wanted to change that portion of the manifesto. They had discussed the matter but had not been able to come to any final conclusion.

Probably Mahatma Gandhi and his strict lowers also do not want legislative interference in *all* "religious" matters. And body has strictly defined the full import of e word "religious" in this connection. We e not aware whether Mahatmaji (who *is* the ficial' Congress in a sense) and his followers ean by the right of temple-entry anything re than 'free entrance into temples for rshan.' In Bengal, in various places, in rvajanin (*i. e.*, practically, all-caste) Durga-ja, Sarasvati-puja, etc , persons of all castes rship the goddesses and cook the food to offered to them just as the Brahmin priests and all take part in serving the dinner and e together. We do not know whether hatmaji is for giving the Harijans the same hts of touching and worshipping the idols the Brahmins possess. As regards inter-ing he has said that it does not form part the anti-untouchability movement. Inter-te marriage also does not form part of the vement. Personally, of course, he "inter-es" and has also taken part in inter-caste rriages. Malaviyaji is not in favour of er-dining or of inter-marriage. But the ngress Nationalist Party is not bound by e Pandit's personal opinions. As regards e use of public schools, roads, etc., he is r in favour of Harijans having the same hts as "caste-Hindus." He would not also ose legislation against the *devadasi* system l other such immoral and pernicious stoms. But as regards the Congress Nation-t Party one must not think that the inions of Malaviyaji are those of the party a whole in all matters, though in the *official* ngress organization the opinions of hatmaji are considered sacred and it is garded as almost sacrilegious not to accept em. To illustrate the difference between leaders and followers of the two parties, we may say that the original intention of Malaviyaji was to form a party independent of the Congress, though certainly including Congressmen as perhaps the majority of its members. But he agreed to call the party the Congress Nationalist Party, because he found that to be the prevailing opinion among those who intended to join and have actually joined the party.

Untouchability and various other socio-religious matters have a very important bearing on our politics, but they are not *political* matters in the strict sense of that expression. And even Mahatmaji did not of his own motion include untouchability in the Congress programme from the beginning of his connection with and leadership of the Congress. When he did it, he did so at the instance of Mr. V. R. Shinde, a religious worker and social reformer of Bombay.

So it may be said that, so far as politics in the strict sense are concerned, the object and position of the two bodies are the same.

Rabindranath Tagore on the Communal Problem

On the occasion of the Congress Nationalist Conference the Poet, Rabindranath Tagore, sent Pandit Madan Mohan Malaviya a telegram and a letter. Both were read at the meeting and published in Calcutta. But in the dailies published in provinces other than Bengal that we have seen, only the letter has been published, not the telegram. We do not know how this omission has occurred. The telegram is printed below.

> You all know that I have always disapproved of the Communal Award. I hope our leaders will join their forces to save from its paralysing grip the political integrity of the nation.

The letter runs :

> My dear Panditji,
>
> I address this to Mahomedans as well as Hindus with the most sincere desire for the good of all sections of the community. I urge that Hindus and Mahommedans should sit together dispassionately to consider the Communal Award and its implications to arrive at an agreed solution of the communal problem. It is needless to point out that self-government cannot be based on communal divisions, and separate electorate. No responsible system of government can be possible without mutual understanding of our communities

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

and united representations at legislatures. We must concentrate all our forces to evolve a better understanding and co-operation between different sections of our people and thus lay a solid foundation for social and political reconstruction of our Motherland. I deprecate all expressions of angry feelings and most strongly appeal to Hindus and Musalmans to avoid saying and doing anything that may increase communal tension and further postpone the understanding between our communities without which there can be no peaceful progress in our country.

Congress Nationalist Party and Non-Congressmen

Mr. Akhil Chandra Dutt moved the following resolution at the Conference :

> That a party to be called the Congress Nationalist Party be constituted with the object of carrying on agitation against the Communal Award and the White Paper both in the legislature and outside and of setting up candidates for election to the Legislative Assembly for the promotion of that object.
>
> That every Congressman who subscribes to that object of the party as defined above shall be eligible as a member of the Party.
>
> Candidates for election to the legislature shall be selected from among Congressmen, who are members of the party. In special cases the Party may support a nationalist as a candidate for election to the legislature who subscribes to the object of the Party and agrees to abide by its rules in the legislature.

The last sentence in the resolution has been adversely commented upon by critics of the Congress Nationalist Party. They obviously appear to think that a party which prefixes the word "Congress" to its name ought not to back candidates who have not hitherto been Congressmen. Not being habituated to think along party lines, we do not attach extreme importance to the party-names by which men may be known ; we think it is better to judge them by their principles and opinions. If a person subscribes to the object of the party, which is the same in the main as that of the Congress, and agrees to abide by its rules in the legislature, he becomes really, if not in name, as much a Congressman as members of the Congress Nationalist Party are. Besides, if the Congress can enlist new members, why cannot the new party do so in this way ? Moreover, it should be remembered that Messrs. Bidhan Chandra Roy, Nalini Ranjan Sarker and Akhil Chandra Dutt were backed up in their candidature for the Bengal Council by the Swarajya Party leader Mr. C. R. Das before they had become Congressmen—they became Congressmen afterwards.

Right to Use "Congress" Name

Sardar Vallabhbhai Patel has objected that the new party is not entitled to use the name *Congress* Nationalist Party. But the name "Congress" is not like names that are registered as trade-marks, patented inventions, etc. If some Congressmen who are now in possession of the machinery of the Congress can use it, other Congressmen certainly have the right to use the word Congress in combination with other words in order to clearly show that they are not the official body known as the Congress. No one can or will mistake the one for the other. The party popularly known as the Swarajya Party was named the Congress Khilafat Swarajya Party without any objection being raised. There is a Congress Socialist Party. No objection was raised to this name either. Sardar Patel suggests that the new party may call itself the Nationalist Party of Congressmen. But we do not find any substantial difference between the two names.

If the Roman Catholics, who were perhaps the earliest organized body of Christians, said that the Protestants had no right to call themselves Protestant Christians or Christian Protestants, if Trinitarian Christians objected to Unitarian Christians calling themselves by that name, if Sanatanists objected to Hindu Mahasabhaites calling themselves Hindus, if Sunnis objected to Shiahs calling themselves Muslims—all these objections would be somewhat similar to Sardar Patel's objection.

"Agreed Solution" and "Government Interference"

It has been said that whereas the Congress wants to replace the Communal Decision by an agreed solution, Pandit Madan Mohan Malaviya and his party want to get rid of the Communal Decision by appealing to the British Government or through its instrumentality. This is not a correct description of the position. By its attitude of non-acceptance and non-rejection of the Communal Decision of the British Government, the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

gress gives it some quarter. The new by its programme of fighting the ion in and outside the legislature, does give it any quarter at all.

Both by deed and word, before and after holding of the Conference, Pandit aviya has shown that he is at least as for an agreed solution of the communal lem as anybody else. We do not know anybody has worked harder than or as as he, more earnestly than or as earnestly e, in connection with the Unity Con- es in recent years. The failure of the erences was due to Sir Samuel Hoare's ing higher bids for Muslims' allegiance. Nationalist Party's programme includes arriving at a communal settlement as one e items.

As regards Government's possible final in the Communal settlement, neither the gress nor the Congress Nationalist Party likely to be able to effect the settlement out the agency or instrumentality of the rnment. Neither the Congress nor the gress Nationalist Party have at present revolutionary aims. Neither can or do "When we arrive at an agreed solution, will give effect to it ourselves, because the Government will be *non est*, or rseded, or superseded." When either or have arrived at an agreed solution, will have to say to the British Govern- in effect: "You said that the Communal sion could be replaced only by an agreed ion. Here is the agreed solution. pt it and give effect to it." If then that rnment does not honour its pledge, the e of India must think of some other s of giving effect to its will.

So far as we are concerned, we could not if we had no hopes of India's ultimate dom. But we must say that we do believe that there can be any agreed tlement of the communal problem so long there is selfish British domination, so long there exists its effective power to bestow vours" (let us call them such), and so long there are major parties or there is a major to accept these "favours" and refrain taking part in a united national struggle freedom.

Constituent Assembly and National Convention

Congressmen are saying that their proposed constituent assembly is a better means of registering the people's will and obtaining a desirable constitution framed by the people than the Congress Nationalist Party's proposed national convention. As the object of both the gatherings is the same and as we care more for realities than for mere names, we cannot give preference to either as a nostrum for curing the National Malady. Both the parties seem to take it for granted that the British Government will be very obliging, will give them all facilities for calling a thoroughly representative popular gathering, and then immolate itself at the altar of the Indian National Will. But, perhaps because we are arm-chair politicians, we are unable to make any such assumption.

A Hope and A Resolution

We should rejoice if all Congressmen were united on one common platform and worked together in harmony for the liberation of India. The Congress brought to the nation new hope, new faith, new courage to dare and suffer and sacrifice. May it do so again.

If the All-India Congress Committee met early and revised and reversed the decision of the Working Committee on the so-called Communal Award, the two parties could then coalesce at once. The Congress Nationalist Conference has adopted a resolution requesting the Congress Working Committee to convene a meeting of the All-India Congress Committee with a view to revising its decision on the so-called Communal Award. Will it do so? If it does not, or if after it has done so, the All-India Congress Committee refuses to interfere, there will be left the last hope of the Indian National Congress in full session assembled in Bombay reversing the decision of the Working Committee. As Malaviyaji has said, "If the Congress Working Committee's resolution on the Communal Award was reconsidered at the coming session of the Indian National Congress at Bombay, it would be a happy day for India."

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Hindu Mahasabha and the New Party

The Congress Nationalist Party, as the very name indicates, is not a party which takes members only from any particular religious community. It has nothing to do with the Hindu Mahasabha. Bhai Parmanand, the president of the Hindu Mahasabha, attended the conference, as some leading Liberals also did, but has not become a member of the party. Maulvi Abdus Samad, M. L. C., the genuine and staunch nationalist of Murshidabad, who seconded the Conference resolution on the Communal Decision, has become a member of the party and has agreed to serve on its working committee. Its selection board will have Christian and Sikh members also.

Congress Working Committee's Hope

The Congress Working Committee's attitude of neutrality towards the Communal Decision was evidently due to its hope that that will make Muslims friendly to the Congress and lead many of them to join it and also lead Muslim voters to cast their votes in favour of Muslim candidates who are Congressmen. As regards the hope concerning voting, the time has not yet come to judge whether it has been fulfilled. But judging by the pronouncements of Muslim leaders and rank and file, it does not appear that they at all like the Congress Working Committee's resolution. It is quite clear that, barring a very few exceptions (big "Nationalists" like Dr. Ansari not being among them), all articulate Muslims like the Communal Decision. So they laugh at the Congress condemnation of it *cum* neutrality about it *cum* the desire to replace and get rid of it by an agreed solution to be arrived at by means of a Constituent Assembly. If the Congress Working Committee had not pronounced any opinion against the communal decision, had not spoken of neither accepting nor rejecting it, but had accepted it, and had not expressed a desire to replace it by an agreed solution, then the Moslem public might have praised the Congress. But even then, we are afraid, the Congress would not have been able to enlist an appreciable number of Muslim fighters for the country's freedom under the Congress banner. If the Congress Working Committee rescinds that part of its resolution which relates to the Communal Decision and inserts in its place a full-throated approval of the Decision, and can thereby get good Muslim fighters for freedom under the Congress flag, we shall unreservedly admit our mistake. Let the Congress make the experiment.

We do believe that there are genuine Muslim nationalists, though their number is small. Their adherence to the cause of freedom is worth more than the adherence to the Congress of those who at one time outdid the Hindus in condemnation of the Communal Decision but who later became and prevailed upon the Congress to become non-acceptance- and non-rejection-walas.

Adherence to Principles, or Partisanship

It has been said that if the Congress had rejected the Communal Decision, it would have been partisanship; for Muslims in general seem to like it. Now, in the opinion of the Congress Working Committee the Communal Decision is a bad thing—it goes against Congress principles. So it comes to this that it is partisanship to reject a bad thing, if some people like that bad thing!

But let it be granted. Is it only the rejection that would have amounted to partisanship? The condemnation of the bad thing—we mean the communal decision—is not partisanship!

What Led to Congress Decision on Communal "Award"

The Mahratta (August 19, 1934) writes:—

What made the Working Committee of the Congress and the Parliamentary Board to adopt the illogical, indecisive and anti-national attitude towards the Communal Award?

From private advices received from London, we are in a position to state that H. H. the Aga Khan has a great deal to do with it.

It was known in England and on the Continent that the Joint Parliamentary Committee, at any rate, some members of it, appreciated the injustice done to Hindus and Sikhs by an undue pampering of the Muslims and Sir Samuel Hoare informed the Aga Khan that in order to save the Award from the Muslims as it is, he must see that even Congress did not adopt an adverse attitude towards it.

The Aga Khan communicated to Dr. Ansari these developments and, it would appear, succeeded in persuading him to give up his former position of complete opposition to the Communal Award and

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

adopt the nebulous formula of neither accepting nor rejecting the Award. This explains Dr. Ansari's disquieting the present attitude of the Working Committee and the Parliamentary Board.

We have seen that despite the lukewarm attitude of Congress, the non-Nationalist Muslims have not been won over and they are going to contest Assembly Elections in opposition to Congress.

If the story is true, what a light it throws on Muslim Nationalism and the Congress leaders who are wooing it!

The London Correspondent of the Daily *Sun* wired to that paper on August 16, that frequent conferences between the Aga Khan and Mr. Jinnah, who is in Europe, were taking place.

The subject-matter of these conferences was of course the fear that the Joint Parliamentary Committee might say something by way of modifying the Communal Award so as to disfavour the Muslims unless the Muslims stood by the White Paper intact.

Sir Samuel Hoare's threat to this effect is said to be accompanied with the offer of two Governorships one to Mr. Jinnah and another to a Hindu.

It may be mentioned here that there is still no candidate for the Muslim seat from Bombay. Mr. Jinnah is still undecided and until Mr. Jinnah decides, the Congress Parliamentary Board also will remain undecided, as he must be accommodated to please Nationalist Muslims!

The italics are *The Mahratta's* throughout. We do not, of course, know what its source of information is.

Muslim Parties, and White Paper and Communal Decision

The All-India Muslim League and All-India Muslim Conference are high-sounding names. But there have been occasions when no big-sounding body or that could not bring together even 75 Muslims out of as many millions of them in India. It is not known how many of them have been speaking in the name of Muslim All-India on recent occasions. But both the above bodies have now late combined to support the White Paper and the so-called communal award. That perhaps represents the sincere opinion of the Muslim public. But no. Here comes the All-India Muslim Unity Board, which at its well-known meeting last month (August 21, 22) passed certain resolutions. It is not known whom this Unity Board has united, and whether it is more representative in character than the All-India Muslim League or All-India Muslim Conference. The following message, published in *The Mussalman* of August 24, gives the gist of its resolutions:—

Lucknow, Aug. 21.

After three days' protracted deliberations the Muslim Unity Board passed resolutions rejecting the White Paper *in toto*. As regards the Communal Award the Board reiterated that it can be substituted only by an agreed settlement amongst different communities. It also declared the names of Assembly candidates from various provinces and drafted the election manifesto.

"Rejecting the White Paper *in toto*" means rejection of the so-called communal award also, for part of the White Paper is based upon and includes that "award." But the Unity Board has a very soft corner in its heart for that "award," and pleads that "it can be substituted only by an agreed settlement amongst different communities." That is the Unity Board's *fatwa* for its *substitution*, but for its temporary-permanent *acceptance* evidently no "agreed settlement amongst different communities" is necessary. That the Muslims have agreed to accept it temporarily-permanently is enough, it being of no importance at all that the Hindus and the Sikhs, for example, have condemned it in unequivocal language.

There is another Muslim organization, called the Jamiat-ul-Ulema, Delhi. We do not know whom it represents.

> Maulana Ahmad Saeed, Secretary, Jamiat-ul-Ulema, Delhi, says, "The Jamiat at first decided not to contest the elections. But receiving invitation from the Board to join its forces for fighting the ensuing election, its Council met at Muradabad where it decided to co-operate with the Board, subject to the Board's incorporating certain conditions in the election manifesto. The Board has failed to satisfy the condition, and so the Jamiat will not co-operate with the Board in the election issue only."—*The Mussalman.*

The support given by the All-India Muslim League and the All-India Muslim Conference to the White Paper and the Communal Decision has been referred to above. The relevant resolution passed at Simla by the working committee of the latter and agreed to in substance by the council of the former is given below.

> As in fact certain public bodies and persons are seeking to reject the communal award directly or indirectly, this meeting of the Working Committee of the All-India Muslim Conference reiterates its conviction that, although such of the Muslim demands as are embodied in the communal award and the White Paper are inadequate to afford that measure of protection to the Muslim community which the existing condition of the country warrants and which had been urged by the Conference from time to time, any modification in the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

provisions thereof affecting these Muslim safe-guards, without the consent of the Mussalmans, will render any constitution wholly unacceptable to the Muslim community.

The joint election manifesto of the Muslim Conference and the Muslim League, the major portion of which is printed below, makes their opinions clearer still.

> On the one hand, the Hindu Mahasabha is bent upon destroying the Communal Award and is leaving no stone unturned to attain that object. On the other hand, the Congress, in order to enlist the sympathy of the Muslim community, professes neither to accept nor reject the Communal Award. Yet it is trying to destroy it by having the White Paper rejected *in toto*, as it claims that with the rejection of the White Paper the Communal Award must automatically lapse.
>
> Therefore, the Muslim electorates should vote only for such candidates as subscribe to the principles and policy of the All-India Muslim Conference or the All-India Muslim League and have won the community's confidence by consistently supporting in the past the principles and policy mentioned above, including in particular (a) the Communal Award and separate electorates (b) the safe-guards demanded by the Muslims in the new constitution; and (c) adequate representation of Muslims in the services by special reservations for them.
>
> Each candidate should sign the pledge given below. Any candidate who signs the pledge should be supported in preference to any candidate who has not signed it, whether set up by any other organization or not. For maintaining our solidarity it is in the highest degree essential that the Muslim public should strongly oppose any candidate who does not comply with the conditions mentioned above.
>
> We appeal to the Muslim voters throughout India to send to the legislatures only such representatives as comply with the above conditions.
>
> The pledge is as follows :—
>
> "I do hereby pledge myself to (a) accept the creed, aims and objects of the All-India Muslim Conference and the All-India Muslim League; (b) to stand by the Communal Award and separate electorates, as well as by the safe-guards demanded by the Muslim community and the adequate representation of Muslims in the services; (c) to vote with the majority of the elected Muslim members in the legislatures in all matters affecting the interests of the Muslim community, (d) to work for the modification and improvement of the proposed constitution with a view to securing responsible government suitable for India."

Clause (d) of the pledge shows that the Conference and the League have perceived that the White Paper constitution is a sort of invitation to the people of India to a Barmecide feast in which there is everything else but the food—plenty of checks, counter-checks, safe-guards and officers and parliamentary paraphernalia, but no transference of real power to the people. And as unfortunately the Mussalman Indians *are* Indians, they also get no power, though they get plenty of seats in the legislatures. So the League and the Conference want responsible government, *i.e.*, a government in which the bureaucracy from top to bottom must be responsible to the people. But they are careful to add that this responsible government must be "suitable for India," that is, it must give the Mussalmans far more power and far more jobs than they are entitled to on the strength of their numbers or their education, ability, public spirit, spirit of independence, etc. Perhaps the Muslim Unity Board has voted for the rejection of the White Paper on the ground that it does not give India "responsible government suitable for India," the stress being laid specially on the last three words.

Following the example of the All-India Muslim Unity Board, the Bengal Muslim Nationalist Party has passed the following resolution :—

> The meeting further appreciates the opinion of the Muslim Unity Board that the only alternative to the Communal Award is an agreed settlement between communities and this meeting, therefore deprecates all attempts that are being made by Pandit Madan Mohan Malaviya and his party to get the Award modified by the British Government in the absence of an agreed settlement.

We have already commented upon the professed desire of the Muslims for an agreed settlement. We have also shown that Pandit Malaviya yields to nobody in his desire and efforts to arrive at an agreed solution of the communal problem. We do not know why the Bengal Muslim Nationalist Party has affected the absurd pose of being greater nationalists than Pandit Madan Mohan Malaviya, as also the pose of repugnance to get anything done by or with the help of the Government. When has the Pandit's party clamoured for and received from the Government weightage in Councils and jobs? The communal decision which Muslims hug is a favour bestowed *by the Government*. If the Bengal Muslim Nationalist Party considers the Government untouchable, why does it accept that decision temporarily or permanently?

Some Congressmen also have accused Malaviyaji of seeking Governments' help to get the communal decision cancelled

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

improved. All such critics should remember that, unless they can get up a successful revolution, they must all ultimately obtain results through Government machinery.

We do not in this connection wish to quote the previous opinions of the most famous Nationalist Muslim leaders condemning the communal decision, which will be found in our July number, pp. 123-124. They have all become practical supporters of it now. But it is necessary to remind the Bengal Nationalist Muslim Party of their former attitude.

The principal resolution passed at the All-Bengal Muslim Nationalist Conference at Faridpur (June 27-28, 1931) insisted on "joint electorate with adult suffrage." The principal resolution passed at a meeting of the executive committee of the Bengal Nationalist Muslim Party, held in August 1932, recorded,

"its emphatic protest against the communal award recently given by the Prime Minister in consultation with the British Cabinet on the following among other grounds: (a) It recognizes the principle of separate electorates, which is fundamentally opposed to responsible government....."

Muslim Representation in the Services

In all civilized countries the rule is to recruit the ablest men for the public services, irrespective of creed. In India Government has encouraged the notion that it is not ability that counts most but that Government jobs must be given by preference to Europeans, Anglo-Indians, and Muslim Indians, according to certain fixed minimum percentages, *in addition to* what they can get by competition. For the Muslims a minimum of 25 per cent has been fixed. But they now want $33\frac{1}{3}$ per cent and "a temporary provision [of more than $33\frac{1}{3}$ per cent] to make good the existing extreme inadequacy of Muslim representation" in the services! As the British Government is desperately in need of supporters for its imperialistic policy, Muslim Indians have seized the opportunity. Hence why do the All-India Muslim Conference and the All-India Muslim League use the words "justice and fair play" in the resolution which unwarranted, unjust and selfish demands relating to the services are made? Perhaps we are wrong in asking this question. For even some highly educated Musalmans seem to think that their "due share" of the services means monopoly.

Mr. S. M. Hussain, M. A., D. Phil. (Oxon), writing on 'Islamic Education in Bengal' in the *Islamic Culture* for July, 1934, says:

> With the object of turning out recruits for public service and for the legal profession, the Calcutta Madrassah was established by Warren Hastings in 1781. Muslim Law and Persian naturally formed the main course of study in it. The Madrassah splendidly fulfilled the object for which it was established and its alumni *monopolized* posts of trust and responsibility under the Government. The Musalmans thus continued to retain their *due share* in the administration of the country and its public life. (Italics ours. Ed., *M. R.*)

Editor of "The Modern Review" Does Not Belong to Any Party

In the course of an article on "The Nationalist Party" our able contemporary *The Servant of India* writes:

> There is one item in the Nationalist Party's programme to which strong exception must be taken even by those who are disposed to agree with its communal award policy. It declares its disapproval of legislative interference in matters of religion. It is true that Pandit Malaviya, Mr. Aney and Mr. Kelkar all stand for abstension from using the machinery of the legislature in socio-religious affairs. But there are others in the Party like Dr. Munje, Acharya Ray and Babu Ramananda Chatterjee who, we are certain, do not support this policy, but who have apparently joined the Party on the understanding that it will be regarded as a minor item, in regard to which freedom will be allowed to those who wish to join the party. No social reformer can ever afford to dispense with the possible support that he will receive from the legislature in carrying through any reform.

Perhaps by now our Poona contemporary has learned that the item referred to does not form part of the programme of the Party as fixed after the holding of the Conference.

It is necessary to inform our contemporary and the public that Babu Ramananda Chatterjee does not belong to the Congress Notionalist Party, or *any* other party, like the Congress, the Liberal Party, the All-India Hindu Mahasabha, the Bengal Provincial Hindu Sabha, etc. There should and must be social legislation, whenever and wherever necessary, for putting down inhuman, cruel and immoral customs. If public opinion cannot put down customs making for race degeneracy, injustice to women, and the like, legislative aid should

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

be sought. But we cannot here go into further details—it is a large subject.

Mr. C. F. Andrews on African-Indian Problems

Mr. C. F. Andrews, who has earned the gratitude of India by his earnest labours for the improvement of the condition of Indians in different parts of Africa and whom we welcome back to India, emphasized the seriousness of the situation in Zanzibar in an interview to the Associated Press on his arrival at Bombay on the 25th August last. Said he :

> I have just come direct from Zanzibar where the situation has become so seriously critical that the Indian leaders implored me by a wireless message to stay over for a fortnight longer in order to take up their cause. But Mahatma Gandhi had already cabled me to come to Bombay not later than Aug. 25. Therefore, I had to hurry up in order to reach Bombay in time. The chief points at issue in Zanzibar are :—
>
> (1) The right of holding agricultural lands being taken from Indians by the Land Alienation Act. Indians who were born in Zanzibar are not allowed to hold agricultural land but Arabs who were born in Arabia and are not even British subjects have been allowed to hold it.
>
> (2) The Government are taking the clove industry, whereon Zanzibar depends, out of the hands of Indians who had always acted as bankers and middlemen and making it a state monopoly. This will drive many Indians out of the country owing to unemployment.
>
> These two new Zanzibar ordinances are likely to weaken the Indian position all round. Their vested rights as British subjects are being taken away. If after seeing Mahatma Gandhi it is possible to return to Africa I hope to do so as the situation all down the coast is entirely critical. The Zanzibar Indians very earnestly desire me to return. I have given them promise to do so if circumstances in India permit.

As regards East Africa Mr. Andrews stated :

> All down the east coast of Africa I found the Indian position shaken owing to trade depression. The Indians in Kenya have been reduced during the last six years from 40,000 to 34,000 and the numbers are still decreasing. There are many more coming home by each ship than going out.

The situation in South Africa also continues to cause anxiety.

> In South Africa again the Indian community has pressed me to return as soon as possible. The division which has gone on for some time over the question of colonization is not quite healed. The colonization issue itself is now practically dead. No Indian from South Africa will ever go out in any colony. The report which the Government has published is entirely negative. There are no colonies suitable for Indians' colonization and every effort must now be made to wreck down the provincial barriers in South Africa itself, so that Indians may move about without restriction. But though this point is now practically dead the issue there is the differences which still need to be settled and reconciled and I have been very earnestly requested to return after seeing Mahatma Gandhi.

Mr. Andrews desires to go back to Africa, and he has given his reasons. Before he does so, however, he will have to see Mahatma Gandhi, go to Simla for seeing high Government officers to enlist their active sympathy on behalf of Zanzibar Indians, and visit Bihar and Orissa. Indians in Africa are willing and able to help their fellow-countrymen in distress owing to earthquake and inundations.

> Certainly, I feel I must go back if only I can be spared, for this has been my special duty for over 20 years past and it is impossible for me to resist such an appeal. A work of this kind cannot be done hurriedly. It needs the greatest sympathy and patience but it will be necessary to visit Simla about Zanzibar and other matters and also there is a great need for visiting the earthquake area and if possible, Orissa. For, if I am able to return to South Africa, there is a golden opportunity of helping the earthquake relief fund. The Indians themselves all down the coast of Africa are prepared to make sacrifices and Johannesburg is now the most prosperous city in the world on account of high price of gold. Only two years ago gold stood at 84 shillings but today it is 136 to 138. The difference is a clear profit. I have been able to make a good beginning and collect about Rs. 2,500 but I had no time to carry it through.

Mr. Andrews has contributed a series of articles on the Zanzibar crisis to the Press.

Devastating Floods in Bihar Again

We deeply sympathize with our afflicted sisters and brethren in Bihar. There have been devastating floods again in that province. The utmost that is possible should be done for the people in distress. We know the futility of these newspaper platitudes and are grieved and ashamed that we are not in a position to take an active part in the relief of distress.

There have been earthquake shocks again in some parts of Bihar.

Atul Prasad Sen

By the death of Mr. Atul Prasad Sen of Lucknow India has lost a true son. He

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

was born and educated in Bengal, and later went to England for legal education, and was called to the bar there. After practising at the Calcutta High Court for some years, he settled in Lucknow for the practice of his profession and rose to be the leader of the Oudh Bar. He was the president of the Oudh Bar Association. He took great interest in educational matters and was offered the Vice-Chancellorship of the Lucknow

Mr. Atul Prasad Sen

University but declined the office in favour of Dr. R. P. Paranjpye. In politics he was a liberal of the stouter and more independent variety and presided over the last Liberal Conference of the Province which he had before his home. We were present when he delivered his outspoken address. A resumé of it was given in this Review. He presided over a session of the National Liberal Federation of India. He was a staunch Swadeshist.

Though he was a very successful lawyer, he was by nature a poet and a musician. People will remember him for his poems and songs long after his reputation as a lawyer has ceased to be remembered. When he sang, people were moved because he put his soul into his music. Many of his songs are very popular in and outside Bengal, wherever Bengalis live.

He was a warm-hearted friend. His charities were many.

He was a member of the Brahmo Samaj.

He was a dutiful and active citizen and a cultural leader of the Province where he lived. Withal his heart continued to yearn for his village home in Bengal and for Banga-desha. This yearning and devotion to the home of his boyhood and youth found touching expression in the address which he delivered at the last session, at Gorakhpur, of the Prabasi Banga-Sahitya Sammelan, an annual all-India cultural conference of Bengalis, of which he was one of the sponsors.

He is the author of some books of Bengali poems and songs. He was the founder and first editor of the Bengali monthly magazine *Uttara*, an organ of Bengalis domiciled in the Upper Provinces.

He was one of Bengal's foremost cultural ambassadors to the Ayodhya People's Durbar.

Mr. Brock on Bengal's Financial Condition

Mr. R. W. Brock, late Editor of *Capital*, Calcutta's oldest financial Anglo-Indian (old style) weekly, writing on "Bengal and its Jute Industry" in the July number of *The Asiatic Review*, says :

> Suffice it to say that, in a Province with a population numbering approximately fifty millions, the Provincial Government has a revenue not exceeding £10,000,000 to finance requirements so varied and comprehensive as Police, Education, General Administration, Civil Works, Justice, Medical, Jails, Excise, Public Health, Agriculture, Registration, Stationery and Printing, Forests, and last but not least, Industries. In other words—to quote only one illuminating comparison—under the Montagu-Chelmsford Constitution the Bengal Government was allotted, for all purposes, a smaller sum than the London County Council spends on education alone.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

£10,000,000 at the present rate of exchange is equal to Rs. 133,333,333⅓. For years Bengal's revenue has been very much less than that sum. That is the only inaccuracy in Mr. Brock's statement.

His comparison of Bengal's total *provincial* revenue with the educational expenditure alone of the London County Council is very illuminating. The population of the Administrative County of London is 4,385,825 against Bengal's fifty millions. The London County Council's net educational expenditure in 1933-34 was, according to *Whitaker's Almanac*, £12,169,839. Its net total expenditure on all heads was £28,114,949. Including debt charges, the total was £30,086,394. These sums need not be converted into rupees. One pound sterling is equivalent to Rs. 13⅓.

Mr. Brock continues :

> In effect, under the Meston Settlement, all the expending revenues—such as Customs duties and income-tax—were retained by the Government of India, while most of the Departments calling for larger expenditure were assigned to the Provincial Governments, and, in particular, to the Indian Ministers, such as health, education, agricultural improvements, etc. It was peculiarly unfortunate that in Bengal, as I have already noted, the ministers were left to face the Legislature with empty pockets : a position not conducive either to political popularity or constructive achievement. *Provincial taxation in Bengal was extended to the limits of tolerance and productivity* : but of the total revenues collected in the Province from all sources, about two-thirds were taken by the Central Government, *whose expenditure is mainly incurred outside the Province*, leaving the Provincial Administration only the exiguous income already mentioned. (Italics ours. Ed., *M. R.*)

Those who think that taxation in Bengal is lighter than in other provinces, relatively speaking, ought to reflect on Mr. Brock's words, "Provincial taxation in Bengal was extended to the limits of tolerance and productivity."

The significance of the fact that the Central Government takes away about two-thirds of Bengal's revenues and spends the amounts mainly outside Bengal should be clearly understood. The largest item of expenditure of the Central Government is that incurred on "Defence." As recruits for the army are not, generally speaking, taken from Bengal, nor camp-followers, therefore, for her big contribution to the Central Exchequer Bengal gets no return in the form of salaries paid to these persons. That is only one direction—there are others—in which some other regions are gainers, Bengal is not. Bengal is only made to pay.

Mr. Brock has explained himself more fully in the following paragraph :—

> Calcutta, that is to say, collects revenues which the Delhi Administration distributes—mainly in Upper India. Perhaps the process I refer to can be illustrated most vividly by instancing the yield of the jute export duty. Jute is grown virtually only in Bengal, and in the rural areas is the principal source of income, while in Calcutta jute manufacture is the principal industry. In the last decade, however, the Central Government has collected between £30,000,000 and £40,000,000 by this form of taxation, and has retained the whole amount, *allowing* the provincial Government to finance, for example, even the Agricultural Department, to whose efforts, prior to the world depression, the progressive improvement in the outturn and quality of the jute crop was largely due. Analogously, while the extension of the mill industry in Calcutta threw additional expenditure on the Bengal Government, the Central Government monopolized the revenue from income-tax, which represents the principal method of securing for the state a reasonable percentage of the substantial profits this industry, until recently, has obtained. Here, again, therefore, Bengal was unable to retain any share of the taxation collected within its own borders. Very large sums flowed out : only insignificant rivulet flowed back.

There is quiet unconscious humour in the word "allowing," which we have italicized above. It is indeed very gracious on the part of the Central Government to take all the receipts from the sources mentioned and *allow* the Bengal Government to meet all the expenditure.

Sir N. N. Sircar's Friendliness

The Daily Sun of Bombay has reproduced the following paragraphs from *The National Call* of Delhi, in which last they appeared in "From the Qutab Minar" column :

> I learn that the late Deshabandhu actually died at the Darjeeling residence of the ex-Advocate-General, called "Step Aside" and it was Sir Nripen who made all arrangements for conveying the 'corpse' of the deceased leader to Calcutta.
>
> The story of B. K. Lahiri, however, certainly merits to be told. It was the Law Member, then the Advocate-General, who was responsible for second prosecution of Mr. B. K. Lahiri. The Law Member built up his case effectively and argued so well that B. K. Lahiri was finally convicted. It was later brought to the notice of Sir Nripen that the wife and son of Lahiri would have to beg in the streets for lack of any source of maintenance. Sir Nripen immediately undertook to pay Mrs. Lahiri Rs. 100 per mensem, and employed his son on Rs. 80 in his chambers. The allowance was

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

ntinued till the release of Lahiri while the son of Lahiri, I am told, is still in the employ of the Law Member.

RAISING A FUND

Recently Sir Nripen came to know that a government Congress leader who had been ailing in Europe was badly in need of money to carry on his treatment. People seemed reluctant to raise a fund for the leader openly. Sir Nripen, I am told, courageously approached the Governor, and after securing his consent, initiated the raising of a fund. He was able thus to send more than Rs. 15,000 to the patriot in exile, his own being the most substantial contribution.

President Roosevelt's Foreign Policy

In July last in connection with the summer session of the Catholic University of America, Dr. Taraknath Das, the newly appointed lecturer on Far Eastern Affairs of the University, discussed the topic of "Present Tendencies of American Foreign Policy under President Franklin D. Roosevelt," before an audience of members of the faculty and the student-body. Prof. Dr. Herbert Wright, Head of the Department of Politics, presided on the occasion.

Regarding President Roosevelt's policy in Asia, Dr. Das said :

> In Asia, President Roosevelt, by promoting the cause of Philippine Independence, has raised the prestige of American idealism and statesmanship, based upon Justice and Freedom. While professing friendship for China, President Roosevelt does not think it to be wise for the United States to espouse Chinese cause with such enthusiasm as may involve the United States in a war in the Pacific. Regarding American-Japanese relations, he advocates the positive policy of American-Japanese friendship and co-operation, which was the policy of the late President Theodore Roosevelt. He does not approve of a policy of Anglo-American-Chinese-Russian co-operation against Japan, which is advocated by many Chinese, Russian, British and even Americans who have very imperfect knowledge of genuine American interests in Asia. In short, President Roosevelt is determined to pursue a policy of friendship and economic and commercial co-operation with all peoples of Asia which would be of great advantage to the United States and be of substantial aid towards real progress and freedom in Asia.

Pratul Chandra Som

Babu Pratul Chandra Som, who died last month in Calcutta in his 69th year, was not much known outside Brahmo-Samaj circles. He had rendered good service to the cause of religion and social reform as editor of *The Liberal Messenger*, the organ of the Sadharan Brahmo Samaj. For years his life was one long struggle against poverty, illness and bereavement. He bore all his afflictions with patience and resignation. His knowledge of philosophy—particularly of theology, and of the evolution of the Brahmo Samaj and the

Pratul Chandra Som

religious opinions of Rammohun Roy, Debendranath Tagore and Keshub Chunder Sen stood him in good stead as a writer on those subjects.

The Bombay Devadasi Act

Originally the Devadasis were women attached to Hindu temples in the Bombay and Madras Presidencies. They were supposed to have been married to the god whose idol was kept in the temples and could not therefore marry any human beings. They were carefully trained in music and dancing and were required to sing and dance in the temples before the idols for their entertainment. As time passed they fell from their ideal of purity and became no better than courtesans.

The late Maharani of Mysore abolished the immoral custom of attaching Devadasis to temples in that State but allowed them to keep their lands. A similar reform was afterwards effected by legislation in Madras by Dr. Mrs. Muthulakshmi Reddy. Last month the Bombay Council has passed Rao Bahadur Bole's Devadasi Bill.

The late Maharani of Mysore, Dr. Muthulakshmi Reddy and Rao Bahadur Bole will be

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

remembered by posterity as benefactors of Hindu society and promoters of social purity.

Calcutta Corporation's Publicity Department

Much good work is being done by the Calcutta Corporation's Publicity Department, which was established in 1932. Since its establishment it has undertaken different kinds of propaganda work to bring home to the inhabitants of Calcutta their civic responsibilities and duties. It publishes illustrated booklets, leaflets and posters. It possesses an efficient and trained staff of lecturers. Up to the end of March 1934 they delivered 533 lectures, illustrated with lantern slides. The lectures delivered are in Bengali, Hindi and Urdu, no charge being made for them. The Department possesses slides on 27 subjects, including the principal diseases. It has a cinema machine and three films on small-pox, cholera and malaria. On previous information being given to the Department, free cinema shows may be arranged in any public place. It also organizes peripatetic health exhibitions, with a large number of charts and models. In addition to organizing its own exhibitions, the Department has supplied charts and models to other exhibitions in Calcutta and arranged for their proper display and demonstrations. The total number of its illustrated posters is 30. The booklets and posters are supplied free. Besides all the above the Department publishes an illustrated monthly bulletin in Bengali named "Sree." It is supplied free to all institutions in Calcutta.

City of Birmingham Handbook, 1934

While noticing the activities of the Publicity Department of the Calcutta Municipality in the foregoing note, we were constantly reminded of the excellent Handbook for 1934 of the City of Birmingham which we have received for review and which has been noticed in this issue in the section devoted to reviews and notices of books.

Our notice of it does not give an adequate idea of this Handbook. We would ask all municipal authorities in India to get a copy of it from the City of Birmingham Information Bureau, Birmingham, England, in order to be able to set before themselves a model of what municipalities should and can do and in how many directions.

On Encouraging Sanskrit Studies

The Hon. Mr. Justice Manmatha Nath Mukherji, Acting Chief Justice of Bengal (till the 30th of August last), who by the by enjoys the unique distinction of being the only permanent or acting Chief Justice who was not knighted, presided at the annual convocation of the Bengal Sanskrit Association on the 26th August last. This body examined on the last occasion some 11,000 students of Sanskrit and conferred titles on those who were successful. There are more than 2,000 *tols* or Sanskrit seminaries. These facts make the Association somewhat like an examining university.

After tracing the history of the Association the president said :

> As a result of the grim financial outlook which faces the University graduates and the economic strain which they have to undergo in going through a full course of English education the number of 'tols' in the country has been gradually increasing. If this increase continues we would have an enormous population of Sanskrit students within a short time. It would be a matter of national economy if by a comparatively small help the large mass of students growing into manhood may be utilized by the society and the country.
>
> Unless and until the Sanskrit students can have at least the scope of earning a modest livelihood it is reasonable to suppose that Sanskrit education will not attract the better class of students.
>
> We are often told that our examination standard should be high. We appreciate the criticism and have recommended the introduction of Mahacharyya title examination for the selected few who may compete for it. But at the same time it can again be said that the general body of students who are recruited from amongst the comparatively less brilliant sons of pandits cannot be expected to show much proficiency in the different paths of Sanskrit studies. If we scare away the unlucky and proverty-stricken students who have come to the Sanskrit line mostly or mainly because they are unable to meet the expenses of English education, the result will be disastrous.
>
> The educational grant of Government is far from sufficient to meet the real educational needs of the country and it will probably remain so for a long time to come. But I desire to press once the attention of the Hon. Minister the question whether, under the circumstances, Sanskrit studies may not be encouraged and made fruitful by giving comparatively increased assistance.
>
> All the recommendations of the Sanskrit College Committee which involve financial assistance, are but just the minimum demand of the pandits, a section of the people who are extremely loyal to Government and who exert a stabilizing influence

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

different from the modern spirit of students of University who are brought up in the Western schools. I fervently urge upon Sanskrit scholars and students and upon the public in general to operate with us in convincing the Government that measures may be adopted for ameliorating the condition of the Sanskrit studies and of suffering Sanskrit studies in the cause of the nation.

Concluding the president said :

I find great satisfaction in observing that a Brahmin girl attached to the research department of the Sanskrit College has been admitted to the Vidyatirtha title for the first time. She is the first recipient of the Ghosh Travelling Fellowship [of the Calcutta University] and is proceeding to Oxford for D. Phil. degree. I am also very glad to have to tell you that a Mahomedan student has taken the highest degree in Kavya this year.

Miss Sakuntala Rao

The girl referred to is Miss Sakuntala M.A., of the Sadharan Brahmo Samaj, was carefully brought up by the late Dr. Mrs. Hem Chandra Sarkar, and has and the M.A. examination of the Calcutta sity in two subjects successively.

Principal Surendranath Dasgupta, M. A., of the Calcutta Sanskrit College, who is the Secretary of the Bengal Sanskrit Association, complained in the course of his address that their examination standards are not high enough.

"It is true," he said, "that the number of 'tol' students has been gradually increasing, but the quality of students is deplorably going down.

"The reasons for this are, (1) mostly the less intelligent sons are sent in for education in 'tols' and yet the acquirement of Sanskrit requires the keenest intellect, (2) pandits are busy in acquiring their livelihood by other means and have no time to teach their students properly, (3) the students, therefore, hardly come to the examination hall after having read the whole text and they are sent in by their teachers for the sake of the stipends granted to teachers when their students pass, (4) students are often picked up from schools and colleges and the important passages are marked for them and they are somehow dished up for the examinations.

"In such a condition it is idle to expect that they should have any wisdom or depth in the shastras which require powers of mature and keen thinking with a full command of the Sanskrit language."

It is to be hoped that steps will be taken to get a better class of students and to educate them more efficiently.

We have a suggestion to make in a different direction. The education given to students in the *tols* is entirely academic, perhaps fit for the world as it was in days gone by. We would earnestly request the Bengal Sanskrit Association to make it a little more modern. We suggest that the students be taught ordinary and mental arithmetic, geography and history of Bengal and India (Hindu-Buddhist period). Those who would go up for the highest, *i.e.*, the Mahacharya title examination, might be required to have a knowledge of the late Bhudeb Mukhopadhyaya's *Purabrittasar* (history of the world outside India in ancient times).

Sir N. N. Sircar on Untouchability in Bengal

SIMLA, Aug. 27

With reference to the report circulated by a news agency to the effect that the Law Member, in his speech on the Temple Entry Bill, said that "in the speaker's own province (Bengal) untouchability was rigorously and severely observed," the "United Press" has been authorized by Sir N. N. Sircar to state that the report was incorrect and misleading, as it was inconsistent with the views he had propounded in the Round Table Conference.

What he said was that untouchability was observed more rigorously between the untouchables themselves and as a case in point he cited a recent event at Jorhat in Assam where at a temple-opening ceremony some untouchables left the place as they

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

found other untouchables of a class lower than themselves coming to take part in the function. —(United Press.)

Freight-War Threatens Indian Shipping

In a well-reasoned statement Mr. Shariff Hussain, president of the Association of Small Steamship Companies of Bombay, describes the hardships of Indian shipping companies caused by the freight-war waged against them by some British companies. Says he :

> The war is becoming keener and keener day after day and rates from Bombay and Karachi have been reduced by 75 per cent to 90 per cent and even more than that. The rate from Rangoon to Bhavnagar was Rs. 9-8-0 and the Conference is now carrying rice to that port at Rs. 2 per ton.

Owing to this terrible rate-cutting Indian shipping requires protection. But in answer to a question asked the other day in the Legislative Assembly the Government reply was that the matter was under consideration. But it is the duty of the Government to see that the consideration stage and the life of Indian shipping companies do not terminate simultaneously. As the Government is a government *of India*, the welfare of Indian shipping should receive its first and foremost attention, just as the interests of the shipping of other countries are looked after as one of their primary duties by their national governments.

That Communal Decision !

Like the poor, the communal decision bids fair to be always with us. For, like Goldsmith's village pedagogue, there are men who, "even though vanquished, could argue still." They say, as the decision given by Mr. Ramsay MacDonald, known in India as Ramji MacDonald and Rahimji MacDonald among Muslims and Hindus respectively, was an arbitral award, neither Pandit Madan Mohan Malaviya nor anybody else has the right to call it in question.

But the fact is, it has been shown conclusively again and again that it was not an arbitral award, it was a decision given by the Prime Minister on behalf of the British Government. That Government never calls it an award, but only a decision.

In his presidential address at the Bombay and Suburban Hindu Sabha Conference, held on the 23rd June last, Dr. B. S. Moonje dealt exhaustively with the matter. That address has been printed in pamphlet form. Dr. Moonje's discussion of the subject occupies about ten pages of the pamphlet and cannot, therefore, be reproduced here. But those who want to know all about it should read those pages.

They should also read Sir N. N. Sircar's pamphlet entitled, "Is the Communal Decision an Arbitral Award ?", included in the book, *Sir N. N. Sircar's Speeches and Pamphlets.*

Steel Protection Bill Passed

The Steel Protection Bill has been passed without a division. It is a remarkable achievement, as it protects British steel, while professing to protect Indian steel. It is an outcome of the imperial preference policy of the British Government. That policy is likely to provoke international commercial animosities and tariff wars.

The Tatas have another chance now of running their gigantic concern as to be able to stand foreign competition without protection.

Khan Abdul Gaffur Khan and his Brother Released

Khan Abdul Gaffur Khan, originator and leader of the Red Coat movement in the N.-W. F. Province, and his elder brother Dr. Khan Saheb have been released from Hazaribagh jail, where they had been detained under Frontier Regulations. This is a commendable step on the part of the Government. But by ordering them not to proceed to the Panjab or to the Frontier Province Government has considerably spoiled the impression produced by their release.

Why Not Release Mr. Sarat Chandra Bose

Mr. Sarat Chandra Bose was at no time at the head of any movement like the Red Coat movement in the Frontier Province. A question was asked in the Legislative Assembly as to whether it was true that when the papers against him were shown to the late Advocate-General of Bengal, now the Law Member, he said there was no case against him, but no reply was given from the side of

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Government. That implied a reply in affirmative. The Home Member has, no doubt, repeatedly said that Mr. Sarat Chandra Bose was deeply implicated in the terrorist movement. But where is the proof? A mere assertion without proof, repeated a million times, would not make it true. If he was *deeply* implicated, it should be easy to prove his guilt in a law-court.

All persons detained without trial are entitled to be considered innocent.

It has been often said in justification of their arrest and detention without trial that the evidence against them was examined by two judges. It does not matter to what category of judges they belonged. Even if Privy Council judges examine the evidence produced by one party against another, if they do not have the opportunity of examining the evidence on both sides, and if Counsel on both sides do not help the judges by cross-examination of witnesses, if any, and by discussion of the laws and legal principles involved, the decision of even such judges cannot be considered convincing. Hence, when it is argued that the evidence against persons detained without trial has been examined by two judges, that is no proof of their guilt. On the contrary, any judge who agrees to base his opinion on *ex parte* evidence shows thereby that he is unfit for judicial work.

It has been sometimes said that persons kept under detention because of their being suspected to be terrorists cannot be brought to trial, as the lives of the witnesses against them would be in danger from the revengeful feelings of fellow-terrorists still at large. But there has been plenty of trials and convictions of terrorists and conspirators without any of the witnesses being killed or even attacked. It may be fairly presumed that in criminal cases tried publicly the prosecutors are more successful in collecting evidence and starting prosecution than in the case of detenus and their cases, in which the evidence, *if any*, can never be challenged. But even in the case of criminal cases tried openly by judges, there is no cent per cent conviction, but very much less. Hence it is not unfair to presume the innocence of at least the majority of those detained without trial. Let us quote from the Bengal Police Administration Report for 1932 (that for 1933 has not yet been received), page 15, to prove our point.

> "27. **Convictions in cognizable cases and number of persons convicted.**(*a*) *In all cases decided.*—The total number of cognizable cases instituted before magistrates and the police under classes I to V, including cases pending from 1931, was 92,584 against 94,585 last year, a decrease of 2,001 cases. Of the total number of cases instituted, 28,425 or 30.7 per cent were tried in court, against 27,493 or 29 per cent in 1931, and convictions were obtained in 45.9 per cent, against 45.2 per cent.
>
> "The number of persons brought to trial was 58,053, against 54,986 in 1931, of whom 23,637 or 40.7 per cent were convicted, against 21,572 or 39.2 per cent in the previous year."

Cases under Classes I to V are offences against the State, public tranquillity, safety and justice, serious offences against the person, serious offences against persons and property or against property only, and so on.

Indian Institute of Deutsche Akademie Scholarships

The Indian Institute of the Deutsche Akademie is glad to announce the award of 21 new scholarships for the academic year 1934-35 to the following Indian graduate students who are to carry on higher studies in various German universities :—

Dresden Engineering University.—Mr. A. K. Ghosh, M. Sc., (chemistry).

Freiburg Mining University.—Mr. B. C. Roy, B. Sc., (applied geology).

Hamburg University.—Mr. C. D. Dwarkanath, L. I. M. (medicine). Mr. S. G. Joshi, M. B. B. S., (medicine) ; and Mr. S. K. Sharma, M. A., (Sanskrit).

Heidelberg University.—Mr. K. P. Mukhopadhyay, M. A., B. L., (political science and economy).

Mohenheim Agricultural University.—Mr. B. K. Kar, M. Sc., (botany). T. V. G. Menon, B. A., B. Sc., (Agriculture). Mr. Y. V. Sreenivasa Rao, M. Sc., (plant physiology).

Jena University.—Miss P. B. Devi, B. Sc., (physical culture). Mr. D. C. Lahiri, M. B. (medicine) ; Mr. T. R. Kannappan Naicker, M. A., L. T., (physics).

Murburg University.—Mr. S. Vahiduddin, B. A. (philosophy).

Munich University.—Mr. I. R. Barua, M. B. B. S., (medicine) ; Miss A. M. Jansz, B. A. (economics and political science) ; Mr. G. Kadambi, M. Sc., (mathematics and statistics) ; Mr. A. K. Mittra, assistant at the anthropological laboratory, Indian Museum, Calcutta.

Stuttgart Engineering University.—Mr. D. R. Mehta, B. Sc., (pharmaceutical chemistry) ; Mr. R. Ramamohan Rao, B. E. (civil engineering).

Tubingen University.—Mr. A. S. Gupta, M. B., B. S., (medicine).

Allianz Scholarship (tenable at the University of Munich).—Mr. Satayaketu Vidyalankar, professor of history, Gurukul University, Hardwar.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Dr. Hira Lal

An appreciation of the late Rai Bahadur Dr. Hira Lal by Mr. K. P. Jayaswal has been printed on another page in this issue. He was a distinguished scholar, archæologist and author. When he presided over the Oriental Conference at Patna in December, 1930, extracts from his address were printed in *The Modern Review* for January, 1931. It was a comprehensive survey of the entire field of oriental learning. As chairman of the reception committee of that session of the Oriental Conference, Mr. Jayaswal pronounced the following eulogy on Dr. Hira Lal :

> Mr. Hira Lal has been one of those workers whose results must go down to future generations. As today we cannot do without quoting Cunningham and Buhler, Kielhorn and Fleet, Bhagwan Lal and Bhandarkar, Rajendralala and Haraprasad Sastri, so in future scholars of Indian History must cite Rakhaldas Banerjee and Mr. Hira Lal. These two names stand out in the generation following that of Sir Ramakrishna Bhandarkar and Dr. Haraprasad Sastri. Mr. R. D. Banerjee and Mr. Hira Lal have filled up chapters of Indian History of which we knew mere outlines when we inherited Indology after Fleet and Kielhorn. There is not a single branch of Indology which Rai Bahadur Hira Lal has not enriched.

At a condolence meeting held in Allahabad under the presidency of Mm. Dr. Ganganath Jha tributes were paid to the deceased.

> Dr. P. K. Acharya paid an eloquent tribute to the learning of the late Dr. Hira Lal, who, he said, had travelled in different European countries in connection with his researches. Dr. Babu Ram Saksena said that the late doctor was a great scholar of Prakrit, Pali and Sanskrit and he carried out researches specially in Prakrit and ancient Jain works.
>
> Dr. Jha, in the course of his brief presidential remarks, referred to the works of the late Dr. Hira Lal, which, he said, were of lasting value. He expressed the hope that young men would work on the lines laid down by the departed scholar.

Indian Footballers in Africa

In the course of an article on the Indian Footballers in South Africa which Mr. B. B. Sarkar has sent us from Mombasa but which reached us too late for publication, he writes :

"On their way back to India they landed at Mombasa and accepted a challenge from the Mombasa European football-players, who, let it be said to their credit, are free from the South African prejudiced mentality. The Indian Footballers played exceedingly well and defeated the European Team by 5 goals to nil. The match was highly enjoyed by a large crowd of about 8,000 spectators. The game being over, even the Africans of Mombasa, in profound appreciation, shook hands with them and congratulated them on their marvellous success. They were heard saying : '*Wema, wa kuteza vijana vya Bombay,*' which means, 'Well done, the youths of India, they have played exceedingly well.' Some of them were heard chattering with overjoy that the Indian Footballers have won through magic in the extraordinary process of their game."

We are glad that our footballers gave a good account of themselves in Africa.

Liberals' Condemnation of White Paper

At a meeting of the Council of the National Liberal Federation of India held in Allahabad on the 26th August last, it reiterated with special emphasis the resolution on the White Paper passed at the 14th session of the Federation held in Calcutta in 1933. Extracts from it are given below.

> The National Liberal Federation of India records its sense of profound disappointment at the 'Proposals of Indian Constitutional Reform' embodied in the White Paper of March 15, 1933. The proposals do not advance India to the status of a Dominion and nowhere is there even a mention of this as the objective. They are overweighted with safe-guards which are informed by distrust of Indians and which are not only not 'demonstrably in the interests of India during a transitional period', but are much more in the interests of the United Kingdom. These proposals make no real and substantial transference of power to responsible Indian Governments.
>
> The Federation desires to make it clear once again that no scheme of reforms can meet India's requirements or satisfy Indian national aspirations or allay political discontent which does not confer the full status and power of a dominion on India within a short period fixed by statute.
>
> While the Federation consents to the reservation for only a fixed transitional period of the subject of defence in the hands of the Governor-General, it cannot approve of the proposals in this behalf embodied in the White Paper, as they will retain complete control in the hands of the Secretary of State. It strongly disapproves of the non-acceptance of a clear policy regarding the complete transfer of the army to Indian control at the end of the period of transition.
>
> The Federation reiterates the resolution passed at its previous session against separate communal electorates and deeply regrets the further perpetua-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

tion for the time being of such electorates not only as between Hindus and Mahomedans but also between different classes of the Hindus themselves under arrangements proposed for the new constitution. This Federation reaffirms the opinion that equitable representation of important minorities will best be secured by reservation of seats with reasonable weightage, wherever necessary, in joint electorates.

Autonomy in the Field of the Fine Arts"

Those who are specialists, experts or enthusiasts in any sphere of life naturally attach greater importance to it than ordinary people who are not. It is natural for the former to think that before our people have proved their fitness in that particular sphere they cannot achieve success in some other sphere. We do not find fault with them for thinking in this way. If a nation contains all the necessary groups, each of which lays the most stress on some particular excellence, the nation as a whole is benefited by the exertions of the different groups. But there must be in the nation others also to appreciate the fact that different lines of advance are interdependent. There was a time, for example, when there were social reformers who thought that Indians cannot expect to have political power before they have thoroughly reformed Indian society. That is, no doubt, one side of the truth. But it is also true that many social evils cannot be combated unless the people have political power. Hence efforts for social advancement and political advancement must go on simultaneously. Cultural endeavours also must go on simultaneously with the fight for economic, political and social freedom.

With these prefatory words we wish to draw attention to what Mr. O. C. Gangoly said at the reception given on the 9th of August last to Mr. Timir Baran Bhattacharya, the musician, on his return from his tour in Europe and America "to vinidicate the claims of Indian music before the connoisseurs of the west." Mr. Gangoly said, in part :

Personally, I whole-heartedly believe in the doctrine that before we can achieve autonomy in the field of the Fine Arts, we can never attain self-government in the realm of politics. A nation which is unable to honour the national artists, a nation which has lost the faculty of realizing the spiritual gifts of the national arts, cannot be said to have earned fitness for self-government. Swaraj is an idle dream to a people who have not developed all the phases of national life.

From another point of view, only those amongst us are best fitted to present to the eyes of foreigners the highest products of Indian culture and civilization who are the custodians of Indian Art and culture. A nation's fitness and capacity can best be judged by the artistic talents of the people, by the efficiency of their poets, artists and musicians. I therefore believe that the Indian artists' missions to foreign countries are of much more value and significance than the undignified stampedes to the Round Tables, or the petty political pilgrimages to Europe and America. The mission of the artists like Mr. Timir Baran Bhattacharya and his associates cannot be said to be of any less value than the political missions of Subhas Chandra Bose or Sarojini Naidu.

We are, therefore, personally grateful to Udaya Shankar, Timir Baran, and their associates, for the rich laurels that they have won for India in foreign countries. They have helped to heighten the values of our national culture, in the estimation of others. They have, therefore, richly deserved our cordial greetings and our grateful acknowledgment for this valuable national service.

These words of Mr. Gangoly contain much truth, though they are not the whole of the truth.

No Equality for Indian Officers

The Army Amendment Bill was passed in the Legislative Assembly by a majority of only three votes, 51 being for and 48 against it. Sir Abdur Rahim's amendment wanted a statutory provision to be inserted in it laying down the general principle that the status and opportunities for promotion, the powers of command, rank and precedence of Indian commissioned officers in the Indian army will be the same as those of "British" officers in the Indian Army in all units and formations. Forty-six members voted for and forty-nine against it. So it was lost. The Government could not have obtained even these narrow majorities if there had not been among the members seekers of re-nomination by Government, if there were not some who had no hope of being re-elected, if all elected members had been dutifully present, if all had voted inspired by a sense of national honour and sense of duty to the country, and if Sir Joseph Bhore had not threatened that Government would drop the Bill if Sir Abdur Rahim's amendment were carried. We do not know whether there were any members who were led to vote in favour

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

of the Bill by Sir Joseph Bhore's assurance that a provision would be made in the Regulations for complete reciprocity of powers and privileges within the Indian army as between Indian commissioned officers and British officers of the Indian army.

There is an evident desire among Englishmen that British military officers should not serve under Indian military officers, though some British civilians have served under some Indian civilians and some may be doing so still. It may be pointed out, however, that in pre-mutiny days, under the rule of the East India Company, British military officers used to serve under Indian commandants.

Our readers will be able to understand the true character and object of the Bill which has now been passed, if they read Mr. Nirad Chandra Chaudhuri's article in the present issue on "The Present Stage of Indianization."

The Saar Problem

According to a *Reuter's* telegram,

Berlin, Aug. 26.

Herr Hitler was tumultuously welcomed by Nazi crowds when, accompanied by Dr. Goebbels, he arrived by motor-boat from Cologne at the Fortress of Ehrenbreitstein, near Coblenz, this afternoon to launch the German campaign for the return of the Saar in view of the plebiscite thereon on January 15, 1935.

Herr Hitler, in a broadcast speech, declared, "If the world outside Germany attacks us, it is because we are defending the interest of our people. An international clique wants everything that harms us, but I tell the grumblers that nothing will ever force us down. In no circumstances shall we ever capitulate. The greater our distress, the greater our strength. The German people will survive the next thousand years as they have survived the past."

Addressing the Saar people, Herr Hitler assured them when the hour came that they would be welcomed into the Fatherland. The German policy with regard to the Saar would be reconciliation regardless of former Party-membership and improvement of the economic foundations of the Saar, which they would chain more closely to the German Reich.

The Saar question was the only one still open between Germany and France and once it was settled he hoped they would be able to conclude sincere peace with France.

The article on the Saar Plebiscite, printed in this issue elsewhere, tells the reader what the Saar problem is.

Early Hindu Architecture

The subject of Indian architecture has been receiving some publicity for some time past. That is good. But people should know what early Indian architecture was. It was no crude primitive thing, but a highly developed art. Professor Dr. Prasanna Kumar Acharya's five monumental volumes on Hindu architecture, giving among other things the text and translation of Mānasāra, the standard work on architecture, published by the Oxford University, supplies abundant information. Those who have had no access to them will have some glimpses of the subject from the Professor's article published in the present issue.

Non-Indian Exploitation of India's Resources

Cawnpore, Aug. 27.

The Indian mercantile communities, it is understood, propose to make a representation to the Government of India in connection with the Government's policy of granting concession to non-Indian concerns for working up and exploiting the resources of India. This question will come up for discussion before different Indian Chambers of Commerce. This policy is not justifiable as it is bound to kill Indian enterprise and drain away India's wealth. Indian commercial classes, if given an opportunity, are in a position to work out the scheme and invest large sums of money for carrying out such enterprises.—United Press.

This obviously refers to the "Imperial Chemicals," a British Company with Lord Reading as its chairman, to which the Government of India has given or proposes to give fifty years' monopoly of some mineral resources in the Panjab. The scheme was launched without the knowledge of the Indian Legislature and was brought to light by Mr. B. Das, an Orissa M. L. A.

Miss Mayo to Visit India Again?

Simla, Aug. 28.

Sir Henry Craik, answering Mr. Bhupat Singh, admitted that he had seen a Press report to the effect that Miss Mayo proposed to visit India, but no request for a visa for India had so far been referred to the Government.

Mr. Bhupat Singh asked: "Are the Government aware of the deep resentment felt by Indians against her on account of her past activities?"

Sir Henry Craik: I am aware that her book entitled "Mother India" had aroused resentment.

Mr. Bhupat Singh suggested that the Government should not allow her to land in India.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Sir Henry Craik: "I must draw attention to my statement that no request for visa for India has so far been referred to us."

Mr. Gayaprasad Singh asked: "Will the Government give her assistance, as they did last time, by allowing her to stay in the Government House and giving her access to Government records?"

Sir Henry Craik: "That is a hypothetical question. We are not aware of the object of her proposed visit."

Mr. Gayaprasad: "Last time some officers were deputed to give her assistance."

Sir Henry Craik was heard to reply that Miss Mayo was not given any more courtesy than was shown to tourists.

Mr. Vidyasagar Pandya alluded to the public acknowledgment by Miss Mayo that she could not have brought out her book without the help received from the Government.

Sir Henry Craik: "I am not aware of that."

—Associated Press.

Sir Henry Craik did not say that if Miss Mayo asked for a visa for India it would be refused. Perhaps he knows how a certain British journalist was treated in Germany because he was doing secretly what Germans do not like. He may also have read the following:

AMERICAN WOMAN JOURNALIST TO LEAVE GERMANY

Berlin, Aug. 25.

The American journalist Dorothy Thompson, wife of the novelist, Sinclair Lewis, who has been living here for the past week, has been ordered by the Secret Police to leave Germany within 24 hours on grounds of her "numerous anti-German publications in the American Press which, for reasons of national self-respect, makes it impossible to grant her further hospitality in Germany."

The German Consul-General informed that the order was based chiefly upon the interview which Dorothy Thompson had with Herr Hitler in 1932.

Dorothy Thompson in an interview to "Reuter," said, "I protest against the charge that anything I have written emanated from hostility to Germany."

American journalists are urging the American Ambassador to take action in the matter.—Reuter.

Sinclair Lewis is a Nobel-Prize-winner. His wife is a lady of some consequence.

"American journalists are urging the American Ambassador to take action in the matter." They are free to do so. But should they not, for the honour of their country, ask the Government to prevent females like Miss Mayo from coming to India?

Sir Henry Craik has said Miss Mayo was not given any more courtesy than was shown to tourists. But are all or most or an appreciable number of tourists accommodated in Governors' palaces and are arrangements officially made for their visits to various persons and places?

Caste Civil Marriage

Allahabad, (By Mail)

Though inter-caste marriages are usually registered under the Civil Marriages Act. III of 1872, a notice has been received by Prof. A. C. Banerji, Registrar of Marriages under the Act under reference, of a caste marriage being proposed to be held under that Act. The parties to the proposed marriage are Mr. Bibhuti Bhushan Bajpai, B.A., a son of Pandit Shri Ram Bajpai of the Servants of India Society, and Miss Sushila Debi Dikshit, a student of B.A. class, Benares Hindu University and daughter of Pandit Hira Lal Dikshit of Farrukhabad. The notice of marriage was given to the Registrar of Marriages a few days ago. The marriage takes place on September 1 next.

Pandit Shri Ram Bajpai has chosen to celebrate his son's marriage under the Civil Marriages Act as it gives greater privileges and rights to a woman than the Hindu Law.

Detenus Allowed to Sit for Examinations

The Senate of the Calcutta University has done the right thing in allowing fifty detenus to appear at the I. A., B. A., or Preliminary Law Examination of the Calcutta University as non-collegiate students.

President von Hindenburg

The death of Field-Marshal Paul von Beneekendorf und von Hindenburg, President of the German Reich, in his eighty-seventh year, brings to a close a very remarkable career. The fact that he died in his saddle is rather uncommon, because, at a period of life when men are apt to spend their time in retirement and obscurity, he made history, and, a part of the time, was the central figure in that history.

Journalists' Wages in U. S. A.

The New Republic of New York writes:

Willard G. Bleyer, director of the School of Journalism of the University of Wisconsin, has complained in the pages of The Quill of the low salaries permitted in the newspaper code. He points out that in cities of less than 25,000 (where two-thirds of all dailies are published) a reporter or editor may be paid as little as $12 a week, or in the case of a learner, $8.40. . . . Any occupation that pays even its apprentices wages so low as $8.40 a week

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

cannot possibly rank as a profession. It is only a sweated trade.

What do our journalists in India say ?

Self-government for Inner Mongolia

The People's Tribune of China writes :

In the realisation of Dr. Sun Yat-Sen's aim of local self-government for the people of China, and in particular connection with the rights of racial minorities to rule themselves, the extension of self-government to the Mongol areas of Chahar and Suiyuan, under Chinese sovereignty, is a real step ahead. Years ago this was looked forward to by the Inner Mongolian Kuo-Min Tang, but the rapaciousness of provincial officials and land speculators who dominated the four North-Eastern provinces prevented the realisation of the plan. But now, at long last, it is possible to achieve in such areas of Inner Mongolia as still remain under Chinese sovereignty, and is being made a reality today.

The journal adds :

The establishment of Autonomous Mongolia is not a concession, but an achievement, for the National Government. It means the realisation of something of Dr. Sun's old principle of local self-determination and self-government for this racial minority. It means the granting of a far more genuine autonomy than the Mongols possess in the much-advertised "autonomous Hsingan province" of Puppetkuo, as autonomous Mongolia under Chinese sovereignty has its capital in its own territory, its governing council is composed wholly of Mongols (though under a supervisor appointed by the National Government), and it is subject to no outside "Board of General Affairs."

It is not to be claimed that the rule of the Mongol princes is an ideal one. A more democratic régime is certainly called for, especially as these petty tribal rulers, with their flair for absolutism and aristocracy, tend to be influenced by the new "Manchu Empire" to the east, and the most potent weapon against this is the solidarity of the common people among the Mongols. But democratisation can be realised in time, just as in purely Chinese districts of the country . . . . . .

The interests of the people—whether Mongol or Chinese—are and must be paramount.

International Council of Women

The International Council of Women, which has for its motto, "Do unto others as ye would that others should do unto you," was founded in 1888 in the United States of America with the aim of strengthening and co-ordinating feminist activity by federating the various associations working for the improvement of the position of women and for social progress.

It has for its object to establish a permanent link between the women's organizations of the different countries, thus making it possible for them to work together for the improvement of the material and moral position of women and by common action to help towards the establishment of peace between nations.

Gradually the influence of this first little group of Councils spread until a federation of women's organizations was formed in more than 40 countries under the name of National Council of Women; these again united to form the International Council of Women. This International Council represents to-day more than 40 million women bound together by their desire for peace and social progress.

At the Council meeting held in London in 1899 it was decided to include questions dealing with Peace and Arbitration in the programme of work of the International Council of Women. At the Meeting held in Berlin in 1904 the "Committee for the Equal Moral Standard and against the Traffic in Women" was formed, and ever since, under the chairmanship of Madame Avril de Sainte-Croix, this Committee has taken an active part in the crusade against the traffic in women and children and for the improvemen of moral conditions in the world. This same Council meeting in Berlin saw the beginning of that big international organization, now known as the International Alliance of Women for Suffrage and Equal Citizenship. Plenary meetings of the International Council of Women have been held at Washington, Chicago, London, Berlin, Toronto, Rome, Oslo, and again at Washington.

There are ten international Committees, namely, Legislation, Education, Trades and Professions, Equal Moral Standard, Public Health, Migration, Child Welfare, Suffrage, Peace and Press, and also three Sub-Committees—Arts, Letters and Cinema.

National Council of Women in India

The National Council of Women in India is affiliated to the International Council of Women described in the foregoing note. The motto of both is the same. We have received the fourth biennial report of India's council. It contains much useful information. The headquarters of the Central Executive Committee is situated in Calcutta. The office-bearers of the Committee are :

Chairman—Lady Ezra.
Vice-Chairman—The Maharani Sucharu Devi of Mourbanj, Mrs. S. R. Das.
Hon. Treasurer—Mrs. E. J. Judah.
Hon. General Secretary—Mrs. Keron Bose, 4, Shambunath Pundit's Street, Elgin Rd. P. O. Calcutta.
Hon. Asst. Secretary—Mrs. K. P. Basu.

The National Council of Women in India has been organized to represent without distinction women of all races and nationalities whatsoever, who are resident in India. Its objects are :

(1) To promote sympathy of thought and purpose among Women in India. (2) To associate Women of all communities in India for the promotion of the welfare of women and children, social, civic, moral and educational. (3) To co-ordinate both nationally and locally organisations in harmony with these purposes. (4) To work for the removal of

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

all disabilities of women, whether legal, economic or social, and to promote such conditions of life as will assure to every child an opportunity for full and free development. (5) To form a link with the National Council of Women in other countries through the International Council of Women.

The total number of Provincial Councils affiliated bodies is 8, representing about societies and about 8,201 members. These Councils have done much good work, be found described in the Report.

On behalf of the National Council of Women in India two delegates to the Executive Meetings of the International Council of Women at Stockholm attended those meetings. They are Mrs. R. C. Gupta and Mrs. Keron Bose. Their interesting reports are included in the fourth biennial report of the Council.

Mettur Dam

The Madras Presidency is to be congratulated on the completion and opening of the Mettur Dam, which is considered the biggest single piece of masonry ever constructed across a river in any part of the world. It has cost some five crores of rupees. With the waters of the Cauvery, distributed through canals, some three lakhs of square miles are expected to be brought under irrigation by this project. Hydro-electrical schemes connected with the Dam are expected to give a great impetus to industries in some districts of Madras and in Mysore. Probably the electrification ofrural areas may be successfully attempted by their means.

Ottawa Agreement Injures India

MADRAS, *Aug. 10.*

The Southern India Chamber of Commerce in the course of a lengthy communication to the secretary of the Federation of the Indian Chambers on the Ottawa Agreement says that the Ottawa Agreement has now turned the scales against India. It is progressively subjecting India to helpless dependence on trade with the United Kingdom and steadily alienating other countries. The chamber has also addressed a telegram to the committee appointed by the Assembly to examine the results of the agreement requesting them to publish Government's report placed before them and have it circulated to the commercial bodies before discussing and coming to conclusions thereon. The Government, it is understood, have expressed that they have no objection to the committee doing so.

The Sino-Indian Cultural Society

We have received a booklet, entitled "The Sino-Indian Cultural Society," containing preface, preamble, regulations and programme. Broadly speaking, the object of the Society, with which we are in full sympathy, is the promotion of "the resumption of the interchange of Indian and Chinese cultures." Prof. Tan Yun-shan, who has sponsored the scheme, recently read a paper at Santiniketan on cultural interchange between India and China. In it his idea is developed in full.

Centenary of Abolition of Slavery

One hundred years and a month ago, slavery was abolished in British territory by a Royal Proclamation which ran :

> Be it enacted that all and every the persons who on the first day of August, one thousand eight hundred and thirty-four, shall be holden in slavery within any such British Colony as aforesaid shall upon and from and after the first day of August, one thousand eight hundred and thirty-four, become and be to all intents and purposes free and discharged of and from all manner of slavery, and shall be absolutely and for ever manumitted.

It was a most memorable event. The memory of Wilberforce and other philanthropists who worked for the abolition of slavery from entirely altruistic motives will for ever remain enshrined in the heart of humanity.

The actual abolition of slavery had an "economic" motive also behind it.

It is a grievous reality that slavery—actual slavery—still exists in different parts of the world. And slavery also prevails in disguised forms in Africa.

Political servitude is not exactly like slavery. But until political servitude disappears along with slavery, from all parts of the world, advocates of freedom cannot enjoy rest. They will, in fact, have to work for economic, social and religious freedom also.

The Task of Sport in the World

Olympic Games—New Service of Berlin reproduces the following passage from the speech of Count Baillet-Latour, President of the International Olympic Committee, delivered on the occasion of the celebration of the fortieth anniversary of the modern Olympic Games on May 20, 1934, in the stadium at Athens :

> "It must be realised that the Olympic Games are not arranged merely for a small group of selected highly trained Athletes, in order to afford them an opportunity of astounding the world with their prowess. The "Record" is one of the idols of our

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

present civilization and it is high time that a return was made to broader achievements. With the help of the authorities, the International Sport Federations and the National Olympic Committees attempts must be made to maintain the educational character of the Games—even if it is necessary to sacrifice this idol "Record," even if it is necessary to do without those who would participate in the games more from the desire to win than from love of sport.

New efforts will bring new results, and the olympism restored by Coubertin will prolong the short armistice—which, according to the ancient custom was always enforced for the period of the Games—into a lasting peace. The young generation, permeated with our principles will do their part to create amongst the Peoples that atmosphere of sincerity and chivalry which dominates the Olympic teams. Under the shield of the Olympic Games Sport has fulfilled the tasks set by the World, and will continue to fulfil them.

The same Berlin bulletin says :

The Honorary Secretary of the Afghanistan Olympic Committee, Colonel Sardar Abdul Khan of Kabul has informed the Organization Committee for the XI. Olympic Games that his country accepts the invitation to participate in the Games and will be represented by a Hockey and a track and field team.

Viceroy's Address to Indian Legislature

If the Viceroy had not delivered his address to the Indian Legislature that he did on the 29th August last, the Indian public would not have been less wise or enlightened than they are after its delivery.

He referred to the Indian Legislature as "this Parliament." Parliament indeed !

Lord Willingdon began his address by thanking the members for the assistance given to his Government during the past four years in passing into law many very important measures that had been brought before them during the period of life of this Parliament, which would shortly be coming to a close.

His Excellency's thanks were quite sincere. The members of the Legislature have really subserved British imperialistic and economic objects by passing repressive and other laws.

Speaking on British goodwill for India Lord Willingdon said :

"The general impression I have brought back with me is that feeling among my countrymen in England is full of goodwill and sympathy for the natural aspirations of Indians in regard to political advance. A deep sense of responsibility was moreover evident on all sides in a general anxiety to obtain first hand information from those of us who have had the most recent experience of the affairs and conditions.

Do the people of England know what are really "the natural aspirations of Indians in regard to political advance" ? Do they care to know ?

As for the people of England getting first-hand information from the Viceroy, we are sorry to have to say that in India the higher the office of a British officer the less is he in a position to obtain or impart first-hand information.

Concluding his speech, the Viceroy said :

"I should like to add that I come back with feelings of the keenest appreciation, which I am sure will be shared by every member of both our Legislative Chambers and by the public outside, of the untiring labours which members of the Joint Select Committee have freely and readily given during the past fifteen months to secure a proper solution of the great problem of Indian Reform.

"One assurance I can confidently give you. When the new Constitution Bill is passed into law you may rely on my efforts to ensure that no time will be lost in carrying into effect, as expeditiously as possible, the intentions of Parliament as expressed in the Act of the Viceroy."

We cannot speak for members of the two legislative chambers, but we know something of the feelings of the public outside. They are not feelings of appreciation, because the public does not know what the outcome of the labours of the Joint Select Committee are going to be, and also because it is feared that their report is going to be worse than the White Paper.

The Viceroy's assurance that the new Constitution Bill, when passed into law, will be expeditiously given effect to, leaves us cold.

Madras School Children Permitted to Look at Their Majesties' Portraits

The Madras Government have issued orders to local boards to the effect that no pictures or photographs of any one except those of Their Majesties the King and Queen of England should be hung on the walls of schools under their charge, except with the previous permission of the inspecting authorities concerned. And there have been questions and answers on the subject in the Madras Council. An English proverb says that even a cat may look at a king. So our school children are perhaps not inferior to cats, as they will be allowed to look at the portraits of Their Majesties. Of course, all non-officials, including gods and goddesses, are suspect. But why cannot the portraits of His Majesty's servants, from the Governor-General down to the village watchman, be kept in Madras schools, seeing that these functionaries themselves can give *darshan* to the school children in person ?

THE MODERN REVIEW

OCTOBER 1934

Vol. LVI., No. 4 WHOLE No. 334

PEACE AND MUNITIONS MAKERS

BY DR. SUDHINDRA BOSE

THE international armament, shipbuilding, aviation, and allied industries have been experiencing for the past few years a boom. It is a ious fact that during this period of severe ldwide depression, while millions of men l women are ill-clad and half-starved, while vernments have been unable to pay their s, while educational institutions have n starved of funds, the munitions nufacturers have been realizing profits of to 20 and 30 per cent during the entire od of depression.

Moreover, while the world was struggling get from under the catastrophe of the at War and to relieve itself of the ld miseries which it imposed, the arms ers have been engaged in disseminating news which brings another world war. s been figured out that if the nations of world would take what they are paying ually for maintenance and extension of ments, and invest it at 1½ per cent return, would pay off within forty years the whole ggering national, provincial and municipal ts of the entire world. In a recent issue the *Fortune* (New York) magazine, I d:

> According to the best accountancy figures it ook about 25,000 dollars to kill a soldier during e World War. There is one class of big siness men in Europe that never rose up to denounce the extravagance of the government in this regard, to point out that when death is left unhampered as an enterprise for the individual initiative of gangsters, the cost of a single killing seldom exceeds 100 dollars. The reason for the silence of these big business men is quite simple: The killing is their business; armaments are their stock and trade; governments are their customers; the ultimate consumers of their products are, historically, almost as often their compatriots as their enemies. That does not matter. The important point is that every time a burst-shell fragment finds its way into the brain, the heart, or the intestines of a man in the front line, a great part of the 25,000 dollars, much of its profits, finds its way into the pocket of the armament maker.

The late World War was to end war. A war to make the world safe for democracy. A war for the self-determination of all countries. A war to crush imperialism. A war to usher in a new era of peace and prosperity. All this now sounds like the spouting of blarney. Twenty years after, the world is worse off than before. Dictators and war-mongers multiply. Credit for essential industry and trade vanishes. Doles for the unemployed are cut. Still the millions are lavished on the beautiful guns, the sleek steel ships, and the marvellous bombers. The world is dedicated to a new era of the adoration of the sword.

Senator William E. Borah made a speech in the United States Senate not long ago in which he set forth the part munitions makers

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

have in war preparedness. "So long as the munition manufacturers," he said, "exercise the influence which they now wield with governments we shall make little progress in reducing armaments or holding navies down to a reasonable programme. The influence of these interests is so very great that they can directly shape and dominate the policy of a nation toward war and away from peace."

The munitions makers arm every group in the world without any regard for national or racial lines. Patriotism does not enter into the arms industry. The traffic in arms is a capitalistic enterprise, and is above patriotism. Given the capitalistic system, given the armament business as one of the capitalistic businesses, given the expectation of making a huge profit out of that business, the rest follows logically. Indeed, the pursuit of making profits out of the lethal industry is above religion, morality, patriotism and other prejudices.

The armaments makers, while encouraging an intense spirit of nationalism in others, are usually internationalistic themselves. The Krupp firm of Germany had supplied fifty-two countries with arms before the Great War. How international the Krupps could be is suggested by the fact that the founder of the firm when he died was an officer of the French Legion of Honor, and a Knight of the Russian order of Peter the Great. He was selling arms to both these countries, the potential enemies of Germany.

Eugene Schneider, possibly the most powerful of all the arms men, is President of the famous Schneider-Cruesot company of France, and controls an international holding company with over 400 armaments firms in it. The sun never sets upon Creusot works. While one of his big companies supported Hitler lavishly in rousing Germans against France, the big Paris newspapers he controls worked up Frenchmen into a war scare.

The firm of Vickers-Armstrong of England is one of the greatest exporters of war materials in the world. Sir Herbert Lawrence is the head of the Vickers coterie with affiliated companies in a dozen countries. It has its factories in Roumania, and allies itself with the Czecho-Slovakian armament firm of Skoda. There are Vickers factories or subsidiary companies in Italy, Spain, Ireland, Holland, Japan, New Zealand, and Canada.

The affairs of Vickers are very profitable. Parliamentary disclosures have shown the flowers of English aristocracy—and politics—have investment interests in Vickers. Among the more prominent shareholders of Vickers or allied concerns in 1932 were: Rt. Hon. Neville Chamberlain, Chancellor of the Exchequer; Sir Austen Chamberlain, winner of the Nobel Peace Prize in 1925; and Sir John Simon, Secretary of State for Foreign Affairs (but who sold out his shares last year). In 1914, the list was even more imposing. It included that lofty philosopher Lord Balfour, Earl Grey, Lord Curzon, Lord Kinnaird (President of the Y.M.C.A.), three bishops, and Dean Inge of St. Paul's Cathedral.

True, there is no single international "armament trust", but in actual practice it amounts to much the same thing. It is an intricate system of interlocked corporations with overlapping ownership and directorates, co-operating with utmost friendliness to protect each other's property and keep up prices even when their respective countries are engaged in deadly war. The armaments industry, controlled by about fifty men, is truly a bloody international. The one thought of this close-knit circle of armaments interests is to make profits out of war, to build fortunes out of the misery and the sorrows of the maimed, the wounded, and the broken of health. It is therefore no wonder that the manufacturers of armaments are both actively opposed to peace and are directly interested in promoting every kind of international strife.

The main facts of the armaments industry are neither secret, nor doubtful. They have been clearly set forth in the two books which just appeared in the United States: *Iron, Blood and Profits* by George Sleds, and *Merchants of Death* by H. C. Englbrecht and J. C. Hanighen. To these may also be added Beverley Nichol's *Cry Havoc* and Fenner Brockway's *Bloody Traffic*, published a little while ago. They all cover much the same ground: they all report the venality of the European press, the sales of arms to potential enemies, the interlocking

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

of apparently competing concerns in theoretically hostile countries, the hypocrisies of the manufacturers. Beyond that they recount that the manufacturer of the tools of war has nothing to do with the sentiments of petriotism in search for profits. He acts not as a Frenchman or a German or an Englishman, but as a capitalist.

According to these writers and several other independent investigators, the armament manufacturers of the world have not scrupled in the past to use any kind of method that might conceivably advance their personal fortunes, including huge sums of money for propaganda and political influence, and they have so organized on an international scale that no sentiments of patriotism, much less of humanity, have been permitted to interfere with their business instincts. In other words, at a time when the world, weary of war, has been making an effort to restore peace, a little group of men for greedy selfish motives has been conspiring to block that effort.

The evidence against the armament industry falls into three general categories. It deals with efforts to thwart all peace movements, including disarmament; with the promotion of war scares, if not of war itself; and with what might be called international collusion on the part of arms manufacturers. Most of the evidence that has been brought out so far in printed form involves the activities of European firms, but some of it is also of American origin.

It is charged that the American representative of certain armament firms worked to block the success of the Geneva Disarmament Conference of 1927. An American steel corporation that was interested in selling armour plate to the government, it is asserted, helped to found the ultra-patriotic Navy League of the United States to agitate for a larger navy and against further limitation of naval armaments.

Evidence that the private Eurepean armament firms have been even more active in combating disarmament and other peaceful enterprises has been produced, and their efforts, backed often by bribery and control of the press, have gone much further in creating threats to peace. But some of the most shocking evidences that have been brought to light by writers on the subject have dealt with the way in which companies have managed to sell military supplies to their national enemies even in times of war and in times of peace have not hesitated to promote political movements in other countries, hostile to the interests of their own countries, simply to obtain munitions orders.

Some of the stories seem almost incredible but they are supported by documentary proof. During the Great War, English and French companies supplied various war materials to Germany through neutral countries, while Germany sent iron and steel to France by a similar indirect route. When this practice was attacked as treason, it was defended as part of an international understanding that made war possible, and was permitted to continue.

It can safely be asserted that munitions makers have no country and no allegiance when it comes to their deadly business. During the Great War the English captured a cannon from the Germans which had been set up in Bedford park as one of the memorials. The cannon bears an English trademark, and in the Parliamentary debates it was brought out that it had been sold by an English firm to Germany. Again, it turned out after the war that the English battleships which were sunk in the Dardanelles were sunk by mines sold to the Turks before the War by the English manufacturers. Just now when it is claimed that Soviet Russia is a threat at Europe, Vickers has sold sixty of his latest and most powerful tanks to Russia.

One major event in the Great War is particularly revealing. Before 1914 the great mines and smelters in the Briey basin provided 70 per cent of the ore used by France. It is the centre of the iron mines and metallurgical industries of France. At the beginning of the War, the Germans broke through this point and the German artillery chiefs saw to it that the mines were so protected from shell fire that they could be taken over intact. Thenceforth the mines of the Briey basin, together with other mines of Lorraine, supplied Germany with some three-quarters of the ore it consumed during the War.

In 1916, Briey came once again within the range of the French artillery. The Briey

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

mines were turning out tons of raw materials per day which were being turned into weapons of death, and were hurled back into the French lines, literally and actually tearing limb from limb hundreds of thousands of Frenchmen. The French army could turn loose its bombing planes and blast out of existence a principal source of enemy supply, and thus put an end to the war. Yet neither bombs nor shells burst at Briey during the entire course of the War. Briey remained almost to the last days of the War one of the so-called "quiet sectors."

There is no question at all about the international operations of the armament makers. The facts are in the records of the French Parliament, substantiated, and unanswered. Efforts were actually made by high military and civilian personages in France to have the Briey mines and furnaces laid waste, as they should have been. But nothing happened. Why this murderous courtesy? The answer is that if the French forces bombarded the Briey basin, the Germans would certainly bombard the French mines at Dombasle, then one of the chief sources of iron for the French armies. The Germans did not bombard Dombasle in return for the French not bombarding Briey. "If we had destroyed Briey"—the French official explanation can be thus summarized—"the Germans would at once have retaliated and destroyed our munitions plants at Dombasle." But had either side done what the national armies are supposed to do, the Great War undoubtedly would have had to end before it did. Perhaps a million or more men would not have been slaughtered. In other words, officially the explanation of Briey was that it was considered preferable to destroy men by the tens of thousands rather than property. But who owed Briey and Dombasle? The answer is very simple. They belonged to the armaments manufacturers, men with international affiliations. The Schneiders of France and the Krupps of Germany owned the Briey basin and Dombasle, and through their connections with the general staffs of both countries they saw to it that no damage was done to their properties.

The Briey incident is of a perfect piece with many other strange occurrences. Indeed, it would be a great mistake to conclude that it was an isolated manifestation of treason on the part of a few high-placed French officials. The armaments men during the War, and always, have been above patriotism when profit beckoned. Exactly similar things were happening among the other combatants.

While the French were doing nothing to prevent Briey from tearing Frenchmen to pieces, high-placed German industrialists were shipping scrap iron into France (*via* Switzerland) at the rate of 150,000 tons a month to tear German soldiers to pieces. And in the ghastly attacks on Verdun, Germans found themselves impaled on barbed wire made a few months before—in Germany, by their own countrymen!

English merchants, until the bitter protests of a naval attache stopped them, shipped glycerin and Canadian nickel into Germany (through Scandinavia) which it was perfectly well known would be used to mangle English soldiers in the trenches.

French nickel, too, found its tortuous way, greased by profit, into Germany. The construction of German submarines would have been badly hampered without French bauxite (aluminium) which they received a-plenty.

One of the most curious of the post-War developments was the suit brought by the Krupps of Germany against the Vickers of England for violation of a patent right. The Krupps, prior to the War, had invented a special fuse for hand grenades. Vickers appropriated the invention, manufactured the fuses from the German formula all through the War and, of course, were instrumental in slaughtering or maiming tens of thousands of Germans. When the War was over, the Krupps (grand patriots) sued Vickers in the English courts for stealing their patent rights. The Krupps demanded a shilling a fuse, and a total of 123 million shillings. The case was settled by Vickers out of court, Krupps took payment in stock. The statement is that "Settlement was made out of court and the Krupps received payment in stock in one of Vickers' subsidiaries in Spain." No armament man could ever descry the blood of a countryman on a stock certificate.

Personally the men at the head of the great armament industries and international holding companies are probably sensitive and

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

rable old gentlemen who would weep over Schubert's or Beethovents sonatas. One of them, Basil Zaharoff, "the mystery man of Europe," who is often referred to as the greatest murderer in history, now spends his last happy hours in the cultivation of rare orchids at Monte Carlo. He is quite old and past business. But he had "lots of character" and business in him, at least a few years ago. Much of the recent growth of the Vickers organization can be credited to Mr. Zaharoff, "the greatest armament salesman the world has ever known." He is a native of Greece, and came to England as a poor imigrant, He is known there as Sir Basil Zaharoff. He was an intimate of David Lloyd George during the War. At one time during the War when peace seemed imminent, he was quoted as favouring continuing "to the bitter end". Naturally. More fights, more profits.

Basil Zaharoff began by making glorious profits out of the perpetual fights in the Balkans and the Near East, to which he was usually purveyor and of which he was frequently instigator. The Boer War added to his laurels; Boers shot Englishmen with Vickers' guns. But it was the World War that gratified Sir Basil most. By the end of the War, Sir Basil had a personal fortune estimated over a billion dollars. Basil Zaharoff has ribbons galore.

Of all the criminals known to man, none would be more despicable than the war profiteer. Plying his trade in legal murder he grows rich on the spoils of his treason against humanity. Police and courts can bring ordinary criminals to justice, but the war profiteer need answer to no one for his thousands of murders.

The problems growing out of the private manufacture of munitions and the international traffic in arms are sinister. The commercial urge to extend the use and translate the demand for the output of munition factories has been demonstrated to be an actual and proximate—not remote and indirect—incitement to war. To suffer this traffic to continue is to connive at all its consequences.

But what can be done about it? Is there a way out? Two principal proposals have been advanced to correct the situation. One is that the manufacture of armaments be taken out of private hands and be made a government monopoly. The other is that the private industries be permitted to continue, but only under rigid international supervision.

The proposal to nationalize the armament industry has been opposed on various grounds. Since modern warfare has become so highly industrialized, it is very difficult to distinguish between production for military and non-military purposes. Should the entire iron and steel industries be nationalized, because they produce war material? Such a procedure is not feasible, except in a Socialist or Communist regime. But if it is not adopted, two of the chief industrial beneficiaries of war would remain in private hands.

Moreover, only a few countries (notably France, England, the United States, Germany, Japan and Czecho-Slovakia) are industrially equipped to produce armaments today. If their armament industries were nationalized, what would happen to all the other countries that must depend upon them for such supplies? The non-producing countries consider that they have a right to buy armaments abroad and that any interference with it would be an unfriendly act, jeopardizing their national safety and independence. And finally many governments are reported to believe that only by free competition among private manufacturers, moved by a desire for profit, can they be sure that their armaments are of the latest design.

The same objections have been raised to the proposal of international control, with the addition of the practical difficulties of efficient supervision. Even if the political opposition of the armament manufacturers themselves is left out of account, both proposals to deal with the ghastly mess are obviously absurd.

The authors of the *Merchants of Death* hold that the "problem of disarmament is the problem of building a new civilization." This is a cautious way of saying that so long as the West lives in a capitalistic society there will always be war. The conclusion is inescapable.

The fundamental difficulty is that the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by eGangotri Sarayu Foundation Chennai and eGangotri

armament industry is the product of the system of capitalism and imperialism. Unless that system gives way to a true desire for peace, the evils of this industry of destruction will never be eliminated. Those who talk of abolishing arms industry, while supporting imperialism and capitalism, might as well talk of abolishing the Atlantic Ocean. The real problem, and the only possible solution, is to alter the world's belief—praticularly of the Occident—that it for ever requires arms. And though there never was a bleaker prospect of success in that endeavour than right now, the West cannot always remain steeped in the ethics of the jungle. I am morally certain that capitalism and imperialism are not immortal. They are no more immortal than cannibalism.

THE PROBLEM OF THE PACIFIC THROUGH ORIENTAL EYES

By TARAKNATH DAS, M. A., Ph. D.

WHENEVER currents of diverse interests meet, there arise peculiar problems. This is true in affairs of individuals, societies, classes of society, and nations. At the very bottom of the various problems of the Pacific, there lies the fact that the most important nations of the world with conflicting interests have met in the Pacific area and this meeting has produced most momentous social, economic, political and religious problems, affecting the whole population of the world. Therefore, the problems of the Pacific are the most serious problems of the present century. I shall make an endeavour to discuss barely some of the important points of the present-day international politics relating to the Pacific area.

The lecture has been designated as "The Problem of the Pacific Through Oriental Eyes". I am afraid that some will be disappointed, if they expect something extraordinarily fantastic or dogmatic, because the lecturer is an oriental by birth.

There are not many Western scholars who do not look at the problems of the Pacific without a peculiar prejudice. Many Western scholars entertain double standards of international morality, one for the so-called superior people of the West and the other for the people of the Orient. They think that anything that might be upsetting to the vested interests—political, territorial and economic—of the Western nations is undesirable and therefore unjust and must be opposed. I wish to make it clear that I do not subscribe to this outlook.

I was born and received my early training in India. But I received my higher education in the United States of America; and I am an American citizen. I have lived in China and Japan as well as other Asiatic countries. I have also tried to study World Politics in various European capitals, as an impartial student who wishes to know facts and their implications. I shall make an endeavour to present a view of the Problem of the Pacific, without prejudice, with the hope that my presentation of facts will rouse interest for further careful investigations, with the sole object, that international problems of the Orient may be solved in such a way that it will bring about better understanding between the East and the West and preserve the peace of the world.

The nations that are directly interested in the problems of the Pacific are not merely the nations of the world situated in the Pacific region, but also all the Great Powers of the world which do not have any possession in the Pacific but which have commercial and political interests in that vast region which include India, Burma, Siam, China, Malaya Archipelago, Dutch East Indies, the Philippines, Indo-China, China proper, Manchuria, Korea, Russia, Japan, Canada, the United States of America, Mexico, some of the South American republics, Australia as well as New Zealand.

Problems of international politics are interrelated and not confined to any special area. So the problem of the Pacific is a vital factor in World Politics. Problems of international politics are not sentimental affairs, but they concern population problems, problems of commerce—raw materials, exports and imports—and problems of National Security in the broadest sense of the term. From this point of view a nation like Italy, which has no colony in the Pacific and which hardly expects to make any effort for territorial expansion in the Pacific area is also vitally interested in every development there. I may say that if an international conflict of

...character breaks out in the Pacific, the ...ks of it will be felt in all the capitals of the ...t Powers, Rome included; because Rome, ...e Eternal City, under the leadership of Signor ...ssolini, has during the last few years attained ...new position of pre-eminence from the stand-...nt of international politics. If New Italy is ...ue to its mission of asserting her position in ...ch a fashion that no problem of any magnitude ...the field of international politics should be ...ved without Italian participation, then the ...ders of Italian public life should pay special ...ention to the problems of the Pacific.

II

One of the main currents of Modern History the world is the expansion of the European ...ers in extra-European regions. From this ...t of view the history of the seventeenth, ...eenth and nineteenth centuries may be ...ded as the history of uninterrupted expansion ...the European peoples (America included, ...ce America is an extension of Europe) in ...Orient as well as Africa. The history of the ...r part of the nineteenth century and the ...ent era of the tewntieth century may be ...ded as the arrest of Western expansion in ...Orient. One may very well conceive that ...twentieth century may be an era of re-...rsion of the East which will lead to better ...erstanding between the East and the West ...the basis of equality. This will be a surer ...ndation of a new civilization to which Signor ...ssolini made an allusion in his epoch-making ...ech delivered before the First Congress of ...ntal Students held in Rome during the last ...istmas week.

Expansion of Occidental Powers to the Pacific ...n and its reactions constitute the Pacific ...blem of the present age. Russian expansion ...the Pacific, expansion of the British Empire ...ugh India to the Pacific, French expansion ...South-eastern Asia, American acquisition of ...Philippines, German efforts to secure a special ...re of influence in China and acquisition of ...e of the Pacific islands are the root causes ...the Pacific Problem.

...far as China is concerned, the Opium War ...ed by Great Britain (1839-1842) to force ...m upon the Chinese people and thus make ...d by the East India Company and its direc-...who indirectly controlled the Government ...Great Britain of that time, was the beginning ...the new epoch in the history of the Pacific ...As a result of the Opium War and through ...nificant form of "European Concert against ...", China began to lose her sovereignty, ...ugh imposition of "extra-territoriality", loss ...territories as well as "establishment of spheres ...fluence". Even today, preservation of terri-...l integrity of China remains the foremost of ...Chinese problems of the Pacific.

About eighty years ago, when Commodore Perry forced Japan to open her doors to foreign nations for trade, Japan was not a factor in the problems of the Pacific. From the beginning of the opening of Japan for foreign trade, statesmen of "the Land of the Rising Sun" were most anxious that their country would not have to experience the same fate as was the case with India and China. However, "extra-territorial jurisdiction" was also imposed upon Japan, by the Western Powers. But the Japanese people, for a period of more than thirty years, concentrated all their efforts on its removal; and they succeeded in gaining their end by the latter part of the nineteenth century. However, not until the conclusion of the Russo-Japanese War, did Japan receive full recognition as a free and independent nation, on the basis of equality with Western nations.

To get an adequate idea of the Pacific Problems of today, one must have comprehensive knowledge of the development of events in the Far East at least since 1894, *i.e.*, the Sino-Japanese War. It will not be possible for me to discuss these events in this lecture. But I must mention a few of the most important facts. The Sino-Japanese War was the beginning of the New Era in the Pacific, when Japan defeated China and served notice to the whole world that she would not calmly submit to other Powers if they interfered with her rights or endangered her national security. However, immediately after the Sino-Japanese War, Japan felt the pressure of and was humiliated by a new "European concert" against her; and she then fully realized the dangerous character of Western expansion in the Far East By the treaty of Simonosaki (April 14, 1895), China, among other things, agreed to cede Liatung peninsula—a part of Manchuria—to Japan. But a few days after the signing of this treaty, on April 23, 1895, through the joint-intervention of Russia, Germany and France, Japan was forced to retrocede the very territory to China. The immediate effects of the defeat of China in the Sino-Japanese War were: (*i*) Great Britain, before the Sino-Japanese War, was contemplating an alliance with China; but realizing China's weakness, gave up this idea and decided to cultivate better understanding with Japan. (*ii*) Japanese statesmen approached the Chinese to come to an understanding with Japan—to form a Sino-Japanese Alliance—to protect their mutual interests against Western aggressors. But this offer was politely rejected by China. (*iii*) China, under the leadership of Li Hung Chang, decided to seek Russian support against Japan. A secret treaty of Russo-Chinese offensive and defensive alliance against Japan was signed. The text of this secret treaty was not divulged, until the Washington Conference of 1921-22. (*iv*) Japanese statesmen realized the most important truth in international relations that a military victory may become a real defeat, if the victory was not

supported by successful diplomacy. They found that they were robbed of the fruits of their victory, because China could secure support of Russia, Germany and France, while Japan was isolated in international politics. Therefore, Japanese statesmen sought Sino-Japanese co-operation which was rejected by China. Then the Japanese statesmen decided either to make an alliance with Russia or to make an alliance with England.

China's defeat in the Sino-Japanese War encouraged Western Powers for extension of their territory and political control of China. Within 1897-98, Russia occupied Port Arthur and China was forced to grant territorial leases to Germany, Great Britain and France. Thus at the end of the nineteenth century there was a concert of European Powers, who were jealous of one another, but in perfect agreement in carrying out the policy of "break-up of China". Japan was opposed to this policy; but she was powerless to oppose it effectively. Japanese statesmen fully realized that the break-up of China by European Powers would mean a serious threat against her very existence as an independent State; therefore, they definitely formulated their international policy, which was to be carried out in course of time, through diplomacy, and if necessary, by victorious war. This international policy of Japan, according to my analysis, may be summed up as follows: *Elimination of political and territorial control of the Far East by Western Powers; and assertion of Asian Independence, under Japanese leadership.*

European Powers' activities towards "break-up of China" led to the Boxer Rebellion. America championed the cause of territorial integrity of China and promulgated her "Open Door Policy in China". But, after the Boxer Rebellion, when it became evident that Russia was determined upon virtual annexation of Manchuria and was planning to extend her influence into Korea, Lord Lansdowne on behalf of Great Britain and Viscount Hayashi on behalf of Japan, on January 30, 1902, signed a treaty—the Anglo-Japanese Alliance—which brought about a real revolution in the history of World Politics of the twentieth century. Since the signing of the Anglo-Japanese Alliance, no major problem of World Politics (especially those concerning the Pacific) has been solved without Japan's active participation.

The Anglo-Japanese Alliance was really the prelude to the Russo-Japanese War. The Russo-Japanese War was Japan's supreme effort to save China from being divided up by European Powers; and by defeating Russia, Japan eliminated Russia at least for the time being from being the most dangerous factor menacing Japan.

The period of 1905-14, was the period of consolidation of Japanese power by annexation of Korea and formation of various agreements with the Great Powers of the West. Western historians often do not mention the fact that Japan possibly would not have dared to annex Korea, if they had refused to consent to it. By the Treaty of Portsmouth (September 5, 1905) Russia recognized Japan's special position in Korea. By the Second Anglo-Japanese Alliance (August 12, 1905) Great Britain virtually put a seal of approval regarding Japanese supremacy in Korea. Then Japan concluded a treaty with Korea on November 17, 1905 by which Korea virtually became a Japanese protectorate. To remove any possible opposition of Russia regarding virtual annexation of Korea and Japanese control over Southern Manchuria, secret treaties were concluded between Japan and Russia on July 30, 1907 and July 4, 1910. Then Japan concluded Root-Takahira Agreement with the United States, by which the Japanese agreed to support the right of the United States in the Philippines: while the United States agreed to acknowledge Japan's special rights in the Far East. (It may be noted that the United States of America was the first Great Power to close its legation in Suoel, as a virtual recognition of Japanese supremacy in Korea). Japan also concluded Franco-Japanese Agreement in 1907 by which both nations recognized their mutual interests in the Orient. During the session of the Second Hague Conference for International Peace, Korean delegates were not allowed to participate in it. (If Korea was allowed to participate in the Hague Congress, it would have meant recognition of Korea as an independent Power.) Therefore, fortified by the consent of Russia, Britain, France and the United States of America and by the indirect consent of all other Powers who were participants of the Hague Conference, Japan annexed Korea on August 29, 1910.

Japan entered the World War, as if to help her ally Great Britain, but really to eliminate Germany from the Pacific and to check any attempt on the part of Britain to gain any new territory in the Pacific region bordering China. In May 1915, Japan forced China to sign a treaty by which Japan not only strengthened her position in Manchuria, but secured Chinese consent to the Japanese demand that China should not cede, sell, or lease any of her territories or islands to any power without Japanese consent. On July 3, 1916, Japan and Russia concluded a secret treaty of offensive and defensive alliance. On November 2, 1917 by the signing of the Lansing-Ishhi Agreement the United States recognized that Japan had special interests in China, particularly in that part to which her possessions are contiguous. During the Versailles Peace Conference, Great Britain and France, bound by secret treaties with Japan, agreed to Japanese claims over the German islands north of the equator and also securing German rights in the Province of Shantung. Japan was also given a permanent seat in the

The Sino-Japanese conflicts in Manchuria as ...ll as in Shanghai are incidents of such recent ...es that I do not wish to examine them at ...ength. However, I should say that Japan has ...llowed her Western teachers most effectively to ...rry out her programme of maintaining her ...hts and privileges in Manchuria and in the ...ternational settlement at Shanghai. She has ...ne exactly what Great Britain did in Egypt; ...d other Great Powers have done in various ...rts of China and other countries. Since the ...e of Sino-Japanese War of 1894-95, Japanese ...licy has been to establish herself securely in ...e mainland of Asia to check the march of ...ussian aggression. Japan has persistently tried ...win over China to her side so that Japan and ...hina may follow a common foreign policy; or ...least Chinese Foreign Policy would not be ...ti-Japanese. Failing to secure a Sino-Japanese ...derstanding regarding Japanese rights in ...anchuria, Japan has created a buffer State of ...anchukuo, so that Russia and China would ...t be able to use their military forces together ...ainst Japan in the Far East.

What the Japanese did at Shanghai has the ...ndation of precedent created by other Great ...wers—Great Britain and the United States of ...merica—which only a few years ago bombarded Nanking to protect their citizens and their property. One must not forget that Britain landed about twenty-five thousand soldiers at Shanghai a few years ago to protect the rights of British merchants and to demonstarte against the Chinese boycott of British goods. At that time, the League of Nations did not pay any attention to Chinese prayers for an investigation or intervention; because these military operations were carried on by great *Western* Powers.

Japanese action in Shanghai was started as a measure to protect Japanese rights and to protect Japanese citizens and their property, following the British precedent mentioned above. At the beginning, the municipal authorities of the international settlement of Shanghai were not opposed to Japan's landing of troops for protective purposes. When the Chinese 19th Route Army took a stand against the Japanese punitive expedition, it developed into a war which was not wholeheartedly supported by General Chiang-Kai-Shek, who was in favour of making an amicable settlement with Japan. After the Japanese operation was started, and British and American cruisers and other types of naval vessels were concentrated as observers at Shanghai, the Japanese decided to raze the forts of Shanghai, so that in future no fleet, protected by Chinese guns of the fort of Shanghai would be able to operate against Japan in the region of the China Sea. Of all the Great Powers in the Pacific, Great Britain was most upset by Japanese actions in Shanghai. British authorities were most anxious that Japanese forces should evacuate Shanghai; and therefore through British mediation an agreement was reached which enabled Japan to withdraw her forces from Shanghai and strengthen her position in Manchuria.

It is not my intention to condemn or justify Japanese actions in Manchuria or Shanghai; because I am merely relating facts and not acting as a judge. Just as Great Britain would not give up her position of supremacy in Egypt, the Suez Canal and Palestine, just because her policies in these countries might be condemned by an international body, similarly, Japan would not give up her position of control over the region of Manchukuo; even if she was condemned "as the aggressor" by the League of Nations. One must not forget that Japan fought Russia to oust Russian control over that region. More than one hundred thousand Japanese soldiers died to check Russian efforts to annex Manchuria. It was Japan which checked the Russian march into North China, for which she had to spend about a billion yen, and lastly, Japanese investment in Manchuria is immense and Japan must protect it. For political, strategic and economic reasons, Japan will keep her hold over Manchuria at any cost.

To make the Japanese position clear, I wish to mention an incident in Italian history, which has an international significance. By the Treaty

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

of Berlin of 1878, Italy was a party to a treaty guaranteeing territorial integrity of the Ottoman Empire. But after the Balkan War Italy attacked Turkey and occupied Tripoli. Many British, German, Austrian and other publicists raised a cry against Italy's action; but Turkey, defeated in the Italo-Turkish War, had to sign a treaty ceding Tripoli and several of the Turkish islands to Italy. Of course, Italian statesmen secretly secured consent of Russia, France and Great Britain—the Triple Entente group of Powers—beforehand. Just as Italy is thinking of further expansion in Africa and not giving up an inch of territory there; similarly, the Japanese are going to maintain their supremacy in Manchukuo, through Chinese consent, international sanction or arrangements with some powers, if that is possible, or by her own force, if that is necessary.

Japanese statesmen are anxious that China should recognize the present status of Manchukuo; because, if China recognizes the new status then there will be less ground for other Powers' objection to recognize it. Next to China, the opposition of the United States of America to the changed status of Manchuria is receiving considerable attention of Japanese statesmen; because the United States of America has not taken an inch of ground of China and is going to establish a new precedent in the history of colonial Powers by willingly according independence to the Philippines.

Japan knows that there would be no serious British opposition to Japanese policy in Manchuria; because Britain has virtually annexed Tibet and British-armed Tibetans have been encroaching into China proper in the rich province of Szechuan. In fact, British Tory leaders are willing to come to an understanding with Japan by agreeing to Japan's special position in Manchuria. It is needless to say that France with her possessions in Indo-China, bound by Franco-Japanese Treaty of friendship of twenty-five years' standing, is willing to recognize the new status of Manchuria. Japan knows the true nature of Soviet Russian diplomacy in the Far East. Soviet Russia, while professing friendship to China, has detached Outer Mongolia from Chinese control and practically made Outer Mongolia a Russian protectorate. Soviet Russia recognized "the People's Government" of Mongolia by signing an agreement for establishing friendly relations between the two countries on November 5, 1921. If one carefully examines this document, then it will be evident that the status of Outer Mongolia is no better than that of a protectorate or it is no better than the status of the present government of Manchukuo. In this connection it may be mentioned that, although the Soviet Russian Government was recognized by China on May 31, 1924, yet on September 20, 1924, the Soviet authorities entered into an agreement regarding the Chinese Eastern Railway, with the late Chang Tso Lin, who was the then head of "the three autonomous Eastern Provinces of China" (*i. e.*, Manchuria). By this act the Soviet authorities acknowledged the autonomy of Manchuria. From the very fact that Soviet Russia was willing to sell its rights of the Chinese Eastern Railway to the government of Manchukuo, through Japanese mediation, it became clear that if proper price were paid, Soviet Russia would be willing to side with Japan on the Manchurian question against China.

However, Soviet Russian leaders are loud against Japan, since Soviet diplomacy has been successful in securing support of France, Italy and other Powers in Europe and the recognition of the United States of America; *but there are no valid reasons for thinking that Russia will fight Japan to recover Manchuria for China.*

Just as Britain would not allow any Power to upset her position in Egypt, Palestine or Iraq and Tibet—not to speak of India, just as Italy would not allow any Power to threaten her supremacy in Albania or Tripoli, just as France would at any cost try to maintain her position in Northern Africa and Indo-China, just as Soviet Russia is determined to maintain her position in Outer Mongolia, similarly, Japan is also determined to uphold her supremacy in Manchukuo, unless Japan become involved in a war with the Great Powers. To strengthen her defensive power, Japan has already concluded Japanese-Manchukuo alliance which is in line with the British Government's proposed treaty of alliance with Egypt, and the existing Anglo-Iraqi Treaty of Alliance.

In the past Chinese statesmen tried to use Russian support or Anglo-American support against Japan. It seems now that they will have to change their policy in favour of Sino-Japanese co-operation. At least there is some evidence of the rise of a group of Chinese politicians who will follow this policy. Such a policy will, more than anything else, stabilize the situation in the Pacific.

IV

It is generally recognized that the international political and economic situation in the Pacific is rather disturbing. Sino-Japanese disputes, establishment of Manchukuo under the protection of Japan, Japanese activities towards Inner-Mongolia, Russo-Japanese tension due to the Chinese Eastern Railway dispute, Anglo-Japanese naval and economic rivalry and also American-Japanese tension on various issues may lead to a war in the Pacific.

In this connection, one may point out that a Nanking despatch, dated March 10, 1934, gave us the news that Dr. W. W. Yen, Chinese Ambassador to Moscow, in an interview predicted a war in the Far East in the near future between Japan on one side and Soviet Russia in alliance with the United States and Great Britain on the other. Dr. Yen, who was in Nanking to

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

the adoption of a sound foreign policy to
extinction of China, hinted that China
have more to gain by collaboration with
Western powers than with Japan.
Other Chinese leaders such as Dr. V. K.
Wellington Koo, Minister to France, Dr. Alfred
Minister to the United States and the South-
western politicians Tang Yi, Eugene Chen and
Woo Lu share this view and date the war for
1936, when the Soviet will have completed their
second five-year plan and the naval treaties will
have expired. The general view is that a weakened
Japan would enhance China's chances of regaining
her lost provinces of Manchuria and Jehol, but
victorious Japan, even if aided by China, would
tighten her grips on the provinces."

The above statement should not be taken
ously. This idea of a possible Anglo-American
-Russian Alliance against Japan is the
ly advocated by many Chinese nationalists of
nion School". They feel that by this means
will be able to defeat Japan diplomatically
recover Manchuria as well as Jehol from
an's grip. They are encouraged by the past
esses of Chinese diplomacy against Japan.
ough China was defeated in the Sino-
nese War (1894-95), Japan received a severe
matic defeat when China could secure inter-
ion of Russia, Germany and France to
cede all territories in the mainland of Asia.
treaty of Portsmouth (1905) concluded after
Russo-Japanese War was, from the Japanese
nt of view, a diplomatic defeat. The Japanese
ple were so incensed with the failure of
anese diplomacy that the Japanese mob of
o tried to set fire to the building of the
eign Office and threatened the life of Baron
ura, the Chief Japanese delegate. The
ese forced Japan to modify her (Japan's)
enty-one Demands" of 1915, through the
rvention of the United States as well as
eat Britain. Although the Versailles Treaty
ded all German rights in Shantung to Japan,
during the Washington Conference 1921-1922,
a recovered the very territory from Japan,
gh active support and insistence of the
ed States of America and Great Britain.
17, although by an agreement, between
an and the United States, known as Lansing-
Agreement, the United States recognized
an's special rights in all the region adjoining
a's territories, yet the very agreement was
gated by the United States Government,
the conclusion of the Washington
erence. Although Japan inflicted crushing
ats upon Chinese forces in Manchuria and
l as well as in Shanghai, Chinese diplomacy
ed Japan's evacuation of the Chinese
ory near Shanghai; and through the support
the League of Nations, Russia and the United
es, brought Japan before the bar of inter-
nal justice and condemned her as the
ressor nation; and forced Japan to resign
membership from the League of Nations.
reover, the United States, through the
Secretary of State Mr. Stimson, proclaimed a so-called Stimson Doctrine, by which the United States has decided against recognition of the changed status of Manchuria.

These successes of Chinese diplomacy and very pronounced sympathy of Signor Mussolini and the Italians have encouraged the Chinese to pursue a policy of bringing about isolation of Japan in World Politics. This is the policy of one section of the Chinese politicians. The Chinese communist leaders, who control several Chinese provinces and have a standing army of several hundred thousand men and are carrying on wars against the Chinese nationalists, are in favour of a Sino-Russian Alliance against Japan. The Nanking Government, under the leadership of General Chiang-Kai-Shek, who is a realist, is not anxious to pick up a quarrel with Japan; because General Chiang knows full well the real weakness of China. Furthermore, General Chiang and others think that the Western Powers—specially the United States or Britain—would not be anxious to fight against Japan, just to help China. They are further convinced that, if through a Russo-Japanese conflict, Russia supported by China and other powers defeats Japan, then it would be the Chinese communists who would be rulers of China. Chiang-Kai-Shek and other Koumintang leaders of the right wing are willing to maintain friendly relations with Russia, but they are decidedly opposed to any further increase of Soviet influence in China and the Far East. In Northern China, the majority of the Chinese leaders have decided that it would be unwise to provoke any further hostility with Japan. They and other Chinese leaders who are now actively engaged in the administration of Manchukuo are friendly to Japan, and wish to have Sino-Japanese co-operation.

Under the present circumstances, Japanese programme or policy regarding China is to support the political parties which will be willing to co-operate with Japan in the Far East and recognize the new status of Manchuria, created by the establishment of the Empire of Manchukuo, free from the control of the Chinese Republic. To demonstrate that Japan has no further aggressive intentions against China, Japanese have recently evacuated the passes dominating the Great Wall of North China. It has been also rumoured that Japan may be willing to agree to the abolition of extra-territorial jurisdiction in China, provided Sino-Japanese relations, involving the status of Manchukuo, be solved amicably. The Japanese contention is that, as long as Chinese politicians will get support from the Great Powers against Japan, there is less possibility of the settlement of Sino-Japanese disputes; and therefore Japan has taken steps to solve all outstanding problems with the United States of America as soon as possible.

(To be concluded)

An Address delivered before the Italian Institute for Middle and Far-East, Rome, on April 10, 1934.

THE RUSSIAN EXPERIMENT

By D. W. INDRA

NOT long ago the word 'Bolshevism' was anathema to the world outside Russia, of which the press was constantly regaling its constituents with hair-raising accounts of the alleged barbarities of the supposed monsters of the Union of the Socialist Soviet Republics.

Whatever excuse there may have been in the past for such grotesque caricature of the Russian scene, the recent achievements of the Soviets have been such as to compel attention from all quarters.

The completion of the first Five-Year Plan of the Soviets about a year ago has not ushered in the expected millennium, nor can it be denied that the execution of that plan has been attended with 'Himalayan' blunders. But after all is said and done, the net result would seem to be a colossal achievement in national reconstruction. It is an achievement well worth our attention.

Take the problem of illiteracy, the onslaught on which has been one of the principal fronts in the great Russian offensive, because Lenin had warned his followers that

> "As long as we have such a calamity as illiteracy in our country, it is impossible to talk of political enlightenment. The illiterate person is an outsider to political thought. He must be taught the A. B. C. Without literacy there can be no politics; there are only rumours, gossip, prejudices and fairy-tales."

"In 1914-15", says Maurice Hindus, one of the most authoritative writers on contemporary Russia, "compulsory universal education was a far-off dream of liberals and intellectuals. In 1931-32 free, universal compulsory education for children between eight and eleven has become a fact. By 1933-34 it will become a fact for children between eight and twelve." As early as 1920, 60 per cent of the male population of the country and 70 per cent of the female population or 68 per cent of the entire population, according to Maurice Hindus, was illiterate. In 1932 only 9 per cent of the population was illiterate.

In 1913 Russia had 859 journals with a total circulation of only 2,700,000. Now there are 7000 journals with a total circulation of 40,000,000. Book-printing has increased ten times.

This transformation which the Soviets have brought about within a decade or so under a host of serious handicaps has extorted high tributes even from those students of Russia who have no sympathy with its implacable attitude towards Capitalism. The official drive against illiteracy, however, would not have been the success that it is on all accounts but for the unofficial co-operation of the members of the Komsomol (Communist Youth Association). This organisation sent

> "volunteers throughout the whole of the Union to instruct the masses, to help in the Schools and provide accommodation, text books, copy books, and pencils; to care for the pupils' clothes so that they should not have to miss school for want of them, to organise the much needed collection of money and to do a thousand other things."
> (*Youth in Soviet Russia* by Klaus Mehnert).

Another problem to which the Soviets set themselves was the drastic overhauling of Russian farming as practised for ages by the vast majority of peasants. Russia is predominantly an agricultural country, over 80 per cent of the population making its living off the land, but the ancient division of farms into long and narrow strips with their adjacent weedgrowing ridges meant crying wastes—wastes in seed, in labour, in human and animal energy. The Five-Year Plan envisaged a great extension of farming on a collective and scientific basis, but though this part of the plan has not succeeded so well as was anticipated, not because collective and scientific farming is not inherently good but because the attempt to socialize villages, according to the distinguished authors of *'The Intelligent Man's Review of Europe Today,'* was too sudden and too vehement for the willing co-operation of the peasants with the authorities. The consensus of opinion of the experts who

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

have written on this aspect of Russian reconstruction is that collectivization has been a good thing for Russian farming, that through the abolition of small landholdings and the creation of large-scale farms, it makes possible the universal introduction of the best modern agricultural machines, and that above all it guarantees open-minded management, which can readily apply anything new that science and experience advise.

According to recent information, the harvest of last year was splendid due partly to natural causes and partly to the increasing popularity of the Soviet policy of the collectivization of land.

It is, however, in the field of industry that Russia's first Five-Year Plan has been an unqualified success. Indeed the Coles say in *The Intelligent Man's Review of Europe Today* that it has succeeded on the whole far more than any observer thought it would. Stalin was able to report to the Sixteenth Party Congress in June, 1930 that in less than a decade industrial production had been raised from 17 to 180 per cent of the pre-War maximum. By 1931 it exceeded 200 per cent. With reference to this Mr. Sherwood Eddy, who as a life-long Y. M. C. A. worker cannot be suspected of partiality to the anti-religious Bolsheviks, rightly says in his, "*The Challenge of Russia*":

> An advance of more than tenfold in production in a decade, in the face of a world depression and without foreign loans is unprecedented.

According to the same writer, the output of oil, steel, rolled metal, electro-technical apparatuses and agricultural machinery has actually outstripped the estimate in the Five-Year-Plan, while at the same time an era of gigantic building is in evidence all over Russia—factories, dams, hydro-electric power stations, irrigation plants, railways, oil wells, mining projects, vast agricultural centres for State farms and collectives and housing for industrial workers. This is confirmed by the well-known author of '*The Mansions of Philosophy*' and '*The Hope for India*', Will Durant, in his '*Impressions of Soviet Russia*'.

The Komsomol (Communist Youth Association) has its place in this industrial campaign. Komsomolites are to be found on every front as volunteers fiercely keen on helping the cause. Klaus Mehnert recounts in his '*Youth in Soviet Russia*' two instances as typical of the Komsomolite.

> "A crack in the chimney of a cement works in Sverdlovsk had brought the factory to a standstill. So as to lose no time the damage was repaired by a Komsomolite at the risk of his life in a temperature of 100 degrees."
>
> "During the erection of the Traktorstroi a brigade of Komsomolites waived, in spite of intense winter cold, their claim to working-clothes of which there was shortage, on the following grounds: 'we don't need the suits so very much. We know how things stand. They must be given to fresh arrivals so that they shall not lose their enthusiasm for work on account of externals like a shortage of clothes'."

It is not possible to exhaust within the compass of a short article all that the first Five-Year Plan has acomplished, but one should make at least a passing reference to its work in the sphere of social services.

In protective Labour Legislation and social insurance, Russia, in the opinion of Mr. Eddy, probably leads the world. The Labour Code of 1918 and 1922 introduced eight-hour day.

Today it has been reduced to an average of 7.2 hours. Instead of one day's rest in seven, one in five is now provided. Each worker rests each fifth day or six days each month. Already more than nine-tenths of the wage-workers are insured. This social insurance is in the control of the trade unions, the Commissariat of Labour and the workers themselves. While in other countries the workers usually contribute from thirty to forty per cent of the insurance funds, in Soviet Russia the workers are not asked to contribute anything.* Most generous and extensive provisions for payments for maternity and child welfare, for medical care, for temporary and permanent disability, unemployment, invalidity and old age, housing, death benefit and burial are made.† Working women who were the beasts of burden in old Russia are specially protected and as a rule prohibited from night work and from certain arduous employments. Public nurseries, provided for small children whose mothers are at work, are a notable feature of Russian life, not only in the factories but on the collective farms, and in the parks and places of amuse-

---

* *Labour Protection in Soviet Russia* by G. M, Price.

† *The Challenge of Russia* by Sherwood Eddy.

Digitized by Arya Samaj Foundation Chennai and eGangotri

ment. Provision is also made in factories and farms for newspapers, magazines, books and study courses. Workers are entitled to vacations on full pay in advance. Palaces and summer resorts of the former nobility are turned over for sanatoria, rest homes, hospitals and nurseries for their workers and their children.

All this fine humanity to a class of workers who have been the bottom-dogs in all climes down the ages was partially offset during the early days of the Bolshevic Revolution by the stepmotherly treatment meted out to the intellectuals, but the Five-Year Plan has brought into relief the importance of intellectuals in the social economy, and that class is now rapidly coming into its own.

The Russian Five-Year Plan has rooted up prostitution, and, says Maurice Hindus, "though stray remnants still linger here and there they are always under cover." This achievement, continues Maurice Hindus, "is more noteworthy when one remembers how sodden with prostitution Russia was in the old days." With the advent of the great plan, the the war on prostitution took on the character of a campaign for national safety. More than three million prostitutes have been persuaded to enter Russian industry in one capacity or other, and to deal with the confirmed prostitutes who would not abandon their profession, Government established special institutions known as prophylactoriums which are among the most remarkable institutions in Russia.

The reclamation of criminals in Soviet Russia is another fascinating story, but would be too long for recital here.

The picture of Russian achievement as presented here is far from complete, has its shadows—shadows which will presumably get touched off in the course of the working of the 2nd Five-Year Plan now in full swing. It is nevertheless a picture which every Indian Nationalist should look at through such volumes as Maurice Hindus' *The Great Offensive*, Sherwood Eddy's *The Challenge of Russia*, Klaus Mehnert's *Youth in Soviet Russia* and Harper's *Civic Training in Soviet Russia*, not indeed with a view to bodily transplanting the too red Communism of Russia on Indian soil but in order to glimpse the wonderful possibilities of progress for any people whose government can touch the keys of its emotion and set it on a co-operative march towards a vision splendid.

THE WATERS OF DESTINY

By SITA DEVI

XIII

BEFORE Sudarshan had finished speaking, Amitā cried out again, "Let other matters wait, tell me first when you are going to give us a feast?"

Sudarshan pretended to be very little impressed with the affair. "It is nothing much," he said, "Every year hundreds of boys are passing the M. B."

"But hundreds of boys don't stand first every year," interrupted Amitā.

"Who told you I have stood first?" asked Sudarshan.

Suparnā spoke now. "Surely you would not have come to tell us, if you had stood last," she said.

"But are not there other positions, besides the first and last ones?" asked Sudarshan.

"There are," admitted Amitā, "but not for you. Why don't you confess the truth?"

"Ladies must not be contradicted" said Sudarshan, "so I have perforce to admit that I have stood first."

"That is sufficient," said Amitā. "But don't try to avoid the real point. After this, you will become an ill-wisher of mankind for the sake of your career; why not earn a little merit now by feeding some good people?"

"I shall be only too glad to invite you to a feast, provided you undertake the cooking yourselves. I am against treating you to our Maharaj's cooking. People will say then that I am trying to secure patients by poisoning my guests."

Amitā burst into a peal of laughter at Sudarshan's words and said, "No, no, I don't want that sort of a feast. We are enjoying the servants' cooking everyday at home. We must organize a sort of a picnic. My aunt is a first-rate cook, we must make her take charge

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

the kitchen department. We shall thoroughly
ourselves. We shall secure our Indu and
friend Gargee also. You know them also,
you? If Gargee is there, we shall not be
want of good music. If you have got any
ds you must bring them also.
"So all that's settled," said Suparnā, "only a
item has been omitted. You have
ten to ask what the man, most concerned,
ks of your arrangements. But I confess,
don't like this custom."
"What custom?" asked Amitā. "That of
ring oneselves? Then what would you
my dear? Shall we hold a condolence
ing for Sudarshan Babu?"
"You will be perfectly justified in doing so,
behalf of my future patients", said Sudarshan,
it would be a bit premature. But why
you like this custom? Don't you think
kind of recreation is as necessary for
n beings, as food and drink?"
"Amitā won't let anybody properly explain,"
Suparnā. "I did not mean that I was
enjoying ourselves. I only wanted to
that we should have stood you a feast.
d of that, it is hardly seemly to compel
to become the host."
"I shall be host only in name," said
rshan. "You will be the real hostesses."
"Goodness gracious! What do you mean?"
out Amitā. "My dear Su, I wash my hands
this dangerous affairs." Saying this, she
l out of the room in mock horror.
"What a strange reception of my innocent
k," said Sudarshan, feeling rather awkward.
Suparnā blushed fiery red. "Really", she
"I have seldom seen a more naughty girl
Amitā. She will never learn to speak
erly. Let that be. Are you then returning
alcutta?"
"No," said Sudarshan. "What would be the
of my going there? In every lane there,
will find half a dozen doctors. I must find
place where the field is yet open."
"There are many such places in Bengal, yet,"
Suparnā. "But you won't be able to make
ghost doctor' is the only available doctor and
potions the only medicine."
"Why don't you give me the address of these
ers?" asked Sudarshan. "I hope I shall be
to compete on equal terms with the 'ghost
'."
"You may not," said Suparnā. "The
ers really need the 'ghost doctor' more, as
themselves resemble evil spirits more than
n beings."
Amitā re-entered the room at this moment
announced, "I am free on next Friday. I
know whether everyone else is. If it suits
present, we can have the picnic on that
."
"Is it quite settled, about the picnic?" asked Suparnā. "Unless that is settled, what is the use of fixing the time and the place?"

"It does not take long to settle that," said Amitā, "it is ancient custom, that you have to stand a feast, if you come out successful in an examination. It is like the admission fee, you have got to pocket it out. I promise now to stand a feast, if I come through all right."

"That is kind of you," said Suparnā, "to invite us so much beforehand. Sudarshan Babu will appear for the feast whenever he sees in the newspapers that you have passed. But where is the picnic to take place?"

Sudarshan thought for a moment, then he said, "It can take place at the garden house of Lala Bishwambharlal. He will be glad to lend it to us for a day, if my father asks him. It is a pretty place. Have you ever been there?"

"No, we have not," said Amitā. "Very well, let it be there. Will Friday suit you?"

"I am not free before three in the afternoon," said Suparnā. "But it does not matter, if it suits everyone else. I can be there at four, in the evening."

Before Amitā could say anything Sudarshan burst out, "No, no, that would never do. It is better to have it on Sunday, which will suit all."

Amitâ looked askance at Sudarshan and said, "Very well then, let it be on Sunday. Now for the list of the invited. Whom are you going to invite?"

Suparnā got up and said, "What is the hurry? I have never seen such an impatient person as you."

"Am I to sit with all my attention focussed on the tip of my nose, as you do?" asked Amitā in anger. "Sudarshan Babu, please don't listen to her. We have got only four days in hand, so we must settle everything in a hurry. Good lord! why must aunt shout for me now?" Saying this, she left the room again.

As soon as she had gone out, Sudarshan asked Suparnā, "Don't you like the idea of having a picnic?"

"I have already told you what my objection is," said Suparnā.

"I shall be much more glad and more grateful too, if you come to my party, than I shall be if you give a party for me," said Sudarshan.

"That is nice," said Suparnā, "you do good to people, and are also grateful to them if they are kind enough to accept your services. You leave nothing for us to do."

"If you enjoy the party and allow me the opportunity of being grateful, that is enough," said Sudarshan. "Don't think it will be an easy job."

Amitā came back and said, "Aunt wants you to have tea with us."

"I have already had it, before I came out," said Sudarshan.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

"Tea is like sunlight and air," said Amitā. "There can never be a question of having more or less of it. You must have it whenever you see it before you."

"That is hardly scientific", said Sudarshan. "But it is certainly more convenient. So let us go and have tea."

Today Amitā had told the servant to serve tea in the dining room downstairs. Amitā's aunt was already there. As the three young people came in, she said, "You have shown great merit, my dear boy. You have stood first, haven't you ?"

Sudarshan bowed down to her feet and said, "So your niece has already informed everyone about it ?"

"Good news must be given to everybody," said Amitā.

Taran Babu and his two nephews now came in and were told the glad news. Everybody began to talk animatedly. Suparnā was the only silent member of the party. She was by nature a reticent person, and on this occasion specially, she was feeling a certain diffidence about expressing herself too freely. It was finally settled to have the picnic on Sunday. Amitā began to prepare a list of the persons they were going to invite. Sudarshan approved of every name she suggested, and finally took his leave. He promised to inform them by the evening whether they would be able to secure the garden-house in question.

Suparnā and Amitā had to start for their respective colleges, by half past nine, so they had very little time to spare in the morning. The party at the tea table broke up very soon. Suparnā went up to her room. She should have studied a while now, but could not fix her mind on the books. She opened the drawers at random and began to arrange them, though they were all tidily arranged. She looked at the dress she was to wear that day. It was clean enough, but to Suparnā's fastidious eyes, it did not seem up to the mark. So she put out another freshly-washed dress, and then sat down on the bed silently. It was against her nature to waste time thus, but today she could not give her attention to anything. She felt a thrill of excitement through her mind, though she did not know what it was about. She tried hard to acknowledge it to herself, but did not succeed fully.

Amitā had finished giving her orders for the day and was coming upstairs singing to herself and taking down her hair. Suparnā's room faced the staircase. The curtain of the door blew fitfully with the wind, thus rendering its presence meaningless, so Amitā could easily see into the room She broke off in the middle of her song and enquired, "Why are you sitting there like a statue, my lady ? Haven't you got any classes today ?"

"I am just going to have my bath," said Suparnā, getting up.

Amitā came into the room and asked, "Can you suggest anyone besides Indu and Gargee who could be invited ?"

"Why should we bother so much about inviting people ?" said Suparnā. "Let the person who is giving the party choose his guests."

"But he has appointed you the hostess," said Amitā, "so you have got a duty to fulfil."

Suparnā gave her a playful blow on the back and said, "Why should I bother ? She who managed everything unasked, should become the hostess. As if you did not know that he meant you, not me, to be the hostess."

"So you are jealous ?" asked Amitā. "The affair has made a certain progress then ?"

Suparnā picked up her towel and soap, saying, "I am going to have my bath now. You can go on jabbering to yourself."

She entered the bath-room and shut the door violently.

Amitā smiled and went off to her own room. She liked to tease Suparnā about Sudarshan. It had not escaped her quick eyes that Sudarshan liked Suparnā rather unusually. The young man had lived in Calcutta all these years, only appearing in Delhi for the vacations. So he had not had before any opportunities of striking up a friendship with Suparnā. After appearing for the final M. B. he got a long vacation and came to Delhi to spend it. He became a constant visitor at Taran Babu's house. Not only Amitā, but other people also had begun to notice it. Sudarshan was a highly eligible match, so many Bengali families were keeping a strict watch on his movements.

Amitā knew Sudarshan's partiality for Suparnā, but she could never get to know Suparnā's heart. She was a very reticent type of a girl, one could never get any careless avowal from her. Amitā never kept any secret from her friend, but Suparnā's heart was a sealed book to her. Amitā did not know what a world of difference lay between herself and Suparnā. Amitā was only a child when Suparnā first appeared at their house to live with them. No one in Delhi knew the painful history of Suparnā's childhood. It was known only to Taran Babu, and it was highly improbable that he should ever tell it to anyone. He had promised his friend Pratul to keep it secret, and he was keeping his promise to the letter. To Amitā and her girl friends, the world meant only love and marriage. But Suparnā pretended to be so very indifferent to these two things that the girls could only feel amazement and anger at her behaviour. What a curious type of a girl ! What was the use of pretending to be a saint ? Every girl was bound to marry sooner or later, so what was the use of posing as an innocent ? But Suparnā remained rather indifferent, in spite of these jests and sallies of humour.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

It was doubtful whether even Suparnā understood herself perfectly. She had not yet forgotten the frightful curse that fate had laid on her childhood. She knew well that she could never have a happy life, in the ordinary sense of the word. She was trying with all her power to become a free and independent being. She turned away her gaze intentionally from the sweeter possibilities of a woman's existence. But it was rather difficult to go on like this. Everyone, with the exception of old Taran Babu, took her to be an unmarried girl, and treated her as such. Suparnā's indifference to certain matters struck people as strange and Suparnā had to suffer many humorous attacks on account of it. She was a beautiful girl and an accomplished one. So she could hardly escape the attention of the young men around. Suparnā attracted them much more than Amitā did. Amitā was poking fun at Suparnā all the time on this subject.

Up to this, Suparnā had retained the serenity of her mind. She tolerated Amitā's attacks good humouredly. She was always so busy with her studies that she could not spare much time for recreation. Taran Babu was a widower and he had no grown-up son, so young men seldom came to his house. The girls met young men outside, but none of them had ever been able to touch Suparnā's heart. But this time the walls of the citadel were beginning to tremble.

Sudarshan was the son of one of Taran Babu's friends, so he had permission to come whenever he felt like it. This time his visits had become more numerous than strict etiquette permitted. Two persons were beginning to feel rather nervous about it. One was old Taran Babu. He understood that Sudarshan was falling very much in love with Suparnā, but how was this to end? He had taken her to be an unmarried woman and was desiring with all his heart and soul to have her as his wife. But cruel fate had placed her in a position where she must remain for ever, hopelessly out of his reach. The old man liked Sudarshan, and Suparnā was fully as dear to him as his own daughter. He trembled at heart, whenever he thought about the terrible blow, fate was preparing for these two young people. But he was helpless.

Suparnā too was beginning to get very much disturbed in mind, not so much for Sudarshan as for herself. She could not but acknowledge to herself that her mind had lost all its calmness and serenity.

XIV

The much looked-for Sunday arrived at last. Amitā had been busy, the whole week, making arrangements for the picnic. As soon as Saturday arrived, she became nearly frantic with excitement. There was a great enthusiast about every kind of amusement. She took upon her own shoulders all the duties that should have devolved on Sudarshan. She invited the guests, made a list of the necessary things and arranged about the cooking and the music, etc. Sudarshan remained completely in the background. Amitā's aunt helped her a good deal with the arrangements, by giving all kinds of expert advice. Suparnā alone, felt rather diffident about taking any part in the work unasked. Amitā scolded her day and night on account of this. But poor Suparnā could not make her behaviour natural and normal in spite of all her efforts. She did not herself understand clearly where her difficulty lay, and she had not the courage to probe deeply into her own feelings.

On Saturday, Amitā and her aunt suddenly changed their previous arrangements to some extent. "Let us finish the cooking here by night", said Amita's aunt. If we try to have the cooking done there, we shall have to suffer many difficulties and may not get many necessary things. Besides, I too shall want to go about a bit, though I am an old woman. It is a question of cooking for only thirty or forty people at the most. If we begin very early and light all the ovens, we shall get everything ready in time."

"Certainly", said Amitā with great enthusiasm. "It's a small affair after all. We have got to cook only the curry, the khichri and the fry; the rest will come from the bazar. It will be great fun. Shall we ask Indu to come and help with cutting up the vegetables ?"

"It is too small an affair to requisition outside help", said Suparnā. "We should be able to do everything ourselves. But the marketing must be done early and someone must go to fetch the meat from the slaughter-house at night. If he goes at half past three in the morning, he will get it fresh."

Both Amitā and Suparnā got back early from their respective colleges on that day. They hurried over their tea, then set themselves to prepare everything for the picnic. They sat down on the floor of the dining room with a large quantity of potatoes and began to peel them. Sudarshan arrived at this juncture. "Look, how busy we are", said Amitā, on seeing him. "We are determined to finish everything before we reach the garden. We are leaving only the eating, to be done there."

"Did you not arrange otherwise before ?" asked Sudarshan.

"Oh, but we have changed our minds", said Amitā. "My aunt says that she would not like to sit still there, mounting guard over the cooks. She, too, would like to go about. So we thought it better to have the cooking done here, and carry the food with us. Since we are getting the use of two cars, I don't see any difficulty in carrying out our plans."

"That will be all right then", said Sudarshan. "I shall be satisfied if I get a good feed. But I came to tell you that I have invited three more guests."

"You need not worry", said Suparnā. "The

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

amount of potatoes, gathered by Amitā, is sure to be sufficient for all."

"Oh indeed!" said Amitā. "So all the fault lies with poor me? Who made the estimate pray? Don't try to be clever at my expense, or I shall hit back very nastily."

"It does not matter if we have more potatoes than we can consume", said Sudarshan, "it is far better than having to go without any. But you must let me know my share of the duties. I must refresh my memory or I shall forget everything.

"You must go and have the garden and the house thoroughly cleansed, first thing in the morning," said Amitā. "Next you must put in an adequate supply of water for drinking and all other purposes. You must also collect and guide all the male members of the party to their destination. Besides these, you may undertake to perform any other work, you want to."

"I don't want any other work", said Sudarshan. "If I feel inspired, when I am there once, I may try something more."

"There will be no lack of inspiration", said Amitā, "you might even get an electric shock."

As Amitā's aunt came in at this moment, they had to change the trend of their conversation. Sudarshan got up after a few minutes and said, "I must be off now. I have to go and inform some of my guests where they have to go. Else, there is no knowing when and where they will arrive."

"Won't your father be able to come?" asked Suparnā.

"I cannot say yet". said Sudarshan, "if he is fit, he might come. His rheumatism gives him no rest. I may take him there and bring him back early.

"Yes, yes, do bring him", said Amitā's aunt. "He must be there, since it is for you, his worthy son, that the party is being given. You must bring him somehow."

"I shall try my best", said Sudarshan. "But he is a confirmed invalid, you know, and one feels rather nervous about dragging him hither and thither."

Sudarshan left after this. The bustle of preparation went on in Taran Babu's house. Everyone felt too enthusiastic to go and have any rest, though it could have been easily managed.

It was about one at night, when Suparnā said, "Amitā, let us go and have a couple of hours' sleep or we won't be able to enjoy the picnic at all. We would only sit and nod drowsily."

"Let us", said Amitā, "but aunt, you must call us as soon as the meat for the curry arrives." They went and laid themselves down.

When they woke, the rosy light of dawn was already upon the earth. Amitā sat up in consternation and cried out, "Goodness gracious! It is already morning. Su, get up at once. Now aunt has gone and done it!"

Suparnā, too, sat up in alarm at Amitā's cry. They rushed downstairs, wrapping themselves somehow in their *saris*. Amitā looked through the open door of the kitchen and cried out, "This is very bad of you Aunt. Why did you not call us?"

The cooking was all finished and Amitā's aunt was instructing the servants how to keep everything warm. "Why is it so bad?" she asked smilingly. "You had a nice nap and now will be able to enjoy your outing to the full. Otherwise you would have felt drowsy the whole day."

"No, Aunt," insisted Amitā, "it was really very bad of you. Why should you sit up the whole night and work and why should we sleep?"

"That's all right," said her aunt, "now stop your righteous indignation. You play at being grown-ups all the year round. Now that a real old woman has arrived on the scene, you can take a little rest."

"But please, Aunt, you must go now and have a little rest," said Suparnā. "We shall do what little is left to be done. We won't start before nine, so you can have at least three hours' sleep in the meantime."

As soon as her aunt had gone out, Amitā sat down on a stool and said, "Though I pretended to be very angry still I would have felt awful without this little nap."

Suparnā was putting up the sweets and curds inside a meatsafe and replied, "That goes without saying. It would have been a horrible affair. Now everything is finished. If that car of Indu's arrives in time, we shall be all right."

"I hope Sudarshan Babu has not forgotten all about having the garden-house cleaned and arranging about the drinking water," said Amitā.

"He is not mad," said Suparnā.

"He is, to all intents and purposes," replied Amitā in a bantering tone.

"What pleasure do you get by constantly repeating a senseless remark?" asked Suparnā.

"It is not at all senseless or why should I repeat it?" asked Amitā. "Everybody with the exception of yourself admits that our young doctor is madly in love."

Suparnā frowned and said, "Well, go on saying it, if it gives you any pleasure." She locked up the kitchen and hurried upstairs.

"Don't be angry, Su" cried Amitā, and followed her.

She caught up with Suparnā when the latter had nearly reached her own room and asked, "Why did you become so mad?"

"Well, you like to hear about loving and falling in love for all the hours of the day," said Suparnā. "But I dislike it above everything."

"Are you going to become a nun, that you dislike all mention of the word 'love'?" asked Amitā.

"I may not become a nun," said Suparnā,

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

does not mean that I am to remain
eventually moonstruck."
Amitā pouted in derision and said, "You can
take it from me, my dear young lady, that you
are going to become far more moonstruck than
you, by the end of this year. I am willing to
bet fifty rupees on it."
"Very well," said Suparnā, "deposit the fifty
rupees in the savings bank; else you won't find
it when you need it, spendthrift that you are."
Suparnā entered her own room and Amitā
followed her. "Instead of quarrelling with me,
you can put out the clothes you are going to
wear at the party," she said. "Then have your
bath. It will be eight very soon. As soon as
Indu and the others arrive, we shall have
start."
"It won't take long to choose my dress", said
Suparnā, opening her wardrobe. "I won't have
to bother my head about choosing the most
suitable colour."
"But you must put on a coloured dress today,"
said Amitā. "It makes me absolutely mad to
see you going about, dressed all in white like
a widow."
"You may get as mad as you like," said
Suparnā. "But since I wear white always, why
should not I wear it now ?"
Amitā now changed her tactics. If she
insisted, Suparnā, too, would insist.
"Why did you not ever put on the *sari*.
Father gave you on my birthday ?" she asked.
Father was so sorry about it. Why don't you
put it on today ? If you put on white, it is
bound to become quite dirty by the time we
come back."
Suparnā had a horror of dirt that nearly
amounted to a mania. So Amitā's words found
a ready response in her mind. "Very well",
she said, "but I don't think anybody would
mind me if I put on a dark blue sari, with
white borders."
"It would not matter," said Amitā, "if no one
recognized you. There would be a sensation
among the crowd about a strange and beautiful
young lady."
Suparnā smiled and went off to have her
bath. It struck eight soon after. Bathing, dressing
and having one's tea,—all these three things
usually take up much time in the case of young
ladies. So when Indu, one of their guests,
arrived, the door of Amitā's room was still found
to be closed.
Indu was one of Amitās fellow-students.
She knew Sudarshan also slightly. She ran
upstairs and knocked loudly at Amitā's door,
saying, "Are you dressing up as a bride, that
it takes such a long time ? I might have as
well waited for Gargee and brought her along."
"I am not dressing up as a bride," said
Amitā from inside, "there is another person who
has more right to do it. You can enquire at
the next room. But why don't you go and
fetch Gargee ? The poor girl will be so disappointed."
"Very well," said Indu, "I shall go and bring
her. But be ready by the time I come back."
The door of Suparnā's room too was closed,
but it did not appear to be bolted from inside.
Indu rapped on it with her fingers as she passed
towards the stairs and cried, "What news here?
Are you still making preparations ?"
Suparnā opened the door and said, "We don't
take so much time to finish our toilette, my dear.
We are going to become hardened lady-doctors.
So we must act in a befitting manner."
Indu looked at her and said, "You have done
enough as it is. If you had adorned yourself
more, it would have meant homicide. I have
never seen you looking so beautiful. Everybody's head would be turned."
Suparnā smoothed the broad gold border of
her dark blue sari and said rather awkwardly,
"It is not my fault, really. Amitā forced me to
wear this. Besides I was afraid to wear white,
lest it should become too dirty in the evening
with constant going about."
"You have done quite well and need not
apologize for it," said Indu. "I am going to
bring over Gargee. You must get Amitā out of
her room in the meantime."
Indu went away. Suparnā began to gather
together the things scattered all over the floor
and to arrange them properly. Amitā quarrelled
with her about this thing, ten times a day.
"Where was the harm if one left one's room a
little disarranged ?" she used to say. "My room
is not supposed to be the show window of an
English shop. What does it matter if it is a
bit untidy, once in a while? It lends quite a
human touch to the appearance of the room."
"Don't say 'human'," Suparnā would retort.
"Say rather 'animal', it would be more apropriate.
It really looks more like a pig-sty than a room."
Now Amitā had finished dressing up. She
came into Suparnā's room and asked, "Have
you finished? Aunt has already gone down in
despair about us. But how are we to manage
with two cars only?"
"It is difficult," admitted Suparnā. "We are
four already. If Gargee brings Madhab, we shall
be five. Then there are aunt, your father,
Shibu, and Nibu. We must also take along a
servant. The big kitchen 'Degchis' will fill up
one car completely. The servant might squeeze
in somehow into it. We must get a taxi for
ourselves."
At this moment, the tooting of a horn was
heard outside. Amitā ran to the window, crying,
"Indu has come back very quickly. Good lord!
It is not Indu. Whose car is this, then?"
Suparnā looked over her shoulder and said, "It
looks stupendous. It is a Dodge Sedan. I
wonder who sent it."
A servant came to the door and called out,
"A letter for you, miss."

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Amitā took the letter and read, "Miss Suparnā Mitra. So the car has come for you, my dear young lady. Who is the Prince Charming? Shall I open the letter and see?"

"Put a stop to your nonsense and see who it is," said Suparnā.

Amitā opened the letter and began to read it. The car had been sent by Sudarshan. It belonged to the gentleman who had lent them his garden-house for the picnic. He had gone away to Gaya on business. He had requested Sudarshan to use the car also, during his absence. So Sudarshan had sent it on, for their use.

Indu came back at this juncture with Gargee and her small brother Madhab Rao. So they had no need of a taxi any longer. The ladies all got into the car that Sudarshan had sent. Taran Babu got into his own car with his sister and two nephews. In another car, went all the food, with the servants, in charge.

The garden-house was situated at a pretty long distance. It took them full one hour to reach it. Two or three men were seen standing at the gate. "Thank God," said Amitā, "that Sudarshan Babu has not failed to arrive."

(*To be continued.*)

CARTOONS FROM AMERICAN PAPERS

PRESSING THEIR CLAIMS

"Let not your left hand know what your right hand doeth."

On one day Debtor Nation bluntly informs Uncle Sam that he does not intend to pay any part of his war debt which is now due—not in cash nor in kind.

That action represents the Nation as debtor.

On the next day the Debtor Nation rushes through its Legislature a bill to seize German assets in its banks and to apply the proceeds on German debt payments which Germany has refused to make.

That action represents the Nation as creditor.

Thus with one hand the Debtor Nation puts the squeeze on Germany while the other hand waves Uncle Sam's just claims aside. This applies to all European Debtor Nations except Finland.

Evidently, they have conveniently adopted the Biblical maxim about the two hands, which is quoted above.

And Uncle Sam, in his future dealings with foreign nations, is likely to conclude that old Polonius had the right idea when he said:

"Neither a borrower nor a lender be."

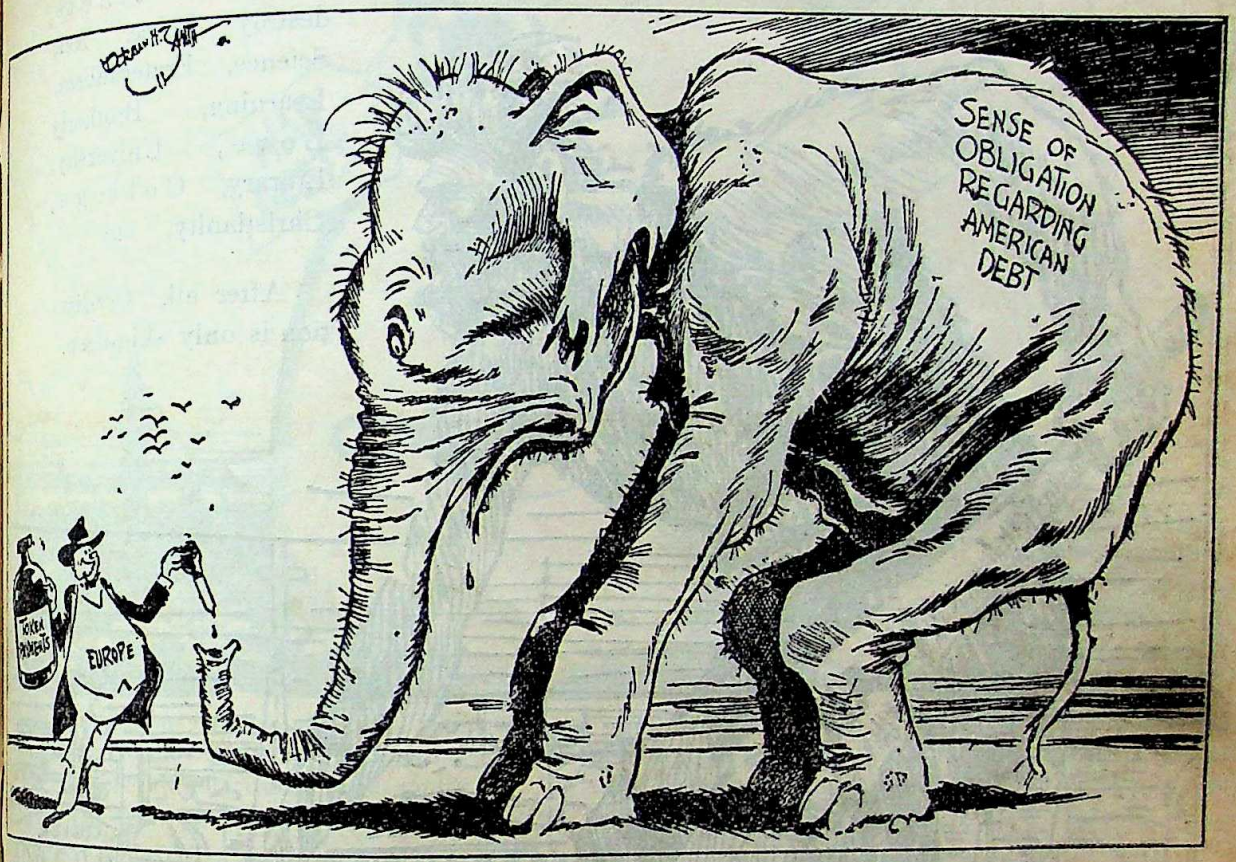
SLOWLY STARVING TO DEATH



When the allied nations of Europe first contracted their war and post-war debts with America, keen was their sense of obligation, audible were their expressions of gratitude.

But how different it is now! Europe is repaying America in gestures—while spending its money on armament, as is France, or boasting, as is England, of its budget surplus!

THE SPIRITUAL GUIDE OF RAMMOHUN ROY

By BRAJENDRA NATH BANERJI

In early as well as later life Rammohun Roy was closely associated with a learned Brahman named Nandakumar Vidyalankar, who later renounced the world and assumed the title of Harihara-nanda-nath Tirthaswami Kulabadhuta. He was a great authority on Tantra, and it was certainly to him that Rammohun owed his Tantric leanings and knowledge. It is also possible that Rammohun learnt Sanskrit from this Pandit.

Not many authentic particulars of Hari-haranand-nath's life are known, though all the current biographies of Rammohun give some anecdotes about him. It is also known that he published an edition of the *Mahanir-vana Tantra*. I have, however, recently found some details of his life in accounts given by contemporary newspapers, and also in a statement recorded by himself when he was called as a witness in a case in which Rammohun was involved. These meagre details are pieced together here and will give some idea of at least the respect in which he was held for his learning.

In his deposition, which is dated 27 August 1818, Harihara-nanda-nath says about himself: "Nandakumar Vidyalankar of Manicktala in Calcutta Pundit aged fifty-six years or thereabouts . . . He is a Brahmin and maintains himself by the donations and contributions of his disciples *shishyas*. . . He hath known the Defendant Rammohun Roy from the time that the said Defendant attained the age of fourteen years and hath ever since been on the most intimate terms with him."

The statement that he was fifty-six years of age in 1818 tallies perfectly with the information about his age in the obituary notice published in the *Sumachar Durpun* on February 11, 1832 shortly after his death, and gives his date of birth as 1761-62. Another interesting point to note is that while in a document dated Rangpur, January 1812, he gives his place of residence as Palpara, near Suksagar, in a document dated December 1799 he gives it as Raghunathpur—the village in which Rammohun went to live in 1817 after leaving his paternal home.

The obituary notice referred to above is quoted in full below:

> ATTAINMENT OF SALVATION.—Nundokoomar Beedyalungkar was a teacher at Palparha, near Sook-saugur, and was the elder brother of Ramchandra Beedyabageesh, teacher of the law shastras in the Calcutta Sungskrit College. It would be difficult now to find any person so conversant with the Nyadurshuns and tuntras as the Beedyalungkar Bhattacharjya was. We never saw any one who had such a command of language. When he was very young he relinquished secular life, and travelled in many directions; and for nearly the last twenty years he resided at Benares. Many Rajas at Benares, and many of the inhabitants of Calcutta and of the Western Provinces, were his religious disciples. When he had lived about twelve years in Benares, he came for once to Calcutta, and then published a book called the Koolarnuba. The people of Benares greatly honoured him; and we have heard that after he had relinquished secular life he obtained the title of Huree-Huranundunath Teerthuswamee-koolabudhoot. At length, when seventy years of age, he was taken to God at Benares, at the full moon on the morning of the 5th of this March [17 Jany. 1832]. We doubtless grieve for his death; for it will be very difficult now to find his like. He has left only one son, Mritoonjoy Bhuttacharjya, who resides with his uncles.

The *Kularnava* referred to in this account raises an interesting point. There is included in the collected works of Rammohun a work with the same name. Can it by any means be indentical with the *Kularnava* mentioned by the *Sumachar Durpun*?

In the *Calcutta Journal* of April 11, 1819 (pp. 119-120) I have found a letter on the practice of *Sati* written by Harihara-nanda. It appears that the letter was originally published by the *India Gazette* from which it was reproduced by the *Calcutta Journal*. The most interesting fact about this letter is that it was almost certainly written by Rammohun himself, as Harihara-nanda did not know English. The whole letter is given below:

BURNING OF WIDOWS

On this occasion we cannot refrain from ...ring insertion to the following Letter: to shew ...w while Christians are thus indifferent to the ...ecution of those cruel and bloody rites, a large ...d powerful class of Hindoos themselves are ...ooked at the practice, as being nothing short ...f wilful and deliberate Murder!

TO THE EDITOR OF THE INDIA GAZETTE.

Sir,

Without wishing to stand forward either as the ...dvocate or opponent of the concremation of ...Widows with the bodies of their deceased Husbands, ...or ranking myself among Brahmuns who consider ...themselves bound by their birth, to obey the ...ordinances and maintain the correct observance ...f Hindoo law, I deem it proper to call the ...attention of the public to a point of great ...importance now at issue amongst the followers of ...that law, and upon the determination of which, the ...lives of thousands of the female sex depend.

In the year 1818, a body of Hindoos prepared ...a petition to Government, for the removal of the ...existing restrictions on burning Widows, in cases ...not sanctioned by any Shastur, while another ...party petitioned for at least further restrictions, ...not the total abrogation of the practice, upon ...the ground of its absolute illegality. Some months ...after, Bykunthnauth Banoorjee,* Secretary to ...the Brahmyu or Unitarian Hindoo community, ...published a tract in Bungla, a translation of which ...in English is also before the public, wherein he ...not only maintains that it is the incumbent duty ...of Hindoo Widows, to live as ascetics, and thus ...secure divine absorption, but expressly accuses ...those who bind down a Widow with the corpse ...of her Husband, and also use bamboos to press ...her down and prevent her escape, should she ...attempt to fly from the flaming pile, as guilty of ...deliberate woman murder.

In support of this charge, as well as of his declaration of the illegality of the practice generally, he has adduced strong arguments founded upon the authorities considered the most sacred.

This tract we hear has been generally circulated in Calcutta, and its vicinity, and has also been submitted to several Pundits of the Zillah and Provincial Courts in Bengal, through their respective Judges and Magistrates. It is reported too, that consequent to the appearance of that publication, some Brahmuns of learning were requested by their wealthy followers to reply to that treatise, and I was therefore in sanguine expectation that the subject would undergo a thorough investigation.

This report has now entirely subsided, and the practice of burning Widows is still carried on, and in the manner which has been I declared illegal and murderous. At this I cannot help astonishment; as I am at a loss to conceive how persons can reconcile themselves to the stigma of being accused of woman murder, without attempting to shew the injustice of the charge, or if they find themselves unqualified to do that, without at least ceasing to expose themselves to the reiteration of such a charge by further perseverance in similar conduct. I feel also both surprise and regret that European Gentlemen, who boast of the humanity and morality of their religion, should conduct themselves towards persons who submit quietly to the imputation of murder, with the same politeness and kindness as they would shew to the most respectable persons; I however must call on those Baboos and Pundits either to vindicate their conduct by the sacred authorities, or to give up all claims to be considered as adherents of the Shasturs; as if they do not obey written law, they must be looked upon as followers of blind and changeable custom, which deserves no more to be regarded with respect in this instance, than in the case of child murder at Gunga Sagur, which has long ago been suppressed by Government.

March 27, 1818. HURRIHURANUND.

* He was secretary to the Atmiya Sabha or ...ty Society started by Rammohun.—B. N. B.

THE TREATMENT OF INFANTILE TUBERCULOSIS IN SWITZERLAND

By A. K. MAJUMDAR, M. A.

"My little child"—in tears she said—
"To wake and weep is mine.
But thou canst sleep—thou dost not know
Thy mother's lot, and thine."

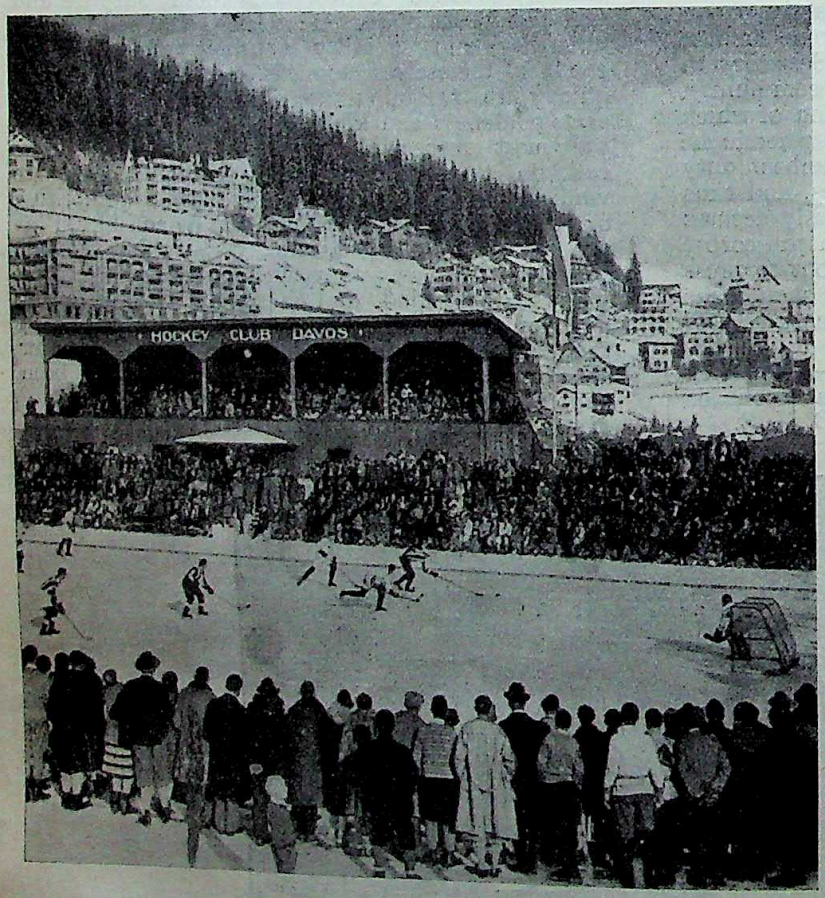
THAT there is a great deal of suffering among grown-up men and women is sad enough; that sickness robs the faces of many growing boys and girls, just blooming into life, of the glow, the warmth of life, is sadder still; but saddest of all is the sight of infants and children in the grip of the deadliest disease which civilization has brought into society,—I mean Tuberculosis. What a pity that the innocent little infant, who has not known what life means, who cannot be imagined to be guilty of any sin of thought, speech or action, who is expected to be

"all the day long caressing and caressed",

should have been tied down to the sick-bed by the most relentless disease before

". . . . its little tongue had just begun
To lisp the names of those it loved the best."

Owing to the absence of special sanatoria, clinics and preventoria for tubercular children in most of the health resorts in India, I had no idea of the large incidence of tuberculosis among infants and children; but in the course of my recent European tour I have witnessed with pain the cruel ravages of this great scourge of our civilization. The visits that I have paid to some of the Swiss establishments for the cure of tuberculosis among children and for its prevention, have evoked in me unbounded praise and admiration for the excellent way in which infants and children are being treated there. A brief description of some of them may not be without interest and perhaps profit, to many of my countrymen. It is in this spirit that this paper has been written.



Ice Hockey at Davos

In the company of my esteemed friend, Dr. R. K. Kacker, Superintendent, King Edward Sanatorium, Bhowali, India, who recently visited Switzerland to enrich his already wide experience by garnering first-hand information regarding the recent researches in the treatment of tuberculosis in that country, I visited on October 16, 1933, the *Sanatorium Des Enfants, Leysin*, which is a sanatorium and also a preventorium for infants and children with pulmonary tuberculosis or those predisposed to it. We had obtained introductions from our friend Dr. L. C. Vauthier, Director of the *Sanatorium Universitaire Swisse*. In the absence of the Medical Superintendent who had gone to Paris to attend a medical conference, we were kindly received and shown round by the non-medical lady-secretary. The intelligence, ability, intimate knowledge of the technique of tuberculosis treatment, and the skill shown in interpreting the X-Ray photographs by this non-medical young

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

were simply astonishing. Through the courtesy of the authorities I had the pleasure of visiting this institution again a few months

This *Sanatorium des Enfants* is nicely located on an elevation, which commands a beautiful panoramic view and at the same time presents to the children the pleasing sight of life on the road below. It is chiefly intended for Swiss children of both sexes, particularly those of the Canton of Vaud, but it admits children of other nationalities too. In 1932 there were in it 98 children, who were distributed as under :—

'Swisses' :	Vaudois	30	
	Confédérés ..	34	64
		—	
'Etrangers' (foreigners) :	France	24	
	Italy	5	
	Poland	2	
	Roumania ..	1	
	Spain ...	1	
	Belgium ...	1	34
	Total		98

The Sanatorium was opened in a chalet or typical wooden Swiss Cottage, and the present magnificent building was constructed in 1910. It is what may be called a *Sanatorium Populaire des Enfants* (a popular or State Sanatorium for children), belonging as it does to the public, for is maintained from the public or State funds, (opposed to one belonging to an individual body. It is under the medical supervision a very senior physician, Dr. Morin, and there also a resident physician who is assisted by number of Sisters or trained nurses. Besides, dining hall, kitchen, office, etc., on the ground-, there are flats for the residence of the nts, and for each flat there is a Sister and a lady teacher who gives lessons in the Swiss languages (French, German and ish), arithmetic, knitting etc ; but there is an ional nurse for the third floor which is ially reserved for little infants. Each flat its own dormitories, balconies, water-closets, -rooms with shower baths, isolation rooms serious cases, closed wall cupboards for the es of the children, kitchen, etc. The sana- m is provided with a good laboratory, an ay apparatus, a pneumo, thorax apparatus complete equipment of Ultra-Violet Rays in a rate room where five patients can be treated a time. The following are the prices of beds— ges for each bed or patient) :

4 Swiss francs (Rs. 3-8) per day per head
5 " " (Rs. 4-6) " "

These charges include board, lodging, lighting, heating, medical attendance, medicines X-Ray screening. The extras are X-Ray photograph (radiographie) 20 francs (Rs. 17-8) and laundry charges. The charges for board are payable for each month in advance.

As stated above, this sanatorium is both a preventorium and a hospital for the treatment of children smitten with pulmonary tuberculosis. The ages of the inmates range from two to twenty years. About a dozen are under 10 years and there are only half a dozen who are over 16 years of age. One of the few snapshots taken by me of what may perhaps be fittingly called "mildewed flowers" is given below. It is impossible for me to describe the depth of my sorrow when I saw, in the grip of the deadly disease, these innocent infants and children whom one would have expected to run and play about, to fill their mothers' hearts with the promise of healthy growth and to fill their homes with their joyful notes. As the majority of them are mere infants and children, the four walls of all the dormitories have beautiful paintings of animals and scenes of child life in bright colours When the weather is good, they spend the greater part of the day on the broad balconies which are provided with curtains for protection against the strong sun,

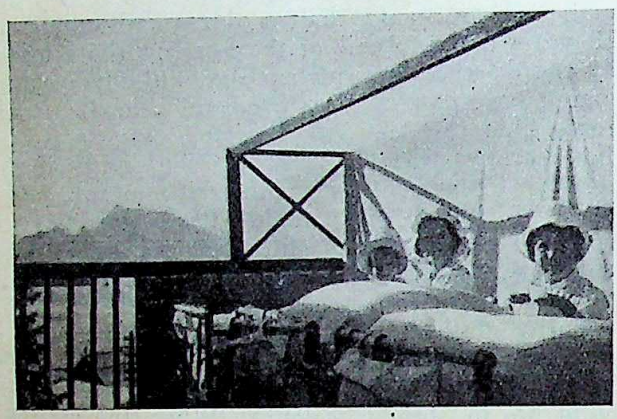
"Mildewed Flowers",
Sanatorium des Enfants, Leysin

when necessary. On each flat the long balcony has iron railings, five feet high, to prevent any children from falling, and there is also a glazed wooden sliding partition to separate the advanced cases from the early ones. There are special yellow glass panes on the balcony and all children use a particular type of linen caps and deep-tinted goggles for the protection of their eyes against the glare of the sun. This is very necessary in a country where the hill-tops, hill-sides, valleys roads and house-tops are covered with snow for nearly seven months in the year. The children come out and play about in bright weather. Three sets of X-Ray photographs of each patient are maintained, namely, (1) one set of large or full size photographs, taken every three months and arranged in neatly labelled big envelopes, (2: one set of

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

photographs of reduced size pasted in the patient's history register, in which are also noted in logical sequence and chronological order the results of X-Ray screenings with sketches where possible, of sputum, blood and other analyses; (3) one complete set of photographs of reduced size placed in a



"Human Flowers", Le Chalet, Leysin

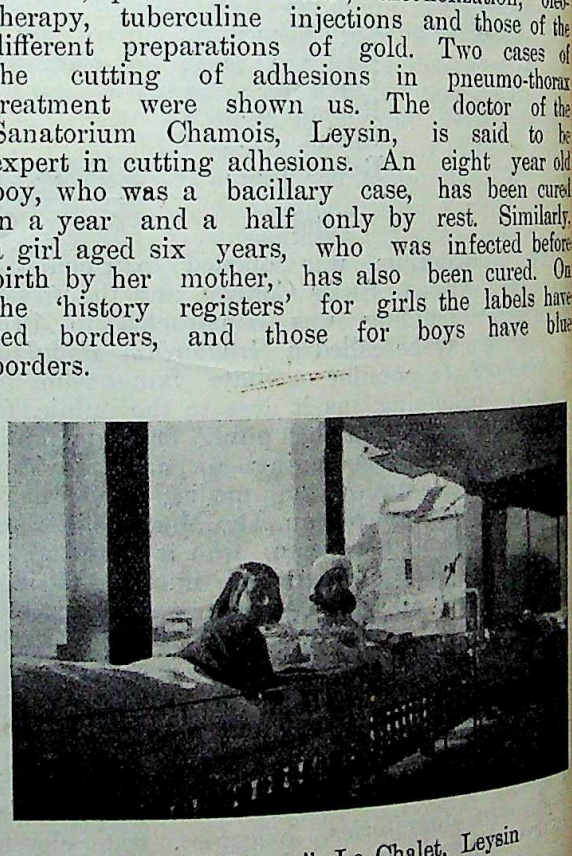
transparent envelope and hung by the patient's bedside, where there is also a chart of temperature, pulse beats, records of A. P. (artificial pneumo-thorax), special injections, etc. Correspondence is allowed once a week. The education of these children is not neglected. For each flat there is a lady teacher who gives lessons in the morning. I have seen some of the exercise books which are exceedingly neat and methodical. In the bath-room there are pigeon-hole cupboards, and in each pigeon-hole are put the soap, tooth-brush, tooth-paste or mouth-wash (Odol) of each child in such a way that they do not get mixed up with those of other children.

The third floor is a preventorium. Infants and children, predisposed to tuberculosis, live here in large dormitories and on broad, sunny balconies. In each of the dormitories for the youngest infants, from two to six years of age, there are six beds. A small bath-tub, looking like a play-thing, is fixed in the wall. There are two Sisters or nurses on this flat and one of them is in constant attendance on the infants. There is an excellent bath-room with seven wash basins and another room with five shower baths. Here there are several girls between the ages of 12 and 14 years, among whom there are two alcoholization cases, one of oleothorax, two of simple pneumo-thorax and one of double pneumo-thorax. The last-named is a boy eight years old. The milder cases are separated from the more advanced ones.

On the second floor there are well developed cases of tuberculosis. The bacillary cases are separated from the non-bacillary ones. A twelve year old girl had come with a big cavity in the lung five months before my visit, but the phrenic evulsion has succeeded in her case and her cavity has almost closed up. There is another child, 13½ years old. In her case pneumo-thorax has succeeded and the cavity has become very much smaller. In another case, age 13 years, A. P. has succeeded.

The first floor is entirely reserved for boys with developed symptoms of tuberculosis. There is a boy aged 13 years in whose case double pneumo-thorax has been successful. It is administered one week in one lung, and in the next week in the other lung, and so on.

The boys do a lot of reading and drawing, and the girls reading and knitting, The various means of treatment adopted here are the Ultra-Violet Rays; pneumo-thorax, both single and double; phrenic evulsion; alcoholization, oleo-therapy, tuberculine injections and those of the different preparations of gold. Two cases of the cutting of adhesions in pneumo-thorax treatment were shown us. The doctor of the Sanatorium Chamois, Leysin, is said to be expert in cutting adhesions. An eight year old boy, who was a bacillary case, has been cured in a year and a half only by rest. Similarly, a girl aged six years, who was infected before birth by her mother, has also been cured. On the 'history registers' for girls the labels have red borders, and those for boys have blue borders.



"Human Flowers", Le Chalet, Leysin

For the treatment of "surgical tuberculosis" that is, glands, bones, joints, etc. among children, there are special institutions at Leysin, such as *Les Fleurettes Le Florimont, Le Buis, Le Chalet, La Rose des Alpes* etc., all under the medical supervision of the world-famous Dr. A. Rollier, M. D., but the most important one is *Le Chalet*, which was his first clinic, opened in 1903. By the kind permission of Dr. Rollier, I visited *Le Chalet*, on January 11, 1934, at 10 A. M. In Europe etiquette requires that one must obtain previous permission or an introduction in order that one may visit an institution like

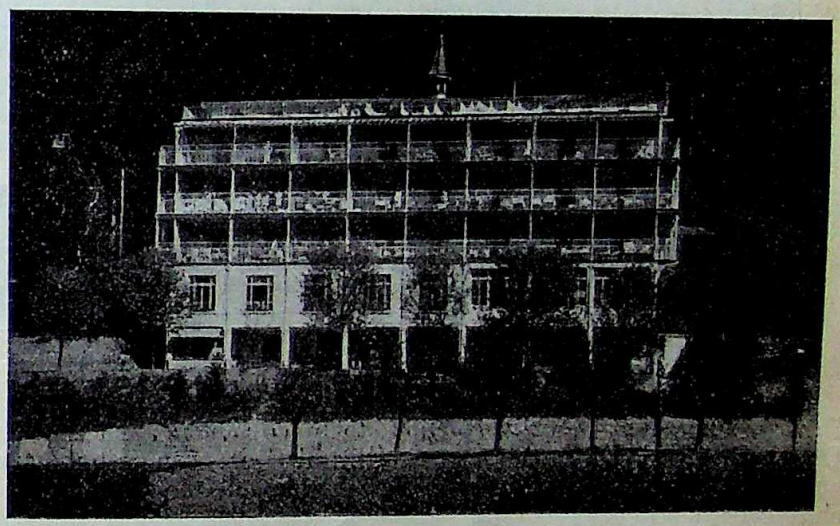
CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

I was received by the Manager and was introduced to the lady-teacher who speaks French and English fluently. This lady showed me round and explained to me the special features of this institution. On the ground floor, just opposite the office, is a room which is a combined *Salon d'Attente* (waiting-room) and library. It is very well furnished and has a number of large, beautiful pictures. There are 1,000 volumes in the library, all having thick blue covers on, serially numbered and neatly arranged in glazed almirahs. Besides some adults, there are 30 children, boys and girls, between the ages of 5 and 14 years. At the time of my visit they were having their "sun-cure" on the roof and balconies on the first and second floors, and on the solarium at the top. They were also learning their lessons. Very young children and infants are kept together, and of the others, the boys are kept quite apart from the girls. There is a trained-up teacher who teaches the children French, arithmetic, history and geography. Knitting and sewing too are taught to such girls as can do them, and drawing is taught to two or three children who have a special aptitude for it. The school hours are from 9.30 to 11.30 A. M. and from 3.30 to 5 P. M., subject to health and the weather permitting. There are children from the French and German speaking parts of Switzerland, France, Germany, Jugoslavia, Tunis, Morocco, two from Palestine and one from Perth. As there is only one teacher, and the children who receive their lessons lying in bed or on lounge chairs, are distributed in three different classes, they cannot be taught like the regular school classes. While one batch does some oral work, another does some written work. Several students write a very good hand and the dictation done is quite creditable. The infants have small ball-frames for counting and doing easy calculations. The addition and subtraction and numeration, simple addition and subtraction have been taught intelligently. The elder boys and girls do harder sums in arithmetic. History and geography are learnt with the aid of atlases. The infants take their 'sun-cure' on the solarium. I was exceedingly delighted with their songs and cheerful appearance. A few snapshots taken by me of these "human flowers", are reproduced in this paper. *Le Chalet* is a *clinique* de Rollier or a clinic maintained by the Canton Vaud. The charges are low, 5 francs a day for this reason this house is generally full. Dr. Rollier once in the course of a conversation with me remarked: "Because these children spend the greater part of the day in the open air—on the balconies and on the solarium—they keep mentally alert, and actually do as much work in two hours in the morning as the other children of the local State school do in the whole day."

In the same way there are some very good institutions for tubercular children at Montana-Vermala, which is also in French Switzerland. It is in the Canton of Valais. It can be reached in half an hour by the funicular railway from Sierre, which is a station on the Milan-Simplon-Lausanne line. The chief of these institutions are the Home d'Enfants *Le Mayen*, 250 francs per mensem, "*Lumiere*" *and* "*Vie.*" 5 francs (Rs. 4-6) a day.

Davos is the oldest, largest and finest Alpine health resort in the Canton of Grisons in Switzerland.

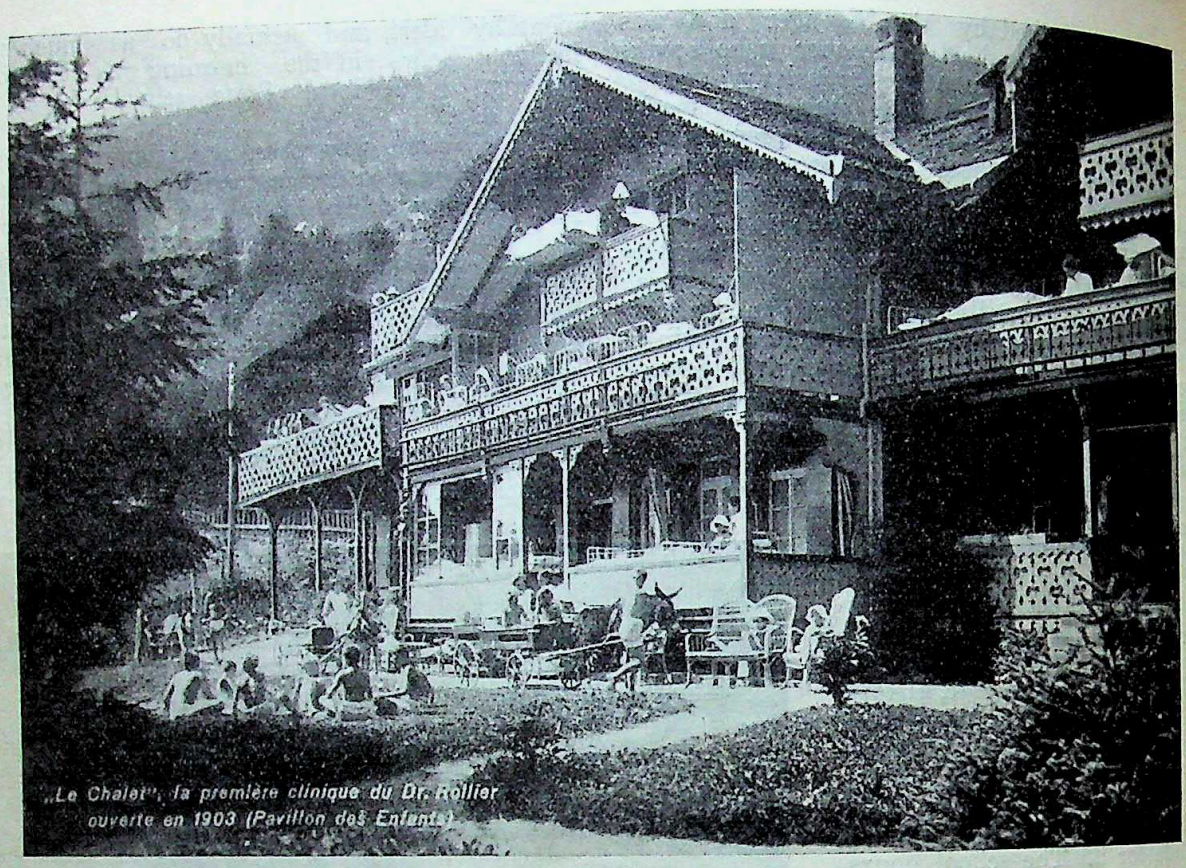


Sanatorium des Enfants, Leysin

It is famous all over the world as a health resort and centre of winter sports. Its altitude is from 5000 to 5,500 feet above the sea level. It has two railway stations, namely Davos-Dorf and Davos-Platz. The sanatoria are all at the latter place. From October till April it is covered with snow. Of all the health resorts in Switzerland, Davos is most famous for its long level walks, its fine municipal gardens, its market square, excellent shops, libraries, churches and palatial sanatoria. A very large number of English-speaking visitors from Great Britain and America come here for treatment or sports; and not only the sanatoria, clinics, hotels and boarding houses have English-speaking men and women on their staffs, but most of the shop-keepers and business people speak English. Messrs. Thos. Cook and Son have an agency here. Davos is reached by a mountain railway in an hour and a half. There are three excellent sanatoria for tubercular children maintained here by the Pro Juventute—and a private sanatorium for children, all under the medical supervision and care of Dr. J. L. Burckhardt, Director of Kindersanatorium Pro Juventute,

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri



Clinique Le Chalet, Leysin

Davos-Platz. I had an introduction to him from Dr. D. Siegfried, Director of the Central Secretariat Pro Juventute, Zurich. This group of children's sanatoria is built on a higher level from the main road below. The main building is provided with an X-Ray apparatus, a laboratory and a room for the examination of patients by the doctor. Most of the rooms have six beds each, with running hot and cold water, bath-room, dining hall, kitchen, etc. and the houses have their full complement of nurses, housemaids, etc. The total number of nurses, including four in training, is 15, and the present number of children under treatment is 175. There are two assistant physicians and one head physician, Dr. J. L. Burckhardt. The inclusive charges for infants are 6 francs (Rs. 5-4) a day and those for children are

Age	Summer	Winter
7-15 years	Frs. 4-50 (Rs. 3-15)	Frs. 5 (Rs. 4-6)

The education of such children as are not seriously ill is not neglected. There are satisfactory arrangements for the teaching of languages, arithmetic, geometry, history, geography etc. There are well furnished regular class-rooms with modern desks, chairs, etc. and the teaching staff consists of four teachers, two being for the regular lessons and two for teaching needlework, knitting, etc.

In the same part of Switzerland there is a new but smaller health resort called Arosa. It is very well laid out, and the beautiful shops, the lakes, the high snow-covered moutains make it a most charming place. It is also a great centre of winter sports. But the altitude is nearly 7000 ft above the sea level and therefore the cold is intense. In the winter the lakes are frozen. Here too there are several "kindersanatoria" or sanatoria for children, which are very good institutions and are well managed, but the place is fast developing into a winter sports centre.

Leysin appears to me to be the most suitable place for Indians. It is easily reached from the Italian ports, Venice and Genoa, and from the French port Marseilles. The altitude, which is 5000 ft above the sea level, is in its favour. For more than six months in the year it is covered with snow. The sanatoria for pulmonary cases and clinics for surgical cases are excellent. The doctors and at least one nurse at each house speak English. It is far less expensive than any other Swiss health resort.

The institutions mentioned above are all well organized and efficiently managed. The infants and children look as happy as they can be expected to in the circumstances. In our country not many cases of early tuberculosis of infants and children are detected, and there is hardly any satisfactory arrangement, specially for their treatment.

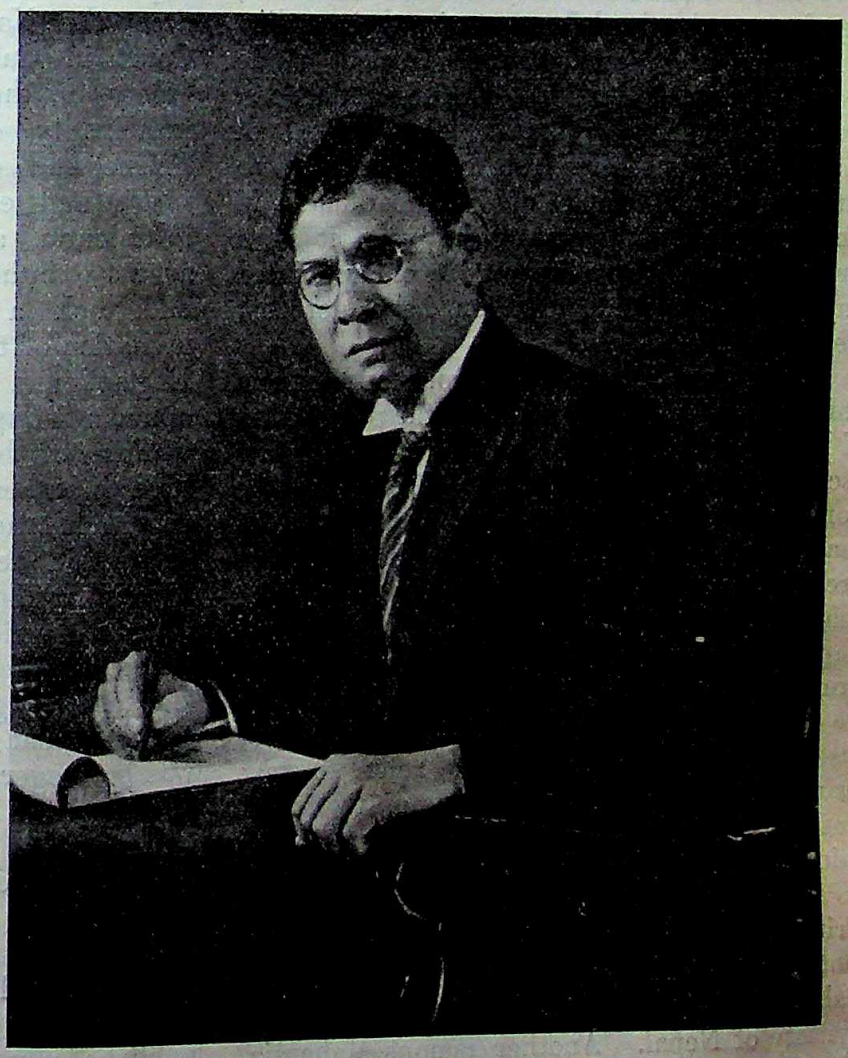
RAJA JAI PRITHVI BAHADUR SINGH

By M. KRISHNAMURTI

An outstanding, and perhaps the most picturesque, figure at the recent Parliament of Religions which met in Chicago, was a visitor from the East—Raja Jai Prithvi Bahadur Singh of Nepal. His visit to the United States of America was greeted with great enthusiasm by the press of the country and his presence at the Parliament, together with His Highness the Gækwar of Baroda, imparted unusual interest to the proceedings. Here for the first time were princes and potentates sitting in solemn conclave by the side of priest and yellow-clad monks in an attempt "to focus the highest spiritual inspiration available on the solution of the world's present problems." In the words of the conveners, Raja Jai Prithvi Bahadur Singh's work at this unique Fellowship of Faiths was privileged to form "the most complete, fundamental and convincing embodiment of the purpose for which the Conference was brought together."

We have said that Raja Jai Prithvi is a picturesque personality. His, however, is not an outward picturesqueness. He has none of the oriental pomp and panoply associated with oriental princes. Clad in the simple costume of the West, speaking in soft and deliberate tones, with a manner that has not lost its natural shyness inspite of extensive travels, Raja Jai Prithvi is what the *New York Times* described as "essentially the scholar—not the demagogue." He has indeed none of the accoutrements of the demagogue: neither the catch-words, nor the language and gestures that stir up sudden popular enthusiasms.

The picturesqueness of Raja Jai Prithvi is in his life, which reads like a story-book. The very land of his birth, Nepal, has a mystic glamour all its own. Its soft-eyed, rose-cheeked women have a singularly alluring beauty, and their intense joy of living finds its expression both in their movements and love of colour. The men of Nepal have long been



Raja Jai Prithvi

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

famous for their bravery and skill in war, but it is not equally well known that they can wield the chisel as deftly as the *kukri* and that the Nepalese wood-carvings are things of rare charm and grace. Before the recent great earthquake, Nepal possessed innumerable art-treasures and beautiful temples, but nature in one of her terrible moods has laid waste the patient labours of many centuries. Nevertheless, the spirit that wrought these last wonders is still alive and will rise again in new glory like the phoenix from its ashes. The Nepalese are a patient and persevering people, and though the recent catastrophe has left their fortunes shattered, their courage remains unbroken. Jealous of their natural seclusion, they have maintained for centuries their policy of isolation and preserved their ancient mode of life undisturbed by outside influences. Only once in the year, during the festival of Shivaratri, are pilgrims from India suffered to journey to the temple of Pashupathinath in Khatmandu: for the rest of the year it is a forbidden land where life goes its old appointed way and custom and tradition have not lost their supremacy.

Even more removed from and almost unknown to the outside world is the principality of Bajang, to whose throne Raja Jai Prithvi ascended as a boy of eleven. It lies in the north-west corner of Nepal and forms the chief feudatory state of that kingdom. So primitive are the conditions in this mountain state that the Raja confessed to an American newspaper-man that he knew neither the extent nor the population of the State over which he ruled for many years. Raja Jai Prithvi was the first of a long line of rulers to start primary education in his state, to found hospitals and build such roads as the mountainous nature of the country allowed.

Born in a family of autocrats, Raja Jai Prithvi is the most democratic of men. His mother's father was the great Maharaja Jung Bahadur, the founder of the present Rana dynasty of Nepal. Another famous Maharaja, Sir Chandra Shumshere Jung Bahadur Rana, was his father-in-law. On his father's side, the Raja is descended from a noble clan of Rajputs who migrated to the Himalayas during the Muhammadan conquests, and there founded the principality of Bajang.

Fate, who loves paradoxes, thus placed the boy Jai Prithvi, who was to grow up into a great believer of the oneness of humanity, in the most aristocratic and exclusive traditions. "My early up-bringing," observed the Raja in a speech he delivered in America, "was calculated to make me a good ruler of my mountain state." "A good ruler", added the Prince somewhat humorously, "means in my part of the world an autocratic, though a benevolent, governor of his people."

His marriage to the daughter of the then Maharaja of Nepal brought the Prince in close association with the affairs of the Central Government, in which he held several important offices. He was also for some time the Napalese envoy at the Viceregal Court in Calcutta. But neither the great offices of the kingdom, nor the cares of his principality could hold him for ever. The Prince had come in contact with Western ideals and education during his student days in Calcutta, and, later, had accompanied his august father-in-law when the latter undertook a voyage to England at the invitation of the late King Edward. Both in England and France the young prince had abundant opportunities to witness the actual working of democratic institutions. Born and bred to autocracy, he had viewed at first with suspicion, then with growing conviction, the success of democracy in the West. Prior to his visit to Europe, it was not difficult for the Raja to believe that he had been divinely called to the rule of his state, in the good and fatherly government of whose people lay the fulfilment of his life. On his return, he was no longer sure of himself and his mission, and for years he passed through great inward struggle. At last, he laid aside his possessions and the splendour of his offices and, followed by his wife and but a handful of servants, migrated to India, where he has spent the rest of his life in quiet pursuit of his ideal. During this period he has written and published several books, founded institutions and lectured in three continents. He might easily have been famous but for his own reserve and distaste for publicity.

Raja Jai Prithvi is a born thinker. In his voluminous book *Humanism* he has given to the world the result of his labours extending

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

over years and embodying his philosophy of life. In an article of this kind it is of course impossible to refer even very feebly to the thoughts set forth in a book of nearly one thousand pages. But we may ask here, What was the quest that moved this Prince to cast away the pleasures and security of his life? It was, as always, the quest for a formula that would yield the secret of happiness to himself and to all of his kind. Has the Prince discovered the formula? He confidently believes so. He declares that the formula that shall yield our race true happiness is the formula that shall adequately express our innate oneness. In the Raja's opinion, all our problems, whether political, economic, social, religious, etc., are but symptoms of one disease. This disease, he explains, is a wrong outlook of life, arising from a false and exaggerated emphasis that men have laid on their superficial differences, disregarding almost entirely their essential unity. Permanent peace and happiness shall be a reality only when we shall have unlearned this vicious lore by which humanity has been divided into different and often hostile groups of caste, creed, race, class, nation, etc.

How shall this be done? What is the formula that will effectively express our oneness? Is it Communism? Or, again, is it Fascism? Is it Democracy? Or, to be sure, is it popular Dictatorship, which in recent times, has supplanted several unpopular democracies? The test that Raja Jai Prithvi would apply to any movement is the question, Does it make men to think and work in terms, not of this or that group, but of their heritage as human beings? If it does, then, it is the true formula. If it does not, you may be sure, it is only another addition to the long list of disintegrating influences that have broken up our homogeneity and caused intestine feuds.

THE INTERNATIONAL CONGRESS OF WOMEN

By IDA M. GURWELL

Place: Palmer House, Chicago.
Event: International Congress of Women.
Purpose: Peace and Civilization.

WOMEN, women, everywhere! Delegates from Europe, from Asia, from America. Jews, gentiles, coloured women leaders, journalists, composers, poets, presidents of womens' clubs and their delegates. Thirty foreign countries sent delegates; thirty-five clubs and organizations, some national, some international, were represented from America, in addition to scores of individuals who attended because of their interest in the subjects discussed. Women met in the Assembly Halls and overflowed into all the available rooms adjoining. Almost unbelievable in mid-summer with a thermometer vascillating and uncertain, but one that for the entire Conference could be depended on to be somewhere around ninety-five, that here assembled were delegates representing five million women intent on the common cause, Civilization.

These delegates represented the very finest in womanhood. They came with a full knowledge of their responsibility as leaders. The association within itself was elevating and inspiring.

Under the able leadership of Lena Madesin Phillips, President of the Congress, weighty subjects, Gargantuan in size and purpose, were handled in a most efficient way. The meetings under each department head went forward with a minimum of wasted time and effort. Each person was given the privilege of discussion and the right to disagree. One doubts if chairmen of any meetings of even fewer numbers and lesser luminaries ever kept to the purpose of the meeting any better than did these chairmen. No one could be a part of this great five-day Conference without a feeling of pride. Women have come far. We marvel at the efficiency and despatch that made it possible for every important question coming before the Congress to be given due consideration, as well as the careful handling of the mountains of detail that follow in the wake of a meeting of such varied interests and stupendous proportions. It took careful systematizing and exact timing to accomplish this.

The Congress was physically or materially colourful as well as mentally so. One sat on the platform or in the audience near a

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

noted Chinese educator who wore a kimono ; a Turkish girl in an embroidered robe ; a professor from Roumania clothed in an elegant gown that carried with it a style that was Paris ; a lovely young woman from Italy in the latest New York styles. There was the stout capable woman from Holland, and the youthful slender woman from the Argentine. All with a dash of American interest. Enthusiastic guests come to take with them to their respective countries new solutions for many times old problems.

What questions were discussed at this Congress ?

One might better ask, what questions were *not* discussed ? The list would be shorter.

The burning issues of the day. The things of paramount interest to women throughout the world. To women who are mothers ; to women who are wives and home keepers : and to women earners out in the open market where service and ability are exchanged for a livlihood.

Unemployment, buying power, education, child care, democracy, communism, politics, government, the benefits and evils of the machine age, and many other questions.

There were men too who attended this Congress. Men able to present theories for the betterment of the conditions throughout the world. Each man present earned his right to be there. He championed the cause of Civilization and Peace.

Vivid clean-cut intelligences were presented throughout the entire Conference. They proudly bore the name of women. Such personages as Margaret Bondfield, ex-Minister of Labour, and Dame Rachel Crowdy from the League of Nations, both from Great Britain. A lawyer from France vigorous and tempermental ; a German judge who added dignity and forcefulness when she appeared. Dr. Muthulakshmi Reddi, identified with the great reform movements of Modern India, came with profound knowledge. Perfect English, in addition to the carefully prepared subject matter of her talks, made it a joy to listen to her whenever and wherever she appeared. Abundant parcels of wisdom from the East she gave freely. The Congress was enriched.

From America came Marry Dingman, the President of the Womens' International Committee for disarmament at Geneva. Carrie Chapman Catt gave of her experience through pre-suffrage years into the present, always with a quiet candour that adds strength and dignity. Jane Addams, always kind, supported the opinions of the youth from eight American Colleges who arose in honest reproach of their elders, in their elders, in their denounciation of war and its evils.

Sessions by night and by day. Sweltering perspiring sessions. Big groups and little groups. Luncheons and Dinners, all satelites and supplementary to the more powerful Congress.

Art and Literature held an important place in this vari-coloured Council :

At the Great Century of Pogress, in the Hall of Science is a sixty-foot mural. The artist, Hildreth Meiere, well known for her murals in the dome of the National Academy of Sciences in Washington, through figures of heroic size, portrayed in dramatic episodes the onward march of the American women between 1833 and 1933.

For those who would read, a permanent record of womens' influence in American life is found in Inez Haynes Irwin's book, *Angels and Amazons*. This is a comprehensive history of organized womanhood over a period of a hundred years.

Ever toward a finer civilization.

In connection with the Congress, and an important part of it, was held the International Writers' Conclave. At its head and directing the Educational Activities of the Conclave was Grace Thompson Seton, Author, and former President of the National League of American Pen Women. Here much valuable information was exchanged by writers from different parts of the world. Eleven countries took part in the Conclave. The representatives from these countries were internationally known.

Miss Anita Browne, poet, New York, Founder-Organizer of Poetry Week, gave valuable suggestions for its furtherance. Poetry Week has come to be recognized in America. All Literary attention for the week is centreed on this week set apart for poetry. Radio, Newspapers and other agencies co-operate and poetry becomes the theme of the week.

To Anna Hemstead Branch, Chairman of the Poetry Conference, the Congress owes a debt of gratitude. She brought to the Writers' Conclave much that is fine through her efforts. It was she who exhibited the fine collection of Poetry Manuscripts and Anthologies from Christodora House. Miss Branch conducted groups on poetry throughout the Congress. These discussions on the poetry of the past and that of the modern writer. Poetic thought was placed before the groups for careful consideration. The best from all Nations was presented.

Margaret Widdemer, successful novelist and poet, represented American Women Poets. This Committee consisted of many of America's finest poets.

Mrs. Richard Mansfield conducted the Candle Ceremony in which American poets greeted those of other countries. At this time the poem, "Youth", written by Edwin Markham, was sent to the sixty-nine countries of the world. On this occasion, too, the Anthology of Star poems, in honour of Arcturus, representing forty-eight states, was sent in care of the leading libraries of the world to the women of each country.

Music meetings were held. All important composers, directors of choruses, and orchestras as well as Instructors took part in the Music Conference.

Perhaps one of the most important places in

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

the Palmer House was the Literature Room. It was rightly named. Here in colourful array were exhibited the books written by women from thirty foreign countries; manuscripts and anthologies from collections in America, including Miss Branch's Collection from Christodora House. The list of the one-hundred best books written in America during the past one-hundred years, and many other literary delights. A popular room. A constant stream of visitors came to this room. Ideas as well as personal views were exchanged. The world met here.

Informal meetings were held in this centre. Countesse Jean de Pange, Author, Representative from the French Council of Women, and Senora Marie Astaldi, Author, Italy, both spoke. The author of this article, Ida M. Gurwell, spoke on "The Internationalism of Literature". It has been the thought of this writer that if we appreciate the best literature from each country, we are together in our quest of Beauty, hand in hand in our search for true Culture, it would seem we would develop together love for the finer things, and would thus step together into the higher civilization where wars are unknown. As the commercial and industrial country is known by her highways, so is the cultural life of a country known by her literature. "We know those countries best, whose books we read".

Out of the Conference has been born a new Womens' Movement, a call to come out into the fields of modern life.

To find fault with the ills of the world but make no move to correct them, or for their cure; to talk and not to act; to believe but fail to act on what one believes! As intelligent women heard day after day of social injustices, the reasons of economic ills, the cause and cure of war, a new slogan was born:

Knowledge: Unity: Action.

What a *trinity* of power!

From the findings of five days' constant presentation and discussion of facts, some of the women minds present wrote the following manifesto. It challenges the women of the world to ally themselves with the co-operative groups, the modern working groups, the best groups in the community, to work for the cause of civilization, and against the common enemy—War.

MANIFESTO

"Forty years ago the women of the world held their first real International Congress during the Columbian Exposition at Chicago, which set in motion a feminist movement, world-wide in sweep and directed toward the winning of equality in social, political, and economic privilege. During these intervening years enormous power has come to women through their position in personal privilege. And wherever the rights of citizenship, such as free assembly, free speech, political participation, and economic self-expression, are still denied on account of sex, nationality, or creed, that feminist movement must continue to have life and loyalty. It retains our full support and enthusiasm.

"At this succeeding great International Congress of Women, held at Chicago during the Century of Progress Fair in 1933, a second movement, likewise intended to be worldwide in sweep, is launched and directed toward the winning of security and opportunity for all mankind. On the basis of free competition as between the sexes, nations, and races of the world, the welfare of humanity has been inadequately accomplished.

"We believe that every person, to whatever sex, race, nationality, or creed he or she may belong, is entitled to security of life, work, the reward of labour, health, and education; to protection against war and crime, and to opportunity for self-expression. Yet even in parts of the world where feminism has made its largest gains, these fundamentals of security and the good life are sadly lacking.

"Hence it is against social systems, not men, that we launch, our second women movement. We enter now a social-planning era following the harsh experiment with laissez-faire and national aggressions, with a world war, and its horrible aftermath in the economic collapse. All civilization is at stake, and the condition of society cannot be ignored.

"Persuaded that only by intelligent, loyal, courageous, and united action on the part of men and women can governments be induced to undertake programmes designed for human welfare in the large, we consecrate ourselves to the task of winning their support for enterprises of that nature, frankly accepting the need of experimentation.

"The care and protection of all life are peculiarly in woman's keeping, and thus at one of the most tragic hours in the world's history we pledge ourselves to assume this responsibility boldly and whole-heartedly.

"Where the feminist movement is fundamental in any country, we call upon the women of the world to give it their loyalty. Where the social-planning movement is imperative, we call upon the women for the world to join us in carrying it forward.

"Thus we shall not be serving two masters but all mankind, ourselves included."

What did the International Congress achieve?

Civilization is born between wars and becomes maimed and broken at the cannon's first roar.

Let us ever have peace singing in our hearts, and civilization, a higher and finer civilization, will be the echo.

Knowledge: Unity: Action.

THE LITTLENESS AND THE GREATNESS OF MAN

By J. T. SUNDERLAND

"When I consider thy heavens, the work of thy fingers,
The moon and the stars, which thou hast ordained,
What is man, that thou art mindful of him?
And the son of man, that thou visitest him?
For [yet] thou hast made him but little lower than God,
And crownest him with glory and honour."
Psalm 8 : 3-5. Revised Version.

THIS fine poetical passage of the old Hebrew psalm expresses very vividly the thought of the littleness, yet the greatness, of man.

As the psalmist looks up into the night heavens above his head, so far-reaching and so wonderful, and sees the moon and the stars shining so gloriously, and moving with majesty through the wide spaces, a feeling of awe comes over him, and a sense of his own insignificance, and he exclaims with a reverence and humility which we can well understand—

"What is man"—puny, insignificant man—"that thou art mindful of him?
And the son of man that thou visitest him?"

This is the psalmist's first feeling. But the next moment he catches a glimpse of something in man which transcends all this seeming littleness, something greater than the stars, and he exclaims again. Yet after all,

"Thou hast made him but little lower than God,
And crownest him with glory and honor."

The feeling of the insignificance of man in the presence of the greatness of nature, and especially in the presence of the vastness and splendour of the heavens above, is one that has been very common in all ages. Nor is it wanting today. Indeed, since the rise of modern astronomy, which makes the heavens incomparably more vast and glorious than the boldest mind dreamed in the ancient times, this sense of disproportion between the physical littleness of man and the vastness of his environment, becomes all the more clear and strong.

When the Hebrew writer looked up to the sky what did he see? A wide expanse which he called the firmament, stretching its dome like a blue tent over the earth. In it were set, in some mysterious way, the sun, moon and stars, movable, having it for their duty to serve as signs for men to mark off the seasons, and to give light to the earth by day and night. All revolved around the earth, were very small as compared with the earth, and were created solely for the benefit of the earth and its inhabitants. The earth was the largest thing the Hebrew thinker knew anything about; and even that, as it lay in his conception, was very limited compared with our earth of today.

How has the rise of the modern science of astronomy changed all this! The earth, though it has grown to be many times larger than the Hebrew thinker understood, is now known by us, not to be the centre of the universe, or the largest object in nature, but relatively only a mere speck amidst the immensities of creation. The silent, mysterious, changeful moon, from a pale sky-lamp, has become a world. The sun does not revolve about the earth, but the earth and all her sister planets revolve about him. The stars, from curious wandering torches of the night, have become gigantic worlds, and centres about which worlds revolve. Vast as we think our solar system, even it occupies but a small corner of space, while beyond it stretch worlds, and systems, and galaxies, innumerable and illimitable.

We are startled, amazed, awed, almost struck dumb by the vast, the incomprehensible, the well-nigh unbelievable magnitudes and distances that our astronomers are revealing to us. Professor Shapley of Harvard University tells us of a universe so vast that our sun is 57,000 "light years," that is, 250 quadrillions of miles, distant from its centre; and Professor Hubble of the Wilson Observatory, tells us of "universes of universes," each one of which contains "millions of suns."

Such is the situation as we see it today.

the men of the ancient world had reason feel humble and insignificant in the midst their little universe, what shall be said of rselves, in the midst of the universe that odern astronomy reveals, which compared th that of the ancient Hebrew is as inity to a hand breadth ?

I think we all have seen times when s thought of man's physical littleness in midst of the universe has come to us painful and almost overwhelming force. ve have asked ourselves, Can it be possible t the Creator of all these innumerable rlds which the telescope reveals, the chitect of this limitless temple of the stars d the galaxies, thinks about or cares for n? Is it reasonable to suppose that our e lives are any more important to him, of any more value in the universe, than nowflake on a mountain top, or a bubble the sea ?

I suppose all of us have had experiences mewhat like this : You pass through a at crowd of people, no one of whom you e ever seen before, or expect ever to see in. You say to yourself, Who are they ? at is the significance of all these lives ? what respect do these human beings differ m the birds that fly in flocks over the ds ? or the midges that swarm in the nshine ? From any other world—even from moon, nearest of all the worlds,—no one them can be seen, even with the most werful of all known telescopes : so that a little distance all are reduced to the e level, bird and midge and men.

You stand on some high eminence in the dst of a great city, and see the thronging usands threading and blackening all the oroughfares below you as far as your eye reach, each man seeming no larger than ant crawling along the pavement ; and w easy it is for you to think of the city an ant-hill, and all cities and towns and ages and hamlets of the world as simply t-hills of differing sizes, inhabited by ants of peculiar variety, but as indistinguishable m a few miles up in the air, not to say m any of the worlds around us, as any ant-hills of the fields or woods !

If then we are so isolated from our sister nets—members of the same world-family with ourselves,—and if all we do is unknown and of no consequence to them, what shall we say of the incomparably more distant worlds that illumine the night sky and make up the whole universe outside our little solar system ? And what shall we say of the great God of all—the mighty Creator and Ruler of all ? With so vast affairs on hand, will he stoop to notice or care for us, the frail creatures of a day, who people this little dust-grain that we call the Earth—this speck on the far-away rim of his creation ?

Above all, is it not the most arrant presumption for creatures so insignificant as we, to dream of a perpetuation of our being beyond death ? When worlds perish—and worlds a thousand times larger than our own shall we, the ephemeral dwellers on this bit of wandering clay, hope to escape ?

It is in these ways that the marvellous revelations of modern astronomy seem to many minds to belittle man, and press him down into insignificance and hopelessness, robbing him of whatever dignity and importance in the universe he once seemed to have.

And now, What are we to answer to all this ?

You see the matter is not something speculative merely, it is intensely practical. These questions which have suggested are being asked in ten thousand places in the world today. And many very thoughtful and intelligent people do not see how to answer them. Thus they darken many lives. Indeed, who among us is there that has not at some time in life passed through hours when their black shadow has fallen upon himself.

I think there are several considerations which throw light upon the subject before us. And first this :

Mere size is only a slight indication of value or importance. The earth is not necessarily less important than a world a million times larger than itself ; and man is not necessarily physically unimportant because his body is small. An elephant is larger than a man, but it is not for that reason higher in value. Many of the small countries of the world far surpass in importance other lands that are a hundred times more extended. Little ancient Greece outweighs a thousand

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

vast Siberias ! and London, which is but a point upon the face of the earth, is more important than a thousand arctic or antarctic continents. A single Plato,or Shakespeare, counts for more in the life of the world than whole races of Kaffirs and Bushmen ; just as a diamond, which can be held between the thumb and finger, may have more value than a huge mountain. In the same way, comparing worlds with worlds, it is not unusual to find the smaller much more highly developed than the larger. Our sun has a mass 316,000 times greater than that of the earth, and volume 1,250,000 greater than that of the earth, yet the earth sustains very high forms of life, while the sun probably has upon its surface no life at all. It seems likely that the huge suns of space generally are much less mature than their planets.

Thus we see that the human race is not necessarily unimportant because it has its home in one of God's smaller worlds, any more than an individual is necessarily unimportant because he lives in little Athens instead of in vast Tartary. Mere bulk signifies nothing. Beings of highest nature and sublimest destinies may as fittingly dwell in bodies six feet high as six thousand, and on this fair earth of ours, small though it be, as on the surface of the hugest bulks of matter in the universe.

But even if we grant the revelations of modern astronomy do seem to dwarf man, it should be borne in mind that science is making known to us other revelations, the effects of which are clearly the opposite. There is rising to view a universe below man, no less wonderful than that of the starry heavens above him. And if the effect of knowledge of the one is to overshadow man, the effect of knowledge of the other is correspondingly to exalt him. Thus the microscope makes good any loss of exaltation or dignity that comes to him from the telescope.

A few facts will help us to see something of the range and splendour of this universe below humanity.

If we catch a butterfly in the summer time, we shall find left upon our hand from the butterfly's wing, something which we shall be likely to call dust. Looking at it with the greatest care, we shall not be able, with our unaided eyes, to see that it is anything more than fine dust. But bring a microscope and see what that reveals to us. Now we discover that this so-called dust consists of a mass of beautifully coloured and exquisitely fashioned feathers, arranged in as perfect order as the feathers of a bird, yet so minute that a single square inch of the wing contains a hundred thousand of them.

How small and simple a thing is a water-drop ! Yet a water-drop is a world. A cubic inch of stagnant water is calculated to contain a billion living and active organisms. Says an eminent New York biologist :

> I placed some clean Croton water, which had been boiled, in a clean vial, and broke into it a few stems of the broom from a clothes wisp. In four days the vial was crowded with monads in numbers that surpassed estimate, but of which it is safe to say that the two ounce vial contained more than the entire number of the human race from the days of Adam to the present time.

Ehrenberg, the great German naturalist tells us that there is a deposit of slate in Bohemia covering forty square miles to the depth of eight feet, each cubic inch of which is found by miscroscopic measurement to contain forty-one thousand millions of infusoria.

So it is that the microscope opens to us worlds beyond worlds, where the unaided eye can see nothing, and where until modern science came on the scene it was supposed nothing existed, worlds as wondeful as those made known to us by the telescope, but filled with living beings as much smaller than man as man is smaller than the great suns in the heavens.

A leaf of a tree is a world. The tree itself is a universe. You see little with your naked and untrained eye. But bring your microscope, and put yourself under the instruction and guidance of a skilled scientist, and he will brush away the veil that blinds your vision, and let you see mystery beyond mystery, and wonder beyond wonder, until, everywhere you look, doors open and avenues unroll themselves leading out into infinities of the minute, as endless awe-inspiring as the immensities to which the telescope invites.

Even man's own body is a universe.

> "In each drop of human blood there are three million vitalized corpuscular disks. Considering all the drops made up in this way, man is a cosmos.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

his veins galaxies through whose circuits these
red clustering planets perform their ceaseless
revolutions."

Nor are these amazing facts the end; they seem to be hardly more than the beginning. Our physicists, chemists and others who are penetrating down, down into the infinite beyond the reach of any possible microscope, tell us that they are finding entities (called by them protons, electrons, neutrons and other mysterious names) which are almost infinitely smaller still.

Thus we see that man stands midway in God's creation. If there are worlds and systems and glaxies above him, no less are there worlds and systems and galaxies below him and in him. If the infinities in the heavens encircle him, quite as much do the infinities in the grass blade, the drop of water, his own physical organism, and the protons, electrons and all the rest, exalt him.

When, therefore, any one persumes to reproach us with our littleness, and pointing us to the starry heavens, asks, Do you believe that the God of those countless worlds pays any attention to you? we may well point him to the infinities of the minute, and reply: I believe that the Universe-intelligence which never forgets these can be trusted to take care of me.

This brings me to the thought that the greatness of man is not physical but spiritual. It is by virtue of his mind, not his body, that he is exalted. What matters it, therefore, whether the physical universe which he dwells in be great or small? Can the heaping up of vast physical dimensions dwarf mind—mind that knows no dimensions, and spurns all physical things? Is spirit overshadowed by standing in the presence of the greatest possible aggregation of matter? Can we say of a mountain that it is greater than a thought? or of the vastest ocean, that it makes insignificant the intellect that fathoms it, and turns it into a highway, and speaks across it as if its thousands of miles were inches, and makes mockery of its fiercest waves? Do all the worlds the telescope reveals, that cannot think, dwarf the human mind that can?

However completely modern astronomy may take away the old primacy of the earth among the heavenly bodies, it can never disturb the greatness of man so long as man remains the thinker. He is great with a greatness which is inherent in his own nature, and, therefore, which is independent of any possible discoveries that science can make in the material realm. He is great because he can *know*, and *reason*, and *distinguish right from wrong*; and *hope*, and *love*, and *worship*. These things he can do because he is a *spirit*, for these are the attributes of spirit. But the greatest world the telescope ever saw, considered as a mere physical mass, is as impotent to do one of these things as is the smallest molecule or atom that floats in our earthly air. Here it is that we see the infinite superiority of man to all possible physical magnitudes and greatness whatever, though they be worlds countless as the sands of the sea-shore, filling the immensities of space with their shining splendours.

It should be borne in mind that man feels awe in the presence of the starry heavens not because of his own insignificance, but really because of *his own greatness*. It is the divine in him that thrills at the great sight. A stone or a clod feels no sense of awe. A brute beast looks up with indifference to the same stars and constellations that bring man to his knees in adoration. The brute is indifferent because he lacks mind. The man admires and worships because he knows, understands, feels; has the correlate of the great heavens in his own greater soul. Wrote Victor Hugo:

> There is one thing grander than the sea; that is the sky. There is one thing grander than the sky; that is the human soul.

To *think* the world is to be *superior* to the world. To *know* the stars is to be *greater* than the stars.

The sun is very large in size. His vast bulk makes the earth seem very small by comparison. But what of that? Need that abash man? Can the sun, big as he is, measure himself or weigh himself? or calculate his path through the heavens? or understand even one of the laws which he blindly obeys? But man can do all these things. Therefore man, though his stature be but five or six feet, is greater than the sun.

The science of astronomy tells us much about the galaxies. But did we ever think, it tells us quite as much about man? Man's mind not only keeps pace with every advance

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

of astronomical knowledge, it is the *cause* of it. If the heavens declare the glory of God, still more they declare the greatness of the human soul, for it is only because man's soul is great that he can recognize the greatness and glory of God in the heavens.

Thought and love are the creative forces of the universe. Because man thinks and loves, he is a creator—a creator in the finite sphere, as God the Infinite Thinker and Lover is the creator in the Infinite sphere.

"All minds are of one family," said Channing. If this is so, then I am related to the Divine Mind. I am not merely a being created by God's power; I am kin to him, because I am spirit, as he is spirit; because I know, as he knows; because I love, as he loves. Therefore I have a right to look up in his face even though that face shines with the light of infinite galaxies and say: "Thou art in some large true sense my Father, I am not a *thing* tossed from thy hand. I am thy *child*; thy great nature is in me."

But perhaps the most overwhelming proof of the greatness of man, and of his superiority to all material things, comes to us from the great doctrine of Evolution.

It used to be supposed to the contrary. Evolution was long feared. Because it linked man's creation with natural processes, and suggested his development from lower forms of life, it was thought to degrade him. But now all this is changing. Profound and philosophical students are more and more coming to see that evolution immeasurably elevates man. As he is unquestionably the culmination of all that has gone before him, so he furnishes the most reasonable and adequate explanation of it all. The evolutionary process has travelled a long road from its beginning in fire-mist to what we see on the earth today. But the progress has all been an ascent, and the culmination is *man*. From the inanimate to the animate, from lower forms of life to higher, from brute to man—that has been the order. Thus man stands on the summit of creation—its crown and its goal. When the physical reached the limit of its possibilities, then mind came in. Henceforth mind was king, and man the thinker wore a dignity second only to that of God the Infinite Thinker.

It is not given to us to know in how many worlds the evolutionary process has reached the same height that it has reached here; but if anywhere it has, then it must have produced there in some sense the spiritual counterpart, and brother of man, I mean, some being who can know and understand, as man can; some intelligence able to "think God's thoughts after him," as man is able; some being, the crown and consummation of the evolutionary process in that other world, or those other worlds, as man is in this; and, therefore, some being who in some true sense is God's image and child there, even as man is here.

Thus it seems to be no extravagance if we say that the whole evolutionary process, from the first movement of primordial matter until this hour, has been one long travailing in pain of the Universe to produce (in this world and we know not in how many others) man or his equivalent,—that is, to produce intelligent spirits, children of the Eternal Reason and Love.

Have we not here, in the costly origin and high nature of man, and in the Fatherhood of God, a key to man's destiny? If man has cost the universe so much, and if his nature is so lofty, must there not be awaiting him a destiny to correspond? Is he not intended for a career greater than can be bounded by this inch of earth and this moment of earthly time? Is the Creator of all things irrational, that he should destroy his highest creature as soon as made? Is the Universe a failure, that its most perfect product should be only an ephemera? If man is God's child, and thus a partaker of the highest attributes of the divine, can he die? Must he not be heir to an immortality parallel with that of God?

We may believe that the Creator can easily enough spare some of his worlds, for he has plenty of them. But can he spare a being without whom the worlds lose their significance? That is the question wrapped up with the problem of man's nature and destiny.

Men talk about worlds and systems and constellations overshadowing and belittling humanity! Can the less overshadow and belittle the greater? Can fire-mist, or earth or rock, or any material thing, no matter how stupendous its volume or bulk, overshadow spirit, or eclipse the glory of mind?

The universe is God's palace, and a marvelous palace it is. But is not a child more than any building? What father of men is there, who if you had a palace, so vast that it stretched from the Great Bear to the Southern Cross, and so glorious that the Milky Way roofed it, and Sirius and a million other blazing suns were the lamps that gave light, would not straightway say, My child is more than it all?

So, as I go out under the sky at night, with no one near, and look up into the glorious and illimitable heavens, I hear in the silence a voice speaking down from the Eternal Throne: O man, whom I have made but a little lower than myself, thou art more to me than all else. I did not create thee for my palace; I builded my palace—all this glorious palace of green earth and shining heavens—*for thee and such as thee.* Before suns and stars were, I loved thee. Even whilst thou wert yet cradled in far-away nebu-mists, I watched over thee. Our destinies are one; nothing shall ever pluck thee out of my hand or my heart.

And then, as the voice from on high dies away, I hear another voice, not less divine, arising out of the silences of my own soul, and corresponding as deep answereth to deep: O God of my life, in thee do I trust. From thee I came when I entered into this earthly room so beautiful, of thy Universe house. Here thou givest me to live a few brief years with thee, led by thy hand, studying thy wonders in nature and my own soul, learning life's lessons, helping my brothers as best I may, doing the work which thou givest me to do. I thank thee for this earthly sojourn.

Soon shall I go forth again; I do not know where, but thou, my father, knowest. It is enough that I shall be still with thee. Death will but open the door to other rooms of thine infinite house. I am not afraid. All worlds are beautiful where thou art. Even hell would be safe with thee.

I believe that essentially this is the attitude to be taken today by the intelligent believer in astronomy and all modern science,—by one who accepts every word of their marvelous revelations in the earth and the starry heavens.

I believe that the scientist, with all modern knowledge shining full in his face, is justified in saying with St. Paul: "I am persuaded that neither death, nor life, nor angels, nor principalities, nor things present, nor things to come, nor powers, nor height, nor depth, nor blazing suns and stars, nor astronomic heavens, nor telescope, nor evolution, nor any other created thing "shall ever be able to separate me from the love and care of the Eternal God."

POET ATUL PRASAD SEN

By S. N. SANYAL, M.A.

THE world knew A. P. Sen as a successful member of the Bar, a social reformer and a respected citizen of Lucknow; but he was also a poet and a lyrist of a high order. Poet Atul Prasad was essentially a lyrist and his songs are very popular in Bengali; sung at prayers of the Brahmo Samaj, by school girls and in the drawing-rooms of the aristocracy. Next to the Poet Tagore he is, perhaps, the most popular composer of sweet songs.

Like his Guru, Rabindranath, Atul Prasad has drunk deep of the fountains of the Vaishnava poets like Chandidas and Vidyapati. He is immersed in the love-lore of the Vaishnavas and has depicted the moods of the love-athirst soul of the divine Radha. In the choice of his themes, in music and in metres he is not so varied nor so deeply rich as the sage of Santiniketan. His moods have one central idea—the pangs of the lover for his beloved whom he had seen but has lost sight of. It is the wail of Radha when Krishna left her and went away to Mathura. It is the pang of Shakuntala for King Dushyanta. Far from Tagore, Sen is a kindred spirit to C. R. Das, with whom he claims some relationship.

Most of the compositions of A. P. Sen are either Kirtans or *Baool* songs, both popular forms of devotional music, handed down to us by the Vaishnava Sadhus and *Baool* devotees. Both are easy to sing and best sung in company, especially *Kirtan*.

To appreciate Atul Prasad we are not to look at the arguing Barrister but we should bring

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

before our mind's eye a tall brownish figure with dreamy eyes and a pensive forehead singing more to himself than to the world. He would fain sit under the *Tamala* tree than in the drawing-room and sing all day long. Days would go by, but who cares. Tears roll down his eyes, his voice is choked with emotion, music is reduced to a hum and then their is a hush, a silence more eloquent than any form of speech.

In his poetry there is no rush, no feverish gush of emotion, changeable and fickle, not many varieties of moods—from intense passion to lethargic indolence like that of Shelley. But there is one resemblance with Shelley. Atul Prasad too perceives the "veil" which prevents a full view of his love. He feels the presence, he knows that she is there, still he cannot transcend the gulf. But unlike Shelley, he has trusting faith in God and Man and the belief that the "veil" would be torn down and that he shall rejoin her. In his trust in the ultimate reunion with his lost love he feels in the same way as poet Chittaranjan. In this respect he shares in common with many Bengali poets the mystic tradition of the Vaishnava savants.

The poetry of Atul Prasad is like a pool of cool and clear water, unruffled by the winds. You would be refreshed and comforted. If there is a slight touch of dejection, it is because separation makes love sweeter and strenghtens the bond of love. In spite of a mournful strain, all through his poetry runs an inner chord of hope and trust in future reunion with his love. Like Shelley and Keats there is no piteous cry of despair. On the other hand he sings :

"If the world cares not for me,
you will be with me,
If I cannot carry the burden, Friend,
you will carry it for me."

The philosophy of A. P. Sen can be summed up as the perception of divine reality through love and renunciation :

"How long will you search for riches and fame,"
or "Love is greater than riches."

By temperament and training Atul Prasad cannot play the juzz nor he can run into mad eloquence for the applause of the gallery. He hates it and his sensitive intellect always refused it. His music is a deep meditative tune sung far from the maddening crowd. It is a soft ode sung by the imprisoned lady in the tower for the knight who shall deliver her. His poem reminds one of the 'Highland Lass' with sickle in hand bending over the ripe corn humming a mournful tune.

As is the case with Rabindranath or Wordsworth, Nature is not eloquent to Atul Prasad. To him Nature in not vibrant nor a living presence with a message for the rejuvenation and resurrection of the world, on the other hand Nature is an ornament for the decoration of his poetry and the beauty of the world. In his case it is not the poet who responds to Nature hearing its silent symphony and going to ecstacies over it. Nature to Atul Prasad is the handmaid of his subjective moods. Moreover, Nature is always loving to him, and he never cares to look at the destructive and ugly aspects of Nature. He likes to see Nature in a well-laid-out garden where she is tastefully arranged and well trimmed. Wild Nature has little fascination for him.

A. P. Sen loves his country as deeply as any other great patriot. He is proud of its great men, of its philosophy, of its religion and of its culture and his heart is heavy when he sees that in this land there is appalling ignorance and a general decadance. With deep sympathy he sings :

"In two houses burns the lamp of learning
but millions are enshrouded in darkness,
This darkness you must dispell—with care,
with extreme care."

He is melancholy that there is communal dissension but is not despondent, and he believes that the narrow walls of communalism and selfishness are breaking :

"Mother, open the door and look, we have come
your two sons Hindu and Mussalman."

The patriotism of Sen is not the trumpeting blast of a god of the mob calling forth his followers by playing upon their false pride and fasle patriotism ending in turmoil and chaos. It is constructive and evolutionary and deep-rooted.

Born in a Bramho family with a tradition of social reform, he is up in arms against untouchability and the caste system.

"Differences of caste and birth,
divide a nation in hundred divisions,
O Hindu, you will die out if
you do not end the evil."

He belives in social equality but it is not the intuitive recognition of the unity of souls which prompted Swami Vivekananda to decry untouchability, nor is it the intellectual perception of the social disbilities which hamper the growth of a common nationality, as in the case of other social reformers, but it is the generous sympathy of a gentle soul which is wounded by the wrong done to a brother who has the same desires, same emotions as himself. In the eyes of the poet it is a grossly ugly thing and a very cruel practice. He, however, feels that the time is fast approaching when social inequalities shall disappear and India, ancient and mighty as ever, shall shine forth in rejuvenated glory :

".....the day of glory shall come,
Look the day is dawning."

and again he sings :

"Say, say all in blended notes of flute and vina,
India again shall take the place of
glory in the comity of nations."

BOOK REVIEWS

BOOKS in the principal European and Indian languages are reviewed in THE MODERN REVIEW. But reviews of all books sent cannot be guaranteed. Newspapers, periodicals, school and college text-books, pamphlets, reprints of magazine articles, addresses, etc., are not noticed. The receipt of books received for review cannot be acknowledged, nor can any enquiries relating thereto answered. No criticism of book-reviews and notices is published.—Editor, THE MODERN REVIEW.

ENGLISH

THE NEW INDIAN CONSTITUTION: *By Krishnaswami. Published by Williams and ...gate Ltd., London.*

...hat Mr. A. Krishnaswami has to offer in the ...e chapters of this treatise is a series of discus... on the proposed constitution of India, now being ...ed by its overlords in London. He deals with ... problems as the Indian states and federation, ...al finance, provincial legislatures, reservations ...afe-guards, racial and religious minorities. His ... of view is that of the imperialists of England. ... statesmanship is at low ebb. As an Indian, ...does not even realize that the tide has gone ...n and only little crabs of statecraft and diplomacy ...e on the beach.

... the author is charmed by the "unrivalled mecha... of the Round Table confab and naturally sides ... its sponsors. In his eagerness to support some ... the worst retrograde proposals of the Roundtable... ...ns, he has dragged in by the tail a number of ...ctions from the eighteenth century constitution of ...United States. I wonder why he did not mention ... Declaration of Independence, which furnishes ...basic philosophy of the American constitution—the ...eration which asserts that the government derives ...powers from the consent of the governed.

... the book is almost London *Morning Post*-ish in ...pport of the reactionary fads and theories of ...bureaucrats. Mr. Krishnaswami, for example, ...es considerable space to justify communal ...s. It seems to us in America that communalism ... a disease which cannot be cured with numerous ...s of the quack poison of seperate electorates ...h in the first place caused the distress. Moreover, ...m astonished to find that the bureaucrats in ...a are more worried about the rights of the ...r groups in Indian as well as alien than ...s of the majority. But since I have no access ...r conscience, I shall let that pass.

... writer of the book holds the thesis that the ...nstitution will be a sort of manna from heaven ...ll inaugurate an era of peace and prosperity—a view not shared by the common sense of the Indian nation, and rightly so. To be sure he admits grudgingly some of its blatant shortcomings, but he stresses unduly the "paramountcy rights," "special responsibilities" "imperial interests" "consolidation" and "performance of the British Empire," and in the end succeeds in presenting a lop-sided picture.

There is little evidence to prove that the author has considered the subject impartially. Among all the Indian leaders whom he quotes to support his arguments are the few lone politicians, universally discredited in India outside the small governing class, which of course has its axe to grind. Indeed, it does not appear that he has heard of the Indian National Congress and given its findings any serious consideration. May be he did, but he forgot. The fact is that the new constitution of India is being drawn up with eyes mainly for the advantage of the United Kingdom, and as such India will never accept it as final. The omens are already far from rosy.

Some of Mr. Krishnaswami's discussions are good, some sketchy, feeble and sophomoric. The book is not downright trash, but it is not destined to longevity. Why did the author omit an index? He should also have added a bibliography.

SUDHINDRA BOSE

SOCIAL AND POLITICAL LIFE IN THE VIJAYANAGARA EMPIRE (A. D. 1346—A. D. 1646): *By B. A. Saletore, M. A., Ph. D. (London and Ciessen), Alexander von Humboldt Stiftung Scholar, Berlin: with a Foreword by Dr. S. Krishnaswami Aiyangar, M. A., Ph. D., formerly Professor of Indian History and Archaeology, Madras University. In two Volumes, pp. liii+470 and 1—525 (over 1000 pages), with eleven plates cloth bound. B. C. Paul and Co., Publishers, 12 Francis Joseph Street, Madras, 1934. Price for the two volumes, Twelve Rupees or Eighteen Shillings.*

A rich feast for the student of Indian history and culture has been spread by Dr. B. A. Saletore in this work which may be described as one of capital importance, considering alike the range of

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

subjects treated in it and the careful marshalling of facts and evidences and of the conclusions deducible from them. This work formed the author's doctorate thesis in the University of London, and the authorities of that body have shown their appreciation of the scholarly labours of Dr. Saletore by making a grant for its publication: this grant, combined with a similar financial support from a gentleman who prefers to remain anonymous, has enriched the historical literature on India with the addition of these two handsome volumes the contents of which will please both the critical student and the general reader. Dr. S. Krishnaswami Aiyangar has in his *foreword* indicated the scope of Dr. Saletore's enquiry, and has signalized how he has utilized all available sources—epigraphical and literary. There is certainly an *embarras de richesse*, as the period extends over three centuries of crowded history, with international connexions, and covers all aspects of life except the strictly politico-chronological. There is an extensive literature on the subject already both primary and secondary, and the carefully prepared bibliography of books, monographs and papers, besides the original sources, which the author has preferred to his book, and with which he has evinced a close acquaintance is a fairly large one, covering over forty pages. As Dr. Krishnaswami Aiyangar says: "the very extent of the subject and the vastness of detail available would baffle any effort in this direction ordinarily, but Dr. Saletore has succeeded in producing a creditable work bearing on the vast subject." There is indeed a wealth of detail under the various heads which makes the picture as full and as living as is possible for a historical synthesis to make it.

The Vijayanagara episode forms one of the most brilliant chapters in the history of India, and modern scholars have been fascinated by it ever since Sewell's resuscitation of its glories, for the average English reader thirty-three years ago. In its days of glory in the fifteenth-sixteenth centuries it easily evokes comparison with the spacious days of the Mogul emperors in Northern India in the sixteenth–seventeenth centuries. Founded during the first half of the fourteenth century with the genius of some of the greatest Brahman statesmen of the day helping the local chiefs of Karnataka to take a stand against Muhammadan aggression from the north, Vijayanagara became the bulwrok which met the Mlechchha onset and saved the Hindu culture and the Hindu soul of Dravidian India, preserving much of the precious heritage of the past which would otherwise have been destroyed as it happened in North India. Vijayanagara has added to the list of illustrious rulers of men at least one great name, Krishna Deva Raya; it created a great city and reorganized the civilization of the South; it fostered trade and the arts and crafts, and literature—in Telugu, and in Kannada. After the disaster of 1565, it continued to carry on its glorious tradition for a century more. The study of the internal life of such an empire has a fascination of its own: Dr. Saletore is to be thanked for giving us an opportunity to read, understand and appreciate this great story.

We do not have chronological statement of its history—of its kings and their fortunes. A knowledge of the background of political history is assumed in the reader. In the Introductory chapter, the author discusses whether the founders of the Vijayanagara Kingdom were Telugu speakers, or Kannadas. The commonly accepted view makes them Telugus; but Dr. Saletore is inclined to regard them as "karnataka by birth and karnataka in valour," who "stood out as champions of all that was worth preserving in Hindu religion and culture." In the two subsequent chapters the Vijayanagara country in general is described, and its various capitals. Then follow chapters on Revenue Administration, and on the Central Government and the Local administration. The administration of justice, and oppression which was inevitable during weak rule in those troublesome times, are then discussed. The relations between the Hindu state and its Muhammadan neighbours are another important point to be discussed in a special chapter. A highly interesting portion of the book describes the organization of the Vijayanagara army. With this the first volume closes. The second volume is taken up with the following topics: The *Varnasrama-dharma*; the Social Institutions; the Brahmans; the Women; Social Legislation, Etiquette and Orthodoxy; Public Service, Honours, and Patriotism; Habitation, Food, and Dress, Corporate Life in Social Matters; and Festivals, Games and Amusements. We have thus a detailed survey of most of the aspects of the life of the Karnataka people of Vijayanagara during three centuries.

Dr. Saletore writes as a Hindu, and as a patriotic Indian; and he sometimes writes with an under-current of enthusiasm for the glory and the heroism that is now past. This under-current of sympathy and enthusiasm, provided it is based on just standards, is a necessary thing even in science: certainly it exalts history into what it is or should be—a science of humanity.

It appears that there is not much of the controversial in this work, which is for all and sundry a mine of information, affording plenty of food for reflexion and suggesting here and there the applicability of the experience of the past to the conditions of the present.

We have here a fine book, the production of fine scholarship. One would have liked a little more, although much has been given: two chapters on Art and Literature (Vernacular and Sanskrit)—the former accompanied by good plates of the typical master-pieces of Vijayanagara architecture and sculpture and other arts so far available—might have completed the picture. Another point which as one who does not read Kannada I would like to bring to the notice of the author: English translations of the Kannada passages (which might advantageously be given in Roman, for one unfamiliar with the Kannada alphabet might like to find out how the thing *sounds* in the original should have been given. Telugu literature flourished so very much under the Vijayanagara emperors, and it seems Telugu authors have been neglected. Surely here some Andhra Scholar could collaborate with our author. A preliminary chapter recapitulating the main facts and dates of political history would not have come amiss as furnishing the bare skeleton—if only for the general reader, for one who has not specially studied South Indian history.

But these are improvements which it is easy for a lay man to suggest. On the whole it is a real scholarly work, bearing the stamp of the best distinction, and we can congratulate the author on this fine production; and we hope that many more of this kind are to come from him in the future.

MOHAN-JO-DARO: *By Bherumal Mahirchand, Esq. Lecturer in Sindhi, D. J. Sind College, Karachi. Published by the author. pp. boards, Re 1.*

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

76436
Digitized by Arya Samaj Foundation Chennai and eGangotri

an interesting compilation from what has appeared the various magazines and other articles and in John Marshall's *Mohen-jo-Daro and the Indus ilization* on the antiquities and culture of hen-jo-Daro.

SUNITI KUMAR CHATTERJI

THE CONSCIENCE OF A NATION OR UDIES IN GANDHISM: *Gaganvihari ..., 70-A, Chakrabaria Road, Calcutta, 1933.* ...

A collection of thought-provoking essays on Atmaji's birthday and other occasions, written in spirit of devotion to the Great Soul. The title is echo from M. Romain Rolland's book on Mahatma dhi. The discussion of the various vital principles ...ved shows that Mr. Mehta has approached his ...ect from the just point of view. "If Right is to Might, Right too must have vitality and must ...e itself in action." For most of us do not yet ...erstand that Gandhiji's method seeks to substitute ... for violence, moral energy for muscular strength, ... for fear in the scheme of life. Mr. Mehta has a ...p on the fundamentals of such a philosophy and ...nunciates them in a style suited to the subject. ...e book will repay careful study.

DR. BESANT AND INDIA'S RELIGIOUS ...NIVAL: *Hirendranath Datta.*

DR. BESANT: WARRIOR. *G. S. Arundale.*

These two Adyar pamphlets, published in February ... March, 1934, deal with aspects of Annie Besant's ... Mr. Datta tries to describe her entry into Indian ...rs and the stimulating effect of her mission on ...an religions, due to her entirely selfless devotion ... the cause of the Indian people and their highest ...rnal good. Mr. Arundale vividly presents to his ...ers the spirit of Annie Besant with its yearnings, ...vement and legacies. They are both sincere ...ssions of reverent homage to the departed great, ... at the same time eloquent exhortations to this ...eration to rise to high endeavour.

BEST SHORT STORIES OF INDIA: ...ected and edited by *Phyllis Atkinson, B. Sc. ...n. (Lond.) D. B. Taraporevala Sons & Co., ...bay. Vols. I and II.*

The contents of these two volumes consist of about ...hundred folk tales, originally published in the ...dian Antiquary, and pertaining to the different ...vinces of India—Kashmir, the Panjab, the Northern ...ts, Madras, Bengal, etc., with delightful Sketches ... F. Ramleder to set them off. The publication ... received the blessings of such eminent scholars as ...fessors Bhandarkar and Aiyangar, who have sup- ... it with the preface and the introduction. If ...e and imagination give any clue to the minds and ...e culture of a people, then these "Stories of India" ...y be accepted as India's introduction to the world. ...s gratifying to note that in their selection the ...or has been guided and rightly, by the principle ...supplying maximum pleasure to the readers. ...e reading of these stories prompts the thought ...t there must be many other tales current in Bengal ...d other provinces, and their collection is an ...mediate necessity. Coming to the individual ...ories, we find that the editor must have suffered ... shortness of supply; *e. g.*, only stories from ...ngpur—unique as it may be in some respects, the district cannot surely be taken as a representative of Bengal—have been selected for Bengal. It may be allowed to observe also that most of these stories had been published long ago, in 1875 or thereabouts. May we not have, moreover, a regional study of Indian short stories?

Nevertheless, under the circumstances, the publication of these two volumes in a handy form has been greatly opportune, and will serve as an expression of the Indian mind. It deserves to be appreciated by the student of history, of anthropology, of sociology and literature, as well as the general reader for whom specialized studies have no interest.

PRESIDENTIAL ADDRESSES: *Delivered at the Beharee Students' Conference (1906-1923) Part I, with a Foreword by Sj. Rajendra Prasad. Compiled by Badri Narain Sinha, M. A. Published by Ramesh Prasad, B. Sc., Mithapur, Patna.*

Bihari Students' Conference, organized for the first time in 1906, was a significant event in Bihar. It was the first sign of national awakening in recent years, the precursor of political conference and separate Congress organization with feeders spreading all over the country; and it was itself a result of the Swadeshi Movement in Bengal or its partition in 1905. From its inception to the inauguration of the Non-co-operation movement (there had been no sessions of the Conference in 1922, 1923) is a distinct period; the book contains the Presidential Addresses delivered from year to year during that priod, thus presenting the ideas and ideals that governed the minds of Bihari students there.

Among the presidents quoted here we find Mahatma Gandhi, Mrs. Annie Besant, Prof. Jadunath Sarkar, Mrs. Sarojini Naidu and Sja. Sarala Devi;—these indicate the wide range of their sympathies and appeal, though sometimes they are centradictory, as for example on the vexing problem of the suitability of politics for student life. Those who are specially interested in student organization and movements as well as those who desire to have, by their side, a manual of typical addresses meant for such occasions will be glad to have a copy of the book.

ELEMENTS OF VEDIC RELIGION: *Diwan Bahadur V. K. Ramanujachari. Published by the Author, at Kumbakonam. 1931. Price Rupee One.*

This book reproduces in brief the substance of the contents of Sri Bhashya in a handy form; it should therefore serve as an introduction to the great commentary. Some of the sections are lucid exposi- tions and take up the Vedas as the basis for the authority of the Vaishnava Shastras. Section XII, in which the superiority of the Vaishnava tenet to other systems of faith is propounded, is the breeding ground of controversies, but it is a question for all times. The book deserves publicity among students of Vaishnava philosophy.

PRIYARANJAN SEN

SHREE MEHER BABA—HIS PHILOSOPHY AND TEACHINGS: *By A. K. Abdulla, (Ramjoo); Published by Rustom K. Sarosh Irani, Nasik; Price 12 Annas.*

This is a booklet of 112 pages which seek to give us the philosophy and teachings of a Parsi saint and also his life history. The more abstruse philosophical

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by eGangotri Sarayu Trust. Funding by MoE-IKS

questions are explained by means of diagrams which are interesting in themselves apart from the truths they are intended to illustrate. Thus we have a semi-circle for Almighty and another for the Creator with shooting straight lines standing for individuals, and so on. Some of the truths also are deep indeed! Thus: "The compact latent human form takes four straight turns and afterwards, one inverse turn (in all five turns) before it becomes completely manifested." (p. 64.) "Our earth is nearest to the Creator point." (p. 73.) etc. etc.

In ch. vi. we have a few questions answered by the Baba. In answer to one question, he says: 'To anybody who has attained the state of consciousness that I have reached, miracles are child's play" (p. 77). And the secret of this wonderful success is "The elimination of the ego" (p. 79).

In a brief biography in ch, vii, we are told that after leaving College, Baba became 'God-realised' in 1914 (p. 101) and for about nine months "his eyes remained a blank stare." Strong doses of morphia and opium and kindred injections were administered by the doctors; and in 1921, he "became super-conscious plus creation conscious" (p. 102). In 1931 he paid his first visit to the West; and by June 1933 he sailed from India for the *fifth* time. During the last nine years he has been observing silence. But the *A. B. Patrika*, Sunday, August 26, 1934, (p. 18) contains the following news: "Shri Meher Baba, the 40 year old Parsee mystic who has kept a self-imposed silence for eight years, has made arrangements for the production of a film embodying his religious philosophy.....It has not been definitely settled, but Shri Baba himself may act in it.....The film is to be shot in Hollywood and India, and it is expected to be ready by next autumn."

One thing that strikes us in this biography is that, just as an Indian scholar of today travels to Europe in order to get his achievements recognized and advertized, so a man with spiritual achievements to his credit also pays visits to Europe now and then in order that he may get himself recognized. This not only proves the importance of Europe but at the same time demonstrates the unimportance of the ego-consciousness in these saints.

U. C. Bhattacharjee

HISTORY OF THE MUSLIM WORLD: *By Khan Bahadur Ahsanullah, M.A., retired I.E.S., sometime Assistant Director of Public Instruction for Muslim Education, Bengal, published by the Empire Book House, Calcutta, price Rs. 5, pp. 647+67 in Appendices.*

This work traces Islamic history from its origins and pursues its developments in different ages and countries. It starts with an amount of the early Caliphs and that of the Abbasid and Omayyad dynasties. Then follows an amount of the developments of Islam under different States and Peoples, the Sasanids, the Samanids, the Ghaznevids and other dynasties of Persia, the Fatimid and Mameluke dynasties of Egypt, the Ottoman Empire of Turkey, and the Pathan and Mughal dynasties in India. Next follows the history of the expansion of Islam in various parts of the world. There is also a chapter dealing with Europe's debt to Islam. The book gives the Islamic view of Islam as a political and civilizing force. It sometimes treats of history as if it were politics. Still it is useful as compressing within a small compass a large amount of information collected from a variety of sources.

X. Y. Z.

RACE AND ECONOMICS IN SOUTH AFRICA: *By W. G. Ballinger. (Day to Day Pamphlets No. 21.) The Hogarth Press, London. 1934. Pp. 67. Price 1 sh.*

In 1928 Mr. Ballinger, an official of the British Labour Movement, was invited by the Native Trade Union, known as the Industrial and Commercial Workers' Union of South Africa, to conduct an inquiry, un-official as it well can be, into the position of industrial relationships in that country, particularly from the view-point of the African workers. This succint little account of problems of colour and economics obtaining in the Union of South Africa is the result of Mr. Ballinger's private efforts. There is not the slightest doubt that Negro labour in South Africa is now subject to the severest of handicaps. The problem of the "Poor White" has almost defied any answer which can be deemed to be to the advantage of the native workers of that country. In order to maintain an artificially bloated standard of living among these "Poor whites," the Union Government has steadily been pursuing a policy of industrial and social discrimination, in which the balance of advantage is entirely with the White employer and the White worker. The collapse of tribal organization consequent on legislation resulting in a compulsory periodical exodus of Negroes from their *Kraals*, the question of segregation of coloured peoples, a double schedule of wages for White and native workers consequent on the reservation of certain types of industrial employment for the former, inadequate legislative provision for the legitimate protection of native workers and the problem of a colour war are some of the engrossing topics dealt with by Mr. Ballinger with clarity and fairness. Any student concerned with a study of inter-racial relations ought not to miss this important publication which redounds to the credit of Mr. and Mrs. Woolf of the Hogarth Press. Our only complaint is that the book is not more exhaustive and detailed.

Lanka Sundaram

A MANUAL OF RECIPES: *By Nirmal Baran Brohmachary, B. Sc. Published by the author, 11, Baldeopara Road, Calcutta. To be had of The Book Company Limited 4-3 B, College Square, Calcutta. 156 pages, Price Rs. 2 only.*

The author is a Pharmaceutical Chemist of long experience. He has noticed that the raw materials mentioned in the formulae recorded in literature are not often easily available in the market. The ingredients recommended in this book for making various preparations such as scents, face powders, tooth pastes, hair oils, syrups, soaps etc., are easily obtained. In addition there is a large number of prescriptions for making patent medicines.

This is a useful book and we bring it to the notice of the unemployed educated youths.

A. K. Mukerji

FLOWER OFFERINGS: *Prose-Poems. By P. R. Kaikini, Bombay Book Depot. Pp. 39. Re. 1.*

There are fifty poems. The poet says, "Prof. Y. M. Trilokekar. M. A., Diplomaed in Education.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

...ics of Wadia College, Poona, read and passed the ...ages for the press." Prof. Armando Menezes, M. A., ...fessor of English, St. Xavier's College, Bombay) ...tes the Foreword. Yet we find ugly errors ...roughout the poems which offend even the most ...ical reader's eye and mar his enjoyment of the ...t's effusion.

"When the merry ducks call no more and vanish ...o the cool shelter of that yonder grove...I cast ...out this net to catch my long-lost glorious dreams ...f love and life." It may be good poetry but it is ...disfigured by the absurd "that yonder" and "cast ...out". Few things contribute more to the vigour of ...prose-poetry than correct idioms and phrases, and ...with such glaring errors, which tend to obscure the ...meaning, the effect is dullness. "Where yonder ...palm-tree lightly waves"—Byron. 'The' or 'that' cannot ...be attached to 'yonder'. "Cast this net" would have ...been the right expression in prose or poetry. "Cast ...out" means "devise means". A combination of the ...two provokes mirth and serves to distract the reader's ...attention.

"The pulse of life that is felt in all my limbs is ...the same as that which once surged in the lone lost ...Delta..." Thoughts raised to a babel height would ...fall by their own weight without the tremors of ...rhythm. Three relatives were never before in such ...weird constellation,—"as that which"; and Prof. ...Menezes's taunt in the Foreword "the Pharisees of ...rhythm cannot too often be reminded that the letter ...killeth and it is the spirit that giveth life" cannot ...protect the present-day solecist. Instead of brandi...shing his sword to scare away critics, Prof. Menezes ...ought to have advised the poet to omit 'as' and ...'that' and make the piece tolerably presentable to ...the public. Literary blemishes are often disregarded ...in the rhythmical pause and onflow of the metrical ...composition. But in prose-poetry which is nothing ...but exalted prose a measure of literary craftsmanship ...is essential to success, even when the thoughts are ...rose and azure, deepening into gold.

CRITIC

GUIDE TO SMALL-SCALE INDUSTRIES, *published by Ram Lal Suri & Sons, Booksellers, Anarkali, Lahore, and edited by M. C. Mohan B.A.; price Rs. 2.*

The book which was published in 1931 comes out ...now in its third revised edition in 1934. In this ...the author has compiled authentic information ...about industries that can be run in India profitably ...by the educated youngmen with small capital. The ...book deals with the following industries more or ...less exhaustively: Absorbent Cotton, bakery and ...confectionery, brush manufacture, button industry, ...candle and cigar manufacture, electro-plating, ...dyeing, laundry, leather industries, metallic manufac...tures, razor blades, pins and clips, safety pins, tin ...and paper clips, wire cloth, wire chains, aluminium wares, ...enamel wares, brass wares, bell metal, brass tubes, brass ...and copper wares, motor spokes, nuts and bolts, ...printing, book-binding, sand paper manufacture, ...stationery goods manufacture, clips, envelopes, fountain ...pens, shoe laces, pen holders, slates, pen and pencil ...making. The book gives the history of the industries, ...the prospects in the country, their manufacturing ...processes, estimates of capital required, places where ...necessary training can be had, books and journals ...dealing with the industry and experts to be consulted ...on the subject.

At this present moment when the country is sorely in need of guidance on industrial vocation, the publication of such a book is a boon to our countrymen, especially our youngmen. We recommend its study by the educated community of the country and hope this will to some extent help the solution of the acute question of unemployment by attracting our young men towards industrial enterprises.

SUKUMAR RANJAN DAS

INDIA'S PLIGHT: *By Sir M. de P. Webb, C.I.E., C.B.E. Published by The Daily Gazette Press, Ltd., Karachi.*

One may not agree to Sir M. de P. Webb's proposal to remonetize silver, it is impossible not to be impressed with the sympathy, sincerity, lucidity and the forceful directness which characterize his writings. *India's Plight* has already run into its fourth edition which is a sure testimony that its worth has been widely appreciated, and it is perhaps too late to review it in any detail.

While price-level and agricultural income in India has dwindled to half their former value and while exports have contracted by more than fifty per cent, income-tax receipts and land revenue have remained the same. While the volume of imports has fallen the custom receipts have remained the same, so that the price of the imported products have not fallen proportionately. At the same time the burden of our sterling obligation has doubled. Thus the total purchasing power of the country has greatly diminished and the manufacturing industries have been badly hit in consequence. This explains India's sad plight. Apart from the world factors there have been special causes operating in India. Mismanagement of the exchanges have led to a loss of no less than 60 crores of rupees. The Gold Standard was resumed at an inopportune moment at the instigation, says Sir Montague, of the financial interests in London, and this has led to the serious currency contraction which has dislocated our national economy. Then we have the detestable 1-6 ratio established in face of public opinion by the Hilton-Young Commission. Lastly we have the recent linkage of the rupee with the sterling, which has placed our currency system in the hands of the London bankers whose interest it is to raise the value of gold by contraction or otherwise.

To get out of this terrible situation, Sir Montague suggests reduction of taxation, restoration of the 1-4 ratio and what is more important, free coinage of silver. To the first two we agree, though with reservation with regard to the second; but we think the difficulties attending the third would outweigh its advantages. It is true that the production of silver is more or less independent of price and hence there is little danger of new production 'flooding' our country, mainly because India is not a great silver producing country. But what about the huge stock in India amounting to anything between 300 to 1,000 million ounces? A large proportion of this hoard is in possession of a class of persons in need of immediate cash who would take the first opportunity of converting silver into liquid purchasing power. *After* the silver standard has been established for some time there would be no such rush for coinage, but during the transition period the strain might be too great. No doubt with the monetization of silver the control of our currency system will go out of the hands of the London bankers, but is it not equally probable that it would pass over to the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

silver speculators in U. S. A. and Mexico? Moreover, we are not convinced that expansion of currency is not possible under a gold or a sterling standard. We do not in any way support the sterling standard, but on the whole it seems to us that it is easier to persuade the currency authorities to change the currency policy than to ask them to adopt silver. At any rate both the possibilities are at present far from being within the bounds of practical politics.

S. N. SEN-GUPTA

FRENCH

DELA VERITE DAUS L' ART. *Dialogue entre un Oriental et un Occidental. By Lionel de Fonseka (Warnesuriya Wijetunge Samaranayake). Publication Chitra. C. A. Hagman, editeur. En vente a la Librairie des Lettres et des Arts. 150, Boulevard Saint-Germain. Paris.*

In this small book of 139 pages a Singhalese author has sought to expose his idea of "Truth in Art" in the form of a dialogue between an Oriental and an Occidental. The scope of this comparative study of the theory of art in the East and in the West is kept tantalizingly vague, as the terms "Orient" and "Occident", "Oriental Art" and "Occidental Art" are nowhere defined. Greece is not included in the "Occident", while there are only a few stray references to France and Germany, the author's observations being mainly confined to England. Persia, China, Japan and Malayanesia are obviously excluded from the "Orient; and it is not clear if India herself is included, or the author means to speak of Singhalese Art alone. There is no means of obtaining even the glimmering of light in the case of the "Orient" that we have in the case of the "Occident", because no work of Oriental art, no single artist or school of oriental art is specifically mentioned.

All the author's exuberant praise of Oriental Art, as compared to Occidental, therefore eludes close examination by application to specific objects of that art: "In oriental art the conventions belong to the domain of form, where they are natural. In Occidental Art they belong to the essence and are an anomaly" (p. 26). "The architecture of the East gives you the sense of mystery and of the immensity of nature. In the decoration of temples is revealed the sensitiveness of the artist before natural phenomena. He understands them and employs them as symbols." (p. 34). "Your thought is academic while ours is popular." (p. 72). "Art expresses our manner of getting hold of nature, art is our way of perceiving" (p. 124). "In the West all the idealism is in the art, while all the materialism is for life; in the East are reserved all our ideals for practical life" (p 91).

In contrast to this is his wholesale condemnation of all creations of art in the West, particularly in England: "You always try to express your own self" (p. 13). "Ball dance when it is not a giddy galloping is only a sterile confusion" (p. 14). "The conventions of Occidental Art have a morbid character" (p. 24). "Among the romantic poets, the expression of sentiment is a gratuitous falsehood" (p. 25). "Your drama and your romance are didactic." (p. 38). "All your arts are dead arts" (p. 56). "Now-a-days, obviously, there exists amongst you, no rational sentiment sufficiently vigorous to give dignity and grace to the monuments that you construct" (p. 65). "Your philosophy is an abstract speculation entirely cut off from life" (p. 69). "Humanism as an artistic faith has its place among the other cruelties of the Renaissance" (p. 73). "The Romanticism of Germany has produced a generation of artistic monstrosities" (p. 98). "Pre-Raphaelism appeared formerly as an extravagance, but it.....is become a pure vagabondage" (p. 101). "For the mass of Englishmen, art has no meaning" (p. 103).—These remarks culled at random sufficiently illustrate the attitude of mind in which this comparative study is undertaken. No attempt is made to trace the historical evolution of Western arts, no impartial exposition of the different theories as they have been shaped and enriched by the varied experiences of life is attempted, there is no sympathy with the artistic aspirations of Western peoples; all the arts of the Occident in all ages and all the theories of art are swept into one basket and condemned.

But the author has a theory of art of his own which he calls Oriental, as if all the arts in the orient have at all times obeyed, like docile student, this Panini of Oriental art. According to the author, Oriental art is primarily utilitarian, and secondarily decorative." In the East all our arts are useful and are fine arts" (p. 60). "The aim of art is first of all usefulness, next embellishment" (p. 77). "In the East we believe that the end of art is decoration" (p. 12). "The aim of art is decoration, expression is not the essential property of art, it is only accessory." That is, according to the author, the artisan who turns out useful objects is, *par excellence*, the artist, and not he who translates into tangible forms the fleeting etherial visions of beauty and perfection and harmony which, since the beginning of creation, have haunted man, the child of Immortality. He has only a cheap sneer for "pure" art, "from which the idea of utility is entirely absent" (p. 30). No more monstrous injustice can be done to Oriental art than to call this the theory of "Oriental art". Of what utility was the tomb of the Empress that the Emperor gathered all the best artists of his age and spent his vast resources in the construction of the Taj Mahal? Of what practical utility were the temples of Orissa and Ellora that whole bands of artists spent the best years of their lives in making each single stone a feast of beauty? The idea of utility is perhaps nowhere more absent than in the art of India. But we look in vain for any consistency in the author's theory. He condemns English novels and dramas because they are didactic and harass people with their propaganda, and again declares that "art loses its dignity if it serves as an instrument of social reform" (p. 48), *i. e.*, becomes an object of utility.

The strangeness of his opinions is indeed such as makes us rub our eyes if we are seeing true: "In India philosophers were legislators and statesmen" (p. 69). "Why does a woman shut her eyes instinctively when she is kissed? Because reaching a certain point, sight becomes incompatible with other senses. Having fulfilled its function it becomes positively irritating" (p 71). "If the Greeks were quite modern they would have arranged in such a way that the same statues would represent the gods on sabath day [sabath for the pagan Greeks !] and football players on Saturday afternoons' (p. 120). Mixed with these there are acute observations here and there, but all distorted like the world seen with a squint in the eye: " In the East the artist never tries to reproduce

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

the external forms of nature, but rather the idea which they incarnate" (p 121) ; is it not true of Western art as well ? "Perfect Art exists in the perfect union of the useful and the true" (p 95) ; —is not true of decorative art only ? "Specializing in art is amputating life" (p. 132) ;—would the author like the Venus de Milo to have her lips and cheeks painted and properly dressed dance a minuet pulled by the strings of the marrionette player, thus combining the arts of the sculptor, the painter, the dancer and of the modestés of the grands boulevards ?

The book is divided into two chapters : (1) Du Decor de la vie. (2) Du Decor de l'Art. Since however the succession of ideas is continuous, the division and the headings of the chapters appear to have no special significance.

"This dialogue," says the author in his Preliminary Note, "is written specially for the Singhalese." In that case there does not seem to be any point in writing the book in French, as French is not a language widely studied or generally understood by the Singhalese. The patient Englishman who listens with exemplary patience to his long condemnation of all the arts of his country—his poetry and drama and romance and painting and dancing and ideas of love and morality and what not—would also have found it easier to understand if the book were written in his own language.

We in India are used to the intellectual hypocrisy of the pseudo-lovers of India, who, without any study of the art or philosophy of India or of their own countries, go into ecstasies over things Indian and decry the achievements of their own countries. It is sad to find an Indian (and the Singhalese are culturally and linguistically Indian) in such company.

SUBODHCHANDRA MUKERJI

SANSKRIT

BRAHMASUTRA : *Chapter II, Pada I with Sankara's Bhasya, the Bhamati of Vacaspati, the Kalpataru of Amalananda and an original commentary called Prabha by the author, with a Bengali translation and elucidation by Pandit Charukrishna Vedantatirtha. Edited by Pandit Rajendrnath Ghosh Vedantabhusana.*

It is a happy sign of the times that Vedanta philosophy is passing away from the hands of Sannyasins and has been take up as a subject of serious study by the orthodox school of Sanskrit scholars in Bengal. In former days Navya-Nyaya was the principal interest of the Pandits of Bengal and they had neither the time nor the inclination to cultivate a first-hand acquaintance with other schools of thought. But though Nyāya is still the main interest and has not lost a whit of its prestige, Vedanta has recently come to take its due share. And I am not using the language of courtesy or convention in saying that Bengal scholarship in Vedanta owes a great deal to the activity and inspiration of Pandit Rajendranath Ghosh Vedantabhusana. The present venture is an illustration of the expansion of Vedantic culture. In this volume the Adhikaranas of the Brahmasutra has been edited with the Bhasya, Bhamati, Kalpataru and an original commentary on the Bhamati, called prabhā and the whole thing has been translated into Bengali with elaborate notes and elucidations in difficult places. Even a tyro knows that this part of the Brahmasutra together with the Tarkapada (II. 2.) constitutes the most difficult and important portion of Bādarāyana's *Magnum opus*. It is gratifying to note that Pandit Charukrishna Vedantatirtha has not grudged any labour to render these classics intelligible to a modern student. His Sanskrit Commentary is really an admirable performance and for the elucidation of the niceties and difficulties in connexion with the exposition and criticism of the Buddhist philosophical concepts, the author has freely drawn upon the texts of Buddhist philosophy, which have recently come into light. These texts were formerly a sealed book to the orthodox section and in consequence many a dark spot in the Bhamati could not be lighted up. The quotations in the Bhasya and the Bhamati have been traced to their original sources, wherever it has been found feasible and this shows that the editor has not spared pains to make the book up-to-date and thorough. The division of the topics into appropriate sections and the illuminating observations on the nature of the *Adhikaranas* based on a study of the wording of the sutras by the editor add really to the value of the work and the latter particularly show a new line of study which may be profitably pursued by a modern scholar. The editor tells us in the foreword that this method of interpretation of the wording is not a new-fangled invention with him, but was actually taught by the Late Mahamahopadhyaya Lakshmana Sastri, the great savant who may be regarded as the founder of present-day Vedanta culture in Bengal. An independent study of the original sutras on this line may go a long way to solve the problem as to whose interpretation among the Bhāsyakāras should be believed to represent the true spirit of Badarayana.

SATKARI MOOKERJEE.

SANSKRIT—ENGLISH

THE BHAGAVADGITA OR THE LORD'S SONG : *With the text in Devanagari and an English Translation. By Annie Besant. Ninth edition : Ten thousand. G. A. Natesan & Co., Madras. Price annas four.*

It is enough to note about the importance and usefulness of this handy and unostentatious edition of this, the most popular work of the Hindus, that it has had to be printed for the ninth time after 120,000 copies of the book had been exhausted even when a large number of editions of the work are available in the market.

CHINTAHARAN CHAKRAVARTI.

HINDI

BHAJAN SAMGRAHA : *Fourth Part. Compiled by Viyagi Hari. Published by the Gita Press, Gorakhpur. Pp. 157. Price two annas only.*

This is a collection of Hindi bhajans written by Muhammadan poets who composed devotional poems on the Hindu imagery. Here is an additional example of the inter-action and *rapprochement* between the two religions in the past.

BHUTON KA KITA : *By Anandakumar. Published by the Hindi Mandir. Prayag. Price six annas.*

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

A ghost story written for children in a charming and attractive style.

BALKATHA-KAHINI: *Fourteenth Part. By Ramnaresh Tripathi. The Hindi Mandir, Prayag. Price six annas.*

The well-known story of Sindwad the sailor and his voyages from the Arabian Nights written for children by a well-known Hindi author. The style is charming and the language attractive and simple.

ANATH NATH BASU

MARATHI

श्यामकांतचीं पत्रें *Shyamkant's letters. Price Rs. 2. Published by Mr. Tikkar. Tilak Road. Poona.*

Shyamkant was the son of the well-known Historian Mr. G. S. Sardesai whose distinguished work *The History of the Marathas* is renowned under the title of रियासत published in several volumes. Shyamkant ceased to live in 1925 when he was at Germany. Mr. G. S. Sardesai, being an expert instructor, had brought him up from his childhood by arranging to send him to different places like Bolpur (Santiniketan), Poona (Fergusson College) and Germany, where he was nearly domesticated from time to time. Shyamkant had prolific and facile correspondence with his parents from the above-mentioned places, in English and in Marathi. We see a few selected letters in this volume. The book is nicely edited and attractively published.

V. S. WAKASKAR.

GUJRATI

ENGLAND NO ITIHAS. *By Ambelal Naranji Joshi B. A. Published by the Gujarat Oriental Book Depot, Ahmedabad. Cloth bound. Pp. 628 Price Rs. 2 (1934).*

This is a very readable history of England. Although it is meant for students of the School learning and similar other examinations, it would be found equally useful by others not concerned with the education department. In addition to the political history of England, one finds in it many other interesting features, as the writer has been at pains to set out the biographical aspect of England's well-known Kings, Queens and politicians and has also included in it the universal aspect of history, such as the Social tendencies of a period, its architectural bent. We will give only one instance of work in misdirection. See Sections 9,10,11,12 of Queen Elizabeth's reign. It is also an up-to-date history.

PRALHAD. *By Mrs. Shrimatibālā Majumdar. Printed at the Arya Sudharak Press, Baroda. Thick Card Board. Pp. 87. Price Annas 6. (1934). Illustrated.*

The story of Pralhad, which every Hindu is supposed to know is divided into nineteen Chapters in this small book. It forms a past of the Sayaji Baljnan Mala series, which till now under the fostering care of H. H. the Maharaja Gaekwad of Baroda has published 100 volumes. The story is told in such a chatty style by the young authoress that children, for whom it is mainly intended, are sure to take to it.

K. M. J.

POLITICS IN THE FAR EASTERN OLYMPIC ASSOCIATION

BY DHIRENDRA N. ROY, M.A., PH. D.,
Professor in the University of the Philippines

SINCE the new awakening of the East the idea of a close contact among its various countries has begun to be popular. It has been received very enthusiastically by those of them which are still under the domination of foreign powers. But there has not been as yet any active continental move toward the realization of the idea. No particular country has taken the initiative to develop an effective technique for it. The term "East" does not suggest any conscious unity of the Oriental people, it still owes its meaning to the West.

The reason why such an active continental move has not been so far possible lies chiefly in the political character which it seems to assume. It is not possible to carry on, in any active sense, an Asiatic movement having political significance, without encountering positive discouragement, if not strong resistance from those foreign powers that happen to dominate over the destiny of many Asiatic countries. The acquired political responsibility of the foreigners may supply them with sufficient grounds internationally justified to suppress such a movement.

But the sovereign powers do not have reasons to discourage any Asiatic movement which is non-political by nature. There are certainly some ways, other than political, through which the peoples of Asia may foster close contact among themselves. One of them is athletics. It is not political by nature and as such not disapproved or objected to by foreign rulers. Yet by means of it the different Asiatic countries can easily come into close contact and acquire a real desire to feel interested in one another. The formation of an All-Asiatic Olympic Association, following the manner of the World Olympics, will certainly afford good opportunities for the Asatic peoples to know one another more directly and intimately than ever before.

And this has been in a gradual process of realization without Asia being fully conscious of it. I do not know how many Asiatic countries outside of those that have been actually taking part in it, are familiar with the new athletic movement known as the Far Eastern Olympics. The geographical limitation as suggested by the name of the movement implies only its simple

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

beginning in the Far East, while it may expand its boundaries at any favourable moment to throw off its narrow regional form for the sake of the whole continent. The movement is certainly something in which the whole of Asia should feel interested, for it is the movement of youth and youth is going to count most in the solution of all world problems. Unfortunately it has received a sudden set-back, thanks to the short-sightedness of some of its present members, and is facing a crisis which must somehow be averted in order to fulfil its own part in the great Rennaissance of the East.

The beginning of this Far Eastern Athletic movement dates back to 1913. Strange as it may seem, it owes its origin not to any Oriental. For it the credit must go to an American. It was Mr. Elwood S. Brown, formerly physical director of the American-European Y. M. C. A. at Manila, who first conceived the idea of an inter-port athletic meet between Manila and Shanghai and communicated it to Mr. W. Z. Zung, physical director of the Shanghai Y. M. C. A. Mr. Zung highly approved of the idea. In May 1913 athletes from the two principal ports of the Far East met together at Manila and played various friendly games. It was an athletic meet between China and the Philippines. Japan also felt interested in it. But she did not participate in the games, as she was not invited. Her representatives came only as guests to witness the games.

The success in this athletic meet led the two physical directors forthwith to organize a Far Eastern Athletic Association with China, Japan, and the Philippines as members. It was proposed at first that the championship game should take place every two years. But in 1927 the interval was extended to three years and after the meet in 1930 it was further extended to four years. The tenth Far Eastern Olympiad was held at Manila last May. Whether or not there will be an eleventh F. E. Olympiad is a question it is difficult to answer just now. China is said to be preparing for it at Shanghai, the scheduled time for the next meet being May, 1938. But a different plan is going on elsewhere—a plan which is in direct opposition to the further continuation of the Far Eastern Olympic Association.

What happened at Manila toward the end of the tenth F. E. Olympiad last May, is responsible for the crisis that has overtaken this association. Some clumsy political question has entered into this non-political venture—a question that concerns only Japan and China but has involved the other member-countries in a very embarrassing situation and has, according to some opinions, caused the wreckage of the association itself. How it has done so is an interesting story.

Originally the Association was composed of three members only—China, Japan, and the Philippines. But later two more countries, Annam and the Dutch East Indies, were also admitted to its membership. The constitution of the Association contains the provision in Article Three that "a country may be formally admitted to membership and representation only by the unanimous vote of the member-states comprising the Association." It is said that the requirement of a unanimous vote for the admission of a country to Association membership was introduced into the Constitution in 1930 at the instance of Japan so that should Korea choose to apply for membership Japan alone by her own vote of dissent would be able to prevent it. But this happened at a time when Japan had in her mind only Korea and no Manchuria. The story of "Manchukuo", although it is not yet a finished story, is quite well known to the world. Whether Japan is right or wrong in her present policy in Manchuria is not the point. But Japan by creating this new state in the land of the Chinese has certainly caused a great international furore affecting her national prestige. She has so far failed to mitigate the situation by any direct political means. So she has been compelled to try other possible means. In the last World Olympiad, held at Los Angeles, she used her utmost endeavour to accomplish the admission of "Manchukuo". But it was a futile endeavour. The World Olympiad Committee could not approve of it.

In the last Far Eastern Olympiad she sought to do the same again.

> "About a month and a half before the opening of the Tenth Far Eastern Olympaid at Manila on May 12, Japan sent an official communication to to the Olympic Commitee applying for the admission of 'Manchukuo' to the competitions. Naturally, China objected on the legal grounds that no such state as 'Manchukuo' existed on the map, and if ever athletes from the North-eastern Province of China... .....participated in the competetions, they should by world recognition be a part of the Chinese delegation."

Japan realized that China had a strong case to back up her opposition. Besides there was the constitutional difficulty of which China would certainly take full advantage. Article Three which has been to the advantage of Japan in case Korea should seek admission to the Association, has now stood clearly in her way to have "Manchukuo" admitted to membership, inasmuch as China would never vote for it and "Manchukuo" could not be a member without the unanimous vote of the member-countries forming the Association. So Japan sought to have Article Three amended.

Upon her request a conference was held at Shanghai on April 9 in which delegates from China, Japan, and the Philippines were present. Japan proposed in this conference an amendment of Article Three to the effect that "two-thirds approval be sufficient for the admission of any new state to the Federation." Evidently the move was to dispose of China's opposition against

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Japan's plan. But the conference, as was expected, came to a deadlock.

"China threatened to withdraw from active participation in the Manila Meet if 'Manchukuo' was to be included, while Japan intimated that she would take a similar step should the puppet state be barred."

Filipino delegates, finding that all the expensive preparations at Manila would be spoiled, sought to break the deadlock by suggesting a compromise. This was that the question should be discussed at Manila after the conclusion of the Olympic Games.

The games were played amidst great pomp and show. Incidentally, I should mention here that to hold the Tenth Far Eastern Olympiad the Filipinos made splendid preparations at Manila. They raised by lottery a huge sum of money (more than one million pesos) and spent it in building a magnificent stadium, containing a semi-oval concrete grandstand accommodating 12,000 people.

The conclusion of the games was followed by the tenth session of the Far Eastern Olympic Congress. As scheduled the "Manchukuo" question was brought up again for discussion. The little assembly assumed the importance of a League of Nations conclave. Japan introduced the proposal to amend Article Three. China opposed it as vigorously as before. The Fillipinos being the host members were in an embarrassing situation They sought a compromise once again. They proposed an amendment of Article Ten to the effect that the host country of the Olympiad be given the privilege to invite any country to participate in Olympic Games. China saw that this left a loop-hole for the admission of "Manchukuo" when Japan would be the host country, and opposed it. At the second meeting of the Congress the Japanese delegates wanted the Filipino proposal to be put to vote. The Chinese delegates "refused to vote on the ground that delegates from Annam and the Dutch East Indies, the two new member-states of the Federation, were absent, pointing out that even if the Japanese and Filipino delegates voted in favour of adoption of the proposal, it would not be constitutional as a two-thirds vote was required to legalize any adoption of new proposals. Their voice unheeded, the Chinese delegates walked out of the conference". This impasse, however, did not signify China's withdrawal from the Association.

There was a third meeting of the Congress in which only Japanese and Filipino delegates were present. It is said that the Filipino officials of the local organization failed to locate the Chinese delegates and inform them of the meeting. But the absence of the Chinese delegates from the meeting was a real advantage to the Japanese. They introduced a resolution to dissolve the Far Eastern Athletic Association and to organize in its stead a new and larger association to be called the Amateur Athletic Association of the Orient. The Filipino delegates quietly acquiesced.

Right or wrong, Japan has announced the creation of a new Athletic Association. Its officials have been elected. The constitution of the new Association is almost the same as that of the old Association except the troublesome Article Three which blocked the admission of "Manchukuo.' It has been also proposed that Japan and the Philippines would jointly issue invitations to various Oriental countries to participate in this Association. The meeting is to be held at Tokyo early this October to discuss complete plans for the new organization. According to present plans, invitations to join will then be sent to Manchukuo, China, the Dutch East Indies, French Indo-China, and India.

China, on the other hand, considers all this as mere farce. Mr. Sung, secretary of the China National Amateur Athletic Federation, says, "The alleged dissolution is completely illegal and nothing less than a farce. How can two out of five members dissolve any organization?" Dr. C. T. Wang, Minister of Foreign Relations, has similarly regarded the affair at Manila. The Chinese do not think that the Far Eastern Athletic Association is dissolved. They have already started to make preparations for the next Olympic Meet at Shanghai which is due to be held in 1938.

All this is most unfortunate. The movement that has, for twenty long years, been going on in this part of Asia, to foster the fine spirit of neighbourhood and slowly push its frontiers, has received a very rude shake from unscrupulous politics which should not have been ushered into it. At any rate, the year 1938 is going to be a very interesting year for the Athletic Orient. Japan is determined to hold at Tokyo, in 1938, the first meet of the new Association with "Manchukuo" as one of its members. While, on the other hand, China is also preparing for the eleventh meet of the old Association. If both of them send invitations to other Oriental countries to participate in athletic competitions those countries will certainly be in a fix.

SOME ECONOMIC ASPECTS OF THE WHITE PAPER:

I. COMMERCIAL DISCRIMINATION

By D. N. BANERJEE,

Head of the Department of Economics and Politics, Dacca University

THE object of this paper is to examine (*i*) the proposals made by His Majesty's Government in what is known as the White Paper on n Constitutional Reform, for the purpose reventing commercial discrimination in , and also (*ii*) the explanatory confiden- Memorandum* on the same question, the 3rd November, 1933, which the tary of State for India submitted to the mentary Joint Committee on Indian ms on the 6th of November last. The randum did not make any new proposals. urpose was to set out, to quote the words he Secretary of State, with greater sion the objects which His Majesty's rnment had had in view in framing the sals regarding commercial discrimination mbodied in clauses 122 to 124 of the e Paper.

he general principles, according to the tary of State, upon which the proposals e Government in relation to commercial imination have been based may be stated as follows :

) Section 96 of the Government of Act which, reproducing in essence on 87 of the Government of India Act, lays down that

"no native of British India, *nor any subject of His Majesty resident therein*, shall, by reason only of his religion, place of birth, descent, colour or any of them, be disabled from holding any office under the Crown in India"

the passages to that effect in Queen ria's Proclamation of 1858 ; and (2) the ving resolution of the Round Table ference adopted on the 19th of January,

to the instance of the British commercial munity, the principle was generally agreed that there should be no discrimination between the rights of the British mercantile community, firms and companies trading in India and the rights of Indian-born subjects, and that an appropriate convention, based on reciprocity, should be entered into for the purpose of regulating these rights".

It may be observed here by way of comment that there is no reference to the question of commercial discrimination either in Section 87 of the Government of India Act, 1833, or in Section 96 of the (existing) Government of India Act. The object of both the Sections has been to ensure that no person should be disqualified from holding any office under the Government in India by reason of his place of birth, creed, or colour, and that fitness alone should be the criterion of eligibility. Perhaps it would be argued that the underlying spirit of the Sections should be taken into account in connexion with the question of commercial discrimination.

The expression "commercial discrimination" is very compendious, and has been used in the Indian Round Table Conference and also in the White Paper to signify discrimination against British commerce 'both in India and with India, in all its diversified fields of Banking, Shipping, Finance, Trading and Industry.'

Now Commercial discrimination may be either of an administrative or of a legislative character ; and proposals have been made in the White Paper for the prevention of both kinds of discrimination. On the administrative side, the Governor-General or the Governor will, it has been proposed, have each in his own sphere—a special responsibility for the prevention of commercial discrimination ; and will be entitled to act, subject to the directions contained in his Instrument of Instructions, otherwise than in accordance with his Minister's advice, if he considers that such advice will involve discriminatory action in the administrative sphere. It will be for the

Vide the Secretary of State's Evidence before the Committee on Indian Constitutional Reform, (Q. Nos. 290-93), 3rd Oct. to 7th Nov., 1933.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Siva Sankar Foundation Chennai and eGangotri

Governor-General or the Governor, as the case may be, to determine *in his discretion** when his special responsibility in this respect is involved by any given circumstances.

It may be noted in this connexion that the original phrase used in Paragraphs 18 (e) and 70 (d) of the White Paper, namely, "the prevention of commercial discrimination," has been expanded in the Memorandum referred to before, to "the prevention of discrimination in matters affecting trade, commerce, industry or ships." The expanded phrase is certainly more comprehensive in its scope.

As some illustrations of what may be considered to be cases of administrative discrimination, I may quote the following extract† from the evidence of Sir Samuel Hoare given before the Joint Select Committee on Indian Constitutional Reform on November 6th, 1933 :

> Marquess of Zetland‡ : Supposing a Provincial Government calls for tenders, it may be for the Public Works Department, for contracts for road making or building or anything of that kind, and supposing tenders are put in by both Indian and British firms, and supposing that the British tender on its merits is quite obviously the best, but supposing it is not accepted by the Provincial Government, but a tender by a purely Indian firm is accepted, it seems to me that that is the sort of case of discrimination which might arise. Would the Governor in those circumstances be justified in calling for the tenders, examining them and saying 'No, on the merits of the case, it is quite clear that the tender put in by the British firm is the most advantageous to the Provincial Government, and for that reason, and for that reason alone, laying down that the British tender would have to be accepted ?
>
> Sir Samuel Hoare : "Certainly, if it was a serious case. I could quite imagine that there might be doubtful cases, in which it was very difficult for the Governor to convince himself that the tender had been given, we will say, on racial lines, *but if it was a serious case, then I should say, it would be the duty of the Governor to intervene.*
>
> Sir Austen Chamberlian§ : Suppose the Governor found that tenders were awarded to Indian firms, irrespective of price, I suppose you would hold that that was discrimination, and that the Governor should interfere ?
>
> Sir Samuel Hoare ; I should think certainly, in a case of that kind, *the Governor would demand an enquiry and would satisfy himself or not satisfy himself that there had been discrimination. If he was satisfied that there had been discrimination, he would intervene.*

Sir Austen Chamberlain* : Take the case where tenders are not called for publicly, but where it is alleged that the Government, having both Indian and British firms well fitted to tender, calls for tenders from the Indian firms only. Would that be an occasion for the Governor to act ?

Sir Samuel Hoare : *I would certainly say it would be a case for the Governor to hold an enquiry and satisfy himself whether or not there had been discrimination.*

Sir Austen Chamberlain† : Would it be within his power if, as a result of the enquiry, he found there had been discrimination, to cancel the contract ?

Sir Samuel Hoare : *His power is unlimited and undefined.*

Sir Austen Chamberlain‡ : Could he hold up the contract pending an enquiry ?

Sir Samuel Hoare : *Yes.*

Further, in reply to the question of Lord Salisbury§ 'whether it would be practical, as a matter of fact, for the Governor to interfere in cases where the Indian Government obviously preferred on several occasions an inferior Indian tender to a better British one,'

Sir Samuel Hoare said :

> I think it must depend upon what importance the Governor himself attaches to the particular case ; I can quite imagine (in fact I admitted just now to Lord Zetland) that there may be very difficult border-line cases, in which it would be difficult for anyone to say whether this or that tender had been accepted for this or that reason, but I am assuming that where it really was a case of serious discrimination the Governor would certainly have his attention called to it. There are not the things that happen without anybody knowing about them at all, and in that case, the Governor should intervene.

Moreover, the Secretary of State made it definitely clear, in reply to two further questions** of Sir Austen Chamberlian, that what was intended to prevent was *'improper discrimination between two companies incorporated in India on any ground of race'* and that he would not treat it as an improper discrimination 'if the Indian Government, to encourage the growth or creation of some industry, placed an order with a Company, whether British or Indian, incorporated in India, and *impartially as between those two,* but excluded companies established elsewhere, even though they were established in the United Kingdom.' Thus his point was that there must not be any discrimination by administrative action

...ainst British Companies in India. * Nor ...ould a *Company incorporated in the United ...gdom but trading in India* be ordinarily ...ject to any disabilities in this respect on ...ount of the fact that it has been incorpora... in the United Kingdom or that its ...eholders are of a particular composition ...class or nationality. This is evident from ... replies to questions 15384 and 15410 ...en by Sir Malcolm Hailey and Sir Samuel ...are respectively in the course of their ...dence before the Joint Select Committee. ...a matter of fact Sir Samuel Hoare clearly ...ed in his reply that the Government did ...make any distinction in its mind between ...slative and administrative discrimination. ...observed, however, later on that he would ...regard it as discrimination on part of a ...vincial Government either to restrict its ...lers to Companies operating in its own ...vince' or to purchase its stores from ...nufactories established under its own ...ervision'.†

A careful perusal of the replies of Sir ...uel Hoare, as quoted above, will convince ...reader that, under the proposals of His ...esty's Government in relation to the ...sion of commercial discrimination, it will ...ft entirely to the discretion of the Govenor-...eral or the Governor, as the case may be, ...determine whether there has been made any ...rimination in any particular administrative ...by a Federal or provincial Minister, and, ...ally, the power of the Governor-General ...the Governor in this respect will be *...limited and undefined*". One can easily imagine from this the amount of freedom which the Indian Minister will enjoy in regard to matters under our consideration under the White Paper Scheme of Government. It may be argued that this state of things will obtain only during the period of transition. But it is nowhere stated in the White Paper how long the period of transition will last. Besides, it is extremely unlikely that the British Companies in India will ever agree to surrender the privilege which it is proposed to confer upon them, once they have got it. Such magnanimous renunciation, however praiseworthy, will be against human nature. Nor again should we ignore in this connexion the probable effect of the proposals, if they are given a statutory form, upon the development of the comparatively young Indian industries or the newly started Indian Companies, as the latter will have to compete with well-established and well-organized British concerns with enormous resources in men, money, skill and experience at their back. It may be argued that in accordance with the principle of reciprocity agreed upon at the Round Table Conference, Indian Companies will enjoy the same privileges in the United Kingdom as it is proposed to confer on British Companies in India. I shall show in my next article how delusive is the appearance of reciprocity in this matter.

Lastly, it may be noted here that there is nothing, as Sir Edward Benthal admitted before the Joint Select Committee in his reply to a question of Sir Purshottamdas Thakurdas on July 13th, 1933, in the present Government of India Act regarding either administrative or legislative discrimination. Thus the position will be worse in this respect under the new Scheme of Reforms as proposed in the White Paper.

---

* In making this point he remarked, however, ...he did not think that anybody was assuming ...in every public tender in India British ...panies from England would neceasarily tender. ...does not happen now.

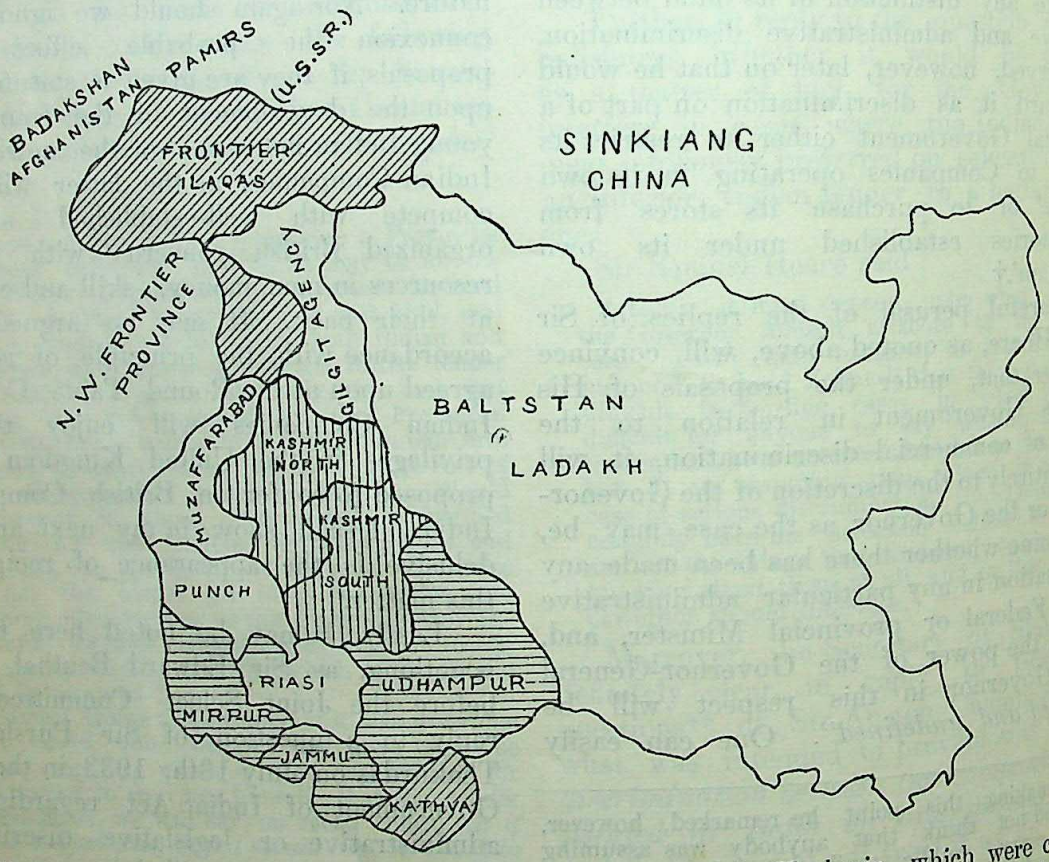
THE FACE OF THINGS IN KASHMIR

By R. S. PANDIT

IN the plains of India when the hot winds are at their worst who does not long to go to Kashmir with its snow-peaks, the soft friendly hills clothed in blue-green pine and fir and its wealth of flowing water and who, if he has once been in that "Earthly Paradise", does not long to go there again? The end of May found us on the Grand Trunk Road from Allahabad heading steadily for the Himalayas, the abode of snows, and dividing the Panjab by the glare of



the headlights of the Nash. Jawaharlal Nehru's daughter Indira who had passed the Matriculation and had a brief holiday before joining Tagore's Institute at Santiniketan was with us looking forward eagerly to the sight of the old homeland.

The government of the Maharaja have recently spent Rs. 58,00,000 in constructing a motor road over the Banihal Pass. There is a tunnel on the top of the Pass; emerging from it one sees below the valley unfolding itself in all its loveliness. On the Kashmir side of the Pass the snow is still to be found and the wild flowers make the dust-laden tourist forget the hot furnace of the plains and his further journey lies through Elysian fields within sheltering mountains and avenues of fruit trees and tall poplars along the winding Vitasta (the river Jhelam) t the Venice of the East. Srinagar—the Cit Royal—is one of the oldest cities of the world and derives its name from the capital founded in th remote past by the Emperor Asoka the Constan tine of Buddhist India.

In ancient Kashmir the Hindu kings had system of passports like that of China and exi and entry into Kashmir were strictly regulated

the passes of Kashmir which were called Dr or Gates being especially closed against foreigner Albaruni, the contemporary of the Turki Conqueror Mahmud, writes about the Kashmir in the 11th century:

"They are particularly anxious about the natur trength of their country, and therefore tak always much care to keep a strong hold upon th entrances and roads leading into it. In consequ it is very difficult to have any commerce wi them. In former times they used to allow one two foreigners to enter their country, particular Jews, but at present they do not allow any Hind whom they do not know personally to enter, muc less other People".

The Banihal route was until recent times ed to Europeans, which was a survival in of the old system. Now all restrictions are ished, for visitors are as welcome as in itzerland.

Close to where the ascent begins on the shmir side is the village of Vernag about fifty s from Srinagar. Those who go to Kashmir the much frequented Rawalpindi route erally miss seeing Vernag, where, according Kashmiri legend, was the source of the Vitasta. s place, which is at a height of 6,100 feet, has a nificent spring known in ancient times as the Naga after Nila, the lord of the Spring- s, and patron saint of Kashmir. The Nagas, rding to legend, were semi-divine beings who ded in the form of serpents in the limpid ls and lakes of Kashmir; they caused hail- ms, thunder and clouds, and when they took shape of human beings they were recognized their locks which streamed with water! The mmadan population of the valley has not yet ed to adore the ancient spring deities. The g at Vernag was enclosed in a fine stone by the Emperor Jahangir, who was half -Mongol and half a Rajput, his mother g been a Rathor princess of Jodhpur. From Emperor's own pen we have a description of lovely spring of ice-cold water. (*Tuzuk-i-Jahangiri*, Oriental Translation Fund, p. 92.) returning from Kashmir Jahangir died Nagas near Rajauri and his last wish was he might be conveyed to Vernag and buried

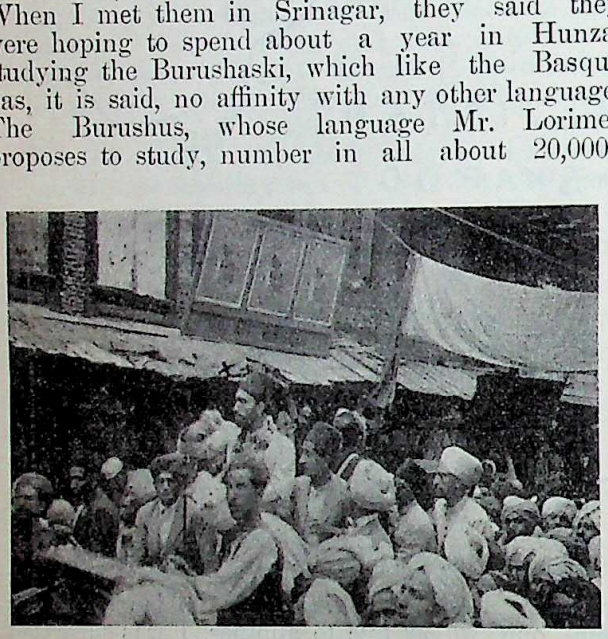
On the Bund opposite the Post Office at Srinagar, while watching the golden oriole flit from one willow tree to another, I was surprised to hear Russian being spoken. A smattering of Russian acquired during University days at Heidelberg helped to make the acquaintance of some Russians, men and women, who turned out to be refugees in Kashmir from Chinese Turkistan. They had escaped from the USSR, after the revolution and lived ever since as refugees in Chinese Turkistan, but they had to leave it when, upon the outbreak of revolution against the Chinese administration, the political situation became very grave. The Russian refugees had come, some of them over the boundary between China and India *via* the Mintaka Pass (13,000 ft) in the snow of January, while others had turned west from the Mintaka Pass into Afghanistan. The latter found themselves in Badakshan, were ordered to move on and eventually came through what are known as the Frontier Ilaqaas (territory) of the Kashmir State *via* Gilgit to Srinagar. They had thus crossed Passes which few Europeans have ventured to cross. Our conversation was short-lived. It was interrupted by an English woman who described herself as a "British officer's daughter"; she warned the refugees that it was the British Government which was maintaining them and not the Indian National Congress, which was under the influence of Jawaharlal Nehru, whom she described as a "Professional Communist" and in sympathy with the Godless Jews of Moscow. Late at night one of the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Russian refugees came on behalf of the group to express regret for the behaviour of the English woman.

Every English visitor is not interested in playing golf or in fishing, shooting and dancing. Some have interests of a more intellectual kind. Among these apparently were Mr. and Mrs. D. L. R. Lorimer, who had arrived from England and who were on their way to Baltit, the capital of Hunza, a feudatory state under Kashmir. When I met them in Srinagar, they said they were hoping to spend about a year in Hunza, studying the Burushaski, which like the Basque has, it is said, no affinity with any other language. The Burushus, whose language Mr. Lorimer proposes to study, number in all about 20,000;

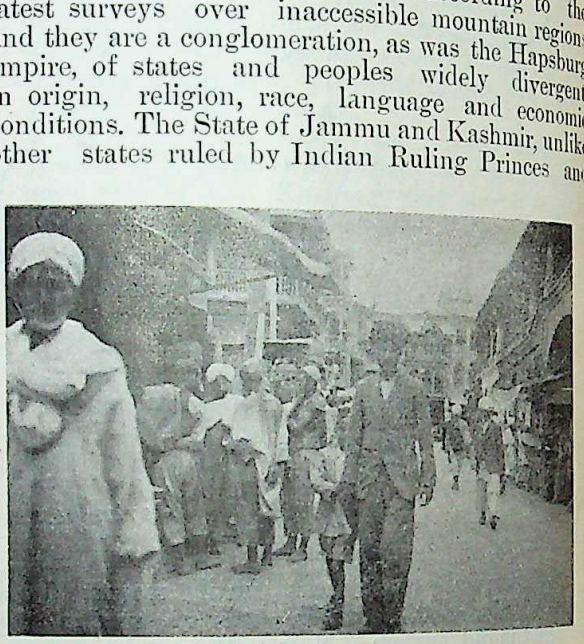


Muslim procession with Abdulla, the Tiger of Kashmir, (Sher-i-Kashmir) in the centre

they reside on both sides of the Hunza river, which is as large as the Chenab in the Panjab and which divides the territory of Hunza from the feudatory state of Nagar. It is interesting to note that Mr. Lorimer was formerly Political Agent there and that along the gorge of the Hunza river which penetrates the Karakoram Range lies the path over the Hindu Kush into Chinese Turkistan, which is used by runners carrying the mail to and from Kashgar; that across the border of Hunza is Soviet territory with its Fort at Sirikul and that Baltit is in communication with Simla!

India, once the social and military concern of the British, has become in recent times one of the leading interests of the world. In modern India traditional values are being judged from new standpoints and with new standards. The cry of revolt is heard everywhere; old beliefs are being undermined and authority cast aside. The working classes, the peasantry and the lower middle classes, crushed by various kinds of exploitation, want immediate relief and food for their hungry stomachs. The land tenure or Zamindari system is breaking down and the majority of even the landed magnates are impoverished. In Kashmir, where, too, change in its swiftness is sweeping the old landmarks away, the people are affected by economic distress similar to that prevalent in India. To get a close up of the present political situation in Kashmir, the position of the Maharaja and of his relations with British Government, it is necessary to briefly review the political history of the Jammu and Kashmir State.

The Maharaja's dominions are larger in extent than even those of the Nizam according to the latest surveys over inaccessible mountain regions and they are a conglomeration, as was the Hapsburg empire, of states and peoples widely divergent in origin, religion, race, language and economic conditions. The State of Jammu and Kashmir, unlike other states ruled by Indian Ruling Princes and



Maharajgunj, the scene of the riots

Chiefs, occupies an important strategic position on the northern frontier of India. It is the only state where the population is predominantly Muhammadan. Part of the population within its territory is warlike and fierce like the tribes on the Afghan frontier, whereas a part is emigrés from Central Asia, Mongol in type and Buddhist by religion.

In 1819 Maharaja Ranjit Singh, the Lion of the Panjab, had wrested Kashmir from the Afghans and it remained a part of his dominions until 1846. After the death of Ranjit Singh the Panjab was annexed by the British, who sold Kashmir for one million pounds sterling to the Dogra Raja of Jammu, Gulab Singh, who had sided with the British. Since then the British have never ceased to look at Kashmir with the eye of covetousness and to regret the error. While Kashmir was yet part of the Sikh Khalsa under a Governor sent from Lahore, the Raja Gulab Singh, after annexing all the petty hill states between the Jhelam and the Ravi, eventually acquired Kisthwar, which touches the country of Ladakh, sometimes called Western Tibet. In 1834 the Raja sent his general, Vazir Zorawar Singh, to invade Ladakh. The Dogra commander advanced to Pushkum in the Wakkha valley on the main Kashmir-Ladakh Road and

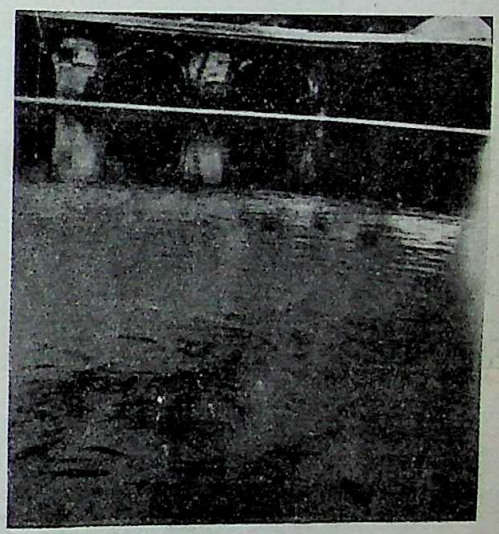
CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

reached Leh. At first the ruler of Ladakh was
s a feudatory of Jammu but eventually
country was annexed. Zorawar Singh marched
Skardo, deposed the chief and put his son
the throne. He raised contingents of Baltis
Ladakhis, and with his Dogras advanced
the winter of 1841 for the conquest of Tibet.
Dorgas are splendid fighting men. On the
of December, when the Dogras at a height
feet above sea level were losing their
and feet from frost bite and were burning
gun-stocks for lack of fuel to keep
selves warm, the Tibetans delivered an
ught. Zorawar fought at the head of his
but was unhorsed and wounded by a
in the shoulder ; he continued gallantly to
with his sword, left-handed, till he was killed
a spear ; his force was routed, only a few

Indira Nehru on the Like to Gulmarg

vors reached Leh. Thus perished the brave
ar Singh in the distant region of the
-bound North. Another brave Dogra
al conquered for the Rajas of Jammu
are now known as the Frontier Ilaqas
ory) of the State, including Gilgit, during
years 1868-1874. This was Hoshara Singh,
conquered Gilgit in 1868, and his gun,
l to mark the position from where he fired,
in situ. The Frontier Ilaqas of the
are: 1. Hunza, 2. Nagar, 3. Punial, 4.
man, 5. Yasin, 6. Koh, 7. Ghize; the last
are inhabited by semi-independent tribes.
Gupsi there is a fort which is garrisoned by
companies of Dogras. Chitral on the
-west frontier of India was also, until the
of Lord Curzon, under Jammu. Lord
took Chitral from the late Maharaja of
and Kashmir and brought it under
British influence. The ruler of Chitral,
still enjoys the ancient Kashmiri title of
tara (now Mehtar), has been granted a
salute of guns and the title of His Highness by the British and Chitral is garrisoned, because of the proximity of the Afghan frontier, by British Indian troops who have taken the place of the Dogras. The British for some time have been exerting diplomatic pressure on the present Maharaja to induce him to cede to them Gilgit and the Frontier Ilaqas, which were conquered by the sword of the Dogras. At the present time all the Frontier Ilaqas are under the charge of a British Political Agent who controls their affairs. Gilgit is similarly under the controlling power of the British Political Agent, although for all civil purposes it is like other districts of the State under a Wazir Wazarat. Appeals from the District and Sessions Judge of Gilgit lie to the High Court at Srinagar and in revenue matters to the Revenue Minister of the



Sacred fish at Vernag

State. In Gilgit political power is, however, exercised by the Political Agent, Gilgit Agency, who is under the British Resident in Kashmir as well as directly under the Viceroy at Simla. The Political Agent enjoys the privilege of a salute of eleven guns. There are three Assistant Political Agents. Yasin, Punial, Hunza and Nagar are under Assistant Political Agents. The Judicial system in different areas is a curious *melange* of tribal methods and modern judicial procedure and the Jirga system obtains just as among the tribes of the North-West Frontier of India. Chelas has a fort which is garrisoned by the state troops but the British Political Agent collects the revenue, called "Tribute", which is sent to the State treasury at Gilgit. Such is the extraordinary dual control in these territories, which are vulnerable to attack from Afghanistan and Central Asia.

It is interesting to note that the people of Nagar, who call themselves Shin or Dard, are by religion Muhammadan and, like the Persians, Shias in faith. In Hunza, on the other hand,

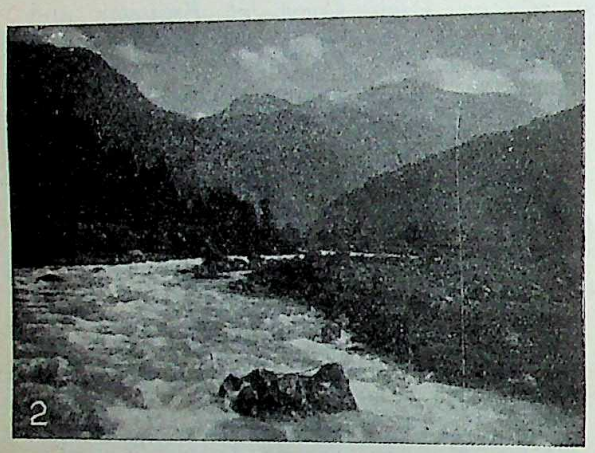
Digitized by Arya Samaj Foundation Chennai and eGangotri



1. Vistar Nag where the Kashmiri Brahmans were massacred
2. The Laughing Sider
3. Kashmiri picknickers in Nishat Bagh.

the people curiously enough, like the inhabitants of Chitral and North-Eastern Afghanistan, are followers of the Aga Khan. The chiefs of Hunza and Nagar are called Mirs and they claim descent from Alexander the Great, who is the hero of these territories and of their legends and epic songs. According to their traditions their horses are also descended from Alexander's charger Bucephelos. Similar legends are current in the North-West Frontier Province, the centre of the Graeco-Buddhist culture and art, where the chiefs still claim descent from a princess of this region (Gandhara) who is said to have married Alexander. Red hair and blue eyes are common in Nagar and Hunza, and the people have the Greek taste for wine and the dance. For half the year, however, the people are cut off from all communication with the outside world after the snows begin to melt when the rivers rise to extraordinary heights, fill the lower reaches of the gorges and render them impassable. In Yasin the people follow a religion called Maulai. The Baltis of Baltistan (sometimes called Little Tibet) and the people of Ladakh are Mongolian in type like the Tibetans; the Baltis are Muhammadans and the Ladakhis are Buddhists. In the Frontier territory, which is a Tolstoyan paradise, there are no mosques, no patwaris (revenue officials), no courts, no land records. The territory comprises 48,000 square miles, but is so sparsely populated that the total population is barely two hundred thousand. There are eighty villages in the whole of the Gilgit Wazarat and only three hundred villages in all the Frontier Ilaqas. The British jealously guard this territory as their military Rakh (sanctuary); they do not allow any European to pass beyond Astor without the permission of the Resident, while the subjects of the Maharaja are allowed to go up to Gilgit but not beyond into the Frontier Ilaqas even for purposes of trade.

Past history shows that Kashmir like Nepal was in touch with Tibet, Central Asia and distant China. The earliest reference is to be found in the Chinese Annals of the Tang dynasty, which record the arrival of an embassy from Mu-to-pi (Samskrit Muktapida), King of Kashmir, during the reign of the Emperor Hiuen-Tsung (713-755) and after the first Chinese expedition against Po-liu (Baltistan), which took place between the years 736-747. The king requested an alliance against the Tibetans and the despatch of a Chinese auxiliary force which was to encamp in the midst of his country on the shores of the Mahapadma Lake (*i.e.*, the Vular) and offered to find provisions for an army of 200,000 men. According to the Sanskrt history of Kashmir the king Muktapida perished like the Dogra Zorawar Singh in the North, fighting the enemy in the "Sea of Sand", probably the Desert of Gobi. Invasions of the Darads are repeatedly mentioned in the Sanskrt history of Kashmir. In the fourteenth century a Tibetan chief, Rinchana, invaded Kashmir, married the Hindu Princess Kota and made himself king of the country. Mirza Haidar, a Mughal free-lance, had accompanied the Khan of Kashgar in 1533 in the invasion of Ladakh and later occupied Srinagar. The Mirza again invaded Kashmir and ruled it from 1541 to 1551. He has left us a valuable work, the Tarikhi-Rashidi, which is a history of the Mughals of Central Asia. Thus British apprehensions about

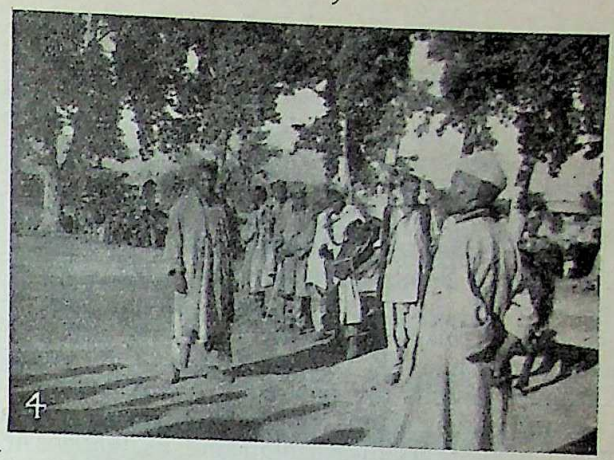
CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

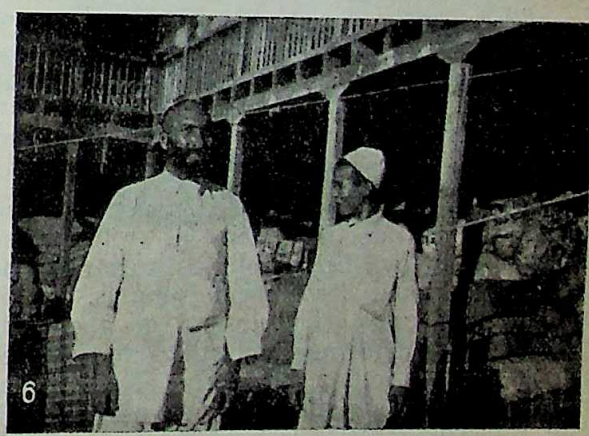
Digitized by Arya Samaj Foundation Chennai and eGangotri

northern frontier of Kashmir, which has for neighbonrs Afghanistan, the USSR. and , are not groundless, and they furnish an for interference in the affairs of the who is the ruler of Jammu and raja, and the overlord of Ladakh, Baltistan, shmir and a number of small states. By the it and a number of the British Resident a Sarai for the ce" of the British Resident a Sarai for the hants of Kashgar and Yarkand has been at Srinagar. It is a brick building, enclosed a jail, with only one gate for entrance and guarded by the Police and watched by the ents of the secret service.

The Maharaja of Kashmir, like almost all ers of Indian States at the present time, has brought up under English tutors and ated in one of the Colleges specially founded the British Government for the education Ruling Princes and Chiefs during their rity. Such education is imparted in the that the princes might become easily sub- ent to the Viceroy and when they are invested the powers of government of their own tory they might, like district officers in British tory, take their orders from the British ernment of India. But even well-laid plans times miscarry, and the British Govern- have not found their wards always nable to discipline; and the Maharaja has in spite of diplomatic pressure, parted with it and the Frontier Ilaqas, which the British anxious to acquire.

In 1931, about the time of the second Round le Conference in London, communal riots e out in Srinagar. The origin of the riots in reality economic. The prevailing economic ession had hit the people of the valley very . The stream of English visitors from whom formerly earned money in summer to pay their living in winter was largely diverted to pe by attractive cheap passages and special ances granted under the Lee Commission the British Government in India. The ation in Kashmir was engineered by Muslim unal organizations in the Panjab, such as religious organization of the Quadianis. ect first arose among the Muslims of mir *inter se*—between those who were of d faith and the converts who had come the influence of the new propaganda, and el round the question of the right to h in certain mosques. After a time the ious jealousies of different Muslim sects nated in disturbances and State intervention wed. Some of their leaders were arrested taken to the jail below the fort at rbat and their trial took place in . A crowd which had collected at the time trial was fired upon by Dogras and forcibly sed. The crowd retreated with the dead and nded to Srinagar in their rage, where they Maharajgunj, the principal bazar of the The Muhammadans forgot their factions and





4. Group of Baltis with their ponies in the background
5. Ruins of Martanda, the magnificent Sun-Temple founded by Lalitadity (700-736 A. C.)
6. Yarkandi merchant in the Serai at Srinagar.

took vengeance against the State by an attack upon the Kashmiri Brahmans, known as the Pandits, who were to them the visible symbol of the State administration. For centuries they have been the sole literate class in Kashmir and had been in charge of offices of state during Mughal, Afghan and Sikh rule. They were murdered, their property was looted and their women were man-handled. Vitasarnag, a village near Srinagar and a holy place of the Pandits, suffered in particular. The Dogra administration looked on

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

with apathy at the riots which raged for three days in Srinagar. They were unmoved by the losses of the Kashmiri Pandits, who as a class had demonstrated by political parades and speeches their sympathy with the Indian National Congress and had closed their shops as a mark of respect at the time of the arrest of Mahatma Gandhi. Their sympathy with the socialistic programme of Jawaharlal Nehru, whom they hold in deep affection and esteem as their kinsman, had also made them suspect in the eyes of the local administration. To the British the talented Kashmiri Pandits are politically obnoxious as the nascent leaders of an intellectual revolt against present conditions in Kashmir and as the possible media for the successful introduction of Soviet propaganda into India. The communal riots were utilized to check the active propaganda of the Kashmir Pandits on the lines of the Nationalists in India on the one hand and to throw discredit at the same time on the administration of the Maharaja. The British government found a lever to extend their power in Kashmir. A British Prime Minister was considered necessary to maintain law and order and the services, of two Indian members of the Civil Service, one Hindu and one Muslim, were lent to the Maharaja for the efficient administration of the State. At the present moment these highly-paid officers help to carry on the work of the administration. The Maharaja is said to be a man of energy, ability, self-confidence and many gifts, but he does not get a chance to display them and his main activities appear to be confined to playing Polo, maintaining a fleet of automobiles and a stud of racing horses and in building and decorating new palaces for himself.

After the riots various commissions and committees were appointed, some of which were presided over by British officers, to investigate the grievances and recommend reforms, as is usual in such cases. The upshot of these was that the rioters, murderers and others were allowed to go scotfree and a legislative assembly was granted to the people of the Jammu and Kashmir State, which is expected to hold its first session in November, 1934. Following the British method of reform for India, while nominally creating a body not unlike the debating society of a college, all power is reserved for the Government of His Highness. Officials and nominees of the State are to form the majority in the Assembly. Separate electorates are created; which are bound to reinforce communal tendencies, while the Buddhists of Ladakh are to be represented not by a member to be elected by themselves but by a Kashmiri Pandit lawyer of Srinagar nominated by the government! Urdu, which is neither the language of Jammu province nor of Kashmir, neither the language of the rulers nor of the ruled, is declared to be the official language by the British officer presiding over the Commission, which further provides that no one shall be eligible for election as member of the assembly who cannot write Urdu in the Perso-Arabic script.

The Muhamadans of Kashmir are beginning to realize that the Constitutional Reform is not a new Jerusalem. The small capitalists, the traders and the repressed who side with the Government are called the "party of the Goat", whereas those who form the opposition are known as the "party of the Tiger" after the leader Abdulla, who is known as the Sher-i-Kashmir (Tiger of Kashmir) and who undoubtedly has a place in the hearts of his countrymen. It will take years to erase the imprint of slavery and blind submission to authority. A new Kashmir can only be built by free men and not by those in whom the instinct for freedom and voluntary action do not exist. After the Pandits had been humiliated and made to pay a heavy price Muslim agitation was in turn repressed through British officers from the North-West Frontier Province, whose services were "lent" to the Maharaja. The only newspaper in Kashmir now is the *Martand* (Sun), which is the organ of the Kashmiri Pandits. It is being conducted with the greatest difficulty under a strict censorship and the constant threat of confiscation. The liberty of the subject, of free speech and of public demonstration or meeting are hedged round by limitations and are in fact non-existent.

The Pandits, literally the Intellectuals, are like the Jew, trained in the school of adversity. For centuries they have been persecuted, harried martyrized and slain. Like the Jew, history proves, that the Kashmiri Brahmans have never bowed their heads to their persecutors and have preferred death to dishonour; unlike the Jews, however, they are not concerned with finance nor has money ever been the Brahman ideal. At the back of the mind of the older generation who are proud Pagans, lurk memories of the glory of Hindu Kashmir, its art, sculpture, painting and music and the joyous worship in the temples to the ruins of which still clings spiritually the faded aroma of the past. The sacred shrines have been destroyed and their exquisite carved stones form part of Muhammadan graveyards. Some of the shrines are being used as mosques. Gazing at each of them the Brahman, like the Christian at Saint Sophia, sees it overlaid with melancholy—a temple dedicated to error. While the older generation is thus easily moved by the communal propaganda of leaders of the Panjab Hindu Sabha, the simple Kashmiri Muslim, who is poor and illiterate and easily swayed by whims, promises and self-advantage, becomes the prey of Muslim communal leaders of the Panjab. Prominent among these is Sir M. Iqbal who, as Fate has willed it, is a Kashmiri Brahman by race, his family—Sapru—having been converted to Muhammadanism. The truth is that the religious beliefs in Kashmir are survivals of the remote past under the official

...ver of Brahmanism and Islam. The sacred ...ces of Buddhism are now centres of Muslim ...logy where the worship of the bone relics ... the Buddha has been replaced by the adoration ... the hair of Muhammad's beard.

According to the last Census of 1931 the ...al population of the Jammu and Kashmir ...te is 3,646,243, of which the number of ...hammadans is 2,817,636 and the Hindus number ...,222. In the valley of Kashmir over a ...tion are converts to the faith of Arabia, while ... Kashmiri Brahmans, who are the only ...rviving part of the original Hindu population ...mber about 60,000. They had formerly a ...nopoly of the posts and offices in the State; ...der the new reforms they are being weeded ... and replaced by members of the majority ...mmunity. The stress and stain of the last ... years has compelled them to look elsewhere ... a living than in the service of the State. ...th the exceptional intellectual qualities of ...r race the Kashmiri Brahmans are sure to ...d the new policy a blessing in disguise. ...olutionary changes have been made by the ...mmunity in the direction of social reform; ...en under thirty have given up the ...ditional Kashmiri dress and adopted the Indian ... for the sake of economy; widow remarriage ... encouraged and hundred and twenty ...shmiri Brahmans have recently married ...-Kashmiri women from the plains of ... of different Hindu castes, while in ...shmir four marriages have taken place in ...h the brides, who were Muhammadans, were ...pted as Hindus. This is new for Kashmir ... among the proud and aristocratic Brahmans ...mewhat surprising, but in the Dard villages ...e Indus Valley we find a curious state of ...rs. Buddhists and Muhammadans inter-marry ... religion changes at each generation, the ...ren of Buddhists becoming Muhammadans and ...e of Muhammadans becoming Buddhists. The ... is that, unlike the Kashmiri Muhammadan, ... is intensely religious, religion is not taken ...ously by the Dards. In Ladakh, where mixed ...riages between Muhammadans and Buddhists ...not uncommon, the two extremes of polygamy ...polyandry meet and end in the compromise ...nogamy. The Muhammadan objects to share ...wife with other men and the Ladakhi woman ...ses to share her position with any others of ...ers!

...t luckily the young men of Kashmir, both ...u and Muhammadan, are turning their backs ...e past. They are not raking up forgotten ...gies and dead emotions. In June Abdulla, ... had been released from prison, was permitted ...e out a procession in honour of the birthday ...Muhammad. Though it was a religious ...ession, slogans of "Hindu-Muslim Ittihad ...ahad" ("Long live Hindu-Muslim Unity") were raised and mingled with slogans in Arabic to honour Islam. The Kashmiris, both Hindu and Muslim, have a deep love for their own country and are proud of their culture; their history is one of persecution and exploitation by foreigners for several centuries; they have a common language and economic interests. The Dogras as well as the British are equally alien exploiters to them. The Kashmiris have realized that their country is the milch-cow of the State and that they are pawns in the game of imperialism. The Kashmiri peasant is a hard-working, honest and peace-loving man who lives on the verge of starvation; the Kashmiri workman is the least-paid skilled artisan in the world. The luxurious life and high salaries of the British officers and others in the service of the State, which is in the grip of economy, present an amazing contrast to the insanitary conditions in which the citizens have to live in Srinagar with its frightfully narrow streets, which effectively shut out light and fresh air. Whoever remains silent about these appalling conditions is a traitor to humanity. The young Kashmiris have realized that their destiny is in the melting-pot together with that of India and that relief will only come to them when it comes to the rest of India from all kinds of exploitation—with the extinction of feudal rule, of medieval conditions, the abolition of all privilege and the building up of a new social structure based on justice and equality.

COMMENTS & CRITICISM

"Christ or the Kaiser of Christendom"

In the August number of *The Modern Review* I find an article by Mr. Manilal Parekh entitled "Christ or the Kaiser of Christendom" in which he says a number of hard things about Christian Missions as carried on in India and other lands for the past century or more. Writing as a baptised follower of Jesus Christ, yet claiming to be a Hindu of Hindus he charges Missions with a five-fold Imperialism, *viz.*, religious, racial, cultural, political and economical, and contrasts the so-called National Church in India with the Kingdom of Christ.

This article contains many things to which a reply might be offered. In the space which through the courtesy of the editor of the *Review* I am allowed to occupy I can only refer to a few.

In the first place I must question Mr. Parekh's reading of history. Referring to the Mutiny of 1857 as giving the occasion for a great outburst of missionary activity on the part of western lands, he says, "From 1858 onwards we have in India the now much-boomed Mass Movements". If Mr. Parekh will read the book entitled "*Christian Mass Movements in India*," by Dr. J. W. Pickett, he will find that he is quite mistaken in saying that "this is the genesis of the Mass Movements in India". Some of the greatest of these Movements were well advanced years or even decades before the Mutiny, and in other cases were the result of work done long before that event, and had no connection with it. He will also find that in almost every case Mass Movements were not *sought* by the missionaries in whose areas they took place.

In the next paragraph Mr. Parekh says, "The situation is only a little better in China where we have the words "Rice Christians". Surely Mr. Parekh does not mean to suggest that any abusive term which people happen to use about Christians is to be taken as a term that can rightly be used. From the days of the New Testament onwards Christians have always been subject to abuse. It is true that at one time it was the fashion in certain quarters in China to sneer at Chinese Christians as "rice Christians". But who were the sneerers? Some of them at least were Europeans in commercial circles who made no profession themselves of being followers of Christ, or of being disinterested, and in their ignorance they could not see how a Chinaman could give up the religion of his fathers unless he was paid for it. When it was found that many thousands of the so-called "rice-Christians" laid down their lives for Christ when attacked by the Boxer rising of thirty years ago, some who had ignorantly used the phrase admitted their mistake, and since then it has not been much heard of.

I confess that I do not know what Mr. Parekh means by "the so-called National Church". I have known of two groups of Christians who have used that name, both connected with Madras. Neither of these ever consisted of more than half a dozen congregations. The Christians of India are, in the first instance, connected with the Churches in the West to which they owe their origin. As time goes on and the Churches grow the desire naturally arises that the divisions which were inevitable at first should not be perpetuated, and so a movement for the union of the Churches has arisen. As a result of this Churches in the South which owed their origin to the labours of missionaries from England, Scotland, America, Germany and Switzerland have found it possible to unite under the designation of the South India United Church; and in Northern India a similar Union has taken place. The Movement is proceeding, but I fail to see in what way it is to be condemned as imperialistic.

As to the fact that Government reckons Christians as a community, Mr. Parekh fails to point out that the leading Indian Christians have protested against this, and are ready to take their place in general electorates. In any case Missions are not responsible for what Government may think it necessary to do.

I am far from defending everything that has been done in Christ's name by His missionary servants. They are human and liable to make mistakes. But I do not attach much weight to the remarks which Mr. Parekh quotes as made to him by certain people. Any one who has a high ideal may suffer from depression as he deplores the contract between the ideal and the actual, and in his depressed moods say things that do not represent his sober judgment. I am surprised at the reference to Korea, regarding which an Anglican bishop is said to have remarked, "It is all bribery". Presumably he was speaking of his own community. It so happens, however, that the vast majority of the Korean Christian have become such through the work of two American Missions, which have taken extraordinary care to see that from the very beginning the people who profess the Christian faith build their own churches and support their own pastors, and so give not the slightest ground for the charge of being "rice Christians".

J. H. MACLEAN

"China's Red Army"

One article, titled "China's Red Army" by Suresh Vaidya in the September issue of *The Modern Review* on page 260, is so full of misrepresentations that one suspects or is tempted to suspect it to be mere false propaganda. Being interested in creating mutual understanding between India and China on the basis of facts, I take the liberty of laying before the reader briefly the plain truths:

1. The Communist leader Mao Tse-tung happens to be a native of my neighbouring district Hsiian-tan in the province of Hunan and also a classmate of mine in a district higher primary school at Changsha. He graduated from the Hunan First Normal School and was a primary school teacher for some years but no "Peking University man" at all so far as I know.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

...aged about forty-two, he is, I can safely assert, ...ignorant of any foreign language, and though able to ...express himself fairly well by oration and composition ...in the colloquial style of Chinese, his knowledge of ...Marxism is based on the Chinese translation of the ...Manifesto of the Third Internationale, while Marx's ...great work on Capitalism is absolutely Greek to him. ...Mao and his comrades named their party "The Chinese ...Communist Party" to be submerged in the Nationalist ...Party of Kuomintang but started their open and ...secret revolt from 1928 in the province of Kiangsi ...in Central China.

2. The first-grade military leaders of the Communists are Chu-Te who is equal to Mao Tse-tung in power and always quarrels with him; Pen Te-Wha also really differs in principle from Mao; and Kong Yo-Ching who has surrendered himself to the Headquarters of Government troops at Nanchang since the middle of last June. Ho-lung, a purely illiterate bandit-head over fifty years old of my native province Hunan, utilized by Chu and Mao as an instrument of plundering and devastating, has no conception of communism whatever and is now doing his old job of robbery with his men in the mountainous regions.

3. There is no such name as "Soviet China" known among the people at all. It is only within the small area of communistic occupation in Kiangsi that a sort of Soviet Government was attempted to be set up, which is, in fact, rather abstract than concrete. Kiangsi is a mountainous province surrounded by Chekiang in the east, by Fukien in the south-east, by Kwantang in the south, by Hunan in the west, by Hupeh in the north, and by Anhwei in the north-east. The communists are at present encircled up within the districts of high mountains and deep valleys along the bordering line of Kiangsi, Fukien and Kwantang, and their future is obviously doomed to failure.

4. General Chiang Kai-shek, personally taking charge of bandit-suppression, rehabitation, and pacification works in Kiangsi of which the villages have been for the most part burnt down and the land-tillers have been driven away in large numbers by the communists' policy of "Massacre", cannot bear to overwhelm that poor province with so many fighting troops, or to use heavy cannons and bombing 'planes, that the cultivated soils and the terror-stricken rural districts should suffer from total destruction. Otherwise, how could you believe it possible for any poorly-equipped army of "approximately 10,000" to be a match for "50,000 troops" with the latest equipments and "50 bombing 'planes" and "other latest devices of warfare" in this human world?

5. The return of "the exiled Chinese warlord Gen. Chiang (not Chiang) Hsueh-liang" from Brighton last spring was simply a matter of his own accord, and had nothing to do with summons or orders from the National Government. He is now residing in Hankow enjoying his private life, hundreds of miles away from the Communism-poisoned area of Kiangsi. And the late accident near Foochow, as reported by the Reuter's telegram from Hongkong, August 3, was in truth not an "invasion of communist troops from the interior", but merely a disturbance by the scattered as well as the disbanded soldiers during the Fukien War last winter who have become bandits and make use of the Communist banner for camouflage.

6. The national mentality and environments of China are by no means receptive to the ideas of the so-called "Chinese Communist Party" whose policy is one of "Force and Terror", "Violence and Deception" so as to "frighten and drive all the people into their line", as they themselves disclosed in the scheme and programme of the party. The Chinese workmen in the city mills and factories may have some fancy for communism, but the rural peasants who are eighty per cent small landholders and tillers really hate the communists whose actions are no better than those of the ancient Huns. Hence "the Red Army" has no "growing popularity" and no "support" at all among "the Chinese peasants in general". And it is nothing but a big lie to say that "Soviet China is a country having a stable government....."

"Why India lives"

Origin of the word 'Hindu'

Mr. Nagendra Nath Gupta in his article "Why India Lives" in the September issue of *The Modern Review* gives the following explanation of the word 'Hindu':

"The word Hindu is a Persian word meaning black..The word Hindu marks a distinction of colour and Hindusthan is the land of the dark people etc."

So far the general belief seems to be that the word 'Hindu' has a Persian origin, that it means 'dark', as quoted above, or is a Persianized modification of the word Sindhu; and it is taken for granted that the word came into existence after the Muhammadan Conquest of India,

But few people are aware that the word 'Hindu' was in existence long before the Muhammadans came into India or even before Islam came into existence, and that the word has an Indian or rather Sanscrit origin.

It is rather interesting to note that the derivation of the word 'Hindu' is given by the celebrated Chinese scholar and traveller Yuan Chwang in the memoirs of his travels. He says:

"The unceasing revolutions of mortals' existence are a dark long night; were there not a warden of the dawn they would be like the night with its lights, which succeeds the setting of the sun. Although the night has the light of the stars, that is not to be compared to the light of the clear moon. As, since the sun of the Buddha has set, it (India) has a succession of holy and wise men to teach the people and exercise rule, as the moon sheds its bright influences. On this account the country (India) had been called 'YIN-TU'."

"A later Chinese writer after Yuan Chwang, like several authors, explains the giving of this name (moon 'TIEN-CHU') to India by saying that the country was called Moon because it was as great and distinguished above the other countries of the world as the moon is great among the stars of the night—'VELUT INTER IGNES LUNA MINORES'."—*Yuan Chwang's Travels*, by Thomas Watters.

"The Secondary Schools in Bengal"

I have read the article 'The Secondary Schools in Bengal' by Mr. Bhupendra Lal Dutt in the September issue of *The Modern Review*.

The writer has very skilfully brought out facts about the existing secondary schools in Bengal. That the non-Government schools are faring well gradually cannot be denied. That the Government schools contributed only about one-ninth of the students in the last Matriculation examination has also been

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

pointed out by the writer, (Government School Students 13,663—non-Government School Students 124,167). That the number of Government schools being very limited, the number of students sitting from them is also in proportion small—is a plain truth.

To give the finishing touch to the subject so very ably dealt with by Mr. Dutt, it will not be very unfair to speak a word or two more about it. His article centres round the question of scholarships in the last Matriculation Examination—though the heading is Secondary Schools, etc.

From what he has shown us about the scholarships secured by Government and non-Government schools the result may be tabulated as follows:

	Government Schools	Non-Government Schools
General Scholarship	1	8
Divisional ,,	8	33
District ,,	10	62
	19	103

So Government schools, according to his own figures, have captured at least one in every five, whereas we have seen above that the number of students is one in every nine. It has been an enigma with me as to what led Mr. Dutt to conclude that the Government schools have failed in respect of scholarship results to prove their worth as model schools. It would be a happy thing if Mr. Dutt would be conscious of the small proportion of Government schools. The Government schools have really surpassed what they ought to have done in proportion. In cases of General Scholarships they have simply maintained their position somehow but this may be said in favour of the Government schools on the point that many of these General Scholars acquit themselves to their own credit. They form a separate class by themselves. Then again, there is the question of general passes, where I believe the Government schools stand incomparably high in proportion.

Just another unpleasant truth. The non-Government schools are trying to better their results as there are the Government schools to compete with to run the race.

Finally, may I be permitted to say that the remedy lies not in robbing Peter to pay Paul, but to increase the number of Government schools to bring the number of scholarships to an equal basis, with better-paid and better-fed teachers than even in our Government schools now.

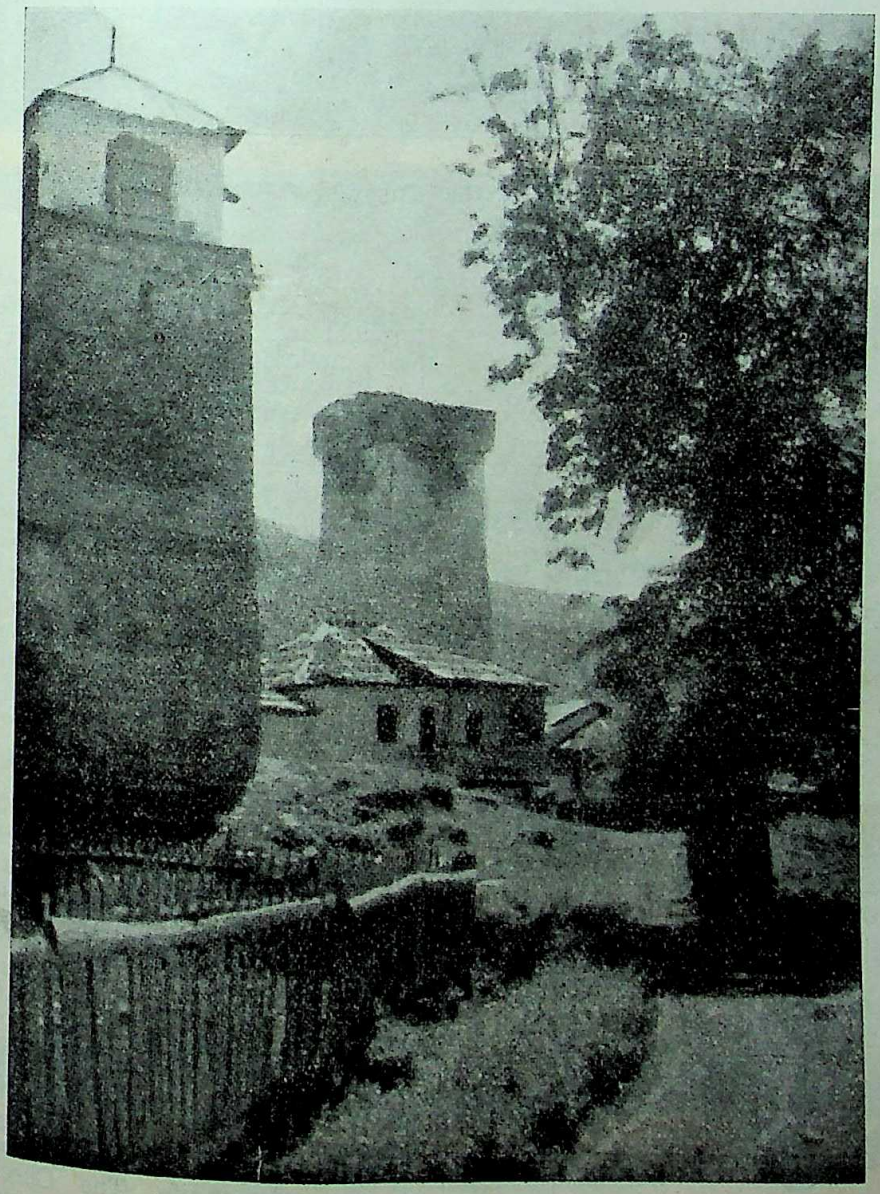
GLEANINGS

The Caucasus—A Racial Curio Shop

The Kubatchi are held in the lowest repute all the Caucasus, depicted as veritable monsters from Nobody seems to know just why, but when the is of demons, ghosts and conjurers, of weird ms and barbaric habits it invariably ends with ion of the mysterious village of the Kubatchi.

Among the people of the Caucasus they onjoy a e position. None cares to intermarry with them even to encounter them; they are looked upon fear and awe. They are sword makers by profession, and every one in the mountains swears by their blades, convinced that a Kubatchi saber assures its wielder invincibility—provided the maker has not bespoken otherwise.

Nobody knows where these Kubatchi came from nor to what racial strain they belong. Strange things recurrently happen among them. At certain intervals, the entire population will go down into subterranean caverns and, out of sight and ken, spend as much as an entire week allegedly praying to their god. One of their customs has long agitated the whole region to conjecture and has very likely caused most of the



Svanetian families, when besieged, used to retreat to these towers

Village of the Kubatchi

An old Kubatchi spells mystery to the people of the Caucasus

subversive rumours. Once a year, the mountain people say, every Kubatchi woman must spend a night on threshold of her house, her face covered by a black mask, motionlessly sitting and looking up at the stars. Any man, whether neighbor or stranger, may approach and possess her; in fact, it is considered the highest honour the woman can receive. However, for any one to remove the mask from her face would mean immediate death. In justification of this strange custom, the Kubatchi claim that their god has so ordained them to do. Children who spring from this sanctimonious prostitution belong to the community and are brought up under special care, apart from the rest.

The village of the Kubatchi is situated high up among the mountian peaks. Living in a wide periphery about it are the most extraordinary people on earth. More than eighty different tribes inhabit the high-flung terrain; and not one speaks the same language as its neighbor!

For ten years, now, the Soviet government has tried to force its proletarian ideology on the region. With startling results, to say the least! When, for example, Bolshevist propagandists appeared and attempted to rationalize "holy prostitution" out of favour, no Marxian dialectic was of any avail. The Kubatchi insisted that their custom was in complete accord with the new style; every woman could do as she pleased, and—sad to say—every Kabatchi woman looked upon the prohibition of the custom as tyrannical and humiliating.

To the west of the Kubatchi village, is a large village of the Chechens, a numerous and powerful people, embracing some three hundred and sixty thousand members. In this village the Bolsheviki had taken special pains to bring about an acceptance of the new order of life. The Chechens gladly accepted everything: schools, motion pictures, lectures, even the Soviet form of government. But it so happened

The Japanese ladies are welcoming the foreign delegates with dance and music

that all members of the local council attended the mosque for prayer before each meeting, and in one respect remained adamant—in their belief in the blood feud. Every Chechen, it would appear, has an avenger to evade or someone upon whom he must wreak vengeance...

In Abkhasia the streets were thronged with full-blooded negroes ! Half-naked pickaninnies gamboled in the dirt, negresses sat in front of their huts, .. Nor was this village the only one of its kind: there were three, occupied exclusively by negroes. As late as seventy years ago, Abkhasia was an independent principality, ruled over by the powerful house of the Shirvashides, whose revenue came from exporting Abkhasian beauties to Turkish harems. The Sultan got the cream of the lot. One day he decided to return the compliment and sent a present of a few negro families, who were put to work in the palace at Sukhum. When the princely house fell, the descendants of these negroes were given land on which they now live in utter peacefulness. It was left to the Bolsheviki to fetter them with some useful occupation. The Congress of Suppressed Minorities, held a few years ago in Baku, was attended by their representative, who demanded the liberation of his enslaved brethren in Africa !

Their neighbours, the Abkhasians, are of noble lineage. According to their own legends, they are descendants of Prometheus, who stole the divine fire and as penance was chained to a Caucasian rock. This rock is still pointed out to visitors. The story goes that the Abkhasians and their neighbours, the Mingrelians and the Svanetians, were dowered with a beauty that should prove their doom and all but did so, since in no other part of the world was the trade in human flesh ever so rampant and devastating as here.

Asia

The Pan-Pacific Buddhist Conference, Tokyo

The Pan-Pacific Buddhist Conference was held in Tokyo on the 18th July last and continued its deliberations till the 25th. Seven hundred delegates from different Buddhist countries attended it. The All-India Hindu Mahashabha also sent two representatives to the Conference.

VERY LIMITED FACILITIES FOR HIGHER EDUCATION IN INDIA

By RAMANANDA CHATTERJEE

SIR George Anderson, Kt., C. S. I., C. I. E., M. A., Educational Commissioner with the Government of India, writes in *Progress of Education in India* [illegible]-32, published this year :

"... It might have been hoped that, having been freed from wasteful overlapping and duplication which is an almost inevitable concomitant of the affiliating system, unitary universities would have proved to be economical; but such is far from having been the case. Indeed, the main criticism levelled against unitary universities is on the score of expense.....

"... One of the main causes of this high expenditure is the unregulated competition which often runs riot between universities, affiliating as well as unitary. Each university seeks to be a self-contained unit, bent on providing ample facilities for higher education and research in almost every conceivable subject, heedless and often ignorant of what is being done in other universities. This danger of overlapping is particularly great in the domain of science, in consequence of the high initial and annual expenditure involved.

"It is difficult to suggest remedies to prevent this insidious form of extravagance, but India should have a university system which will promote higher learning and research, which will provide suitable training for her young men and women, which, above all, will be within her means." Vol. I, pp. 77-78.

Writers of official reports should use measured language, in harmony with facts. In the passage quoted above, Sir George Anderson has failed entirely to keep this ideal in view. What is his idea of a university system for India "which, above all, will be within her means"? He has not given any estimate of the expenditure, within India's means, which India should incur for elementary, secondary, intermediate and university education. If in any case of the activities of the State in India the expenditure is excessive and out of all proportion to its revenue, it is certainly not that of education. But from the language used by Sir George Anderson one may suppose (1) that the figures of expenditure from public funds on education in India are enormous, (2) that educational expenditure is the biggest or one of the biggest items of public expenditure in India, and (3) that out of the more than 1200 (twelve hundred) crores of India's public debt a large portion was incurred for education. But none of these three suppositions would be correct. Neither the Central nor the Provincial Governments ever borrowed a rupee for educational purposes, educational expenditure is neither the biggest nor one of the biggest items of state expenditure in India, and **the total amount spent from public funds in the whole of British India for education of all kinds and grades is comparatively insignificant—is in fact smaller than the educaiional expenditure of the London County Council.** Details are given below to show that this is a strictly accurate statement.

It is entirely unnecessary to take any particular kind or grade of education to show that India does not spend an excessively large sum of money on it. The **whole** amount spent from public funds on education of **all** kinds and grades in 1931-32 for a population of 271,780,151, inhabiting British India, was Rs. 16,84,25,628. To this amount Government funds contributed Rs. 12,46,07,093, District Board Funds Rs. 2,80,01,313 and Municipal Funds Rs. 1,58,17,222. So, for the education of 27 crores of people Government spent in 1931-32 about 13 crores of Rupees, or less than eight annas per head per annum. It is to be hoped that this is not, to use Sir George Anderson's words, an "insidious form of extravagance." Why, by the by, does he use the word 'insidious,' which means 'treacherous', 'crafty' ?

Let me now turn to the educational expenditure of the London County Council, referred to above. The population of the Administrative County of London was 43,85,825 in 1931. Its estimated educational expenditure for 1933-34 is given in Whitaker's Almanack for 1934 as £ 12,717,354, or

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Rs. 16,95,64,720, according to the present rate of exchange.

So, it comes to this, that for the education of 44 lakhs of people the London County Council spends about 17 crores of rupees, and for the education of more than 27 crores of people the Government, District Boards and Municipalities in India combined spend less than 17 crores of rupees. Seventeen crores of rupees is not the whole of the educational expenditure in London. For instance, the University of London spends much more than the aid which it receives from the London County Council. But taking the expenditure of the London County Council alone, it comes to more than Rs. 38 per head per annum.

Undoubtedly, we are a very poor people, though our country is rich in natural resources. But even for very poor people, an educational expenditure of some annas per head per annum from public funds is not extravagant.

Sir George Anderson complains of "wasteful overlapping and duplication" and of "the unregulated competition which now runs riot between universities, affiliating as well as unitary." The reader will excuse a repetition of part of his other charges also. Says he :

> Each university seeks to be a self-contained unit, bent on providing ample facilities for higher education in almost every conceivable subject, heedless and often ignorant of what is being done in other universities. This danger of overlapping is particularly great in the domain of science, ..."

Sir George Anderson's ideal, if ideal it can be called, seems to be that no two universities (or is it colleges also ?) in the same country or province should teach the same subject or subjects—particularly in science. If they do, there would be "wasteful overlapping and duplication" and "unregulated competition running riot."

A good ideal should be good for every country. Let us, therefore, see whether there are in England "wasteful overlapping and duplication and unregulated competition running riot." In England, with a population of 37,794,003, there are eleven universities. I shall take into consideration only three of them : Oxford, Cambridge and London. They are within a distance of a few hours' journey by railway from one another. There are *university professors* of the following subjects in all the three, *in addition to readers and lecturers and other teachers in their colleges*:

> Anatomy, Anglo-Saxon, Arabic, Archaeology, Astronomy, Biochemistry, Botany, Chemistry, Chinese, Civil Law, Economic History, English Literature, Experimental Philosophy, Fine Art, Geography, Geology, Geometry, German Language and Literature, Greek, Hebrew, History (Ancient), International Law, Italian, Latin, Law, Logic, Mathematics, Medicine, Metaphysical Philosophy, Mineralogy, Moral Philosophy, Music, Pathology, Physics, Physiology, Political Economy, Political Theory and Institutions, Pure Mathematics, Sanskrit, Spanish, and Zoology.

This list has been compiled from Whitaker's Almanack for 1934. If, instead of enumerating the subjects common to three universities, I had mentioned those common to any two, the number of common subjects would have been greater. I do not think the classes in Arabic, Chinese, Hebrew, and Sanskrit are overcrowded in either Oxford, Cambridge, or London. Yet all the three universities teach these languages. So, there *is* overlapping, duplication, competition, etc., in England, and in Scotland, too. But there is no attempt to prevent these 'evils' there, though 'Reform', like Charity, should begin at home.

Sir George Anderson, no doubt, says that "considerable improvement has been made in this direction in the United Kingdom by the University Grants Committee," and adds that "the attitude of the Committee is explained by the following extract from the report of the Hilton-Young Committee on the University of London":

> "We think it appropriate in this connection to quote from the Report of the University Grants Committee. 'Our conviction, which is in accordance with the national traditions, is that the Universities must be free to control their own destinies and to develop along their own lines. It has therefore been our constant endeavour, in the administration of the Treasury grants, not to impair the autonomy of universities or to diminish in any way their sense of responsibility. With this aim we have always recommended, and shall continue to recommend, that so far as possible the annual Treasury grants should be given as block grants in aid of a University's general income, and that, provided the obvious limits of financial prudence are not transgressed, it should ultimately remain with each University itself to decide in what precise way its income, including the Government grants, should be distributed over the field of its activities ; for without control of finance there can be no effective control of policy."

This extract does not show that the University Grants Committee in the United Kingdom has done anything to prevent the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

called overlapping, etc. That Committee does not even mention such things. On the contrary, it supports the policy of University autonomy. No doubt, it lays stress on financial prudence, which is quite necessary, but is trite, too. If in India Government thinks that any university is not prudent, it does simply to warn it.

The body called the Inter-University Board in India has definitely proposed something that goes against University autonomy—a thing so highly prized—and quite rightly too—by the University Grants Committee in the United Kingdom. The Board wants that a certain group of Indian Universities should teach and carry on research in certain subjects, other subjects being assigned to other groups. There is no such grouping of the Universities in Europe and America that I know of. It seems to me that the Board's proposal would still further limit the very limited facilities for higher learning and research, particularly in scientific subjects, which exist in a large country like India.

Sir George Anderson thinks that our Universities are "bent on providing ample facilities for higher education and research in almost every conceivable subject." It may be safely presumed that the subjects which are taught in the Universities of Oxford, Cambridge and London by university professors are "conceivable." So Sir George may be asked to point out which Indian university teaches almost all these conceivable subjects. He may go further and ask whether all the Indian universities combined teach and carry on research in almost all these "conceivable" subjects. They are mentioned below. The list of "conceivable" subjects could have been made much longer, if European continental universities and American universities had been taken into account.

Aeronautical Engineering, Agriculture, American History, Anatomy, Ancient History, Ancient Philology, Anglo-Saxon, Animal Pathology, Anthropology, Arabic, Archaeology, Architecture, Assyriology, Astronomy, Astrophysics, Aviation, Bacteriology, Belgian Studies and Institutions, Biochemistry, Biology, Botany, Byzantine and Modern Greek Language and Literature, Celtic, Chemical Engineering, Chemical Technology, Chemistry, Chemistry as applied to Hygiene, Chinese, Chinese Art and Archaeology, Chinese Language and History, Civil Law, Classics, Classical Archaeology, Colloid Science, Colonial History, Commerce, Comparative Anatomy, Comparative Philology, Dietetics, Divinity, Dutch History and Institutions, Ecclesiastical History, Economic History, Economic Science and Statistics, Economics, Education, Embryology, Engineering, Engineering Science, English Language and Literature, English Language and Medieval Literature, English Literature, English Law, Entomology, Civil Engineering, Civil and Mechanical Engineering, Electrical Engineering, Highway Engineering, Mechanical Engineering, Municipal Engineering, Exegesis, Epidemiology and Vital Statistics, Ethnology, Eugenics, Experimental Philosophy, Experimental Physics, Fine Art, Forestry, French, French and Romance Philosophy, Genetics, Geography, Geography (Economic and Regional), Geology, Geometry, German Language and Literature, Greek, Hebrew, Helminthology, History (Ancient), Byzantine History, Central European History, English History, Imperial History, International History, Legal History, Medieval History, Modern French History and Institutions, History and Culture of British Dominions in Asia, History of Art, History of Medicine, Imperial Economic Relations, Immunology, Imperial and Naval History, Industrial Relations, International Law, International Relations, Interpretation of Holy Scripture, Italian, Jurisprudence, Latin, Law, Commercial and Industrial Law, Comparative Law, Constitutional Law, Roman Law, Laws of England, Logic, Logic and Scientific Method, Mathematics, Mathematics (Applied) and Mechanics, Mathematical Physics, Mechanism and Applied Mechanics, Medical Entomology, Medical Industrial Psychology, Medical Protozoology, Medicine, Mental Philosophy and Logic, Metallurgy, Meteorology, Metaphysical Philosophy, Military History, Military Studies, Mineralogy, Mining, Mining Geology, Modern History, Moral Philosophy, Morbid Anatomy, Mycology, Natural Philosophy, New Testament Exegesis, Obstetric Medicine, Obstetrics and Gynaecology, Old Testament Studies, Optical Engineering, Papyrology, Pastoral Theology, Pathology, Persian, Petrology, Pharmacology, Philosophy of Mind and Logic, Philosophy of Religion, Philosophy of the Christian Religion, Phonetics, Physical Chemistry, Physics, Physiology, Plant Pathology, Plant Physiology, Poetry, Political Economy, Political Science, Political Theory and Institutions, Portuguese Language Literature and History, Pure Mathematics, Psychology, Public Health, Radiology, Roman-Dutch Law, Romance Languages, Rural Economy, Russian Language, Literature and History, Sanskrit, Social Anthropology, Social Biology, Sociology, Spanish, Statistics, Surgery, Theology, Town Planning, Zoology.

It is not my contention that every one of these subjects ought to be taught in India; but most of them should be—and will be when Indians are able to control India's public income and expenditure.

From the list given above it will be evident to teachers and students in India's universities that it is not true that "almost every conceivable subject" is taught in them. That fact can be made obvious in another way. A very large number of teachers would be necessary

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

CC-0. Mumukshu Bhawan Varanasi Collection. Digitized by eGangotri and Sarayu Trust. Funding by MoE-IKS

to teach "almost every conceivable subject" in universities. A comparison of Indian universities with British universities—I do not wish to bring other Western universities into this comparison—will show how ill-equipped our universities are to teach "almost every conceivable subject". The following statement gives the names of the British universities and the number of their professors, &c.

Universities	Number of Professors, etc.
England—	
Oxford	450
Cambridge	388
Durham	267
London	1,243
Manchester	275
Birmingham	246
Liverpool	321
Leeds	343
Sheffield	185
Bristol	260
Reading	152
Total for England	4,130
Scotland—	
St. Andrews	152
Glasgow	306
Aberdeen	162
Edinburgh	390
Total for Scotland	1,010
Wales	379
Totals of above	5,519

The figures do not include the staffs of Colleges, Halls, "Schools" (of London University), etc.

The population of England, Scotland and Wales in 1931 was 44,937,444. Each of the Provinces of Bengal, United Provinces, and Madras had a larger population that year, namely, more than 50,48, and 46 millions respectively. So, the total number of the professors, etc., in the British universities should be compared with the total number of the university professors, etc., in each of the provinces of Bengal, United Provinces, and Madras. The figures are given below.

In Bengal there are two universities, *viz.*, Calcutta and Dacca. In the Calcutta University there are 239 professors and other teachers; and in the Dacca University, 107 professors and other teachers: total for the two universities, 346. This is a much smaller number than 5,519, the total for the 16 universities of Great Britain.

In the United Provinces there are five universities, *viz.*, Allahabad, Benares Hindu, Aligarh Muslim, Lucknow, and Agra, with 105, 0, 105, 120, and 0 university professors and other teachers respectively: total, 330. This, too, is a much smaller number than 5,519, the total for the universities of Great Britain.

In Madras there are three universities, *viz.*, Madras, Andhra, and Annamalai, with 28, 6, and 68 university professors and other teachers respectively: total, 102. This is very much less than Great Britain's total of 5,519.

The whole of the Indian Empire, including Burma and the Indian States, of which the population is 352,837,778, as against Great Britain's 44,937,444, contains 18 universities, as against Great Britain's 16. The total of the university teaching staff of these 18 universities is 1012. This is less than one-fifth of that of Great Britain. Therefore, assuming that the intellectual capacity and equipment of university teachers in India are equal to those of the university teachers of Great Britain, the whole of India offers less than one-fifth of the facilities for higher learning and research possessed by Great Britain. Even if we added the number of the professors and other teachers in the constituent colleges of Indian universities to the number of university teachers proper, the total would come to only 2299, less than half of Great Britain's 5,519. Lastly, *though in giving the number of Great Britain's university teachers I have not included college professors and tutors,* let me in the case of India include the professors and other teachers in affiliated colleges. Even in that case, the total of all university and college teachers comes to 7,383. Considering the extent and population of India this is quite inadequate, to say the least. The area and population of the Indian Empire are 1,808,679 square miles and 352,837,778 persons; and the area and population of Great Britain are 89,041 square miles and 44,937,444 persons.

Sir George Anderson has complained that in India "each university" is "bent on providing ample facilities for higher education and research in almost every conceivable subject." The facts and statistics given in the foregoing paragraphs will, I hope, convince unbiassed readers that the facilities provided are very far from being ample and that they are also very far from being in almost every conceivable subject.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Sir George Anderson makes it a grievance that "the Indian university system is still overburdened by an excessive number of students" (page 63, Vol. I.) He has not said whether the students whose number he considers excessive are students in university departments and classes, or also those in constituent colleges, and in affiliated colleges, too. For comparison with Western countries —say, Great Britain—only university students proper, *e. g.*, post-graduate students, ought to be taken into consideration, as in Western universities our graduates are generally not given the same academic standing as their graduates. I shall, however, give the numbers of students of university departments and classes, of constituent colleges, and of affiliated colleges, too, in India.

The number of students in the sixteen universities of Great Britain is 53,386. This figure does not include 11,296 external students of the London University, nor its 13,184 University Extension students. If we have to take into account our college students also, I should include the 553 students of University College at Exeter, 682 students of University College at Nottingham, 1,297 students of University College at Southampton, 1,375 students of University College at Leicester, and 206 students of University College at Hull. Thus the total number of University and College students in Great Britain is 78,979. This is, of course, exclusive of the numbers of students in the many agricultural Colleges, technical institutes and other institutions for higher professional and vocational training in Great Britain, of which we have very few in India.

In the 18 universities of the Indian Empire there are 10,458 students in university departments or classes, 15,475 students in constituent colleges, and 79,310 students in affiliated colleges : total 105,238.

Great Britain with a population of over 44 millions has 53,386 university students ; the Indian Empire with a population of over 352 millions has 10,458 university students. The Indian figure is very small. Great Britain has 78,979 university and college students : India has 105,238. As India's population is eight times that of Great Britain, India ought to have 631,832 university and college students (instead of 105,238, which she has), in order to be equal to Great Britain in higher academic education.

I have said in a previous paragraph that Bengal, United Provinces, and Madras have each a larger populatton than Great Britain. The numbers of university and college students in these and some other provinces are compared with that of Great Britain in the tabular statement printed below.

Country or Province	Population	Number of University & College Students
Great Britain	44,937,444	78,979
Bengal	51,087,338	27,623
United Province	49,614,833	10,687
Madras	47,193,602	20,976
Panjab	24,018,639	16,971
Bombay	26,398,997	14,499

N. B. The population figures for the provinces include those of the States attached to them except partly in the case of Madras, where they exclude Cochin & Travancore.

In estimating the spread of high education in any country or province, its population should always be borne in mind. For the Provinces of India the numbers of students given are for 1932, for Great Britain it has been compiled from the Statesman's Year-Book for 1934.

I have said above in this article that the total educatioual expenditure of the Central and Provincial Governments in British India in 1931-32 was Rs. 12,46,07,093. In that year the total revenue of the Central and Provincial Governments was Rs. 203,72,52,000, according to the Statesman's Year-book for 1933. Therefore, in British India in that year Government spent a little more than 6 (six) per cent. of its revenue for the promotion of all kinds (general, professional, vocational, technical, industrial, etc.) and grades (university, collegiate, secondary and primary) of education. Such being the extent of the total expenditure, it is for Sir George Anderson to convince the public that there has been an "insidious form of extravangance" for the promotion of any grade of educaiion. The progressive States of the world, and even progressive "States" in India, spend a larger proportion of their revenues on educating their people. But that is another story.

FOREIGN PERIODICALS

Russo-Japanese Non-agression Treaty

Many apprehend that war-clouds are gathering on the Far Eastern horizon. In the face of this it would not be unfair to dream of a non-aggression treaty between Russia and Japan, which will help the warring nations to restore peace and order in the Eastern frontier, for a period of time. But conditions have been laid down where statesmen stumble and the matter has been dropped for the future. Dr. Suchiro shows in *The Japan Weekly Chronicle*, how the idea originated :

When Mr. Kenkichi Yoshizawa stopped over in Moscow on his way home from Europe in December, 1931, to accept his new post as the Minister for Foreign Affairs, the authorities of the Soviet Government met him and suggested a non-aggression treaty to be concluded between the two countries. The same project was aired again in connection with the problem of recognition of Manchukuo by the Soviet Union. The Soviet Government made another overture on the same proposal towards the end of last year. As the Soviet authorities realized that the Japanese Government was disinclined to reconsider the matter, they severely criticized Japan, giving the impression abroad of grave relations between the two countries.

The Japanese Government, however, does not seem to be particularly opposed to the proposed non-aggression treaty with the Soviet Union. When Mr. Koki Hirota, Minister of Foreign Affairs, who was formerly Ambassador to Moscow, was ready to return to Japan from Moscow in October, 1932, he said in effect in an interview with newspaper reporters that even Italy and Turkey which are most hostile to Communism have no trouble with the Soviets since they concluded non-aggression treaties with that country, and that it might be to the interest of Japan from this consideration to accept the Soviet proposal. He indicated thereby that he harboured no intention of rejecting the Soviets' proposal.

It is true that he has been preoccupied since he assumed his present post with the work for alleviating the aggravated relations between the United States and Japan since the outbreak of the Manchurian incident. He considers that the measures to create a favourable atmosphere for the naval conference scheduled to be held next year are of the first and foremost importance. Under the circumstances, it is likely that the discussions of the Japan-Soviet non-aggression treaty and other problems pending between the two countries would have to be deferred for the time being. There is no doubt, however, that the discussions are bound to be resumed in the future.

—

Marco Polo's Predecessors

Mr. Marion A. Habig in an article in *The Catholic World* gives an account of the European travellers to the Far East before Marco Polo :

Far back in the history of the old World we find the beginnings of American history Columbus owed much to the old medieval travellers who explored the mysterious Orient. It was in the hope of finding a westward route to the eastern lands which the intrepid travellers of the thirteenth and fourteenth centuries had visited and described that the Great Mariner ventured out upon the unknown deep. From his own letters we learn that he mistook Cuba for Cipango (the medieval name for Japan) ; and after he had reached the American mainland, he wrote to Ferdinand and Isbella on July 7, 1503, that he had "arrived on May 13, in the province of Mago, which is a part of Catayo" or Cathay, as the northern part of China was called in the Middle Ages.

The story of Marco Polo's travels in Asia has often been told ; but there were pioneer travellers who preceded him, and until recent years, at least in the English-speaking world their pathfinding journeys and enterprises have remained almost wholly unknown. Dr. Clougherty of the Catholic University of Peking wrote some years ago : "While the name of Marco Polo is known throughout the civilized world, little or nothing is known, except by Orientalists and in other limited circles, of his Franciscan contemporaries who, a generation before the Venetian's entry into China, traversed the country of the Tartars and left to posterity the most vivid and detailed records of their journeys." Columbus, however, knew them and was as much indebted to them as to *The Book of Ser Marco Polo.*

The International City

When nations of the world are keen for an armament race, philanthropists dream of how wars can be prevented. Mr. H. C. Andersen, a Norwegian scluptor, has push forward the idea of establishing a 'World's Centre City of Communication' where nations of the world will meet on neutral ground. We quote below his ideas from *World Unity* :

In view of the frequently expressed desire for amity and co-operation between all nations, and the economic depression from which the world is suffering, the present moment seems appropriate for again bringing before the public a scheme for founding an *International City and World Centre of Communication*, that is to say, a city belonging to all nations, in which all would meet on neutral ground.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

The International City offers a definite advantage
each individual nation, since each would have its
n buildings, administrative quarters and permanent
resentatives. Hence its products, whether industrial,
ientific or artistic could be presented to the world
a large in the particular manner most suitable from
the producers' point of view; and in placing them
the market of the International City, the producers
ld be placing them on all the markets of the
rld. All countries, whether great or small, would
ve equal opportunities in this respect, and no
oduct would be unsuitable for presentation at the
ternational City, provided it was of interest to any
untry in the world.

Each country might advantageously devote a certain
ea of its building in the International City to the
hibition of its geographical, mineralogical, and
riculturel charts, showing the rock strata, typography
d mineral deposits, as also the areas suitable for
different crops, tracts of land still uncultivated
many details of the same nature. By this means
comparative study of the characteristic features of
countries could be made with the utmost facility.

—

Malaya and the Malays

Mr. V. K. Sabapathy shows in *The Indo-Ceylon Review* that the name of modern Malaya owes its origin from Malayar or Malays, who lived in the classical age in the hilly tracts of the Western Ghats. He Says :

The word, "Malay" is a pure Tamil word, meaning hill or mountain. In the classics, Western Ghauts of Southern India are spoken of as 'Malay Nadoo," meaning hilly country or mountain country, and the people who lived there went by the name of Malayar or Malays. The Tamil chieftain who ruled this country is known as Malaya-man Kari-Kari, the Lord of Malaya–the mount

Malaya is referred to from the earliest times in Sanscrit literature. In Sanscrit the term Malaya is applied to the Western Ghauts. Satapat Brahman—one of the earliest Sanscrit compositions—makes specific mention of Malaya, the mount in the Southern mountains, now known as the Western Ghauts, the peak on which the ark of Manu rested before the flood which submerged the continent where the Indian Ocean now stands.

The Chinese traveller Houen Tsang, who travelled throughout India in the early part of the 6th century A. D. while speaking of Malay Kuta, says, "South of this were the famed Malaya mountains, the western portion of the Malabar Ghauts, which produced sandal wood and camphor."

At the time of whlch I am writing the present Malabar was under the sea. The Western Ghaut stood

Dr. Francis Day, civil surgeon, Cochin, refers to "a manuscript account of Malabar where it is said that more than 2.300 years ago the sea came up to the Western Ghauts." He also says that "tradition and an examination of the geology of the country lead to the conclusion that the sea formerly flowed up to the Western Ghauts." Mr. Phillips of the Geological Survey of India, points out that Malabar stood 500 feet lower than at present and the sea washed the foot of the Ghauts

Until the 15th century A. D. all traders and merchants and emigrants to the Far East from Malaya and Malabar were Tamil-speaking people.

"Manimekala," one of the five great Tamil Epics of the 1st century B. C.. speaks of the Tamils trading with the islands of Java and Sumatra, also with China and Indo-China. W. H. Schoff says in "Periplus" : 'Thousands of years before the emergence of the Greeks from savagery, Egypt and the nations of ancient India came into being and a commercial system was developed for the inter-change of products within those limits." He also writes : "The growth of civilization in India created an active merchant marine trading to the Euphrates and Africa and Eastwards, we know not whither."

The trade with the Far East continued unabated because of the far-flung Hindu kingdoms. It was as the result of these commercial enterprises that traders and other adventurous colonists from Malaya settled in the highlands of Sumatra and other islands of the archipelago. Gradually such settlements became multiplied as time rolled on until in the course of some centuries, and with the break up of the empire in Java, the Petty Malay chiefs of Sumatra arrogated themselves kingly powers in different parts of the island. To this settlement the name of "Sumatrai" was given by the colonists. What name the island bore before the settlement is not known. This name 'Sumatri" is known in Sanscrit as 'Samutri' 'Samutri' is also the native official designation of the king of Calicut in Malabar.

Sir Frank Swettenham was quite correct when he wrote, in his book "British Malaya," that "there are good reasons for believing that the Malays are the decendants of people who crossed from the South of India to Sumatra, mixed with a people already inhabiting that island, and gradually spread themselves over the central and most fertile state.

The Kalinga Kingdom was founded by Dravidian tribes about 2800 B. C. It was a very flourishing kingdom in Deccan. It included Bengal and Orissa. It was the Kalingas, it appears, who established the town of Sinhapura, now known as Singapore, while they were building an empire in Java.

Speaking of Indo-China, Colonel Gerini (Researches on Ptolomey's Geography) says :

"From several centuries before the Christian era a double stream of traders and adventurers began to flow into Indo-China from Northern and Southern India, reaching the upper parts of the Peninsula by land through Burma, and its Southern coast by sea, and founding there settlements and commercial stations."—The Southern Indians were no doubt Malays.

He also says : "Even previous to the time of Buddha (Buddha was born 557 B. C) the Dravidians of Bengal—evidently the Kalingas—conquered the country of Annam and gave the name of Bong Long to to their new coloney in the East. The descendants of Lak Lum of Bengal resigned in Annam for a long time from the 7th century B. C. to 258 B. C."

Warmington, author of *Commerce between the Roman Empire and India* remarks that "the Indians of old transported living animals by sea to China, to the Persian Gulf and to Africa." Fa Hian, Chinese traveller, visited India and Ceylon about 400 A. D. On his return journey he got on board a great merchant vessel which carries about 200 men, and landed at the Southern coast of China. Of Sumatra he says there were large settlements of votaries of the Brahminical religion.

Slavery in the Modern World

A century ago, on August 1, 1834, every slave in the British Empire was set free. Many heroic souls fought and died for this noble cause, but Mr. Lawrence Schroeder shows in *The Inquirer* that the iniquitous traffic still exists :

Of course, we know that freedom does not mean license, and that discipline is essential to right development, and that obedience and command are complementary. How does the theory work out when we think of the child-slavery in China ; of great gangs of men, women and children chained to each other, driven like beasts by their brutal captors, for sale in one or other of the fifteen countries of the world where that kind of slavery is allowed ?

Since 1922, when the League of Nations took action, forty nations have given their word to suppress slavery, and as a result thousands of slaves have been liberated ; but the trade still flourishes—a challenge to the good-will, the pity, the finer mind of humanity. We can at least determine that human beings will not be treated as mere bodies, but as souls with feelings for home aud country, and with possibilities of happiness within their own specific environments.

I suppose that the root cause of the evil—not only in slave-dealing countries, but in the presumedly more enlightened civilized nations—is the lust for material power, expressed in the mad desire for riches, and in the accummulation of possessions : and yet there is the pregnant word of the Great Liberator—Jesus—"Man's life consisteth not in the abundance of the things that he possesseth."

Rather is it that which possesses us that matters—a mind touched with a sense of the beauty and power of the spiritual Kingdom, wherein freedom is the condition of such achievement as spells happiness ; and a soul that finds the meaning of itself in gracious and helpful association with its fellows.

Such a wonder of realization is beyond the experience of the five million fettered and degraded bodies, whose orbit is bounded by the lusts and brutalities of their masters. What must we do ?

—

Buddism and Extremism

Bruno Petzold's reflections on the establishment of the International Buddhist Society, Tokyo, are quoted below from *The Young East* :

A wave of extremism is to-day inundating the world—an extremism that displays the twofold colour of communism and nationalism. Both are taking pride in their fanaticism and enforce their recognition by a dictatorship which is all the more unscrupulous, as it has behind itself the elementary impetus of the masses. Religion is either declared as superannuated, or has to submit blindly to the rulers, in order to be tolerated by extremism.

Buddhism, in principle, rejects this extremism. It teaches the 'middle path, (chu do) between the two extremes. Already the Buddha of Hinayana taught the theoretical middle path between eternalism and nihilism, and the practical middle path between eudaemonism and ascetism, by rejecting these two extremes as low and pagan ways, as ignoble, unprofitable and not leading to salvation. What constitutes the middle path discovered by the Tathagata is the Aryan Eightfold Path, that is to say Right Views, Right Aspirations, Right Speech, Right Conduct, Right Mode of Livelihood, Right Effort, Right Mindfulness and Right Rapture. This is the Middle Path which opens the eyes and bestows understanding, which leads to peace, to insight, to the higher wisdom, to Nirvana. Mahayana Buddhism elevated the doctrine of the middle path to the sublime heights of metaphysics by stating that Absolute Truth is what is in the middle between existence and non-existence, *ie.*, between the glittering world of phenomena and the dark abyss of the void. The highest formulation which the view of the middle path attained is the doctrine of the harmony of the opposites, *i. e.*, the doctrine of the identity of countries which can be called the ripest fruit of Mahayana, and which shows a surprising similarity to the most mature views of occidental philosophy.

—

Modern Persia

His Excellency Mirza Taquizadeh, Persian Minister at Paris, has recently dilivered an illuminating lecture on Modern Persia in London. Extracts from it are reproduced below from the *Journal of the Royal Society of Arts* :

The history of "modern" Persia, in the proper sense of the word, begins with the Persian Revolution of 1905. Up to that date, Persia was from a variety of causes much behind the times. In spite of her liberal-minded and not unintelligent people and with all her assets of philosophy and literature in the past, she had in some respects remained in a state of civilization not dissimilar from that of the Middle Ages in Western Europe.

It is convenient to divide the 28 years which have elapsed since then into two clearly defined periods, namely, the first from 1906 to 1921, which may also be subdivided into two parts of five and ten years respectively ; and the second from 1921 up to the present time, which we may name "The New Era."

Those first five years up to 1911 were actually the most intesesting of that period—when hopes for the success of aspirations which then animated the optimistic and enthusiastic reformers illuminated the horizon and spurred on the people of Persia to work passionately for their salvation.

The change in the form of Government and Administration was both great and fundamental. As in all revolutions, destructive or negative reforms at first naturally outnumbered the constructive achievements Nevertheless, it constituted the secular law in a country where for a long time it had been almost unknown ; it created the Civil Courts of Law, as well as ordering the executive and administrative Departments of State, more or less on modern lines ; and it established through the Constitutional and Budgetary laws legal restrictions for entering into any kind of engagement with foreigners as well as for Revenue Administration, both of which were, until then, uncontrolled.

Persia, in spite of her neutrality, was not spared the horrors of the Great War, which, coupled with a severe famine and a series of epidemics, went far to exhaust the resources of the country materially, while the anxiety of the people for the continuation of their independence and national existence in face of ever-increasing pressure drove them to disappointment, apathy and even despair. It may justly be said that the heart-beat of a nation in such a state is temporarily

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

...ended, since there can be no development to ...ord, and a mere chronicle of events cannot be ...ed as history.

Providence, however, favoured Persia, and the crisis ...ended a leader. A great change came with the ...ension to power of the present ruler of Persia, His ...perial Majesty Reza Shah Pahlavi, our August ...vereign.

Persia has certainly no desire, at a time when there ...s still some hope that friendly discussion may lead to ...ternational disarmament, to exaggerate her defensive ...eparations. Being one of the most pacific countries ...the world she is anxious only to ensure her own ...ety and peace. She has concluded clearly defined ...cts of non-aggression with many of her neighbours, ...e has been a member of the League of Nations from ...s inception, and remains one of the most zelous ...pporters of that international institution.

Persia has sometimes been accused of adopting an ...ti-foreign attitude and of pursuing a course of ...xaggerated nationalism. I believe this accusation to ...e totally unfounded. Persia desires to work undis-...rbed for the peaceful realization of much-needed ...forms. She is willing to encourage foreign enterprise ...n the country, but claims as a condition of such ...ncouragement that her rights should be respected by ...e countries of these enterprises and that co-operation ...ill mark the abandonment of all prejudice on their ...rt.

The nationalists of Persia have, since the revolution, ...ways maintained that Persia will work out her own ...lvation if her freedom of action is not disturbed, ...ough foreign observers may not infrequently have ...pressed their doubts or even sincerely held a contrary ...inion.

I am sure no ground for misunderstanding will be ...von our side, and I am fully convinced that harmony ...d friendship will characterize our relations with all ...tions who are willing to regard Persia as an equal ...d fellow member of one and the same family.

"This simple, serene and lovely figure"

In an address in The Berry Street Conference ...r. John Haynes Holmes has paid a glowing ...ibute to Mahatma Gandhi and other personalities ...our age. The following appears in *The ...ristian Register* :

Of Gandhi, how can I speak ? It was at the ...oment when I was as though perishing, in 1919, ...at I found this sainted man. My discovery of him ...n only record in the words used by John Keats ...record his discovery of Chapman's "Homer" :

Then felt I like some watcher of the skies
When a new planet swims into his ken ;
Or like stout Cortez when with eagle eyes
He stared at the Pacific—and his men
Looked at each other with a wild surmise—
Silent, upon a peak in Darien.

In the midst of the fall of nations, out of the horror ...war and revolution of bloodshed, fire, and fury, ...e suddenly arose this simple, serene, and lovely ...ure. To a world of violence he brought the gospel ...Satyagraha, or non-resistance ; to an age of hate, ...e broke the old and almost forgotten word of love ; ...a generation caught in the snares of death, he ...ught release into the peaceful ways of life. In the darkest hours of my experience Mahatma Gandhi brought into my soul what I have always felt that Jesus must have brought into the souls of his disciples. And if there is any one thing out of all my years that brings me comfort, it is that I have lived to see humanity swing to Gandhi, as a planet swings in its celestial orbit to the sun.

Such are the four immortals of our age—Einstein, who has recharted the pathways of the stars ; Freud, who has redesigned the patterns of the soul ; Lenin, who has remade the structure of society ; Gandhi, who has restored the sanctities of religion ! Have these men renewed my hope ? Have they revived my faith ? Have they reconciled me to my world ? Let me re-draw in a brief series of propositions, or theses, the outlines of those convictions to which I cling—the shadow of that grim and stern reality which, like a dark-bound shore seen through a rift of storm, may save me ere I sink.

Adult Education in America

After reviewing the Progress Report on the San Francisco School of Social Studies Mr. Alexander Meiklejohn suggests that America should now adopt a comprehensive scheme of Adult Education. Some suggestions are quoted below from *The New Republic* :

The time has come for the establishing of a new branch of public education in America. It is no longer enough that we teach children. It is not enough that we lead many of our young people through high school and a few of them through college. Every day makes it clearer that the amount of learning, and the kind of learning, that an American needs for proper living cannot be won in the years before twenty-one. Our scheme of government and of life can succeed only if, in their more mature years, men and women will engage in careful, enthusiastic and guided study of common values, common dangers, common opportunities. In a word, we must have a comprehensive scheme of adult education.

The end to be served by this new teaching will not be vocational. We Americans are already well able to train ourselves for jobs. There is no need for a fresh start along that line. On the other hand, the purpose is very badly described as that of "fitting people for the new leisure." That notion has in it too much of individual irresponsibility, too much of mere escape from obligations—from significant loyalties and endeavours—to serve as a basis for a national movement in popular teaching. The primary aim of adult education goes far deeper than either of these relatively superficial glimpses of its meaning. That aim is the creation of an active and enlightened public mind. The deepest question in American life today is not economic or political ; it is educational. It is the question of the thinking power of a democracy. Can our people understand and direct their own living or must someone else do their thinking, make their decisions, for them ? As a democracy we are pledged to try the first of these two programmes. And to make that attempt successful is the aim of adult education. At this point we do need a fresh start.

It should be noted in passing that the programme here suggested is not that of the indoctrination of Americanism. We need the practice of democracy rather than the preaching of it. And the practice of democracy in teaching is one of "free inquiry." It seeks to create and develop the will and the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

capacity for independent judgment. It regards its own beliefs as open to study to criticism, to revision. To fall short of such self-criticism is to betray the deepest principles of our American life. There is among us no treason so black as that which would, by methods of insinuation or of violence, "impose" democratic principles, keep them safe from hostile opinions. We cannot teach democracy unless we trust it in action, practise it in our teaching.

It need hardly be said that the task of creating a national system of adult education is a very difficult one. In terms of quantity, the difficulties are obvious enough. Into the field in which newspapers, churches, libraries, theatres, lecture platforms, books and magazines, art museums radio centres, concert halls, are already at work, teachers must go. And they must go in sufficient numbers and with sufficient clarity of purpose to criticize and modify these other agencies as well as to co-operate with them. Theirs will be the primary responsibility for making vivid and attractive the studying activity in which every good American should be engaged. To do that will be, in sheer quantity, an enormous undertaking.

But the qualitative difficulties are even greater. How shall a people that has not built up the habits of study be led into the forming of those habits? Who shall be the teachers? What "materials" shall be used? What "methods" shall be followed? Here is a teaching problem as difficult as it is important. A democracy must arouse and sustain the creative intelligence upon the postulating of which its whole scheme of government and of living rests, with whose success or failure its own existence stands or falls. How shall it be done?

—

Soviet-American Trade Relations

In order that peace may be maintained in the Far East, Russia and America should now collaborate together. Though Soviet has been recognized by the latter, yet a deadlock has crept into the Soviet-American relations regarding the settlement of debts and claims. V. M. Dean's suggestions for a better solution of the question appears in *Foreign Policy Reports*, an extract of which is quoted below:

The renewal in Washington on July 25 of Soviet-American negotiations regarding settlement of debts and claims represents a determined attempt to eliminate a problem which has threatened to embitter relations between the two countries. It is reported that the U. S. S. R. has offered to pay a lump sum, to be determined by agreement, which would liquidate the debt of the Provisional government and the claims of American nationals. This sum, however, would not be paid outright, but would gradually be collected by the United States in the form of additional interest paid by the Soviet government on American credits, which the U. S. S. R. wishes to secure as an integral part of the debt settlement. The Washington negotiations are consequently expected to concentrate on two points: the amount which the Soviet government is willing to pay and the United States is ready to accept in liquidation of debts and claims, and the sum which the American government is prepared to advance to the Soviet Union in the form either of a loan or of long-term credits for Soviet purchases in this country. It is hoped that a settlement of debts and claims will break the deadlock which has occurred in Soviet-American relations since recognition of the Soviet government by the Roosevelt administration in November 1933.

Recognition of the Soviet government has as yet failed to justify either the sanguine expectations of its advocates or the gloomy prophecies of its opponents. Establishment of diplomatic relations, while it has terminated an anomalous situation, has not materially increased Soviet purchases in this country, which continue to depend on the extension of substantial long-term credits guaranteed by the American government; these, in turn, have been made contingent on settlement of Russia's indebtedness to the United States government and of the claims of American citizens. At the same time recognition has not noticeably stimulated the importation of Soviet goods competing with similar American commodities, nor has it given an impetus to Communist propaganda. The development of Soviet-American relations from the level of ordinary diplomatic intercourse to that of close political and economic co-operation depends, as in the past, on the measure of financial assistance which the United States is prepared to give the Soviet Union and on the willingness of the two countries to collaborate for the maintenance of peace, especially in the Far East.

—

Confucian Philosophy

August 27 was officially observed in China as the anniversary of the birth of Confucius. To commemorate the occasion, the editor of *The People's Tribune* reviews some of the philosophical teachings of this immortal sage and says:

That ancestor worship and filial piety form the foundation of Confucian philosophy is common knowledge, but there are others of his teachings which have such intimate bearing upon social problems of today that it is really astounding to realize these plans for establishing human happiness were drawn up considerably more than two thousand years ago. Conditions, too, in the days of Confucius were strikingly similar to those existing today—political disintegration, social unrest, intellectual anarchy, and moral disorder. "The world had fallen into decay," writes Mencius, "and truth had faded away. Perverse doctrines and violent deeds had arisen. There were instances of Ministers murdering their Sovereigns, and of sons murdering their fathers. Confucius was afraid."

But this being "afraid" did not mean that he lacked courage, otherwise he would never have essayed the tremendous task of travelling throughout the country educating the rising generation to an appreciation of their responsibility for establishing higher social ideals by a process of intellectual reorganization. Confucius, as a social reformer, insisted upon the necessity of every member of the community faithfully discharging the duties proper to his or her station. It was his aim to educate the people in such a way that they would do the right thing because they knew it was right, and not simply because they feared the legal penalties in store for wrong-doers. "If the people be led by laws and their conduct be regulated by punishments, they may try to avoid the penalties, but they will have no sense of shame. Lead them by virtue and standardize them by the rules of propriety, and they

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

will not only have the sense of shame, but they will also become good."

That the principles laid down by Confucius and his followers were not put into general practice throughout China was due to obstructive tactics on the part of the well-to-do and the absence of effective administrative machinery to carry theories into effect. Confucianism is not a religion, but a school of philosophy whose teachings include axioms generally recognized today as being sound in logic even if still somewhat impractical in regard to execution. Confucius was a democrat in the best sense of the word: his sympathies were with the poor, and he was convinced of the original and inherent goodness of human nature. "He who governs by his moral excellence may be compared to the North Star, which abides by its place, while all other stars bow toward it." Again, "good government obtains when those who are near are made happy, and those who are afar are attracted;" what is right or wrong is decided by what is good or the people, and what the people decide is Heaven's will."

Problem of Depressed Areas in Great Britain

The following introduction is annexed to Mr. E. D. McCallum's essay on the above subject, in *International Labour Review*:

Perhaps the most characteristic feature of unemployment in Great Britain since the War is its persistent concentration in certain industrial areas of the country. In years of prosperity and years of depression alike, unemployment has been twice as severe in these areas as in the rest of the country. Their principal industries seem to be permanently unable to employ the number of trained and efficient industrial workers available; this creates a position whose seriousness must continue to require attention, even if the present signs of economic recovery are maintained throughout the country as a whole. It is this situation which creates what has here been called "the problem of the depressed areas".

—

Rejoicing in Cuba

Great rejoicing was witnessed throughout Cuba on the news that U.S.A. has renounced her contractual rights of intervention and financial supervision in the country. The following note appears in *The Commonweal*:

Two months after granting independence to the Philippines the United States renounced her contractual rights of intervention and financial supervision in Cuba. The signing of the new treaty (which was ratified by the Senate in Washington without a dissenting vote) was greeted in Havana by a salute of twenty-one guns; church bells pealed and sirens and whistles blew. Crowds in the Cuban capital gave Ambassador Caffrey an ovation. In a radio speech hailing the new understanding President Mendieta declared, "Today Cuba, with her sovereignty unimpaired, salutes all other nations." The United States by abrogating the Platt Amendment of 1903, also relinquishes her supervision of Cuba's foreign affairs, her right to establish further naval bases and the continuance of certain sanitary measures which she instituted. She retains the naval base of Guantanamo. Article IV of the new treaty provides for the outbreak of a contagious disease, in which case either government may suspend communications with the other "without its act being considered unfriendly." At the same time the Foreign Policy Association announced that on the invitation of the Cuban authorities it would inaugurate on June 15 an impartial survey of the economic and social conditions of the island. Under its auspices an American commission of distinguished professors and other authorities will be sent to prepare a report for the people of Cuba and of the United States, recommending a relationship of mutual advantage to the two nations. The Rockefeller Foundation is to finance the work.

INDIAN PERIODICALS

More Pusas—the only Solution

The Pusa, agricultural research institute, will soon be removed to the neighbourhood of Delhi. This has elicited divergent comments from unexpected quarters. In this connection Dewan Bahadur M. Ramachandra Rao has contributed a thoughtful paper in *Advance India*. In this vast agricultural land a number of institutions like the Pusa Institute should have been already established for research work. It is a pity that instead of supplying this want, the Government are bent on removing the Pusa Institute from Bihar, where it is most needed. So Dewan Bahadur Rao writes :

I venture to say that in coming to decision on these questions there are many other relevant considerations which cannot be ignored. In the first place, it will be admitted, as pointed out by the Royal Commission, that an ideal site for a central research institute which can suit the needs of the whole of India is doubtless impossible of attainment.

The climatic and agricultural conditions of the country differ widely from province to province and research work connected with all the crops and soils cannot obviously be carried on at one centre for the whole country. This fact has been admitted by the experts and officers of the Government of India..... Examined by the Royal Commission, they suggested the desirability of organizing agricultural research in two or three centres to suit the varying conditions of the country.

In giving evidence before the Commission, Mr. G. S. Henderson, the Imperial Agriculturist, Pusa, stressed this point and his criticism of Pusa was that it was a single station, whereas he contended that there should be several institutions. Pusa could be improved upon in every way. I could have one place where irrigation is practised, another place representing Southern India, a centre representing Bengal conditions and possibly a centre in Central India.

Organization of research work by crops has been advocated by Dr. Clouston, the Agricultural Adviser to the Government of India, *i. e.*, the research in regard to the wheat should be carried in the wheat tract, the research regarding rice should be carried in the rice tract and that relating to cotton in the cotton tract. He, therefore, laid stress on the need for the establishment by the Government of India of additional research stations controlled by the Government of India. He expressed the view that there is a room for *duplication of institutes similar to Pusa, in Southern India, to deal with the wet crops and rice crops, to which it is not possible to devote attention at Pusa.*

Further pressed on the subject, Dr. Clouston stated that "we have already a cane-breeding station in Southern India. We should like to have a rice station in Madras and Bengal. We should rather like a wheat station in Jubbalpore or somewhere else in northern India."

It Is only on these lines in the development of more Pusals that a satisfactory solution of the problem can be reached.

Christianity and Nationalism

Dr. T. G. P. Spear of St. Stephen's College, Delhi, writes in *The Young Men of India, Burma and Ceylon* :

Christians should not fear to be nationalists or to love their native lands. Our own countries, like our homes and our childhood experiences, are things we can never escape from, even if we would we owe to them much of the best that is in us, our inherited traditions, our ideals and standards. Let each sing his "Bande Mataram" and not fear to acclaim with John of Gaunt his country ;

> This other Eden, demi Paradise,
> This fortress built by nature for herself
> Against infection and the hand of war

The Christian spirit will sanctify all that is best in national traditions. It will enable us as pilgrims of eternity to see, in "our own dear lands," the type of the celestial city which is for ever laid up in heaven—that city of God in which we strive to live and move and have our being. Most men love their country because it is their home. Christians should love it because they see in it the symbol, imperfect though it be, of the eternal Kingdom of righteousness, which they seek to establish upon earth.

Sri Ramkrishna's Humorous Remarks on His Marriage

Swami Saradananda writes in *The Vedanta Kesari* :

At times the Master would indulge in much fun over his marriage. Indeed, how amusing they were! We shall present the reader with a sample here. One day at Dakshineswar the Master was sitting at his noon-meal and talking in a light vein with Sjt. Balaram and a few other devotees. The Holy Mother had started that day for Kamarpukur, to spend a few months there on the occasion of the marriage of Ramlal, the Master's nephew. The Master (to Sjt. Balaram): What is the meaning of the (my) marriage? What is the use of the wife when I cannot keep in order even the cloth on the loins?

Balaram smiled a little and kept silent.

The Master: Indeed! I have now understood. (Showing a little curry picked up from the plate.) It is for this only. Otherwise who else would cook for me with so much care? (Sjt. Balaram and the other devotees burst into laughter.) Really, who else will take care of my food with so much interest? They

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

have all gone away to-day. (The disciples failed to understand whom he meant.) I mean Ramlal's aunt (the Holy Mother). She has left for Kamarpukur on account of Ramlal's marriage. I stood quite unconcerned and saw the party going. Truly, the mind was not in the least affected on this account, as if they had no connection whatsoever with me. But a little later, the anxiety came as to who would hereafter cook for me. You see all sorts of things do not agree with me. Nor can I myself always be sufficiently attentive to my food. She knew which things would be agreeable and would prepare different courses accordingly. That is why the thought came to who would now take her place.

—

The Master's Jokes

In the same paper writes *A Disciple* of Sri Ramkrishna :

"Ah, my dear Baburam came to Sri Ramkrishna while he was a mere boy. Sri Ramkrishna used to have great fun with them. Naren (Swami Vivekananda) and Baburam would roll on the ground with laughter. Once, while living in the Cossipore garden, I had been climbing the steps carrying a pitcher with five pounds of milk. I felt giddy and the milk spilt on the ground. My heels were dislocated. Naren and Baburam ran there and took care of me. There was a great inflammation of the feet. Sri Ramkrishna heard of the accident and said to Baburam, 'Well, Baburam! It is a nice mess I am in. Who will cook my food? Who will feed me now?" He was then ill of the cancer in the throat and lived only on farina pudding. I used to make the pudding and feed him in his room in the upper storey of the house. I had, then, a ring in my nose. Sri Ramkrishna touched his nose and made the sign of the ring by describing a circle with his finger, in order to indicate me. He then said, 'Baburam, can you put her (making the sign) in a basket and carry her on your shoulder to this room?' Naren and Baburam were convulsed with side-splitting laughter. Thus he used to cut jokes with them. After few days the swelling subsided. Then they helped me to go upstairs with his meals.

Khan Abdul Gaffar at Santiniketan

On his conditional release from jail Khan Abdul Gaffar went straight to Santiniketan. *Visva-Bharati News* writes in a supplementary note :

On the 31st morning of August we had the pleasure of receiving Khan Abdul Gaffar, the Frontier leader in our midst. He arrived by the morning train from Burdwan and was received at the station by Rabindranath Tagore, Karma-Sachiva of Visva-Bharati, and a few *adhyapakas*. Before an assembly of students and other members of the Asrama in front of the Library Building, Rabindranath welcomed the illustrious guest in a few well-chosen words. He said the Khan Shahib's visit was a memorable event in the history of the Asrama and that it was fortunate for the students to have the opportunity of meeting him. It had touched them all, the President continued, that his confidence in the Visva-Bharati expressed in the fact that he had chosen to send his son here for education when he was away in jail.

Khan Shahib replied saying that he felt deeply overwhelmed with the warmth of the reception. He was highly pleased to visit the place, where he saw things much more than he had heard of. The great Poet's ideals appealed to him as being truly necessary for India's uplift. He hoped that his community would imbibe the Poet's noble ideas about education based on true spirit of religion. The feelings of communalism that threatened to stifle all of India's aspirations were largely due to misinterpretation of religion.

Khan Abdul Gaffar

His visit to the Asrama was a very hort one for he left the next morning for Patna, *en route* Wardha. But he did not spare himself and managed to go over all the departments at Santiniketan and Sriniketan and evinced great interest in all that he saw. There was a farewell ceremony just before he left, in the yard in front of Uttarayan when Rabindranath read an address to

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

him in Urdu, an English rendering of which is given below.

Dear friend,

You are with us only for a while but even that is a rare good fortune for us. This is my hope that you will not think it a mere exaggeration or an expression of civility when I say that your presence has created a new strength and vigour in our hearts. Love is never taught by the word of mouth; the soul of a true Lover is Love's own touch-stone. When we come into contact with it, the value of whatever sentiment there is in our own hearts gets magnified manifold.

We have you here with us only for a short period but we will not measure the worth of the event by the standard of time. Those really great, whose hearts are for all, who belong to all the lands of the world, transcend also the bounds of moments; they are for all time. Believe me, the memory of this short visit of yours to the Asrama will ever remain fresh in our hearts

Truth is the very foundation of your life, and I am sure that you radiate its influence all around you. We have realized this too that all our own efforts are everyday being frustrated for lack of this devotion to truth. You have come to this land whose unhappy being is shattered into fragments, in order to fulfil the purpose of Providence to save her from the poison of fratricidal hatred with which she is drugging herself to self-destruction. I have not the slightest doubt that you have been able to stimulate the heart of our folk here with some of that great force of character which is your own. Pray accept the grateful homage of all of us. This is our earnest prayer that you be long spared to help this land, sick, unto death, toward vigorous health and truth.

—

The Menace of War To-day

In *The Ashram Review* (formerly, *C. S. S. Review*) the Rev. G. C. Dewick writes:

In 1918, we all thought that the Spectre of War was "laid," at least for our generation. But to-day it hovers over us with grim and menacing insistency. In 1918, boys and girls coming out of the schools and colleges in most nations of the world were thanking heaven that they at least were free from the danger of having to undergo the terrible ordeals through which their immediate predecessors had just passed. Today (at least in most of the countries of Europe) one cannot speak to a group of young men without realizing that they anticipate that most of them will end their lives by violent death in some battle-field or air-raid. Of late especially, the menace of war seems to have grown more threatening every month; and at no time since the close of the Great War in 1918, has the apparent inevitability of another war been more present to our minds than it is today.

And yet, the strange thing is that no one—or almost no one—desires war. I wish it were possible to say that no one *at all* desires war; but I fear that the evidence is all too plain that there are certain industries, notably those connected with the manufacture of armament, that are prepared to put their own profits before the welfare of humanity and are definitely using their influence in the direction of encouraging another world-war as soon as possible. But these form a small minority in the midst of humanity at large. There are also a few who hold that war is so inevitable that it is useless to try to avert it; some of these, because they believe that it is foretold in the Bible as part of the Divine Plan for the world; and others because they think that it is predestined by the 'laws of Science,' as part of the structure of the Universe. But the great majority of men and women emphatically refuse to accept this point of view. When confronted with the menace of war, their instinctive reaction is: "It *ought* not to happen!" and further "It *need* not happen!"

—

The Temple Entry Bill

The Temple Entry Bill has recently fallen through in the Legislative Assembly. The Bill sought to remove legal obstacles against the *Harijans* entering Hindu temples. This regrettable event has evoked the following editorial comments in *Stri-Dharma*:

Turkey and Persia offer us living examples of what legislation, backed and promulgated by a strong national government, can do to transform public opinion overnight and to create a new point of view almost within the rising and setting of the sun. But in India it is not so. The onus of carrying out all reform and also enforcing reform legislation has been put upon the private individual, reform worker or organizations. If social reform work is to be effective and fruitful, it should be strengthened by adequate legislation. Of course, we realize the need for constant propaganda and education of public opinion. We merely suggest that legislation and propaganda should co-ordinate at a given place where either one would be futile without the other. To achieve this the closest sympathy and co-operation should exist between official and non-official workers, and an identity of interest is essential to ensure such sympathy and co-operation. When we are on the eve of wider responsibilities it is very necessary to remind our future representatives and also all these Indians who will hold high office how essential it will be for those men and women, who will enter the councils as the representatives of the reformed and progressive point of view to keep closely in touch with the workers outside and to do all in their power to reinforce the work that is being done by organizations and individuals to bring about a healthier and happier state of affairs in the country. For the present we many take this as a lesson and press forward more than ever before to create the right attitude in the public mind towards the question of the right of Temple Entry to Harijans! Let this failure be a stepping stone to a successful campaign against this inhuman and cold philosophy.

—

International Control of Narcotics

The National Christian Council Review writes editorially:

While the Assam Province, where apparently the opium evil had long been established, is trying to eradicate it, in response to public opinion, our readers will be interested in knowing how the evil is being attacked at its source by the League of Nations.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

The Scope of Competition

In an important paper in *Indian Journal of ...omics* Prof. Sir J. C. Coyajee writes:

We have to bear in mind that the true nature of ...concept of Free Competition has been very ably ...keenly discussed by economists for decades. Its ...tions in connection with the idea of "maximum ...ophelimity" were debated by Pareto and even ...er by Marshall in his chapter on Maximum ...faction. Very recently too a great deal of analysis ...been devoted to problems of Imperfect Competi- ... Admittedly basing herself on the analysis of ...rshall and Pigon, Miss Joan Robinson has shown ... "the analysis of perfect competition is only a ...ing case of the general theory" and that "it can ... longer occupy its former dominant Position in ... theory of value." Thus the analytical economists ...e been themselves seeing the limitation of com- ...tion and have been adding to the contents of their ...ox of tools" for the keener and deeper study of ...petition as well as of monopoly. To demoastrate ...e vast existing range of imperfect competition is to ...ow the smaller importance of ideas of pure com- ...tion and monopoly. Indeed, it is through the ...ress of economic analysis that we are being led ... adopt a more correct and modest view of the ...omic position and importance of Competition— ...ding ample allowance for the limitations of com- ...tion both on the theoretical and practical sides. Competition must decrease while collaboration and regulation must increase in scope. Moreover, whether in the past or in the present there has been and is no case of an economic society working on the bases of ideally and absolutely free competition, for the simple reason that the requisite institutions for the success of such competition were and are lacking. We can go further and admit that as an ideal it is better to aim at a rational and humane ordering and organization of affairs than to acquiesce in the struggle for existence. But facts must be faced and after all has been said and done although the merits of collaboration are many it will never be possible to oust and replace competition entirely. It is well to attempt to control competition; but in one shape or other it will always be an important factor in our whole scheme of economic and social life as long as there is a struggle for survival in society. True the scope of competition will be more and more restricted either by "formal control within the business conceived or by the coming in of an authoritative economic order." But there can be no doubt that in some form or other competition will manage to survive. "The parties, the forms, the fashions, the intensity and the ends of the struggle many change; but the norm of competition among persons, good industries, ideas, institution and culture must remain." A great deal certainly depends upon the way in which competition is defined and upon the sense which we attach to the word in the controversy regarding the proper scope of competition. But however defined or regulated, there seems to be no prospect of competition being abolished or entirely done away with.

—

Regulations for Ashrams in Cambodia

Prof. Bijan Raj Chatterjee, M.A., D. Litt. in his "King Yashovarman's Regulations for Ashramas in Cambodia" in *Prabuddha Bharata* writes:

Yashovarman (889-910 A. D.) was one of the greatest monarchs of Kambuja (the Sanskrit name of Cambodia). It was he who founded the town of Angkor (Sanskrit – Nagara) which became one of the most magnificent cities in the whole world during the Middle Ages.

Three Sanskrit inscriptions of his reign (recently edited by M. Coedis) give us the regulations laid down by the monarch for a Vaishnava, a Shaiva and a Buddhist Ashrama respectively, which was constructed by royal command in the immediate neigbourhood of of his capital (Angkor).

The three inscriptions have much in common.

This Decree (शासन) of Sri Yashovarman is to be obeyed in the Ashrama by the Kuladhyaksha (कुलाध्यक्ष) as well as by his servants.

The Kuladhyaksha shall see to it that the Ashrama flourishes and that the Ashram Jana (people) are well protected.

If the king comes here with his queens the Kuladhyaksha should show him the honour due to a divinity. For ..according to Vyasa "He who is devoid of respect towards the king, who is the Guru of the whole world, will see none of his gifts, sacrifices and offering bear fruit."

After the king the Dwija (द्विज) should be honoured

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

above all others ; if there are several of them, their conduct should first be taken into consideration, then their good qualities, and finally their learning.

Particularly (among the other visitors to the Ashrama) the brave should be honoured, who have proved their valour in the field of battle for the defence of right depends on them.

The Ashrama regulations of king Yashovarman of Cambodia came to a close with the following noble stanza :- The Earth, the Waters, the Winds, the Clouds the Sun and the Moon—have they the slightest personal interest in contributing to the happiness of created beings ? The noble rule of life which the truly great follow is this : to minimize one's personal interests and to strive to promote the interests of others.

Indian Insurance Law *re* Indian Provident Societies' Act

In an important paper in *Commerce* (September 22, 1934) Mr. S. C. Ray, M. A., B. L., Editor, *Insurance World*, and Manager, Aryasthan Insurance Co. Ltd., indicates lines in which the Indian Insurance Law should be modified. An abstract of his suggestions has already been quoted in this section (*vide The Modern Review* for June 1934). In this connection he also lays stress on the need of amending the Provident Societies' Act under which many mushroom societies, miscalled Provident Insurance Societies, are growing up almost daily. Mr Ray's suggestions on this branch, too, deserve notice. He says:

While discussing the question of insurance law in India it is not possible to leave aside the Provident Societies' Act under which innumerable insurance companies have sprung up in India in recent years. The dividing companies, registered under its provisions have become a terrible menace to the progress of Indian insurance and unless this Act is suitably amended immediately, we shall have to face dark days in the near future The maximum risk undertaken by a provident company must not under law exceed Rs. 500 on a single life. But the loss of even this small amount for an average Indian is a great strain and so it is necessary that these Provident Societies should be regulated in such a way that the insured people may not suffer. Their only safe-guard is Section 17 under which the Registrar of Joint-Stock Companies can institute some enquiry in regard to the affairs of a Provident Society.

I strongly advocate the revision of the provisions of the Indian Provident Societies' Act under the following lines :

(1) Every company should deposit Rs. 5,000 before registration and increase this deposit by addition of 3 of the renewal premium income every year until the total deposit reaches Rs. 50,0 0.

(2) All insurance schemes should be examined by qualified Actuaries and companies should be allowed to carry on business only under such schemes as are found to be scientificaly sound.

(3) Provident Societies shall not be allowed to style themselves as insurance companies as in such cases the lay people will not be able to differentiate them from companies carrying on regular life insurance business.

I am glad to find that the Jodhpur State has already made a move in this direction by requiring Provident Societies to deposit Rs. 5,000.

—

Rabindranath's Paintings

Dr. Rabindranath Tagore recently held an exhibition of his paintings in Bombay. Mr. G. Venkatachalam wrote a critique on Rabindranath's paintings in *Triveni*. Part of it is given below :

When he recently held an exhibition in the city of Bombay, his pictures literally puzzled and mystified the Indian public. One noticed worried looks in the eyes of visitors, and heard all sorts of amusing comments. 'You call this art ?' snapped an outraged society lady, herself a widely travelled woman and a writer, but of nervous temperament. 'We don't understand these pictures, frankly we dont,' observed many well-meaning friends and admirers of Tagore and his poetry. 'This art is beyond us', confessed a young girl artist, and added cynically, 'One must be born, I suppose, in Bengal to appreciate it.' Here and there one met a person who showed interest in the pictures and discovered some artistic merits in them. If Tagore's paintings do not arouse any enthusiasm or admiration for his art, they at least set people thinking about newer modes of artistic expression than one is generally used to.

Tagore's works are not to be judged by the ordinary accepted academic standards, for the simple reason that they are not painted after any accepted style, school or tradition. No rules of the art are applicable to them. They are just creations of playful moods and unfettered joy, and so they share the nature and significance of all original impulses. Laws and rules do not give birth to art ; art creates its own idioms and expressions. Thus there is really no criterion by which original creative efforts like those of Tagore's could be judged. They must be appraised on their own intrinsic worth, their inner vital quality.

Tagore was not trained in any academic school. He never studied the art of painting under any master, nor does he consciously copy or follow ony style or technique. The creative urge in him plays with lines and colours which take definite shape and design under the spell of his genius. He never strives after any perfection of form or idea but just lets his fancy or imagination create figures or portraits, scenes or symbols, effortlessly and without prejudice. They are like the play-creations of a child, simple, spontaneous and beautiful.

Some are crude and unfinished ; some are delightfully drawn with an eye for precision of line, balance and composition. Whatever may be their æsthetical merits, there is no doubt that everyone of them is intensely alive with a dynamic vitality like a piece of sculpture. There is grace, beauty, movement and suppleness in every line and curve that he draws. His art is really an inspired art ; and there is freshness and originality in all his single figure studies and group composltions. The poetic and lyrical nature of his pictures are obvious. As he says himself : 'My pictures are my versification in lines. If by chance they are entitled to claim recognition, it must be primarily for some rhythmic significance of form which is ultimate, and nor for any interpretation of an idea or representation of a fact.' Even the most unfinished picture of his has this 'rhythmic significance of form, and it is this that makes his art so interesting.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Tagore seldom bothers himself with the regular paraphernalia of an artist: studio, easels, palette, brushes, pigments, canvases, glues and the rest. He paints as he likes and on all kinds of papers, white or coloured, rough or smooth, big or small, even on bits of newspapers. Some of his striking pictures were done with the aid of a simple fountain-pen or piece of stick or his own thumb and fingers. His portrait sketches executed in this style are exceedingly clever. His landscape sketches have a distinct atmosphere, and he now and then paints them in colours. He has a preference for ordinary liquid colours and it is amazing what rich colourful effects he gets out of them. His decorative designs are genuinely original and some of them ultra-modern and very intriguing.

On the whole Rabindranath's paintings have an originality, sincerity, truthfulness and vital quality to be ranked as high as any of the modern masters. Dr. Ananda Coomaraswamy's pithy statement that Tagore's pictures are not childish but childlike is about the sanest criticism so far offered on this new phase of Tagore's genius.

How the Press Act of 1910 was forged

The interesting story of how the Press Act of 1910 was forged has been narrated in *The Indian Review* thus:

The Radical statesman [Lord Morley] was averse to this unnecessary addition to the Statute-book, but what could one man, however exalted and forceful do against a whole brood of opposing reactionaries? It is curious how from Royalty down to the Civilian there was such strong opposition to the legitimate and modest aspirations of Nationalist India. Sir Sidney Lee, in his "Life of King Edward VII" has told the story of the King's directions to the Cabinet supporting the Commander-in-Chief's demand for "a drastic Press Act especially for the Army." But Morely and the Cabinet were adverse to it. Morely gave way anyhow probably in deference to the Viceroy's wishes—the Viceroy who had so warmly supported him in his Reform Scheme. One is amazed at the ugly manœuvres played behind the scenes to bring the Liberal democrat round to support the unwanted Press Act. Says Mr. Kincaid, I. C. S. (*Retired*) in his recent book*:

I was summoned to the India Office by Sir William Lee Warner, the senior member of the Council of the Secretary of State. He first bound me over to strict secrecy, and then told me that he was trying to induce Lord Morely to agree to a proposed Press Act in India. Sir William wanted me to write something to the Press preferably the *Times*—to strengthen his hand. I was finding Lord Morely very difficult. I promised to do my best best. I asked my friend Enthoven, who knew Valentine Chirol, for a note of introduction to him. Armed with it I went to the office of the *Times*. I sent Mr. Enthoven's note, and was received by the Director of Foreign Intelligence, as he then was in the specious pre-Northcliffe days of the *Times*. He was very cordial and said that he would consider the articles that I wrote. I sent him, one after the other (1) on 'Kichak Wadh' a seditious play by V. V. Khadilkar; (2) 'Mr. Tilak and the seditious Press'; (3) the Chipawans of Chiplun'; and (4) 'Ancient Indian Theories of Government.' They were all accepted, and the first was translated into almost every language by the European Press. The second and third articles were commented on in leading articles. In view of the Public interest aroused by my articles Valentine Chirol was sent out to India to get 'copy.' This led to the publication of 'Indian Unrest.' This again was the cause of an unsuccessful libel action brought by B. G. Tilak against Sir Valentine Chirol, the *Times* and Macmillian & Co.

Sir William Lee Warner and I held our tongues. Lord Morely was wild to know who had written the articles. With the artless guile of a Radical minister he pretended to think that they were from the pen of Valentine Chirol himself, and wrote to congratulate him. The Director of Foreign Intelligence was equal to the occasion. He thanked Lord Morely very nicely for the congratulations and expressed himself very pleased that he should like the articles. Soon afterwards Lord Morely sanctioned the passing of the Press Act.

A Plea for Cultural Readjustment

Prof. J. M. Kumarappa writes on the above subject in *The Aryan Path*:

If Modern India is barren of high aspirations and creative ideals, if she suffers from intellectual poverty and inertia, is the cause far to seek? By adopting foreign culture and ignoring her own, has she not lost touch with her real source of life and intellectual vigour? Indeed, by cutting off this source of vitality, she has reduced herself to a life of cultural parasitism in the very country which is the home of learning itself. This mental deterioration is certainly most debasing. And therefore our greatest concern must necessarily be, not material want—bad as it is; not even political subjection—degrading as that is; but cultural poverty. At a time such as this when we are giving serious thought to the problems of reorganizing all our nation-building institutions, we can ill-afford to ignore this terrible state of our intellectual degeneracy. And the task of cultural readjustment must therefore be viewed by our leaders as most pressing and urgent.

If our education is to be truly Indian, it must be so reorganized as to develop the racial traits in each child till it makes him a perfect incarnation of the spirit of the race. Hence our first aim in educational reconstruction must be to meet the need of providing the children of India with a culture that is the product of India's own thought and creation. Only a knowledge of the great thoughts and ideas found in Sanskrit literature will generate in the minds of our youth a proud and living faith in their Motherland, and help them incidentally to get rid of their inferiority complex. Further, it must be noted that Sanskrit learning is necessary and invaluable for the preservation of our national or cultural individuality.

Since it is the living consciousness of the race's past ideals and achievements which differentiate one cultural group from another, it is imperative that such historical traditions and ideals should be made to form the intellectual equipment of not only every student but also every uncultured member of the race. If education is to realize this end, it must take full account of the genius and civilization of the people and the environment which influences them, just as surely as it must take account of the inborn qualities. Further, it must raise Sanskrit and the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

vernaculars to their lost but legitimate place in our scheme of studies. Though the Indian vernaculars are diverse, yet Sanskrit is not only the source of most of them but the fountainhead of the social and religious culture which inspires and sustains them. Because the vernacular literatures contain, though it be in a limited measure, the supreme ethical and spiritual wisdom of the saints and sages of India, it has been possible to spread a common culture among the teeming millions of India. And now in order to develop the vernaculars to meet the demands of the present age, Sanskrit must be popularized. For if the vernaculars are to be re-enforced, if their capacity to form abstract, scientific and literary terms is to be strengthened, the necessary element must be taken, as Tagore points out, from Sanskrit. Only when the vernaculars are thus re-enforced will they be in a position to respond to the need of the higher stages of study.

Besides its value in strengthening the vernaculars to meet modern demands of expression, a study of Sanskrit literature is important for promoting Indian national unity. The great thoughts contained in them would, if popularized, serve as a powerful antidote for our modern narrowness, exclusiveness and bigotry.

The literary classes have been successfully divorced from the illiterate masses, so much so, that to-day it would be difficult to find anywhere on earth a class of people so different in outlook from their own masses as the typical product of this educational system Since the masses receive their intimate ideas and images, not from Burke and Shakespeare, Hume and Mill, but from the Vedas and the Puranas, from the writings of Kabir and Kalidasa, it has, in fact, made the natural irrigation of culture well-nigh impossible. Similarly, it has divorced the husband from the wife in thought and outlook. In most cases they live on two different social and intellectual planes.

She has a mission to perform, a mission of peace and reconciliation. She has ever stood for a true and living harmony of toleration and discipline, of law and love of restraint and freedom. In this age of international strife India must offer to the world her philosophy of life, of peace based on her conception of the spiritual unity of all human beings. If the world is to take cognizance of her never-failing emphasis on the abiding values of the spirit, then she must demonstrate the superiority of her spiritual culture. And that is possible only when the masses of her people learn to live up to the high and noble ideals of her sages and saints.

In order, therefore, to make the best in our culture available to the peoples of the West, it is essential to revive Sanskrit learning and make it widespread in India first. Our schools and colleges must really become saturated with our own indigenous culture. Then our seats of learning must be so organized as to enable them to extend the intellectual hospitality of the country to the research scholars of the West who are eager to come to India to specialize in Oriental learning, and to study Indian culture at its very sources. But unfortunately no adequate facilities have been provided for them and, what is worse, for want of such centres of Indian culture our own students are even now obliged to go to the London School of Oriental Studies to learn Sanskrit, Indian Literature and Indian Philosophy, the very subjects for which India ought to be the greatest research centre in the world.

In whatever way we Indianize education, it must be so as to revive our culture, and make Indian life seem as sublime as any the world has ever seen. It must make it possible for India to resume her place among the nations, not as a competitor in material production, but as a teacher of all that belongs to a true and radiant civilization.

—

The Rights of Children

Many progressive countries have declared that children should enjoy some inherent rights. The Indian Bureau of the League of Nations has given wide publicity to the Declaration of Geneva regarding the rights of children. Part of this declaration is here quoted from *The Educational Review*:

(1) The Child must be given the means requisite for its normal development, both materially and spiritually.

(2) The Child that is hungry must be fed, the child that is sick must be nursed; the child that is backward must be helped; the delinquent child must be reclaimed; and the orphan and the waif must be sheltered and succoured.

(3) The Child must be the first to receive relief in times of distress.

(4) The Child must be put in a position to earn a livelihood and must be protected against every form of exploitation.

(5) The Child must be brought up in the consciousness that its talents must be devoted to the service of its fellow-men.

—

Poverty in India

Miss G. Ponnaiya, M.A., writes in *The Mysore Economic Journal*:

Cheap labour, like cheap scraps, is an unwelcome intruder in the economic field. Millions are employed in India on this basis on the assumption that cheapness denotes profit. Were this true India would have been a land flowing with milk and honey, the El Dorado of earthly existence. But unfortunately the reverse is true. Cheap labour leads to the employment of inefficient units of labour, the unskilled who waste time, energy and money. But the overpaid rich are not also the efficient. The wages must be dependent on work dependent on brain power. Mr. Henry Ford believes in substituting machines wherever great physical strength is required. This is real economy as it releases brain power for the work it ought to do. Hard toil for sixty hours a week to any labourer, burdened with the responsibility of supporting a large family, leaves very little room for improving one's brain power. Far-sighted business men make due allowances for leisure. The leisure and the high wage paid, suitably graded according to one's brain power, has contributed not a little to economic progress. More economic goods are consumed if high wages and a high standard of living are assured, in the economy of the nation. The consumption creates and keeps up the demand, which is satisfied by a chain of industries enriching and ennobling the economic life of the nation. In other words, the brain power circulates within and without the country, in much the same way as money does. The policy of grading wages combined with leisure automatically drives out poverty. It also keeps an eye on the work turned out rather on the money reward and the greed for hire, and incidentally discourages the lazy and the undeserving that clog the wheel of progress. A premium on steady, sustained and efficient work is thus assured.

QUOTAS AND TRADE RESTRICTIONS

By Major D. GRAHAM POLE

EVER since the Joseph Chamberlain campaign for fiscal reform subsequent to the Boer War there have been various campaigns undertaken by the Conservative Party to promote protection. It was a cardinal principle of Conservative policy that protection of the home market would lead to higher wages and higher prices. In 1906, the Conservative Party made Protection a test question. They then avowed that the full application of Protection was the only solution to the problem of unemployment and low wages. The defeat which they met with in that election weakened the campaign considerably, although latently the bulk of Conservative opinion was protectionist. It was not until 1924 and the subsequent elections that the Tory Party became a little more courageous in advocating Protection as the main plank in their political programme. We have seen the passage into law of all that the Conservatives had hoped for in the full instalment of protection—as a result of their gaining power by the trick election of 1931.

The success of the Protectionist advocates has in no small measure been due to the weakness of the Liberal Party in defending whatever measure of Free Trade this country enjoyed. With many Liberals Free Trade was not an economic principle but was a policy which seemed to be conducive to a flourishing import trade. The Liberal advocates, with very few exceptions, defended Free Trade in a narrow and limited way. They never correlated Free Trade with free production: that is to say, the right to freely produce goods as well as the right to freely exchange goods and services. They left in abeyance the whole question of unemployment and devoted their attention merely to trade relationships.

The ever-present army of unemployed people gave the Protectionists grounds for promoting their theories. It was little consolation to an unemployed man to be told that Free Trade was the foundation of Britain's great international commercial prosperity. And it seemed an obvious truth to an average unemployed voter that his chance of getting a job was remote if Britain continued to import an ever-increasing volume of foreign goods.

Unfortunately, politicians who were not quite clear as to what was meant by Free Trade on the one hand, or what was fully implied by Protection on the other, pursued a middle course and devised a policy of quotas, trade licences and import boards. Since 1925 this modified form of Protection has become fashionable. Super-imposed upon the quota system, and following as its natural complement, came the subsidy system. For if you restrict certain commodities from foreign countries which are essential to consumers in your own country, you must take measures to encourage the production of these commodities within your own boundaries. Thus subsidies were inevitable.

Beet Sugar Subsidy

The subsidy on English beet sugar is the outstanding example of the beginning of this ruinous policy. Ironically enough, the proposal to grant the subsidy was first made by the Labour Government in 1924. Mr. Philip Snowden, outlining the Government's plans for relieving unemployment, said in the House of Commons on 30th July 1930: "The Government have accepted the principle of Exchequer assistance for the Sugar Beet industry. An excise duty of 9/9*d* would be put upon beet sugar manufactured in this country and we propose that they should get a subsidy of 19/6*d* per cwt. We suggest that the rate of 19/6*d* should be subject to a falling scale. It might be reduced to 13/- in four years and again reduced to 6/6*d* after a further three years, and at the end of ten years might be removed altogether."

A General Election intervened in 1924. The Conservative Party, however, adopted the Labour proposals and gave the subsidy at exactly the same rates and for the same period as Mr. Snowden had outlined. The history behind this proposal has never been made public. Mr. Runciman, criticizing the scheme in the House of Commons, divulged the names of Dutch engineers who were responsible for imposing the whole scheme upon the British Government.

The direct cost of the subsidy, and the preferential rebate of duty on beet sugar which was allowed under the scheme, have cost the taxpayers of this country £40,000,000. This sum is, of course, far in excess of the value of the sugar product.

The price of imported raw sugar has fallen to about 5/- per cwt, not including the duty. But even in the last stage of the subsidy, when it was at its lowest rate, the subsidy amounted to an average of 7/3*d* per cwt and the effective duty preference was 3/6*d*—making a total of 10/9*d*, or twice the value of raw sugar.

Be it remembered that ostensibly this was a scheme to help British agriculture and increase employment. From this point of view the scheme has been entirely useless. The crop of sugar beet has not been in addition to but in place of other crops. The principal crops displaced by beet are the roots: mangolds, swedes, turnips, etc. which

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

have a greater yield per acre and give more regular employment than beet. Furthermore, the rate of agricultural wages in Norfolk, where about one-quarter of the entire beet crop is grown, is one of the lowest in the country.

As for employment in the factories, the Minister of Agriculture stated in the House of Commons, on 12th May 1932: "The average number of persons employed in beet sugar factories each year since the beginning of the subsidy period is about 7,130 of whom 5,360 have been employed during the manufacturing seasons and the remainder whole-time." The manufacturing season lasts only three months—and less than 1800 persons are employed outside of that period.

A Scandal

It would have been far cheaper for the British taxpayer, and more beneficial to world trade in general, if the Government had bought all the sugar from abroad and given it away and paid those engaged in the Beet Sugar industry full wages for doing nothing. The case has been put cogently by Sir Herbert Samuel speaking in the House of Commons on 19th March 1934, when he said: "The Government might pay all the workers who are now employed on farms in production of sugar beet £2 per week to stand idle. They might give all the workers employed in the factories £3 a week to stand idle. They might give all the farmers who grow the beet £3 an acre to grow something else. They might pay all the beet sugar companies their full dividends, not according to last year but according to one of their good years, to keep their factories inoperative. And then the Government might have enough money to buy an equivalent amount of sugar and distribute it to the populace for nothing —free—but charging only the amount of the customs duty. I am sure that every Member of the House will think that this is incredible, but I will give the exact figures.

"An answer was given in this House to the effect that the number of man-weeks each year in field work on the farms for growing this crop was 692,000 on the average during the period of the sugar subsidy. I suggest all these men should have been given £2 a week to do nothing and this would amount to £1,384,000. The factories employ 5,000 workers who should have £3 a week. This wonld amount to £180,000. They employ 2,000 people for the year and at £3 per week this would be about £300,000. I suggest that every farmer should get £3 an acre in order to grow wheat or something else. There are 366,000 acres so that that is just over £1,000,000. I suggest that dividends should be paid to the companies at the rate of their year 1930-31 when they were paid an average of 8·8 per cent if only they would not work their factories. That would amount to £411,000. The total of all these amounts is £3,275,000 and that would leave a saving of £3,000,000 upon the present State expenditure—which would be enough to buy the whole crop of sugar, worth £2,900,000, to distribute it to the population free, charging for it only customs duty. Over and above that we should have the advantage of £300,000 or £400,000 for our Shipping industry, which they would receive and would be very glad to have."

And to that damning indictment no answer was, or can be, given.

The Continued Ramp.

Make the Consumers Pay

The Beet Sugar subsidy came to an end in 1934. Everyone knew that this was an industry that could not be run economically nor could it be maintained without the aid of vast subsidies. The interested parties who had wrung fortunes out of the State were not likely to remain passive when their term of subsidy came to an end. All this year there has been a vigorous campaign promoted by the vested interests to force the hand of the Government to grant them monopoly powers in the field of production and distribution of sugar—so that they may be enabled to restrict the production of sugar with a view to increasing its price and thus throw a burden upon the consumers equivalent to that which heretofore they have been exacting from the Exchequer.

There has been set up what is called the Green Commission, whose duty it is to find ways and means of establishing the industry without a continuance of the subsidy. There have been other two Commissions set up to take evidence from interested parties—*i. e.* producers and distributors—and in each case the terms of reference of these commissions are so restricted that any attempt to widen the scope of enquiry so as to bring into relief the claims of sugar consumers is ruled out.

Before each of the Commissions the Co-operative Society has endeavoured to expose what that sugar ramp really means to the consumers. But in each case the presiding Chairman has under his terms of reference been obliged to rule out certain lines of enquiry. This public scandal of a furtive attempt on the part of vested interests to root themselves in a privileged position cannot be too widely known—and calls for immediate public action.

In tropical countries the production per acre of pure cane sugar is 5½ tons. This subsidized beet sugar process produces only 2½ tons per acre. The world sugar market at the moment is glutted and in the United States, India, and on the Continent, conferences are being held to devise schemes to restrict production—while we in England are boosting production to the extent of about £40,000,000!

£16,000,000 of this money has gone to companies controlled by Dutch investors. £9,000,000 has gone to companies dominated by Tate & Lyle. And about £6,800,000 has gone to the following companies: The Lincolnshire Sugar

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Company Ltd., The Second Lincolnshire Sugar Company Ltd., The British Sugar Manufacturing Company Ltd. It is interesting to notice that much of the preference share capital of the Lincolnshire Sugar Company Ltd. is held by the McAlpin family, famous as public work contractors.

At Foley Park the West Midland Sugar Company Ltd. operates £180,000. Its Chairman is Lord Weir whose Anglo-Scottish Beet Company holds 94,098 shares. Other Directors of this firm include Lord Stonehaven and Lord Invernairn.

One last detail before we leave this sweet subject. It would be difficult to compute what the ground landlords have raked in in high rentals on their agricultural land where beet sugar has been grown and upon which the manna of the taxpayer's money has fallen so liberally. In Norfolk alone the annual rental from small holdings where beet is grown amounts to £66,500.

From what has been said above we, the voters, who can determine future government and policy, understand why at the moment a gigantic effort is being made by these gangsters to dig themselves into privileged positions.

The Wheat Quota

Mr. Baldwin, in a speech at Glasgow on December 12, 1930, referring to wheat, said: "I believe the quota is the best weapon for this country," and added, "We are busy now in our Research Department of the Unionist Party working out problems connected with it." But by 1932 Mr. Baldwin seems to have been a little startled at the operation of the quota. For on 23rd June of that year he said: "All the restrictions taken together will show the House what an appalling amount of grit there is in the whole machinery of the circulation of goods, and until that grit is removed, and the machinery lubricated, little progress can be made... Another form of restriction is the question of quotas. *The Quota is a very Dangerous Weapon.*"

We only grow 7 per cent of our wheat requirements in this country. Our land is more suitable to other forms of agricultural produce than wheat growing. But in order to encourage more wheat growing as we encouraged beet sugar growing novel devices were resorted to. Actually, wheat quota has never been put into operation. The Wheat Act passed by the National Government provided for a guaranteed price (at 45 a quarter with the subsidy raised by a levy on all flour milled and paid eventually by the consumer), but left the millers free to use wheat in any quantity from any source that they liked.

The cost of the wheat subsidy for the first year was £4,510,000. This year it will reach the figure of £6,000,000, Ostensibly this is a levy paid by the millers, but we, the bread consumers, bear the capital charge of all in the price of the loaf. Landowners are intimating to farmers that they will expect regular rent payments in respect of their wheat lands, because of the guaranteed price established under the subsidy.

Quotas by Agreement

Agreements made with the various Dominions at Ottawa in August 1932 provided not only for numerous additional and increased tariffs, but also for the quantitative regulation of imports—notably Meat.

Australia and other Dominions undertook not to increase their exports of meat to the United Kingdom above the quantity sent in the year 1932 and the United Kingdom undertook to reduce the imports of foreign meat in accordance with a programme agreed to by the Dominions. This programme laid down a series of percentage reductions of foreign imports of meat for each quarter until the quarter ending June 1934.

The Ottawa Conference was aptly described as a thieves' kitchen, a place at which Dominion exporters would meet the affable J. H. Thomas and the simple Mr. Baldwin—and induce them to agree to certain marketing proposals which would divide the British markets between the Dominion interests to the utter exclusion of all foreign importers into Great Britain.

The economic reactions to the Ottawa agreements are creating a hornet's nest for the so-called statesmen who acquiesced in them.

Take but one example. Norway is required to take 70 per cent of her coal imports from us. It follows that she must restrict and limit her imports of coal from other countries. Thus the immense commercial influence of the United Kingdom was used to compel these smaller countries to extend the quota system and so further shackle and reduce the free movement of trade in Europe. But with the best will in the world the Scandinavian countries cannot suffer to have their imports to England restricted by the Ottawa Agreements and at the same time adhere to any quota arrangements imposed upon them by Britain. How to accommodate our own export trade to foreign countries and at the same time give a privileged market position in this country to the Dominions is the problem for the architects of the Ottawa agreements.

The Bacon Scheme

The same story could be told with regard to the Pigs and Bacon Scheme. Mr. A. S. Warren, Chairman of Warren Sons & Company, gave the following in a letter to the *Times*. He quoted the prices as stated in the *Official Weekly Diary Produce Notes* of the Empire Marketing Board. "It is," he said, "interestihg to note that this time last year, before any Government scheme was in operation, the price of English bacon pigs was 10/1 a score and the wholesale price of Danish bacon was 62/- per cwt. This year,

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

under the Government quota scheme, the price of English bacon pigs is 10/4 a score, but the price of Danish bacon has been forced up to 76/- a cwt. This difference in price is of course being paid by the public and all goes into the foreign producer's pocket. It will be seen that it has made no difference to the price of English pigs—so that it is an unnecessary waste of public money." (The *Times*, 7th August 1933).

The Milk Scheme

The scheme is even more complicated and extensive than the bacon scheme. Before a poll of the registered producers of milk had been taken, the Milk Marketing Board set up by the Government invited applications, on the 31st July 1933, for the following posts under the scheme :—

Description	Salary
Manager	£5,000—£7,000
Accountant	£2,500—£3,000
Registrar and Statistician	£1,000—£1,250
Secretary	£2,000—£2,050
Marketing Officer	£2,000—£3,000

Mr. S. G. Foster has been appointed Manager at a salary of £5,000 a year.

Mr Eliot's delight at the manner in which the scheme was rushed throuh Parliament induced him to become almost poetic. For he said in the House of Commons on the 28th July 1930 : "No one comes to me and says 'Hail Eliot' and I have no crosses to wear." This is Walter's little jest, but he added in complete seriousness : "The danger here is that for want of ballyhoo and some crosses the thing may not go through." In other words, he regretted that he could not carry it through on his own fiat. There was still a certain amount of free voting by the people in the industry !

The voting took place and the farmers fell for it. The nett result of it was that the nation suddenly became threatened by a huge surplus of milk production. And it seemed at one time as if what we lacked in rain we were going to make up for in milk. The cow in this process was incidental. The taxpayer was all important. No end of worry was caused the bureaucrats as to how to dispose of the flood.

Chocolate manufacturers and others were asked to take large gulps of this at 4*d* a gallon—ordinary consumers being charged twice that amount.

Despite the attempted strictures of the scheme a number of milk producers began to sell their milk at less than the standard price laid down by the Board. This led to a series of summonses and court actions so that many producers had to pay fines for selling milk to poor consumers at a cheaper rate than the standard rate. These people were subjected to the new name of "milk boot-leggers."

The nett pool price of milk in December 1933, after the cost of transport had been deducted averaged 1/0¼ per gallon. The price of liquid milk was 16*d* per gallon in all regions except the South-Eastern where it was 17*d*. The price for manufacturing milk was for cheese and butter 3¾ per gallon ; for condensed milk and milk powder 6*d* per gallon ; for chocolate 8*d* per gallon. Approximately 18 per cent of the milk sold under contract was used for manufacture.

Severe criticism of the scheme was made at the Exeter Branch of the National Farmers Union in December 1933. Mr Odgers, Chairman of the Exeter and District Dairy Farmers Association, declared that the Milk Scheme was nothing less than chaos and he said : "We were told that it was a producers' scheme. We were told that the whole object of the scheme was for the producer to receive a bigger share of the amount of money paid by the public. ...The public pay more money but now we get less."

The West Riding National Farmers Union Branch on the 12th January 1934 unanimously adopted a strongly-worded resolution on this scheme. "So far the scheme in the Yorkshire areas has been more than a failure. It has been a disaster."

At the moment there are under contemplation similar schemes which will affect Eggs and Poultry and Fish.

Summary

Reviewing the quota system and trade restrictions as a whole it will be seen that the following are among their commonest results :

(1) They raise prices and place a burden upon a majority of the community for the sole benefit of an interested minority.

(2) They involve heavy trading losses which are borne not by the individuals who make them but by committees or boards or the State—and fall eventually upon the general body of consumers and taxpayers.

(3) They are an attempt to create prosperity by creating scarcity.

(4) They involve widespread political control in industry and commerce to the advantage of private interests.

(5) Their policy is directed to safe-guarding the financial interests involved in production without regard to the economic difficulties involved in these schemes to the consumer.

The abolition of these trade restrictions necessarily involves the abolition of our so-called 'National' Government. Let us see to it that it is not long delayed.

FINANCE AND INSURANCE

Finance

Mr. S. C. Mitter's Recovery Plan

The economic rehabilitation of Bengal largely depends upon the improvement of the Jute trade. Any scheme or suggestion that is likely to help the growers of this important crop is, therefore, welcome, and we have one in the recently released excerpts from *Recovery Plan for Bengal* by Mr. S. C. Mitter, Deputy Director of Industries, Bengal. This advance publication is perhaps intended to be a feeler of public opinion. This is the only constructive plan before us and deserves best consideration, especially as it has been carefully prepared by one who can claim a pretty long official acquaintance with the intricacies of this particular problem and has deep sympathy for the poor cultivators.

"The problem for Jute", Mr. Mitter says, "is two-fold, viz., (1) improving the production side and (2) improving the marketing organization." For the first he suggests (a) 'lowering the cost and producing better jute' and (b) 'regulation of the crop according to the world demand'. 'The price in the world's market and hence the cost of production must be kept low.' So Mr. Mitter suggests 'increasing the yield per acre' but he does not like the increase in the total out-turn. He is of opinion that only such an area as may produce sufficient quantity to meet the present world demand, may be reserved for jute, releasing the rest for other crops. But the question is: What is the total world demand? Mr. Mitter puts it at 90 lacs of bales per annum (50 lacs by Indian Mills and 40 lacs by foreign consumers)." But an agriculturist would not accept Mr. Mitter's figure. Mr. Mitter does not include the domestic consumption which at the modest figure is estimated to be no less than 5 lac bales. It is a known fact that Indian mills or rather European mills in India entered into a pact to restrict their manufacture with a view to having higher price. Again, the crop is denied the privilege of easy and free out-let from the land of its production, while there is already a cry in other lands for suitable substitutes. But that question need not be discussed here. Mr. Mitter does not want the 90 lac bales even. He says that "the normal world production should be at this figure" but in view of the fact that Indian (!) mills have large stock and "can thereby depress prices by running out of market for a considerable time", he is of opinion that "it will be better if in the next season the crop can be reduced by 30 lacs of bales". The total area under jute is estimated to be about 25 lac acres and Mr. Mitter would curtail the existing acreage by 5 lacs in Bengal and 7 in Assam and Bihar and Orissa. But he is anxious that rayats may not suffer and suggests that "districts are to be selected, keeping in view the quality of jute grown there and possibility of substitute crops to be grown and acreage to be withdrawn therefrom is to be fixed. The rayats in these regions are to be told that if they do not sow jute, they will be given Rs. 15 per acre and also facilities will be given to them to grow substitute crops. The acreage in other districts should not be allowed to increase.' Rs. 15 per acre means less than two pies per lb; [Mr. Mitter puts 3·7 bales (1 bale=400 lb.) per acre in the Dacca and Chittagong Divisions]. However small the subsidy may appear, it and the prospective price of substitute crop may appeal to the peasant who has hitherto turned a deaf ear to the counsel of the Congress as well as of the Government. Now, where is the fund for subsidy? Mr. Mitter does not ask the Bengal and Central Governments to pay a single cowrie from the jute export duty that they enjoy—it was Rs. 3,46,66,892 in 1933-34. He proposes two new taxes—Consumption tax and an additional Export tax—and suggests the modest sum of Re. 1 per bale. This is not robbing Paul to pay Peter—it is robbing Peter to pay himself. Mr. Mitter is no believer in the incidence of taxation and ignores the effect these new taxes may have on the price of jute. He is confident that his "restriction scheme will raise the price of jute to about Rs. 5/8 or Rs. 6 in Calcutta". Accepting that Mr. Mitter's hope is realized a cultivator may very well ask: Is Rs. 5/8 in Calcutta quite remunerative? If the price in Calcutta is Rs. 5-8 what harvest price may he expect in a distant village? The harvest price is, as shown in the Minority Report of the Jute Enquiry Committee, always less than Calcutta price by Rs. 50 per ton or nearly Rs. 2/- per maund. Rs. 5-8 minus Rs. 2 stands at Rs. 3-8 only. Thus we see that even at Mr. Mitter's own calculation, his Restriction scheme offers little relief to the jute growers.

Now, to improve the marketing side Mr. Mitter finds four problems to tackle, *viz*, (a) marketing of jute in Mofussil, (b) marketing in Calcutta, (c) marketing in foreign countries and (d) making new uses of jute. As for the first problem the remedies suggested are (i) fixing of standards and introduction of uniform weights throughout the province, (ii) establishment of self-supporting regulated market, (iii) establishment of licensed ware-houses and arrangement for credit facilities, and (iv) establishment of Co-operative Sale Societies. In the absence of any detail programme no discussion on these points is possible. As for marketing in Calcutta a distinction is made between loose jute and pucca

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by the Sarada Foundation Chennai and eGangotri

bales. In the former case Mr. Mitter suggests the reduction of freight rates, specially the steamer rates from Eastern Bengal, extension of insurance facilities to country boat transport and providing storing facilities in the Cossipore Mart. The high freight is a standing grievance but will reduction of freight to the advantage of jute growers be possible before railways and river-ways are nationalized? In case of pucca bales he demands the overhauling of the existing futures market. He suggests the establishment of "futures market with loose jute as basis". He also suggests the substitution of "Home Guarantee" system by "certifying the quality from this side", and would charge a certificate tax of 3 pies per bale. For marketing in foreign countries he advocates the appointment of "special Representatives in the principal foreign countries for propaganda for more extensive use of jute and for keeping India informed about the improvement in the techniques and new uses for the fibres." But Mr. Mitter in his scheme has made provision for only two—one in Hamburg or Antwarp and the other at Genoa—both in Europe. This aspect of the plan should get more attention from the sponsor of the scheme. A world market for jute must be aimed at, for external consumption would help the price and the influx of foreign money through that channel would go a long way in helping the recovery. The propaganda must be wide and intense and calculated to preserve our monopoly in the world. No room must be left for any substitute of jute to crop up anywhere in the world.

Mr. Mitter is willing to leave the problem of finding new uses of jute to his Department of Industries. Success here, we are sure, will help and expedite the recovery of jute more than anything else.

Mr. Mitter proposes the formation of "a Statutory Jute Board which shall be "under the Ministry of Agriculture and Industries, but must be entirely independent of other departments, with the ministry." He puts the cost of the Board per year as follows:

Chairman (Bengal)	at Rs. 2,000	per month	24,000
2 Bengal Members, 1 Assam member, 1 B & O Member	each at „ 1,500	„	72,000
1 Secretary	„ 750	„	9,000
Total salary of all appointments			82,800
Office Staff and miscellaneous			52,920
		Total	2,40,720

But where to find the money to meet the heavy expenditure? Mr. Mitter's Consumption and Export taxes would bring in, for 90 lac bales, Rs. 90 lacs while subsidy at Rs. 15 for 5·7 lac acres amounts to only Rs. 85,50,000. Thus there is a big surplus of Rs. 4,50,000. Add to this Rs. 62,500—the Certificate tax at 3 pies per bale. Then the first surplus is Rs. 5,12,500 while the Board will cost Rs. 2,40,720 only—less than half. Mr. Mitter minimizes the cost of the Board by Rs. 36,000 by asking the Bihar-Orissa and Assam Governments to pay the salary of their members. Mr. Mitter has a soft corner in his heart for the Government of Bengal—he does not ask them to pay for the three Bengal members (including the Chairman, who, Mr. Mitter asserts, shall be a Bengal member). We do not know how these neighbouring governments will appreciate the preferential treatment, when their jute shall be subject to the same Certificate, Consumption and Export taxes to create this fund.

Even after meeting the cost of the Board there shall be a second surplus of Rs. 2,71,780 or even Rs. 3.07,780. Mr. Mitter proposes to utilize thisa mount to organize Co-operative Sale Societies. Sale Societies we have had—and may we ask, with what results?

Mr Mitter expects that "if nothing catastrophic happens in the mean time and there be no further development in the direction of aggressive economic nationalism, after a couple of years increase of the acreage may be possible," and then no subsidy need be paid. Co-operative Sale Societies, 'if run on proper lines', will require no further assistance. The Board will continue to function. The taxes must remain, though at a very reduced rate; even anna one per bale amounts to Rs. 5,60,000. This will allow the Board, after meeting its cost, "a large surplus to expand its activities."

Mr. Mitter's enthusiastic optimism is well reflected in his admirably drawn-up recovery plan. An acceptance of his scheme will, no doubt, confer benefit upon the jute growers but there must be some modifications to it before the scheme can be profitably applied.

BHUPENDRA LAL DUTT

Insurance

AMERICAN INSURANCE IN 1933

America leads the world in insurance, and there is no reason to doubt that she will maintain the lead. This is so, because, to take up adequate insurance is regarded there as a moral obligation, and more than anything else such consciousness on the part of the individuals contributes to the development of insurance. So far as America is concerned one cannot fail to be impressed with the remarkable manner in which life insurance held its own during the years of depression. According to the Reports of the National Industrial Conference Board the depression cost the people of the United States in 1931, 1932 and 1933, $108,000 million, but life insurance companies met their obligations and preserved the integrity of their contracts with practically no assistance from outside. The assets of the companies which were $17,500 million in 1929 increased to $20,900 million in 1933. In addition to the loans granted during

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

period of the stress the companies paid approximately $13,000 million to policyholders for death and matured claims, surrendered policies, dividends to policyholders and annuitants. The premium volume aggregated $3,321 million in 1933 and the New Assurance written, revived and increased, amounted to $14,729 million.

Canadian Companies at the end of 1933 had total admitted assets of $1,716 million with assigned and unassigned funds of $127 million. The premium volume was $279 million while the total income aggregated $371 million. Total disbursements amounted to $303 millions, while new insurance written amounted to more than $3 million.

These figures show what an important part insurance has come to play in the modern scheme of things, and its development even in the years of stress and strain is additional evidence of the confidence of the people in its capacity to fulfil its obligations and objectives.

Annuity Business Increases

In recent years the demand for annuities has continually been on the increase, particularly in Great Britain. This is, perhaps, because of the fact that people who so long invested in government papers or stock exchange securities are keen about ridding their investments of the market fluctuations by purchasing annuities abroad which will guarantee good returns and give steady additions to their income. In 1932 the annuity business transacted in the United Kingdom amounted to nearly £16 millions consideration money while fifty years previously the amount was less than £600,000. During the year 1933, the total consideration money paid by clients in the United Kingdom for the purchasing of annuities amounted to £16,747,079, of which the share of the British offices, 54 in number, exceeded £13 millions; the balance was distributed among the three Canadian, two Australian and one South African companies and the Government Postal and National Debt offices. It would be interesting to note in this connection the decennial progress of the Annuity business in Great Britain. In 1913, the total consideration money was £3,092,996, in 1923, it was as low as £3,503,081; but in 1933, only ten years later, it was £15,518,016, exclusive of the Government's share of the business.

Hail Insurance in South Africa

The farmers in the Orange Free State, South Africa, have an excellent organization for insuring their crops against loss or damage through hail. The Scheme was started by a progressive and far-sighted person, himself a farmer, who conceived the idea of organizing the local farmers into a Society so that the pooling of their joint resources and efforts might help to compensate the loss to their crops through hails. Each member of the Society should pay a premium of 3 per cent of the value of the crops insured. If a member's crops are damaged by hail, two other members of the Society are chosen as assessors who visit the farm and estimate the extent of the damage. The crop the farmer eventually reaped was taken into account and the total benefits payable assessed. The Scheme proved so popular that the Society, which had at the end of the first year only 316 members, now enjoys the membership of 3000 farmers, and has paid away £32,000 as compensation. The Society has now extended the scope of its operation over a wider field and the success it has attained is a glowing example of what co-operotion could achieve.

Inequity of Income Taxes

The inequity of the method of assessing income tax on Life offices has once again come for hot discussion in view of the proposed amendment to the existing insurance legislation. In a recent pronouncement Sir Purshottamdas Thakurdas asserted that "the levying of Income Tax on the total profits of a life insurance company is inequitable and involves a greater burden on life assurance companies in India than the basis of assessment of life insurance companies in Great Britain and elsewhere" Unfair and unreasonable as the present method is, still more inequitable is the fact that life assurance companies are called upon to bear super-tax, "which, in principle, should be a tax on the income of the individual only as has been recognized in Great Britain, but which principle is not, for reasons not so far clear, recognized by the taxing authorities in this country." It is a simple fact that a portion of the profits of the life offices which is distributed as bonus to policyholders, represents simply a return to the participating policyholders on the increased premiums they have paid in order to have the privilege of sharing in the profits of the Company. The assessment, therefore, on the total profits or actuarial surplus, is obviously unfair. In Great Britain, total Interest Income less Expenses forms the basis of assessment, and in computation of the profits such portion of the profits as belong to, or are allocated to, or reserved for, or expended on behalf of, policyholders and annuitants should be excluded. This is quite a fair and understandable basis, and we join with Sir Purshottamdas Thakurdas when he seeks to impress upon the Government "the imperative necessity of their removing, within the least possible time, the burden on Indian Insurance companies of Income and Super tax assessed on the present basis, an amendment of which would encourage, instead of handicapping, the swifter progress of India towards larger investments in life insurance policies."

PRINCIPLES OF INDIAN ART

Rai Bahadur Ramaprasad Chanda, late Superintendent of the Archaeological Section of the Indian Museum, delivered a lecture on the Principles of Indian Art in the Indian Sculptures Room at the British Museum, London, on Friday, the 24th August, at 3 P. M. Among those present were, Dr. L. D. Barnet and John Allan, and Messrs. Wilkinson and Basil Gray of the British Museum, Mr. Campbell, Keeper of the Indian Section of the South Kensington Museum, and Mr. Richter, Honorary Secretary of the India Society. In course of his lecture Mr. Chanda said :

He used the term Indian art in a restricted sense, to denote figure art, and, particularly, images of the Buddhas and the Jinas, and of gods and goddesses both Brahmanic and Buddhistic.

The history of Indian art, as distinguished from its pre-history in the Indus Valley, began from the third century B. C. Though many of the reliefs carved on the Buddist monuments of the Sunga period dating from the second and the first centuries B. C., were concerned with the narration of events that happened in the life of Gautama Buddha, the figure of the Buddha was conspicuous by its absence.

The carving of the figures of the Buddhas and of the Jinas began at Mathura about the beginning of the Christian era.

Beauty Of Human Form

The continuous history of the image-maker's art in India, starting from about the beginning of the Christian era, ran an uninterrupted course for nearly 1,300 years in Northern India. Though the style and merit of the works produced in different epochs in different areas during this long period varied considerably, the guiding principles were the same all along. The first of these principles was bound up with the Hindu conception of the beauty of the human form. Hindus recognized auspicious signs as marks of physical beauty and moral excellence. Varaha-mihira writes :

प्रायो विकम्पासु भवति दोषा ।
यत्राकृति स्तत्र गुणा वसन्ति ॥

"Generally speaking, vices will be found with the ugly, whereas the virtues reside in one who has handsome appearance."

Auspicious signs characterize prettiness, like the signs of the Mahapurusha.

This astrological conception of the beautiful prevented Indian artists from deriving fresh inspiration from nature, and tended to render their figure sculptures conventional.

Expression Of Meditation

The other principle followed by the Indian image-makers was that the *face*, not only of the saints, the Buddhas and the Jinas, but in Northern India, also of most of the Brahmanic and Mahayana Buddhist gods and goddesses, should express absorption in dispassionate meditation. In the images of the Buddhas and the Jinas, the expression of meditation indicated the possession of supreme knowledge and in the Brahmanic gods and goddesses, it marked the divine essence, omni-science. But the expression of meditation and concentration in the face did not hormonize with even the mildest of actions, such as the Buddha preaching to his disciples or taming a wild elephant, to say nothing of the activities of the gods and goddesses. It thus neutralized an important artistic feature, namely, the freedom of movement of the limbs.

Decorative Relief

The third guiding principle of Indian figure sculpture was the adherence to the tradition of decorative relief. Almost all Indian images, even cult images intended for installation in temples, were in relief. Ancient Indian temples were dark inside, and images in relief were intended mainly to decorate their outer walls. Sculptors engaged in carving such images could hardly be expected to keep in view the production of figures that would produce the impression of massiveness or of three dimensions. There were a considerable number of images in relief that produced such an impression, and appeared to be swelling outwards from within.

The lecture was followed by demonstration.

...Asinine Affair—*Is It True?*

...*Kaif's Weekly*, Delhi, dated the 17th ...ember, 1934, has published the following ...graphs:

There are penalties one has to pay for loving another. One such penalty was paid by the mighty Government of the Punjab at the altar of Muslim sentiment. It is not a fairy tale; it is the considered action of His Excellency the Governor-in-Council of the Punjab that is related.

Yes, has he not heard it? And then the aged Muslim shook his head. Things have come to such a pass that the British Raj, reputed to love and favour Muslims,—one *Lat Saheb* had actually called them his "favourite wife"—had deliberately named a donkey, working in the stud farm, as "Ahmad."

And this deliberate outrage to Muslim sentiment was passed from lip to lip. To call a donkey "Ahmad"! And that by the British Raj who—

And then came the inevitable martyr on the scene. A boy walked up with a dagger, swearing that he shall kill the man who christened the donkey "Ahmad."

Newspapers, of course, carried on the crusade, not against the Kashmir State or the Alwar State, but against the mighty British Raj in India.

Things were beginning to wear an ugly look, when the high officers hastily sat in conclave and deliberated.

II

A donkey shook the British Empire in India to its very foundations—that was the fact. Even, as in Ramayan, a washerman's words sent Maharani Sita to exile.

The Muslims had to be convinced that the donkey was not named "Ahmad" but "Ahmak," meaning a fool.

That would not do—it was adding insult to injury. The Muslims are not "Ahmak" enough to swallow this theory of "Ahmad" being mistaken for "Ahmak," They have ear-witnesses—people who had heard the outrage pronounced within their hearing—Oh Allah that it should come to this—of the donkey being called "Ahmad."

And so the Mighty Government of the Punjab set down and wrote the press communique that the donkey shall hereafter be called "Bahadur" and not "Ahmak."

And the press published it, and the might of the Muslims was acknowledged, and once again peace is reigning—and there is yet a chance of the White Paper not being opposed in this quarter.

Who laughs that on such foundations is British Raj in India reared in India! He does not know. This is the responsiveness to public opinion.

Every time "Bahadur" brays, it will do the Indian heart good, as proof of Government's responsiveness to public opinion.

It is lucky that the now far-famed Ass, if not fictitious, has been named simply

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

"Bahadur," not with the words D—, K—, R—, R—, or S—, prefixed to it. Else there might have been greater trouble or hubbub.

"Has Italy Prospered under Fascism ?"

Under the above caption *World Events* of June 15th, 1934, edited by Mr. Devere Allen, has published the following paragraphs :

We present herewith a number of important facts which any investigator of Fascism will have to take into account. They are compiled from several sources: "Current History" for June, 1934; press releases from the British Labor Party; the "Daily Herald," London; reports from the International Labor Organization, Geneva; the last annual report, summarized in "The New Statesman," London, from the Commercial Adviser at the British Embassy in Rome; "The New Republic," May 16, 1934; "The New Leader," London, March 23, 1934; and data gathered in Italy, in 1931, by the editor of WORLD EVENTS.

These figures cannot be dismissed merely by asserting that every country has suffered an economic decline: a fair examination will not detract appreciably from the evidences that Italy, contrary to the boasts of Fascist leaders, has experienced severe losses, and that her people have seen worse conditions than those of many non-Fascist lands.

Then follow the facts and figures.

Economic security has disappeared. The monthly average of bankruptcies in 1922, the last year of non-Fascist rule, was 321; in 1928, after six years of Fascism, it was 970; in 1932, after ten years of Fascism, it was 2,003—more than six times that of 1922. In 1932, there were more than five times as many bankruptcies in Italy as in Britain. The total of bankruptcies in 1921 was 1,896; in 1933, 21,308.

The number of unpaid promissory notes in 1922 was 306,703; by 1931 the number had grown to 1,663,716. In 1923 the number of passengers carried on Italian railroads was 100,145,000; in spite of the electrification of 720 miles of railways since 1925, the number of passengers by 1932 had dropped to 80,272,000, a fall of 20 per cent. Goods carried on railroads decreased, at a time when new funds were being spent on public works to raise business morale, from 44,540,000 tons in 1932 to 36,970,000 tons in 1933. In 1922, the forced sales of property for non-payment of taxes numbered 1,357; in 1931, the number was 8,190.

The following paragraph relates to budgets :

In the 1932-33 budget 600,000,000 lire were allowed for armaments; 1,600,000,000 lire less than in the budget for 1931-32 was allocated to public works. Taxation has increased 50 per cent. since Fascism came to power. Mussolini has made much of the manner in which he wiped out the budgetary deficits of the immediate post-war years, 1920-21 and 1921-22, which were, respectively, 17,400,000,000 and 15,700,000,000 lire; but under the impact of the new depression, deficits began to accumulate, and that for the year 1933-34 will be about 8,000,000,000 lire. The long-term debt has risen from 84,800,000,000 lire in 1928 to 92,700,000,000 lire at the end of February, 1934; the floating debt, amounting in 1928 to 1,618,000,000 lire, stood at 9,874,000,000 lire in February, 1934. The total public debt amounts to 98,029,000,000 lire, not far from a quarter of the entire private wealth of the country.

The figures given below indicate declining prosperity.

Crimes against property have increased from 256,393 in 1931 to 304,909 in 1932, the increase arising from petty thefts, mainly for food. Deaths among babies on account of immaturity and defects at birth rose from 2,933 in 1926 to 4,340 in 1931, an increase of 48 per cent. The consumption of sugar has fallen from 3,470,000 quintals in 1927 to 2,995,000 in 1932, thus giving an annual use of sugar per head of about 15 pounds as against 98 pounds in Great Britain. Use of table salt has fallen off from 295,000 tons in 1927 to 178,000 tons in 1932. Coal consumption in 1932 was 5,800,000 tons less than in 1929.

The concluding paragraph strengthens the same impression.

Salaries and wages have been reduced again and again, until today they stand at 35 to 50 per cent below the rates for 1921; the wages of 183,000 rice pickers, for example, were cut in 1931 by an arbitrary decree from 72 to 55 cents, American money, for a day. However, the index figure for the cost of living has fallen only 15.73 per cent since 1927, thus indicating a vastly decreased standard of living and purchasing power. Comparing Italy with Britain, Italian wages dropped 14 index points between 1928 and 1933, while British wages rose 15 points. Economic nationalism led to a wheat drive which increased the annual average produced from about 201,850,000 bushels to over 293,600,000 bushels in 1933; yet inability on the part of the impoverished masses to buy food caused national wheat consumption to drop from 293,600,000 bushels for the year ending July 31, 1929 to about 220,000,000 at present, leaving an unused surplus which the government has been trying to sell abroad.

World Events is an American leaflet issued on the first and fifteenth of each month from October to June. It is published by Nofrontier News Service, Wilton, Conn., U. S. A. The publishers call it "A Pocket Periodical for Students of International Affairs." If its October number reaches us, we shall be able to know whether Signor Mussolini or his followers have said anything to controvert the facts published in this American leaflet. Similar statements in relation to other countries under dictators should be published.

Liferacy in Russia

The article on the Russian experiment published in this issue contains some facts relating to the progress of literacy in that

...ge state. Some later figures are available ... a book called "The State of the Soviet ...on," published this year by the International ...lishers of New York. Some of these are ...ven below from page 56 of that book :

In the sphere of the cultural development of the country in the period under review we have the following:

(a) The introduction throughout the U. S. S. R. of universal compulsory elementary education and an increase of literacy among the population from 67 per cent at the end of 1930 to 90 per cent at the end of 1933.

(b) An increase in the number attending schools of all grades from 14,358,000 in 1929 to 26,419,000 in 1933.....

(c) An increase in the number of children receiving pre-school education from 838,000 in 1929 to 3,917,000 in 1933.

(h) An increase in the circulation of newspapers from 12,500,000 in 1929 to 36,500,000 in 1933.

Principal Das Gupta on Sanskrit Education

It was an important address which Principal Surendranath Das Gupta, Secretary, Bengal Sanskrit Association, delivered at the convocation of that Association. In the course of the speech he contrasted the dreary prospects of the *pandits* (those who acquire Sanskrit learning in the *tols* or indigenous Sanskrit seminaries) with those of even ordinary graduates (he might have added 'even of ordinary undergraduates') of universities. Yet Sanskrit learning can be made the instrument of as liberal a culture as the study of Greek and Latin. Said Dr. Das Gupta :

But not all pandits trained in the indigenous methods can be expected to acquire high scholarship or to live up to the ancient ideals of life. It was never the case even in the golden days of the past. The ordinary graduate of the University is but a ghostly shadow of Western learning and Western spirit. But still he has all avenues open to him through all stages of our social and economical life. If he can prove his abilities he can occupy the highest station of life in society. But even the pandit with the highest scholarship has no avenues open to him and he has to bear his life more or less as a burden to the society living on the charity of others or at best occupying a lectureship in the Calcutta Sanskrit College. It is pitiable to imagine that thousands of our countrymen should have their destinies closed up for them for ever. We hear of the great encomiums paid regarding the study of Greek and Latin, of their great liberalizing influences, of their humanizing tendencies, but are they not true to the same extent, if not more, of the study of Sanskrit? Yet, while a classics man in Oxford can easily push his career forward up to the Prime Ministership, the pandits, even the most learned of them, live in a world which is walled up on all sides. It is said that Sanskrit is not modern and its teachings are often in conflict with those of modern science. But is Aristotle or Plato modern? Did not Aristotle think that the sun moves round the earth and was not Galelio put into a cage for contradicting Aristole? He who is modern today becomes ancient tomorrow. Even Newton has been largely displaced by Einstein, Heisenberg, and Schrodinger. The British people know how they can best utilize the liberalizing spirit of the ancient classics and supplement it with such modern studies in their own vernacular by which the freed spirit might work effectively under modern conditions. It is well worth thinking in what way we can do the same in regard to the study of Sanskrit.

Dr. Das Gupta has suggested how the usefulness of the *pandits* can be increased and their prospects bettered.

Taking into account the extreme poverty of the people of India it is difficult to imagine that even in some distant future Government would be able to provide for a sound good English education to all people (assuming that it was so desirable). We have in the tols a system of education which is in principle very sound as it involves a direct and personal contact between the teacher and the pupils all along their course of studies—a system in which the teacher and the taught are bound together by ties of affection which is the very sap which feeds and nourishes the sprout of the growing soul. If in addition to these, some arrangements can be made with the aid of high schools in villages (where one or two special teachers may be maintained for the purpose) by Government aid, for giving some instructions in modern subjects such as History, Geography, the four elementary rules in Arithmetic and just a little elementary knowledge in English composition these students will be fit for all the ordinary vocations in life, and the Government will achieve its end of giving a fairly liberal education at the minimum expense. Such students when they will grow into manhood, will be able to take their due part in society and if they have any special ability then they will be able to distinguish themselves in any career of life. If the doors are kept open those who have strength and vitality would come out in the light and take their rightful position.

Dr. Sir P. C. Ray is not the only Don who has a poor opinion of the University Hall-mark as such. Dr. Das Gupta says :

The University Hall-mark is an appendage to the mediocre and we have instances of people who have taken the Nobel Prize or have become the first citizen of Calcutta without any University degree. I beg most humbly to urge for the kind consideration of the Hon'ble Minister of Education who represents the Educational conscience of the country whether it is proper to keep a system of education the *alumni* of which should be practically cut out from the society should not have the throbbings of the social mind pulsating through their veins and who even after a study of 20-25 years should be left without any career to chalk out for themselves. When there is a great flood, great epidemic or an earthquake, the tol students hardly enlist themselves as volunteers. They live in the past within the Sutras of Panini, Vadarayana or Gautama. They have not

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

been so trained that they can feel themselves as one with their fellow-brethren. But that is not their fault. In thus isolating them we not only deprive them of the vitality, strength, enthusiasm and the current of life that flows through society, but we also deprive ourselves of the help of which we are in so much need. So long as they will remain thus cut out from society and will be requisitioned only for a marriage ceremony, *sradh* or a *svastayana*, they can never be encouraged into developing within them, the traditional virtues of Sanskritic culture, the old ideals of selflessness and beneficence with which the Orient once stood resplendent and the stabilising inward influence of which may still be sought for not only in India but also among the struggling nations of the West.

In the Government of Bengal's *Report on Public Instruction in Bengal* for the year 1932-33, page 86, we find that some *tols* are classed in General Table I as Primary Schools and some as Special Schools. So we thought more *tols* could be started as primary schools and aid could be applied for from the Government, District Boards and Municipalities. But it appears that the Calcutta Municipatity has distinguished primary education from *tol* education—on what grounds we do not know. Dr. Das Gupta writes :

> The Education Commission in their report, published in the "India Gazette" of the 23rd Octobber, 1884, by the Government of India, recommended in chapter 13, paragraph 675, that all indigenous schools established or conducted by natives of India by native methods should be recognized and encouraged, if they have any purpose of secular education whatsoever and in the Government resolution, dated the 23rd October, 1884, paragraph 8, in accordance with this part of the report, it was held that steps should be taken for the encouragement of the Sanskrit tols. It may incidentally be mentioned that the Corporation of Calcutta in their new interpretation of primary education has distinguished it from tol education which is against the findings of this Education Commission and the Government resolution based on it which regarded tols as seminaries of primary education also. In accordance with the Sastras the first teaching of a Brahmin lad should be through Sanskrit and Sanskrit must therefore have to be regarded as a medium of primary education whatever may be meant by it. If the age restriction stands in the way that ought to be amended.

If the Calcutta Corporation or any other body cannot help the *tols* as primary schools, they can and ought to help them as special schools. The *tols* must be preserved—not as relics of the past, as historical specimens, but as educational institutions which can still play an important part in the educational and cultural advancement of the country.

It may be noted in passing that Dr. Kumarappa has written an instructive article, dealing among other topics with the cultural value of Sanskrit for Indians, in *The Aryan Path* for September, extracts from which will be found in our Indian Periodicals section. For Bengalis the study of Sanskrit is essentially necessary, as the Bengali language depends largely on Sanskrit for the progressive enrichment of its vocabulary necessitated by the progress of knowledge in all directions.

"An Annual Income of At Least 5000 Dollars for Every Family"

We have received from America a request to become a subscriber to *Common Sense*, a monthly magazine which is described partly as follows :

> *Common Sense* is a militant monthly magazine which believes that the profit system has outlived its usefulness, that an economy of scarcity in an age of superabundance is a contradiction that demands an answer, that an annual income of at least $5,000 can and should be assured to every family (the present miserable average being about $1,200).

An American dollar is roughly equivalent to three rupees. We shall gladly subscribe for several copies of this American magazine, if it can tell us how every family *in India* can be assured the "miserable average" annual income of about Rs. 3600, or Rs. 300 per mensem. How standards of living differ in America and India !

Up-to-date-ness of Year-books

Many, if not all, Year-books claim to be up-to-date. For instance, *The Indian Year Book* of Bombay claims in effect in the preface to the current year's issue to have produced it with 'up-to-date statistics.' We hope all its statistics are up-to-date—we have not examined them yet. But the other day we happened casually to turn over the pages devoted in it to the Press. We found there the names of many newspapers which have long ceased to be published. *The Indian Mirror* stopped publication some decades ago, *The Hindu Patriot* died many years ago, *Liberty* ditto, the weekly *Englishman* no longer exists (the daily edition was discontinued some years ago), and so on. Among existing journals, *Prabasi*, *The Modern Review*, *Bharatvarsa*, *Tattwabodhini Patrika*, *Bichitra*, *Desh*, &c., are not mentioned. A-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

regards the "Who's who in India" section, dead men find a place there and their addresses when living are given—perhaps because their present addresses are unknown and unknowable. Many well-known men, who are very much alive, too, are not mentioned—perhaps because one object of this section is to drag into light various persons whose light is hidden under a bushel and to make them as famous as the really famous men whom the section could not manage to ignore.

The Statesman's Year-book for 1934 says that "every section has been thoroughly revised so as to bring the information and the figures completely up-to-date." But the latest year for which statistics relating to municipalities and district and local boards in India are given is 1930-31. The latest year for which statistics relating to Indian newspapers and periodicals are given is the same. For Bengal the educational statistics given are for the year 1926-27, which is up-to-date-ness with a vengeance! Finance statistics of Bengal are slightly more modern, being for 1927-28. These are followed by a paragraph devoted to Production and Industry in Bengal, in which statistics for 1926 and 1926-27 are given! Figures about literacy have been given for Bihar and Orissa, but not for Assam, Bengal, Bombay, Burma, C. P. and Berar, Madras, Panjab, and U. P. This Year-book states what portion of the educational expenditure was contributed by the Government in Bombay, Madras, Panjab, and U. P.; but no such information is given as regards Assam, Bengal, Bihar and Orissa, Burma, and Central Provinces and Berar. But enough.

Sir Henry Lawrence on India

Sir Henry Lawrence is a conservative, and was Commissioner of Sind and Acting Governor of Bombay. He is the grandson of the oldest of the three renowned Lawrences of the Panjab, George, Henry and John. Mr. Edward Thompson, fiction-writer, poet and historian, has contributed to the *Observer* an article on Sir Henry's speech to the Indian Parliamentary Committee of the Conservative Party in the House of Commons, which has been reproduced in *The Indo-Malayan Review*. In his speech, according to Mr. Edward Thompson,

> Sir Henry took up the Nationalist's allegation that the material progress India has made under British rule "would have been made under any other tutelage of India, by any other European nation, or by Japan ....that it would have been carried out by any Indian ruler under the influence of the spirit of economic progress which has marked the development of all parts of the world throughout the nineteenth century."
>
> He gets to grips with the controversy at once, saying, "in this clash of opinion I hold that the truth lies far more with your Indian critics than with your spokesmen in Parliament."

Proceeding, Mr. Thompson writes:

> Then he brings out the way the whole Indian controversy is overrun with cant. Take, for example, a difficulty of which we hear so much, the corruption of Indian public men. He asks "those who proclaim their disbelief in the ability, the integrity, and the courage of Indian politicians to examine the state of affairs which we see before our eyes in the different countries of Europe....And if we turn our eyes to the United States of America is the case different?"
>
> A moment's reflection on what is matter of notorious knowledge—or else the papers of the whole world are lying all the time!—should make us hesitate before seriously affirming that Indian public virtue is so exceptionally low that self-government is out of the question!

This is *some* admission.

We are told in the *Observer* article that Sir Henry Lawrence "is not one of those who use the 'helpless riot' as a reason for obstruction; but he feels deeply for him, and he wants him to be helped.

> He presses for two main changes in the White paper. The first relates to the proposed divisions of India. The present plan is all towards the increase of Provinces. He, however, protests against "the Balkanization of India," and would have the ten existing great Provinces reduced, by the absorption of such "superfluous" provinces as the Central Provinces, whose disappearance would bring about "the reunion of the Mahratta people under Bombay ...a political asset of the greatest value to the stability of the country. It has been denied in the past, on grounds now obsolete."
>
> Here at any rate, I am sure he is urging that we do now what the future will achieve in any case. The Mahrattas are a great people, whom our historians have treated scurvily, causing a prejudice which is still hiding their immense importance. Sir Henry's reduction of the number of provinces is based largely on the fact that Indian Government has grown increasingly top-heavy; the country cannot bear the burden of so many States as are proposed.

We are not in the least opposed to "the reunion of the Mahratta people" or to that of any other people. But we are not aware why Sir Henry has not advocated the re-union of

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

the Bengali people under the administrative province of Bengal. The Bengalis do not claim to be a great people. But just as the splitting up of the Mahratta people has added to the cost of administration, so has that of the Bengali people. Moreover, those who know and believe that a, if not the, main cause of terrorism in Bengal is political, also know that that political cause was directly and indirectly connected with the partition, and re-partition of Bengal and the Bengalis. The aetiology of terrorism should not be mistaken for a justification of terrorism. It is not justifiable. What we mean is that, if political discontent produced a favourable atmosphere for terrorism, political contentment should destroy that atmosphere, and, therefore, everything should be done to produce political contentment.

We are for the reduction of the present number of provinces—certainly not for their increase, except in the case of Orissa.

The second safeguard for the Indian masses suggested by Sir Henry Lawrence is

> to give them an immensely wider franchise than any authority now proposes, wielded through methods of indirect election. He argues that the 700,000 villages of India
>
> "are full of decent, hard-working men and women, who compare favourably in character and intelligence with the villagers of any country in the world. Illiteracy is no proof of the absence of experience or wisdom, just as the converse proposition is not necessarily true."
>
> The widening of the franchise, as now proposed, is to be "based on a property qualification at a time when in this country we have discarded that qualification." He goes into details of what he holds to be a better scheme.

Turkish Overseas Trade Department

A correspondent writes to us from Ankara, generally written Angora, that a new official body, connected with the Ministry of National Economy has been recently established in Ankara under the name of "Turkofois" or Turkish Overseas Trade Department. He adds:

"This department, whose most important task is the furtherance of the commercial relations between Turkey and the other countries, already possesses branch offices over here and intends to establish others, later on, in this country as well as abroad, to serve as a link of connection between Turkish and foreign firms, supplying both with any required economic and commercial information.

"Desirous of giving interested parties the opportunity of keeping constantly informed on the conjuncture in this country and abroad, the Turkofois has opened reading halls in Ankara as well as in its branch offices, which it wishes to provide, especially, with extensive foreign literature, such as commercial and economic periodicals, statistics, trade directories and Year Books."

Czechoslovak India Society

Professor Lesney, the Indologist, who is president of the India Society at Prague, there called Praha, the capital of Czechoslovakia, writes to us: "We shall do our best to cultivate and promote cultural and economic relations between India and Czechoslovakia. The reading of your periodicals, *The Modern Review* and *Prabasi* will also greatly serve the purpose." Dr. Lesney knows Bengali and has translated some of Rabindranath Tagore's works into Czech. We were present at Prague when he welcomed the Poet there in a Bengali speech.

Another correspondent writes to us from Prague that "Professor Lesney is greatly helpful in advancing the cause of India here in all ways possible. The India Society is doing good work in an unostentatious way. Work of loud noisy nature not rarely has no deep basis and often causes reaction from various sides that hinder and harass constructive activities . . . It is valuable to have the co-operation of persons whose interest is based on deeper contacts and estimates. And in this we have good openings here . . . Professor Lesney informs me that the Society has already 100 regular members. There are schemes to extend opportunities for Indian students here. There is also a plan to open a special Overseas Department at the Czech Technical University especially for Indians, Chinese and Persians, where courses will be held in English, German and French. By this arrangement Indian students will lose no time and can at the same time learn Czech. It is valuable that they should learn more foreign languages."

China and Olympic Games

Olympic Games-News Service of Berlin writes:

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

The Kuo Min News-Agency announces from Nanking that the Physical Education Committee of the Ministry of Education of the Central Government has decided that China shall take part in the Olympic Games at Berlin in 1936. The National Amateur Athletic Federation has been entrusted with the task of making the necessary preparations. China's first appearance in the modern Olympic Games was in 1932 at Los Angeles, where the sprinter Cheg Chun Liu represented his 400 million fellow-countrymen. Undoubtedly Berlin will be able to welcome a larger Chinese representation in 1936. When the Japanese first competed in the Olympic Games at Stockholm in 1912, they had only two representatives—a sprinter and a Marathon runner —and failed then to achieve success; but twenty years later, at Los Angeles, they were one of the half dozen most successful nations. Conditions amongst the Chinese and Japanese are too varied to permit the drawing of any sensational conclusions as to China's future in the Olympic Games.

Physical Training and Games in China

From the same German news-service we learn:

Physical training in China has a history which dates back before the Christian era, and around the year 1000 A. D. the Chinese were already playing a form of golf, football and polo, of which pictures still exist. Their own form of boxing and gymnastics have lasted throughout the centuries until today, even if the western world knows as little of them as it does of China's learning and of her ancient cultural possessions. It is clear that an attempt is being made to link up with these old traditions, and in accordance with a further recent decision of the Physical Education Committee the school authorities in Peiping, Tsingtao, Hankow, Nanking, Shanghai, Canton and other cities are to be asked to introduce experimental training courses in Chinese boxing.

As regards modern times, it is stated:

Sports and games of a western character began to make their way in China about the commencement of the present century. In recent years several modernly trained gymnastic and athletic instructors, graduates of the German College of Physical Education, have been attached to Chinese schools and universities. No form of European and American sport is any longer unknown in China. Football is especially popular, and China's most important successes in sport have been gained against Japan and the Philippines in connection with the biennial Far Eastern Games, and in these contests at Manila in the spring of this year. If a football tournament is held in connection with the Olympic Games at Berlin, it will be very interesting to compare the Chinese method of play with that of the other nations. Even though the organization of physical training amongst the masses of China's population still has many obstacles to overcome, yet the decision to participate in the Olympic Games combined with the other activities of the Chinese Committee—the question of the organization of gymnastics in the schools as well as the problem of constructing play grounds are being especially attacked—clearly show the strides which national fitness through physical training is making in China.

Much otherwise unavailable information relating to the Far Eastern Games Association, referred to above, will be found in Professor Dhirendra Nath Roy's article on that topic, printed in our present issue.

Withdrawal of American Control from Haiti

August 15 last was set as the date for the embarkation of the last United States marines to leave Haiti after having the situation more or less in hand for nineteen years. Most probably the transfer of authority and the evacuation were completed on that date. *The Christian Century*, said to be the foremost religious journal of America, writes:

> It was a benevolent blunder to assume authority and place American troops in the island under the treaty of 1915. The benevolence of the policy has been doubted, especially when it was charged that American bankers had forced loans upon the Haitian government to their own profit. However, the debt of Haiti has been greatly reduced during the period and its credit much improved. Certain practical advantages have followed from the occupation of the island and the administration of its finances under the treaty of 1915, but at the cost of much resentment and suspicion. The date of the withdrawal of American control was advanced by two years under a treaty negotiated by the Hoover administration in 1932. This is one Hoover policy which was heartily approved and promptly carried out under his successor. The experience will not have been wasted if it has taught us the folly of military occupation of a small neighbouring country as a means of grace. Nothing in our occupation of Haiti became us like the leaving of it.

As it is not usual for imperialists to voluntarily withdraw even from an inch of ground once occupied, this withdrawal of America from Haiti is a notable event. The future withdrawal of U. S. A. from the Philippines, when it takes place, will be a still more remarkable and welcome event.

"The World Tomorrow" Suspends Publication

The World Tomorrow, an American periodical which waged a brave battle for its ideals for 17 years, has ceased to appear and has become united with the *Christian Century*. And this in spite of the fact that it had a subscription list of nearly ten thousand names.

In India ten thousand paying subscribers would be a fortune to most newspapers and periodicals.

"Expanding Universe"

Science Service of Washington, U. S. A., is an institution for the popularization of science, organized in 1921, with trustees nominated by the National Academy of Sciences, the National Research Council, the American Association for the Advancement of Science, the E. W. Scripts estate and the journalistic profession. In its Mail Report, dated July 6, 1934, it gives the following scientific news, under the caption, "Light changing into Electricity may have started Expanding Universe":

> The primordial act which started the expanding universe on its supposed soap-bubble expansion may have been the changing of light into electricity. This is the report of Prof. A. C. Banerji of the University of Allahabad to the British Science journal, *Nature*.
>
> The basis for his belief is the known fact that a unit of light radiation—the photon—may break up into two particles of electricity—a positron and an electron having opposite electrical charge—if it is strong enough.
>
> The universe began to expand; its parts began to move away from one another, when the gravitational attraction between the parts became less. In a world composed of matter and radiation the attractive force is the joint result of the two. But mass for mass radiation exerts more gravitational pull than does matter.
>
> According to Prof. A. C. Banerji's theory if radiation is converted into the particles of electricity the result will be less attraction by gravity. Hence the universe would begin expanding and continue to do so as long as light turns into positive and negative electrons.
>
> The Indian physicist believes that the end of the universe as predicated by Sir James Jeans, due to all the matter in it dissolving away into radiation, may not happen because the reverse effect—the materialization of radiation— is possible.

We have seen Professor Banerji's article in *Nature*. As it is too technical for the general reader, no part of it is reproduced here.

A Call to Scholars, Scientists, and Educators

A letter was sent more than a month ago to a number of scholars, scientists, and educators inviting them to a conference against the fascization of learning, to have been held at London during September, 1934. It bore the signatures of Sir Basil Blackett, Harold J. Laski, J. B. S. Haldane, Hyman Levy, Julian Huxley, Baron Ernest Rutherford, Albert Langier, Paul Langevin, Paul Rivet, Jean Perrin, Lucien Levy-Bruhl, Marcel Prenant, Henri Wallon, and Joseph Hecht. In spite of its length it is printed below, because of its importance. We do not yet know whether the proposed Conference was held, nor, if held, what were its proceedings.

Sir: with increasing concern we have observed that, as a result of the political development in many countries, the freedom of science has been threatened or entirely destroyed. We have seen how scientific investigations have been suppressed, or their results falsified, in order to make them serviceable to the dominant political doctrine. We have seen, for instance in Germany, how doctrines unsubstantiated by science or entirely discredited by it have been elevated to the rank of scientific knowledge through pressure from the state, if these doctrines appeared useful for political aims.

We have verified the fact that in various countries science is subordinated almost entirely to the need of war industry and to the propagation of a chauvinistic ideology. From the last war we have learned the devastating effect of a war period on scientific research, and we are convinced that at present the very threat of a war danger hampers free scientific investigation and reduces it to the function of slave to war industry.

We know that in fascist countries many highly respected scholars have been driven from the scene of their activity or have voluntarily quitted their homes, because they refused to sacrifice their learning to the violent demands of the totalitarian state.

In many countries we behold the organization and growth of political powers making such unlimited claims that beside them there would be no place for intellectual independence. Especially the events in Germany have evoked our most profound concern for the perpetuation of the freedom of science.

In that country the exact sciences have been openly degraded to jobbing for war industries. During the education of young physicists and chemists much time is devoted to lectures and practical exercises in "defensive science": gas protection, air protection, study of explosives, war intelligence service, which have no relation to the scientific significance of this field. Moreover, only such investigations are favoured as are likely to bring about a direct technical advance, and are therefore grateful to the state's interests in "economic and technical predominance throughout the world."

[National socialism is not unscientific, but only hostile to theories.—*Dr. Rust, Reichsminister for Science, Education and Popular Instruction, in a speech at the Physical and Technical Reichsamstalt, June 27, 1934.*]

All branches of physics which cannot be made to serve political and economic imperialism are therefore hampered and restricted. Studies which have contributed essentially to the broadening of our concept of the physical universe are thrust aside openly as vain and fruitless intellectualism.

In biology and medicine there rules the same principle of brutal subordination to political aims. Verified scientific knowledge concerning heredity and race is cast aside. In its place appear new doctrines, unverified by honest research, but maintained to support a political doctrine and designed for the annihilation of hundreds of thousands of

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

existences. In order to propagate and establish these new doctrines (ethnology, hereditary pathology, the question of sterilization, marital legislation), "chairs of instruction" were founded and "textbooks" were written; but the scientific preparation of the instructors and authors consisted merely in willingness to recognize the wishes of the totalitarian state and to clothe them in pseudo-scientific dress.

In practical medicine, the most exalted task of the physician—to place his knowledge and ability at the disposal of his patient, regardless who it might be—is now limited. In accordance with the National Socialist belief that it is senseless to help the weak at the expense of the biologically strong, social hygiene is now shorn of all justification. Quacks are placed side by side with experienced physicians in many fields, and colleges are forced to establish chairs of "nature-healing." The gates are open to superstition and deceit.

The eternal principles of human rights have been banished from the halls of philosophical instruction. The works of the greatest philosophers have been handed over to small spirits who, under political direction, sift them through and promulgate them now in falsified form.

[From now on, philosophy and science must be reoriented in the spirit of the S.A. and the S.S.—*Dr. Rust, at the Congress of Philosophers in Halle.*]

Historical research is completely obedient to the current political demands. This is not only true of questions of recent times. Regardless of historical truth, prehistorical and ancient times are so presented as to support the thesis of superiority of the nation concerned, and the inferiority of all others. Under the protection of the political power, sources are frequently falsified and their acceptance assured by the suppression of all scientific investigation or criticism. Very often a purposeful mysticism is substituted for an awkward historical truth.

The suppression of free research and the violation of truth are most clearly revealed in the new jurisprudence. Justice is sacrificed to martial law. Punishment and execution now serve revenge and the annihilation of political opponents. Where no law declared a deed punishable, it is made retroactively possible to destroy the doer. The new jurisprudence, which is designed to give a theoretical basis for the cruel and arbitrary practice, is founded on legal concepts of the Middle Ages, long since outmoded. Teaching and studying are enslaved along with pure science. The colleges suffer from an intellectual terror exercised by one part of the students. Students are forced to join military organizations. Upon the completion of examinations, the scientific achievements of the students are, according to official order, given comparatively small consideration in the application for state positions involving scientific work. Successful military drill and political reliability are the determining factors.

Through misuse of and contempt for free research there is imminent danger that the whole structure of scientific knowledge will be destroyed and from the fragments a new series of enslaved pseudo-scientists will be erected, which will be harmful for the progress of mankind.

Because of this condition of affairs we believe that the moment has come to summon all scholars and scientists of all countries and to lay it upon them as a duty to look beyond the limits of their specialities and to recognize the common danger. Let them join with us in the maintenance and protection of free science, as one of the most essential elements of international culture and peaceful co-operation.

Though the writers of this letter have named only Germany and made specific allegations with reference to that country, yet it is not Germany alone which is guilty. And they are, therefore, justified in trying to rouse all scholars and scientists and educators of all countries. Journalists and other publicists and public men all over the world should also take note.

Cinema Morals

The World Tomorrow tells its readers that in America a vigorous campaign is being carried on against indecent and immoral films shown in Cinemas. These pictures do harm both to the 'stars' producing them and to the spectators as well. For this reason Hollywood morals have become a byword.

The Commonweal of America writes :

> "In the opinion of *Harrison's Reports*," says the July 14 issue of that paper, "the movement against indecent pictures is the most constructive that has ever been undertaken."
>
> That the movement is far-reaching there can be no doubt. Lay societies are all agog over the matter, and it is said that 5,000,000 Catholic signatures to the pledge of the Legion of Decency may be expected before long; and this huge figure does not take into account the millions of non-Catholic signatures that will be obtained.
>
> That the crusade has affected Hollywood is also obvious. While it may hardly be said that the producers are frantic over the matter, certainly they are not altogether unperturbed. Pictures have been withdrawn from circulation, others have been withheld, and still others have been laundered.

We have heard that in India also, many undesirable motion-pictures are exhibited, though, not being among Cinema-goers, we cannot say anything from personal knowledge. In different provinces of India there are Companies which have taken to producing motion pictures as an industry. We do not know whether the morals of the actors and actresses engaged by these producers are comparable with those of Hollywood 'stars.' The whole subject is worthy of serious investigation both by Government and the leaders of the people.

One reason why there should be such an

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

investigation is that it is necessary to ascertain how far films relating to robberies, murders and allied crimes indirectly incite youth to criminal deeds. It may be that many youthful terrorists had their first indirect lessons in desperate deeds in Cinema houses.

The Littleness and the Greatness of Man

Dr. H. E. Barnes, speaking before the American Association for the Advancement of Science, has observed :

> "The growth of modern science has brought about a comparable transformation of our attitude toward humanity...Man tends to shrink in terms of the new cosmic outlook. Far from being the lord of all creation, existing from the beginning of things, he now appears to be but a temporary chemical episode on a most tiny planet."

Perhaps it is views like these of the material smallness of man and the material immensity of the universe which led Dr. J. T. Sunderland to write his ennobling article on the littleness and the greatness of man, published in this issue.

Dr. Barnes speaks of man as "but a temporary chemical episode on a most tiny planet." But in the light of all that science has been able to discover about the cosmos Professor Haldane of Oxford has said, "personality is the great central fact of the Universe." It is man's personality which makes him value the ideals of truth, justice, honour, mercy, love. What scientist has ever measured them in his laboratory ?

> "The fact that man has been able to reach out a hundred million light years into space, to measure, weigh and chart the orbits of the myriad worlds that course through the vast reaches of interstellar space, should be sufficient evidence that man cannot be adequately described in terms of neurons, blood vessels, lungs and bones, or in any merely quantitative terms. The chasm which separates the two outermost rims of the universe is not half so broad nor half so deep as the gulf which yawns between the physical and the mental, between the material and the spiritual."
>
> "Imagine a member of the school of thought to whom all values are measured in terms of physical quantities, seeking to appraise the worth of such personalities as Plato, Michelangelo, Dante, Francis of Assisi, Newton or Einstein, by analyzing the chemical constituents of his body. He will find, as Dr. A. L. Sachar has ingeniously figured out:
>
> 'enough fat to make eight bars of soap, enough iron for four or five ladies' hair pins, enough sugar to fill an average size sugar bin, and enough salt for a few salt cellars. There will be enough potassium to fire off a little toy cannon, and enough magnesium to whitewash four and a half square inches on your back yard fence. These and other elements, taken together would bring about .73 dollars.' "When reduced to these plain terms, is there anyone who does not see the ludicrousness and the mockery of trying to weigh the human personality on the scales of material values?" (*The Common Weal.*)

Society for the Improvement of Backward Classes

The twenty-fifth annual report of the Society for the Improvement of Backward Classes, Bengal and Assam, namely, that for 1933-34, has been published. This society, meant for boys and girls of all creeds and castes, has been doing such important work in a quiet way for the last quarter of a century that its report deserves an article. But we can spare sufficient space only for summarizing some facts about its activities.

I. No. of Schools—444 including 118 Girls' Schools.

II. No. of students on the rolls—
Boys 12,978 (1,814 Muhammadans)
Girls 5,291 (375 Do.)
Total—18,269.

III. 77 Scholarships (Boys 52 and Girls 25) of the aggregate value of Rs. 148-12- a month were awarded during the year.

IV. Prizes were awarded to 7 Schools during the year.

V. There were under its control:
(1) Five Public Libraries.
(2) One Boy-scout and one Cub-troops
(3) Arrangement for delivering lantern lectures inculcating ideas of Sanitary responsibility
(4) Four Seva Samitis.

VI. The amount spent in grants-in-aid was Rs. 59,515-0-7, but the amount spent in Establishment and other charges stood at Rs. 6,851-13-8½, representing only 11.2 per cent of the total expenditure of Rs. 67,041-13-8½.

The following table gives an idea of the progress of the society's work :

Year	No of Schools	Number of pupils Boys	Girls	Total
1909	2	*	*	
1910	3	*	*	
1911	6	*	*	
1912	13	*	*	
1913	13	*	*	
1914	50	*	*	
1915	50	*	263	
1916	62	1,916	459	
1917	104	3,347	1,453	
1918-19	231	6,667	2,760	
1919-20	329	8,435	3,468	
1920-21	397	9,981	3,773	
1921-22	393	10,251	4,064	
1922-23	404	10,925	3,398	
1923-24	362	10,763	3,777	
1924-25	406	12,612	3,676	
1925-26	406	12,598	3,565	
1926-27	407	13,105		

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

No of Schools	Number of pupils Boys	Girls	Total
418	13,543	3,935	17,478
424	12,907	4,711	17,618
439	13,349	4,308	17,657
439	13,187	4,607	17,794
441	13,106	4,703	17,809
444	11,813	5,260	17,073
444	12,978	5,291	18,269

The Society's continually increasing work ires continuous increase of income. All ributions, large or small, will be thankfully eived by the honorary secretary, Dr. P. K. arji, M. A., M. B., at 40, Karbala Tank e, Calcutta.

rldwide Economic Depression and employment

Vol. X, No. 12 of Foreign Policy Reports, August 15, 1934, published by the Foreign icy Association of America, treats of the radoxes of World Recovery." Perhaps there World Recovery," or rather "World-*minus*-ic Recovery." But we in India—partiarly in Bengal—do not perceive it, though particular number of the Reports under sideration observes that "for the world as whole, the ebb tide of the economic pression appears to have occurred in the y summer of 1932. Since that date most ntries have experienced a certain degree recovery despite continuing maladjustments d frequent set-backs."

The section devoted to gains in industrial ivity contains a table of indices of industrial duction. India is not in it. India is not in e table of pig iron production. In the tion treating of changes in commodity ces, the statement of index of wholesale ces in certain countries, India is not includ-. India is not mentioned in the section ating to Government Finance. The section d the tabular statement regarding world employment make no mention of this ntry. For this omission the Foreign icy Association is not to blame. For vernment here neither compiles nor blishes statistics relating to unemploy-nt. It must be admitted that it is a ther difficult job ;—it is perhaps easier count our employed than our unemployed, as it is easier to count India's literates n her illiterates.

The only table in which statistics for India are given is the following, under the section International Trade :

WORLD TRADE BY COUNTRIES
MERCHANDISE ONLY
(in millions of U. S. [old] gold dollars)

	1929	*1932*	*1933*	*Per cent of decline from 1932 to 1933*
Argentina	1,727	545	514	—6
Belgium *	1,872	863	803	—7
Canada	2,524	886	710	—20
France	4,247	1,946	1,841	—5
Germany	6,415	2,471	2,151	—13
India	2,074	706	646	—9
Italy	1,941	771	705	—9
Japan	1,969	783	746	—5
Netherlands	1,906	865	780	—10
United Kingdom	8,956	3,561	3,286	—8
United States	9,496	2,907	2,392	—18
Total for world	68,641	26,611	24,182	—9

It should be borne in mind that India's International Trade, both import and export, is almost entirely in the hands of non-Indians and carried on by non-Indian shipping. It is also to be noted that India's trade in 1933 was less than one-third of what it was in 1929.

Though the "Conclusion" begins by telling us that "little doubt can remain regarding the existence of a world economic upswing of significant proportions" (which we in India do not perceive), it ends by saying :

> "Real wages and standards of living for the working class appear to have fallen almost universally. Agriculture has also suffered a serious loss in purchasing power. It is evident that until consumption can be raised in line with production, there can be no basis for permanent recovery, and that such revival as has occurred will not affect the vast majority of the world's population."

Fascism in England

Mr. H. N. Brailsford writes in *The New Republic* :

> Englishmen used to smile in a superior way when a foreigner asked whether fascism would ever come to their peculiar island. Even when Sir Oswald Mosley actually created his party of Blackshirts, they answered that this phenomenon illustrated only their tolerance of eccentricity. There would be fascists, they conceded, as there are communists in England, but neither the one nor the other would ever leave a mark on the serene pages of her history. And they went on to moralize, preening their feathers as they talked, "We are too proud to imitate foreign ways. Our sense of humour"—by which they meant their love of the commonplace—"finds colored shirts and uplifted arms not a little ridiculous. We are introverts with no taste for drama. We are averse to all extremes of opinion. We detest violence. We are nurtured in a democratic tradition, so ancient

* Including Luxemburg.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

and so firmly rooted in our habits that it is unthinkable that we should ever depart from it."

This complacency has received a severe shock in recent months and weeks. Fascism is growing; it has attained prominence in the news. This party has now its 17,000 active, paying members, which is about half what the Independent Labor party possessed at the height of its influence. A large proportion of them are young men, chiefly of the middle class, who perform quasi-military exercises and drill. They have some armored cars, and with five or six airplanes as a nucleus they are forming an air force. They are exceedingly active in conducting an incessant campaign of public meetings, both in halls and in the open air, all over the country. Their leader, Sir Oswald Mosley, is, in a country that breeds few speakers of the first rank, a powerful and popular orator. They seem to command unlimited supplies of money and until recently had the help of Lord Rothermere, with his Daily Mail and the long chain of newspapers, both provincial and metropolitan, that do his bidding.

Is There a "Red" China ?

In our last number we published an article on "China's Red Army." A Chinese gentleman, a professor, who is now in our midst, and possesses first-hand information, has contradicted many or most of the statements contained in that article. The contradiction is published elsewhere.

We do not want any Bolshevism in India. But living in the year 1934 A. C., we must know, as far as practicable, what is happening in foreign countries. *The New Republic* (August 22, 1934) gives us some information relating to "Red" China in the course of a review of a book entitled *The Chinese Soviets*, by Victor A. Yakhontoff. Mr. T. A. Bisson is the reviewer. He was for four years a teacher of English in China and Co-editor of *The China Outlook*, and is a specialist on Far Eastern Affairs on the research staff of the Foreign Policy Association. He writes as follows in part :

> The rise of a Chinese Communist state, larger in area and population than any European power, has been attended virtually by a conspiracy of silence in the Western world. Now within only a few months —in Agnes Smedley's "Chinese Destinies" and in the book under review—the Soviet movement in China has found two historians.
>
> Communism in China has undergone two distinct phases of development. The revolutionary debacle of 1927—magnificently treated by Andre Malraux in "Man's Fate"—marked the end of the first phase. In consequence, Borodin and the other Russian advisers left China; Chiang Kai-shek set up the counter-revolutionary government at Nanking; and Communism was largely driven underground. Following the abortive Canton Commune (December 11-14, 1927), a remnant of some 4,000 Communist troops, led by Chu Te and Mao Tse-tung, withdrew into the inaccessible regions of southwestern Fukien. From this time dates the formation of the Chinese Soviets, marking a new phase of Communist development, one exclusively under Chinese leadership and relying solely on meager native resources. A period of steady growth was signalized to the outside world in 1930 by the capture of Changsha, from which the Communist forces were ejected only by foreign gunboats. On November 7, 1931, the provisional government of the Soviet Republic of China was established at Juichin in southern Kiangsi, with Mao Tse-tung as President. Since 1930 Chiang Kai-shek has thrown half a dozen major attacks against this government, utilizing at times several hundred thousand troops in a single campaign. From each attack the Chinese Soviet regime has emerged strengthened by deserting Kuomintang troops and by captured ammunition, rifles, machine guns and even airplanes. Today it boasts a regular army of 350,000 men, unexcelled in China for discipline and morale, while the administration of the various Soviet areas is solidly based on a Communist party membership of 400,000.

There is much else worth quoting in Mr. Bisson's review. We content ourselves with extracting only another sentence, which is rather startling.

> General Yakhontoff's concluding statement that, were foreign help withdrawn, "most, if not all, of China would 'turn communist,' probably within a very short time" is so near to sober truth that only a miracle could effect such withdrawal.

The Anti-terrorist Conference

We are in full sympathy with the object of the recent Anti-terrorist Conference in Calcutta, though in every detail we may not be able to see eye to eye with the promoters of the anti-terrorist movement. Mr. P. N. Tagore, who delivered the opening speech at the conference, observed correctly that assassination "has never in history, in any part of the world, been known to have brought about political advancement or regeneration to a nation struggling for it." He proceeded to observe :

> True, the actions, motives, policies and decisions of the Government are sometimes misconstrued. But that the entire blame cannot, to my mind, be laid at the door of the people. Government themselves are as much responsible for it as the people who are alleged to misconstrue them, and thus provide materials for those who have brought about a situation which calls for the holding of this Conference. Government should be well-advised to take the people into their confidence, at any rate the leaders of thought and opinion in the country, who deplore and condemn these incidents of terrorism as much as anybody else.

In the "Programme to Check Terrorism"

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

...ee, adopted at the Conference, it has been said that the terrorist movement in Bengal "has drawn its sustenance in the past, as it is doing at present, mainly from misunderstanding and misrepresentation of Government policy and action." The difference between Mr. P. N. Tagore's utterance and the view expressed in the "Programme" is that in the latter there is no mention of Government's share of the responsibility for such misunderstanding when and where it exists or happens. In one paragraph of his speech Mr. P. N. Tagore has said:

> The relation between the teacher and the taught ought to be improved and lifted from the mechanical platform to the holy and sacred status of personal contact and relationship.

Such relationship certainly depends on the possession by the teachers of an enlightened and noble personality. Perhaps in the ranks of our present-day teachers, men with such personality, though unknown to fame, are not wanting. But even such men cannot do all that is necessary to inspire their pupils with right ideals of patriotism. Our teachers feel obliged either to refrain from speaking to their pupils on patriotism and citizenship or to inculcate a kind of politics which does not include the whole duty of man. Mr. P. N. Tagore asks:

> And will you believe it that the "Rights and Duties of Citizens" are taught in America and in other European countries with as much care as any other subject having a commercial or literary value?

There is another question, which he does not ask, namely, whether "our teachers and professors" are in a position to teach their pupils the "Rights and Duties of Citizens" as they are taught in America and in European countries which are in a normal condition, *e. g.*, Great Britain, Norway, etc.

Mr. P. N. Tagore says:

> There is a general belief that terrorism is the outcome of unemployment. It is difficult to believe that it is wholly the result of unemployment, for our experience shows that most of those who have hitherto been guilty of it are not those who had been affected by the problem of unemployment. They are differently situated. But undoubtedly in the solution of the difficult problem of unemployment lies the partial, if not the entire, solution of the terrorist problem.

We agree. Mr. Tagore is also right in observing that we Bengalis are here in our province on sufferance. By giving details he has proved his case. But whether Government can or will remedy the state of things described by him is more than we can say.

Considered as a piece of ideal advice, the following is commendable:

> Gentlemen, as a humble citizen of the Empire, I will expect my countrymen to boldly lay their grievances before the Government on whom rests the responsibility, if they are true to themselves, to boldly deal with them, not to shield or shelve, but expose and punish.

Those who are not Bengali or non-Bengali Indian editors working in Bengal should set an example in this kind of very needful courage for us journalists to follow. We speak of journalists in particular, as we are supposed to voice the grievances of the people.

> And it will further be conceded that if terrorism is found and judged to have a political outlook, the satisfaction of the hopes and aspirations of the people would undoubtedly be an effective antidote.

He is entirely right. Only, we would point out that where he uses "if," the "Programme" adopted at the Conference uses positive and unequivocal language. Its very first sentence runs, "The Terrorist movement in Bengal is political in origin."

The foregoing sentence from Mr. Tagore's speech is followed by the subjoined passage:

> I am glad to think that our Government realises this, and we learn from no less a person than His Excellency Lord Willingdon himself who told us the other day that His Majesty's Government was doing everything possible to speed up the constitutional reforms so as to satisfy our legitimate hopes and aspirations as citizens of the Empire. Delay in such circumstances worsens the situation no less than an illiberal spirit. In case of India, perhaps, both are equally responsible.

We would emphasize the last sentence. As regards the so-called "constitutional reforms," almost fully outlined in the White Paper, Mr. Tagore knows that non-sectarian representative bodies like the Indian National Congress, the National Liberal Federation of India, etc., have declared that these cannot in the least satisfy the hopes and aspirations of the people of India. Hence the speeding up of such "reforms" is not a matter of any importance.

We join in Mr. P. N. Tagore's concluding appeal:

> Finally, I would appeal to my own countrymen who are responsible for such atrocities as have been perpetrated in the past to consider the miseries

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

brought on the people of the country, great many of them their own kith and kin, by their wicked deeds. The misdirected activities of these young men, some of whom, I believe, under proper guidance would prove to be valuable members of society and fine specimens of manly character, have been responsible for untold troubles and tribulations patiently suffered by their innocent and beloved fathers and mothers, and dear brothers and sisters. Gentlemen, that is not all; there is yet another aspect from which the result of their conduct must be judged. It is the economic loss to the province which is so dear to us all. Imagine the amount of nation-building work which could be pursued by our own Ministers if the moneys, unprecedented in their magnitude, spent for the maintenance of law and order, were released tomorrow as no longer of any necessity. This is a vital consideration, and I cannot impress it too strongly upon them.

There is no doubt that large sums of money have been spent for years for combating terrorism. Whether, when these sums would no longer require to be spent for that purpose, they would be devoted to nation-building work or not, we want the eradication of terrorism. We want it even if the sums, when released, are not spent for the promotion of education, public health, irrigation, waterways, agriculture, industries, trade, etc. What we must remind the Bengali public of, is that, even when there was no terrorism to fight in Bengal, nation-building work was not financed to the extent that it was in other provinces. That may be a matter to settle between the Government of India and the Government of Bengal. But a fact is a fact.

Mr J. N. Basu's Speech

Mr. Tagore's speech was followed by the presidential speech of Mr. J. N. Basu. In noticing Mr. Tagore's speech we have said much that we had to say, and, therefore, it would not be necessary to comment in detail on Mr. Basu's speech.

Mr. Basu is a seasoned politician and has personal knowledge of the days when terrorism appeared in the Deccan and when, later, it appeared in Bengal. His historical retrospect is accurate. Said he:

> For a little over twenty-five years, terrorism has manifested itself in different shapes.
>
> There have been long intervals, when terrorism lay dormant lulling the public into the belief that it had completely disappeared. But the continued reappearance of terrorism in an unexpected manner and in unexpected quarters has shaken the sense of security that the people have felt.

As regards criticism of the past, his opinion is:

> Criticism of what has up to the present been done is not likely to be of help. What is wanted is not criticism but action inspired by the solemn nature of our duty in the present circumstances.

We, too, are against criticism for the sake of mere criticism at this juncture. But if criticism is necessary for the purpose of preventing the harmful mistakes made in the past, and for adopting right methods and taking right action, there should and must be such criticism.

Mr. Basu proceeded to observe:

> The dangerous character of terrorism as it prevails here is due to a great extent to its being of political character. Love of home and country is inherent in the human mind almost everywhere. Love of freedom stands on the same basis. The recruiters attempt to pervert these natural impulses. They do not point out what the facts are. They fail to show that a peaceful and well-ordered society is the best basis of progressive development, and that strivings towards advancement can best succeed in an atmosphere of peace and order. Measures and acts of the State are misrepresented and distorted, instead of the spirit of frank and open criticism the spirit of brooding over a supposed wrong is sought to be developed. The acts of particular members of the State services are held up in such a light as to give rise to hatred. Those that the recruiters work upon are deluded into the belief that there is a short cut to an ideal order of things. Neither the recruiters nor those they influence know what their ideal in fact is likely to be. All they know is that they are aiming at a negation of the existing order of things, but they do not care to give any thought to what will replace the existing order. Instead of the prolonged and steady endeavour in every sphere required to attain progress for our people, whether residing in villages or towns, criminal acts of a spasmodic and impulsive character are held out as real endeavours for national progress. The young are not taught the truth that, as in individual life so in national life, there is no short cut to progress but that progress implies long, steady work in spheres of constructive activities, and in the patient removal of difficulties and obstructions. It is not emphasized that the knowledge and strength that is invaluable for progress will last the test of time. The short cut that is taught is a crime of the most abominable character, the crime of secret murder. Such a path is reprehensible for the attainment of the best of ideals. In the case of terrorists the path leads to nowhere.

The whole passage quoted above is conceived in a statesmanlike spirit fit for normal times. We would offer a few comments only on those sentences which bear some resemblance to the following passage in the "Programme":

> "It (the Terrorist movement) has drawn its sustenance in the past, as it is doing at present, mainly from misunderstanding and misrepresentation of Government policy and actions. The most urgent need of the hour is organization of systematic publicity and propaganda on a wide scale to remove this unhealthy atmosphere and to establish a healthy contact between the Government and the people."

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

There is another passage, which occurs in the "Programme", which should be read along with the passages reproduced above. It runs thus:

> *The Press*—Although there is a very marked and healthy change in the attitude of the press in dealing with problems connected with terrorism and the Congress papers no less than other organs of national opinion in Bengal are united in their condemnation of terrorist ideas and methods, the situation demands still greater efforts on the part of the Press as of the general public. It is necessary to impress on the Press that they should judge Government policy and measures in a spirit of fair play and give them adequate publicity, criticize Government when necessary but uphold them against all subversive influences. The consequence of irresponsible writings in the past has been to create a mentality among the credulous public that Government are responsible for all ills that people are suffering from. Apart from the assistance such writings have rendered to the terrorist organizers by causing disaffection and hatred against Government, they have in no small measure undermined the self-reliance of the people themselves and impeded their progress. This mentality must be destroyed. For that the whole-hearted co-operation of the Press is essential.

We do not know what sort of misrepresentation or perversion of facts terrorists or their recruiters indulge in, for we have never come into contact with such persons. So, we must confine our comments to what has been said about the Press, by which perhaps the promoters of the anti-terrorist conference mean the indigenous Press.

The promoters may not have meant it, but there is an air of superiority and patronage in the paragraph devoted to the Press. A great English statesman once observed that he did not know how to indict a whole nation. The promoters evidently know how to indict the entire Indian indigenous Press. There are many substantial men among the promoters, able to conduct an English and a Bengali daily paper even at a loss. We would urge them to run model papers for the edification of journalists in Bengal.

Regarding "misrepresentation of Govenrnment policy," it would have been helpful if the promoters had given some actual instances of such misrepresentation. For a pretty long period some of the topics most discussed in the Press have been the White Paper, the Communal Decision and the Government policy underlying them. We do not know whether in the opinion of the promoters Government policy was misrepresented in these discussions.

We do not in the least advocate or justify misrepresentation of Government Policy; we are against such misrepresentation. But we would ask all concerned to reflect why there is no terrorism in many countries, *e.g.*, Britain, though there is no lack of misrepresentation of Government policy there.

"Programme to Check Terrorism"

We support what has been said in the passage quoted below, provided it is understood that by "responsible government" is meant such a form of government as is enjoyed by the Dominions in the British Empire.

> The Terrorist movement had also been helped in no small measure by the unsympathetic and in some cases positively improper conduct of individual Government officers in dealing with the people of the country. It is of utmost importance that Government should not hesitate, as they have done in more instances than one in the past, to take adequate steps against their officers when found guilty of improper action. Further, we consider it important to observe that early establishment of responsible Government in the country is one of the surest ways of nullifying the Terrorist movement. Government should do nothing which might shake the confidence of the people in their good faith or create an impression in the public mind that any particular section or sections is or are receiving differential treatment to the detriment of other sections. To treat this province differentially under the forthcoming constitution, as is being urged in some reactionary quarters, will be playing into the hands of the terrorist organizers.

The "Programme" states in detail on what lines publicity and propaganda work may be taken up, showing that the promoters have devoted much thought and time to the subject. "Lecturers enjoying the confidence both of the Government and the youth of the country", the employment of whom for purposes of propaganda has been suggested in the Programme, would be an invaluable acquisition indeed. But it would not be easy to find them. "A more contented teaching staff is essential." Among other things adequate salaries would have to be paid to them to make them contented. It has not been pointed out where the money is to be found to pay such salaries.

We do not believe in the efficacy of moral and religious education in schools unless the teachers and the guardians of the children lead moral and religious lives and set an example.

"The ideals of true citizenship" should certainly be placed before our youth. But precept and example should go together.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

The supervision of the conduct of the boys by their respective parents and guardians is quite natural and proper. It should, however, be borne in mind that in various ages and countries some youth, and sometimes even some boys, have not been able to obey their parents, not because the former were vicious, but because the parents were not what they ought to have been and had failed to march with the times. The situation with which we are faced reminds one of the ancient Egyptian manuscript, now preserved in the Imperial Museum at Constantinople and supposed to date from the second millennium before Christ, which reads :

> "Evil days have come upon us. A spirit of unrest is at hand. Children no longer obey their parents. Everybody wants to write a book. The end of the world is manifestly approaching."

And yet the world has gone on for more than three thousand years after the above foreboding was expressed ! And then, there is the more modern instance of the German professor's wife who deplored the lack of interest in her husband's teaching. "Why," said she, "twenty-five years ago students thronged my husband's classroom, but now no one goes to hear him. And the thing that I can't understand about it is that his lectures are exactly the same to-day, word for word and comma for comma, as they were when he started teaching!" Pathetic.

The suggested formation of Central District Committees and Village Committees for the supervision of and the reporting on the conduct of boys, if it is to bear good fruit, should be done with very great care. In the section devoted to "the organization necessary," "District Committees, Town Committees and Union Committees, consisting mainly, if not wholly, of non-officials" has been suggested. Are the two sets of committees to be the same or different ? If officials are to be admitted, it should be borne in mind that the rules relating to the conduct of Government servants require them to report to Government everything of a politically suspicious nature. We are not here criticizing those rules or the C. I. D. or other Government servants. They do the duties they are paid to perform, and are certainly useful functionaries so long and so far as they confine themselves to their proper task. The function of the proposed Committees, as we understand it, is to be different, namely, to educate, to admonish, to warn, and to reform—*not* to punish or get punished according to the laws as they are at present. Therefore, care ought to be taken that there is not the least suspicion of espionage, or of the "free and frank exchange of views between the boys and members of the Committee," suggested in the Programme, leading indirectly to trouble for the former. Else the whole object of the Committees will be frustrated.

We do not know that "the mushroom libraries all over the province are full of subversive literature and form a most dangerous source of infection." It may be so. But as libraries are open public institutions, how can they be full of subversive literature without the knowledge of the police ?

The section devoted to the Economic Aspect deserves the serious attention of the Government and the people. All the seven proposals made by the promoters ought to be carried out.

Some General Observations on Terrorism

What has been said in the section entitled, "necessity of co-operation between Government and the people", will require to be elaborated.

We have not the least desire to minimize the seriousness of the problem of terrorism. But it would not be of any use to take an alarmist view, or, confining our attention only to Bengal, to ignore the fact that terrorism is not an isolated phenomenon but prevails in many countries of the world. It is connected with men's war mentality in various countries—their belief in physical force as a sort of final arbiter. That mentality has to be changed and an effective moral substitute for war found and applied. That is a world problem, which can be directly tackled, so far as Governments are concerned, by the Powers of the world—not by subordinate Governments like the Government of India, and far less by Indian Provincial Governments. Therefore, we do not expect India's Central and Provincial Governments to tackle this root cause of terrorism, nor blame them for

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

not tackling it. This can be done by the promotion of real pacifism by the Powers of the world and the intellectual and spiritual leaders of mankind. Pacifism does not mean that the use of physical force is to be absolutely abjured. No Government can do that within its territories. When men agree to live in a civilized country, they are understood to agree that the physical force is to be used for the prevention of wrong doing is to be used only by the State or under the direction and laws of the State. But it is also understood in all really civilized countries that the physical force to be used by Government in their respective countries is to be used strictly according to law. This ideal should be borne in mind in all countries.

Love of daring is natural to youth in all countries. If it does not find legitimate scope, it may lead youth astray into careers of crime. Therefore, it behoves all Governments to have open, if not also to create, careers in which courage may be exercised and developed by the youth of the Country in legitimate ways.

Communal Decision and Congress Split

The split in Congress ranks over the Communal decision is to be deeply deplored. If any section of Congressmen had believed that the Communal Decision was good and necessary in the interests of India and had, therefore, parted company with those who believe it to be anti-national, anti-democratic and injurious to the interests of the Indian nation as a whole, then in that case, too, the division in Congress ranks would have been regrettable. But what adds to the painfulness of the present situation is that, though all Congressmen believe the Communal Decision to be anti-national, anti-democratic and injurious to India, yet for the sake of expediency a section of them will not agitate against it, or vote against it, if returned to the Legislative Assembly as members. The Congress Working Committee's attitude of neutrality towards the Communal Decision was evidently due to its hope that that would make Muslims friendly to the Congress and lead many of them to join it and also lead Muslim voters to cast their votes in favour of Muslim candidates who were Congressmen.

Principle should never be sacrificed to expediency. But supposing the sacrifice of principle for the sake of expediency were justifiable, it must be shown that expediency has produced or is expected to produce the desired result. In the present case, however, the generality of Muslims have not changed their attitude to the Congress. As for voting for Congress-Muslim Candidates, Muslim voters have been asked by the two biggest and oldest Muslim organizations, *viz.*, the Muslim League and the Muslim Conference, that they should vote only for those Muslim candidates who accept and would support the White Paper including the Communal Decision.

We have said above that principle should never be sacrificed. This maxim should in particular be strictly followed by those who have declared that *satyāgraha* is their rule of life. *Satyāgraha* is a Sanskrit compound word. *Satya* means truth, and *āgraha* means 'strong attachment', 'persistence', 'insisting', according to Apte's *Practical Sanskrit-English Dictionary*. Therefore, Satyāgrahis should prove their strong attachment to truth by persisting in and insisting upon truth in and outside the Council Chambers.

In spite of a party's failure to achieve its object, it can command the respect even of those who do not belong to it, if it adheres to truth and principle and bears witness to the truth under all circumstances. But non-persistence in and non-insistence upon its convictions cannot command respect.

It was said at Wardha that there would be a fight to the finish between the two Congress parties and the result would show which was right. But rightness and wrongness cannot be determined in that way. The voice of the majority of voters is not necessarily the voice of Truth and Right. Even if the candidates of the Congress Parliamentary Board succeed in capturing all the elective 'general' seats, that would not in the least show that the attitude of neither accepting nor rejecting was right.

Party Candidates for the Assembly

For the welfare of India it is necessary that the Communal Decision should be condemned

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

by as large a number of Indians and others within and outside the council chambers as possible. For this reason, it is essentially necessary that all those candidates, irrespective of race, creed and caste, who would openly condemn it, should be elected. It is also necessary that the party or parties who are opposed to the Communal Decision should have in the country as large a following as possible. It would be a crying shame if even appearances seemed to show that Indians for the most part had accepted the Communal Decision, which is not a fact.

The Congress Nationalist Party's ticket has been published and is well-known. All who accept its opinions and principles can become its members irrespective of their race, creed or caste. Hindus, like others, can become its members.

The Hindu Mahasabha has issued a statement. It could have been the manifesto of any other truly Nationalist party, whether Hindu or not. It insists upon the condemnation and rejection of the Communal Decision. But so does the Congress Nationalist Party. Therefore, the difference between the Mahasabha party and the Congress Nationalist Party is only this that Hindus alone can be the members of the former, whereas both Hindus and non-Hindus can be members of the latter. But as the latter does not exclude Hindus from membership, there is no absolute necessity for the Hindu Mahasabha and the Provincial Hindu Sabhas to set up separate candidates of their own parties. Multiplication of candidates of parties holding the same political opinion only decreases the chances of election of those candidates and increases those of their opponents.

Gandhiji's Intention to Amend Congress Constitution

The formation of the Congress Nationalist Party is not the only sign that there is division in Congress ranks. There is also the Congress Socialist Party to reckon with. Most serious of all is the fact that Mahatma Gandhi has been really thinking of retiring from the Congress and will decide exactly what to do, after testing the feeling of the Congress at the next session on all the points on which he has touched in the course of a statement issued to the Associated Press. The reason why he has been thinking of retiring from the Congress is that he has got the impression that—

> A very large body of the Congress intelligentsia were tired of my method and the views and the programme based upon them that I was a hindrance rather than a help to the natural growth of the Congress, that instead of remaining the most democratic and representative institution in the country, the Congress had degenerated into an organization dominated by my one personality and that in it there was no free play of reason.
>
> If I am to test the truth or otherwise of my impression, naturally I must put before the public the reasons on which my impression is based and my own proposals based thereon. Congressmen might vote on them and thus clearly register their opinion.

His reasons have appeared in the dailies.

The amendments he proposes to the constitution are four in number. He has mentioned them and given the reasons why he wants such alterations. The amendments proposed are given below :

> The first amendment I would propose is to replace the words "legitimate and peaceful" by "truthful and non-violent." [This refers to the means and method of attainment of the goal of *Purna Swaraj*.]
>
> The second amendment would be to replace the four-anna franchise by the delivery by every member to a Congress depot of 2,000 rounds (one round equal to four feet) per month of well twisted even yarn of not less than 15 counts spun by himself or herself on a spinning wheel or takli.
>
> The third amendment I should propose would be that no one shall be entitled to vote at any Congress election whose name has not been on the Congress register continuously for six months without default and who has not been a habitual wearer wholly of khaddar for that period.
>
> I would have an amendment reducing the number of delegates to not more than 1,000, nor more than one delegate per every thousand voters.

Had we belonged to the Congress party it would not have been difficult for us to accept the first and fourth amendments. The second we could not have accepted. The third we could have accepted, were it declared that Khaddar meant hand-spun and handloom-woven cotton, silk and woollen goods. It is not for reasons of luxury or show but for those of health that one may have sometimes to use silken and woollen goods.

Empire Won & Kept by the Sword

In the course of the debate on the Indian Army Bill which has since been passed, the Commander-in-Chief of India is reported to have said that the British people have won their Empire by the sword and have kept it

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

by the sword. The British Empire covers an extensive portion of the earth. But the majority of its inhabitants live in India, and when Britishers have to refer to or speak of the large countries of Canada, Australia, South Africa, etc., they say that these latter parts of the earth are included in the *British Commonwealth of Nations*, refraining from using the expression British Empire. Moreover, the Commander-in-Chief was speaking in India mainly to Indians. Therefore, by the British Empire he must have meant India above all.

Now, if he reads Indian history, even such Indian history as has been written by British authors, he will find that it was not by the sword alone that India was won. And whenever and wherever the winning was by the sword, it was mostly the sword of India. It is no pleasure for an Indian to mention this fact—it has to be mentioned only for the sake of historical accuracy.

As regards keeping the Empire by the sword, the Commander-in-Chief may be reminded of the implications of what he has said and of what many Viceroys and other British statesmen have said before him.

If the people of a country are loyal, there can be no need to use the sword to keep them in subjection. If it be true that that country has to be kept by the sword, that would imply the existence of a rebellious spirit.

On the other hand, many Viceroys and other British statesmen have told the world that the teeming millions of India are thoroughly loyal. If so, it is not by the sword that the Indian Empire is kept.

Either these personages or the Commander-in-Chief can be held to be right, not both the parties.

Sir C. C. Ghose

Sir C. C. Ghose, who was in his 61st year at the time of his sudden and quite unexpected death, retired in January this year from the Calcutta High Court Bench. He was a distinguished judge and had officiated as Chief Justice four times. After his retirement he was invited in February this year by the Governor of Bengal to accept the office of a Member of his Executive Council upon the death of the late Sir Provas Chunder Mitter. Sir Charu Chunder was already in a poor state of health at the time. So the exacting duties of his new office told upon his health and he resigned. He was a Vakil of the Calcutta High Court in good "junior practice" when he proceeded to England to study law. His career as a student of law was brilliant. As a barrister at law he had a lucrative practice before being appointed a puisne judge.

Before that appointment he was prominently connected with the public life of Bengal. He and the present writer were fellow delegates to the Madras session of the Congress in 1898 over which the late Mr. A. M. Bose presided. When he and Lady Ghose went to Berlin, the writer met them there. He was noted for his genial and charming disposition. He was connected with many educational and philanthropic institutions and was twice President of the Asiatic Society of Bengal. It was expected that, after being restored to health, he would re-enter public life as a member of the Liberal Party. But that was not to be.

Kumar Manmathanath Mitter

The late Kumar Manmathanath Mitter was 68 years of age at the time of his death. He was a wealthy landholder and was sheriff of Calcutta for one term. But he was a people's man, and it is said that there was no oppression in his zamindary. When he took part in any movement for the public good, it has been observed that no one who did not know him good guess that he was a member of the aristocracy. After the Bengal Partition he took part, with devotion, in the movement for the production of Swadeshi goods. The National Fund was established for that purpose. He was one of its secretaries and treasurers, and not only contributed to it but begged barefooted from door to door to collect money for it. At the Sangit Samaj building in Cornwallis Street, Calcutta, he gave freely of his time and energy to establish a school for teaching hand-spinning. The plot of land in Balaram Ghose Street on which the Calcutta Orphanage stands was his gift. He gave liberal donations also to the Deaf and Dumb School, Blind School and other philanthropic institutions. Owing to the benevolence of him and his brother Kumar Narendranath many poor men received free meals and free treatment and medicine, when ill, at the Kumars' ancestral house in Jhamapukur Lane. Arrangements for such charities have been placed on a permanent footing, and Kumar

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Manmathanath's nephew Kumar Hiranya Kumar Mitter has effected improvements in these arrangements. Kumar Manmathanath was a man of culture with a fine literary taste, and a connoisseur of precious stones.

What Sir N. N. Sircar Really Said

In the report of the debate on the Bengal Criminal Law Amendment Bill in the Legislative Assembly which appeared in the Press, Sir N. N. Sircar's speech was so misreported as to create the impression that he considered the Bengal Bill (now an Act) to be "milk and water." Consequently, misled by that report, we along with some other editors criticized him. What really happened was this :

In his speech Sir N. N. Sircar started by saying that it was a "very drastic measure," by which executive opinion was substituted for judgment of Courts. He conceded it was 'repression,' but said that such repression had been enacted by the Bengal Legislature. Later on during the speech he was interrupted by the 'interjection,' "Is there such repression in any other country ?" To that he put the counter-question : "Is terrorism so much prevalent anywhere else ?" On this two members said : "Germany, Ireland, Russia." In answer to that the Law Member said that, compared to what was happening in those countries, the provisions in the Bengal Act were milk and water. When reporting the speech most of the papers omitted the context showing that comparison was being made to what was happening in Germany, Ireland and Russia.

Solicitude for the British Steel Industry

We read in *Forward* dated the 7th September last :

> The following extracts taken from the report of proceedings of the executive committee of the British Iron and Steel Federation leaves no room for doubt that the British Steel Industry had full access to the Indian Tariff Board's Report on protection to the Steel industry prior to its publication here on July 1. last. It also appears that they were aware of the intention of the Government of India to impose an excise duty on Indian Steel.
>
> "Mr. Elliot, (the head of the delegation of the British Steel industry who appeared before the Tariff Board for oral examination), stated that a brief summary of the recommendations of the Indian Tariff Board had been circulated to all members at the end of last week. The British Government had been favoured with an advance copy of the report and as the representative of the industry in the proceedings in India he was privileged in confidence to study this report and in consultation with Sir William Larke, to comment on the proposals for the assistance of the Board of Trade.
>
> ". . . It was understood, however, that the Government of India would adopt a method of obtaining revenue from the Indian producers by means of an excise duty on ingot production of 4 Rupees per ton, with an adjustment of 1-1|3 for the finished product, that is, an excise duty of 5-1|3 Rupees per ton on the finished product."
>
> We are not only not surprised at this breach of confidence by the British Government but unhesitatingly admire their anxious solicitude for the welfare of the British Steel industry which their action displays.

It seems then that the plan to recoup the loss of revenue, due to the preferential treatment of some British steel articles, by the wholly unjustifiable imposition of an excise duty on Indian steel, was an affair prearranged behind the back of the Indian Legislative Assembly.

Application for Pandit Jawaharlal Nehru's Release

An Associated Press message, dated Allahabad the 25th September, tells the public that

> Mr. Girdhari Lal Agarwalla Advocate, taking off his gown and appearing as a member of the public, moved an application today before Mr. Justice Kisch under section 491 of the Code of Criminal Procedure, read with the General Powers of the High Court (habeas corpus), for the immediate release of Pandit Jawaharlal Nehru.
>
> The application after reciting the facts relating to his temporary release, stated that there was no warrant of law to arrest and imprison the Pandit again after he was once released and that he could not be re-arrested or imprisoned again without a fresh trial. Mr. Agarwalla prayed that the Pandit might be set at liberty and that, pending disposal of the application, he should be released as his wife was seriously ill.
>
> His lordship ordered the matter to be placed before him when the Government Advocate was present.

As the printing of the present issue of this Review will be finished today (26th September), we shall not be able to notice the result of this application in this issue.

Apart from the legal aspect of the matter, it has been the opinion of the public all over India that Mr. Nehru ought to have been allowed to remain by the side of his wife at least till she was pronounced completely out of danger, if not till her complete recovery.

The Question of Mr. Sarat Chandra Bose's Release

The two letters which Mr. Sarat Chandra Bose has written to the Home Member of the Government of India and in which he has tried to refute the unproved allegation of

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

latter that he was deeply involved in the rrorist movement, having been published in the *Amrita Bazar Patrika* and other papers, has become incumbent upon Government ther to release him unconditionally or to ove the allegation made by the Home mber by bringing Mr. Bose to trial before tribunal indentical with or similar to the suggested by the latter. Otherwise the blic will be entitled to believe that all that Bose has said in his letters is accurate. vernment may, of course, try to show the rrectness of his statements by issuing a mmunique. But that will not be accepted the last word. And an indefinite number replies and rejoinders from the parties ncerned cannot be thought of as within the ge of practicability or probability.

It is true, the Simla correspondent of Anglo-Indian daily has tried to discredit me of Mr. Bose's statements. The former be officially inspired. If so, the official spirer or inspirers concerned should come t in the open and enter the lists against Bose. Fighting from behind a *Shikhandi* uld not be considered satisfactory. It is what Englishmen call cricket.

e Teaching of Journalism

Journalism, like other professions, requires rious preparation. It may be true that st, if not all, Indian journalists took to rnalism without any *direct* preparation for But those of them who have made their rk in the profession were able to do so cause of the general education they had ceived and because they liked the work and oured persistently to become more and re efficient. Of course, they must have had some special aptitude for the fession. But whatever their success, eryone of them would have been better some *direct* preparation for their oretical education can be a substitute practical training and experience. That also ecessary.

Mr. Mrinal Kanti Bose, president of the dian Journalists' Association, in his instruc- and interesting university extension lecture the place of journalism in society, has tried dispel the wrong notion that "journalism uld be left outside the scope of study in university, school, or college." As he has correctly pointed out, journalism is a subject of study in schools, colleges and universities in educationally advanced countries. He has dwelt on the intellectual training and equipment and the moral qualities which make for success in journalism, and on the power of the Press. He has done very well to point out that education in journalism is not merely for those who want to be journalists.

> It is commonly supposed that Journalism is for one who is definitely out for a journalistic career. From what I have said above it will appear that journalistic training and education has a value of its own and is of great use to persons who will not or cannot adopt journalism as a living. The two hundred and thirty Universities and Colleges and the fifty-five schools in the U. S. A. and the Universities and schools in England that include in their curriculum journalism as a subject of study turn out graduates and certificate-holders by hundreds every year. All these people are not and cannot be absorbed in the profession of journalism just as all holders of degrees in Law do not become lawyers by profession. As a liberal education, journalism is of the highest value.

Mr. Mrinal Kanti Bose's lecture and the waiting of a deputation of journalists upon Mr. Syamaprasad Mukherji, the present vice-chancellor of Calcutta University, asking that arrangement for teaching journalism be made by the University, have revived the question of the University taking up this duty. If Mr. Syamaprasad Mukherji succeeds in making provision for education in journalism, such achievement will be highly appreciated by the public. It will greatly redound to his credit. Some years ago a committee appointed by the Indian Journalists' Association, of which Dr. Nalinaksha Sanyal was the most active and zealous member, drew up an elaborate syllabus and curriculum of studies. It was sent to the Calcutta University. But nothing was done by the University.

Floods and Storms

The present year is a year of great calamities. The earthquake in Bihar has been followed by devastating floods in that province and in Bengal and Assiam. The recent typhoon in Japan has been terribly destructive of life and property.

All sufferers in all countries deserve the fullest sympathy and help.

The Japanese people and Government are very energetic and have control over private purses and the public purse. Therefore, they

CC-0. In Public Domain. Panini Kanya Maha Vidyalaya Collection.

Digitized by Arya Samaj Foundation Chennai and eGangotri

were able to do more in the course of a few weeks to repair the ravages of the cataclysmic earthquake in that country some years ago than the people of Bihar and Government have been able to do in the course of more months to repair earthquake damages in that province. It is noteworthy, moreover, that the British people gave more help to the Japanese in their calamity than they have given to the people of Bihar. We hope, with their characteristic energy the people and Government of Japan will soon be able to do all that is necessary and humanly possible to repair all damages.

With regard to the floods in our country, we join in the appeals for help issued by various relief societies. In addition, we again remind our people and Government that modern science has made it possible to train rivers and control floods to some extent. And, therefore, as proposed repeatedly by Professor Meghnad Saha, river physics laboratories—at least one such laboratory—should be established. Neither the initial cost, nor the recurring charges will be large. Details are to be found in Dr. Saha's paper on the subject in the commemoration volume issued on the occasion of the completion of 70 years of the life of our youthful countrymen Sir P. C. Ray.

Soviet Russia and the League of Nations

Soviet Russia has become a member of the League of Nations.

GENEVA, Sept. 18.

The Assembly has granted the Soviet a permanent seat on the League Council. Nobody voted against, but ten abstained from voting. The galleries were packed to hear the debate on the Soviet's admission. Senor Madariaga transmitted the Sixth Committee's recommendation to M. Sandler (Sweden), who is the chairman of the Assembly. After the Assembly had voted the Soviet a permanent seat on the Council, M. Litvinoff and two co-delegates entered and took their seats. A few minutes later the chairman announced that henceforth the Soviet Union would be part of the great world family co-operating to safeguard peace. He invited the Soviet delegates to take their seats. Loud laughter was proclaimed when M. Litvinoff forestalled the invitation. M. Litvinoff then rose and declared that the Soviet had joind the League as the representative of a new social economic system not renouncing any of its special features, and like other countries preserving its personality intact, and promised to make itself felt as a powerful factor for peace in the council of nations.—Reuter.

Japan's aggressiveness and power on the Asiatic continent has had much to do with Soviet Russia's desire to enter the League. French diplomacy has helped that State to fulfil its desire. Notwithstanding M. Litvinoff's declaration, only the future can show whether capitalistic imperialism will be able to preserve its sway over League affairs and world affairs. Such imperialism has not hitherto made for peace.

Though not surprising, it is significant that Soviet Russia starts with a *permanent* seat on the League Council. India has been a foundation member of the League from the start and stands sixth in the list of contributors to the League's expenses. Yet she has not yet been given a seat on the League Council for a single year. This is due to her inferior political status as a subject country. The Council consists of 15 members, of whom five—Great Britain, France, Japan, Italy and Germany—have permanent seats. Japan's withdrawal created a vacancy, now filled up by Russia.

India and the League of Nations

Ever since the latter part of 1926, when we went to Geneva on the League's invitation, we have repeatedly drawn attention to the inadequate discharge of its duties to India by the League. Perhaps we were the first to do so. One of India's grievances has been that very few appointments made by the League have so far gone to Indians, and the few Indian officers that there are in the League all hold subordinate posts. The League's expenditure is divided into 1,013 units, distributed between 57 member states. Of these India pays 56 units, or 5.5 per cent. The number of secretaries and clerks appointed by the League is 700 in round number. Out of these only 6 permanent and 3 temporary jobs have fallen to the lot of Indians. If the 3 temporary jobs were made permanent, even then Indians would have less than 1.3 per cent of the League jobs.

"Muslims Have No Right to Live in India"!

Under the above heading *The Bombay Chronicle*, edited by Syed Abdulla Brelvi, published the following in its issue of the 7th September from its "own correspondent":

ALIGARH, Sept. 3.

Several important zemindars of U. P., including the Nawab of Chhatari, Nawab Jamshed Ali Khan, M.L.C., and Khan Bahadur Ubaidar Rehman Khan Sherwani, M.L.C., had an opportunity last night of feeling the pulse of Muslim youth when at a debate held by the Muslim University Union there

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

activities were condemned by student speakers. The subject, which was moved for discussion by Mr. Abdul Latif Puri, was,

"That in the opinion of this house Musalmans have now no right to live in India."

The proposer who spoke at length condemned the activities of the so-called leaders of Musalmans. He deplored the attitude of those Musalmans who were against the national movement and said that they could give no proof of their service in the cause of the country. Recalling the great and splendid past of the Musalmans, he compared it with their present condition when they had not self-confidence and were suffering from an incurable inferiority complex. Musalmans, he said, will continue to exist but this existence was that of serfs and slaves and they could not claim to live as Musalmans.

The Nawab of Chhatari, speaking against the motion, said that socialism was the most popular creed today and further declared that Islam was the most socialistic of all creeds. He wanted the Musalmans to revert to their past traditions of equality and brotherhood when even the Caliphs got the same share from the State treasury as any other Musalman.

Khan Bahadur Ubaidar Rehman Khan Sherwani opposed the motion and said that a community which could produce great men like the Nawab of Chhatari and Sir Sikandar Hayat Khan had no need to fear anything. The Nawab of Chhatari, he said, had been in charge of Law and Order in U. P. for more than eight years and not a single Hindu or Muslim had any complaint against his administration.

Mr. Ansar Harvani, an under-graduate, supporting the motion, challenged the Muslim leaders to prove their "bona fides" to speak for the masses. It is one thing, he said, to become a Minister through the help of the Government and quite another to serve the country. "I am sorry," he said, "that reference has been made to the so-called services of men like the Nawab of Chhatari and Sikandar Hayat Khan." He was ashamed, he said, that it was under the regime of a Musalman when men, women and children were persecuted in U. P., not because they were thieves or vagabonds, but because they dared stand for the rights of their country. He reminded the house that mankind was no longer divided on religious or racial but on economic basis. Islam, he said, was a socialistic religion, but the irony of it was that Muslims had forgotten the teachings of their faith. So long as they did not identify themselves with the cause of the masses, they had no right to exist as Musalmans.

A number of other speakers, mostly students, supported the motion, which was declared carried on a division.

Commenting on this debate, *The Mussalman* makes the concluding remark :

We are glad that the majority of those who participated in the debate showed manliness worthy of the great community to which they belonged.

Defeat of Mr. Bakhale's Bill for Helping Harijans

The Bombay Sentinel writes :

There was no doubt that the Government would oppose the Bill brought forward by Mr. Bakhale in the Bombay Legislative Council for the removal of the Disabilities of the Depressed Classes in this Presidency. The Home Member opposed it uncompromisingly in a lengthy speech and enumerated, what he called, "the practical difficulties which will arise by carrying into practice ideals of this kind." The Government attitude in this matter at least was of a strictly practical kind. Apparently they are not bothered by any ideals. As we said yesterday, if there are defects in the Bill, they could have been removed in the Select Committee, and we do not suppose Mr. Bakhale would have opposed any such amendments, since his main anxiety is to improve the lot of the Harijans by every possible means.

It is unfortunate that the real question was sidetracked by a great deal of casuistry, and since the non-Brahmins and Muslims were equally opposed to the measure along with the Government, there was no difficulty whatever in defeating its first reading by a majority of twenty votes. It is curious that the Non-Brahmin Party, which generally allies itself with the Harijan members whenever any spoils have to be divided by an alliance with the Government, should have deserted the Depressed Classes at this juncture and left Mr. Bakhale to his own resources.

The Servant of India says in the conrse of its comments that "Government had no excvse excuse whatever to oppose it" (the Bill).

Pocha and Sons' Golden Jubilee

On the occasion of the golden jubilee of their House, Messrs. Pestonjee P. Pocha & Sons, the famous seed merchants of Poona, have issued a nicely got-up and illustrated souvenir brochure narrating the history of the firm. It was founded in the year 1884 by the late Mr. Pestonjee P. Pocha, and the business has gone on expanding ever since. That shows that it has been able to satisfy its customers, who are to be found all over India, Burma, Ceylon, Further India, and even in Japan, Persia and Africa. Besides vegetable seeds, herb seeds, flower seeds and other garden seeds of all kinds, as well as bulbs, it supplies garden tools and implements, lawnmowers, fertilizers, insecticides, &c., and books.

NOTICE

The Modern Review Office will remain closed on account of the Durga Puja Holidays from the 14th October to the 28th October, reopening on the 29th October. Communications received during the holidays will be attended to on and from the 29th October next.

UTTER INCOMPATIBILITY OF COMMUNAL DECISION & SELF-RULE

By RAMANANDA CHATTERJEE

SELF-RULE means that people are ruled either by themselves or by their representatives who have been elected by them. In ancient times in very small city or tribal republics, the citizens themselves in meeting assembled could transact the business of the state and govern themselves. In our present-day really self-ruling States, the government is "of the people and for the people," but literally not *by* the people, but by representatives elected by the people. But under the Communal Decision, in the Central and Provincial Legislatures the statutorily fixed majority parties will consist either of Hindus elected exclusively by Hindus, (as, *e. g.*, in Madras or U. P.) or of Musalmans elected exclusively by Musalmans (as, *e. g.*, in the Panjab or N.-W. F.) or of Musalmans elected exclusively by Musalmans *cum* Europeans elected exclusively by Europeans (as in Bengal). Therefore, neither in India as a whole nor in the Provinces will there be representative self-government, but government by statutorily fixed communal majorities, elected, not by voters of all communities, but by voters belonging to the particular communities concerned. In the Muslim-majority provinces not a single legislator of the majority party will be elected by a single non-Muslim voter and in the Hindu-majority provinces not a single legislator of the majority party will be elected by a Muslim or a Christian. And even such majority parties will not be the real rulers of the country. They will be only nominal rulers. Their "government" will be a sham, as the real power will remain in the hands of the Secretary of State, the Governor-General, the provincial Governors, and the foreign bureaucracy in general, known as the "steel-frame"—an expression coined by Mr. Lloyd George.

One of the essential conditions of democratic and responsible government is that what is to-day a minority party may become the majority party to-morrow by the conversion of its opponents to its way of thinking or owing to other causes. In this way all groups have an effective chance of giving the nation the benefit of their wisdom, capacity and public spirit. The changeability of the personnel of the ruling party gives the ruling majority for the time being a sense of its real responsibility to the nation, and exercises an effective check on arbitrary, irregular or corrupt methods and actions. But if a constitution makes any religious community as a community, the permanent ruling majority, there cannot be any democratic and responsible self-rule in the country, and all the advantages of such rule, pointed out above, are lost. The Communal Decision militates against the essential conditions of democratic and responsible government, and would, if given effect to, keep India deprived of all the advantages of such government.

Under a system of joint electorates, to whatever religious community or communities, classes, castes, interests or races the majority of the members of Central and provincial councils might belong, it could be said that people of all communities had helped to elect them and were responsible for choosing them. So the members also would feel their responsibility to and would and must try to promote the interests of all the people of all these groups. But under a system of separate electorates, in some cases the majority would be elected exclusively by the Hindus, or at any rate by non-Muslims and non-Christians, in some cases the majority would be elected by Muslims, and in one province (Bengal) the majority would be either Muslims or Muslims-*cum*-Europeans elected exclusively by their co-religionists or compatriots. Hence each province of India would be ruled *by* a foreign bureaucracy (for British *domination* would continue) *through* a majority of legislators for whose election people of all the groups would not be responsible and who would not feel responsible to and would not in consequence ordinarily try to promote the interests of all groups. This would be a highly undesirable state of things. It would not be self-rule or representative government. It would be rule by a bureaucracy, mostly British, in the name of a majority with whose election whole groups of people had nothing to do.

I do not lay stress on the fact that the Communal Decision has been grossly and insultingly unjust to the Hindus. For, even if it had been possible for it to be fair to the Hindus and all other communities, *separate* and *communal* and *class* electorates would have remained a great evil against which the nation must wage unrelenting war.

It has been necessary to explain the sinister significance of the Communal Decision in order to make it easy to understand why organized opposition to it is necessary.

THE MODERN REVIEW

NOVEMBER 1934

VOL. LVI., No. 5 WHOLE No. 335

SANTINIKETAN TODAY

BY C. F. ANDREWS

THIS week, which has been passed at the Poet's Asram, in Santiniketan and Surul, has given me one of my happiest experiences of India during this visit.

There is an often-repeated Sanskrit prayer ich runs,—"Lead me from the unreal to the al, from darkness to Light, from death to mortality." In Rabindranath Tagore's Asram constantly feels that this transformation is eady being accomplished. For here is the real ha both in the villages and among the students. ere is also an immortal spirit manifest in this ation of the Poet's genius.

The Poet himself, as he sits before sunrise his verandah, watching the first streaks of rn, is a symbol of ageless Youth. For he ains astonishingly young, and his massive ellectual powers show no sign of senile decay. ing his long life of three quarters of a tury, he has passed through adversities which uld have made the stoutest heart despair; but remains serene. The analogy with Goethe, he held his commanding intellect high above military violence of the Napoleonic Age, has en come back to my mind as I have sat by his e this week each early morning and felt the ness of his inner spirit.

Nearly twenty years ago, in Tokyo, when lie Pearson and I were with the Poet, we ched together a critical audience at the perial University remain blankly silent, as he nounced in unmeasured terms Militarism and tionalism,—the two idolatries, which were ong the beauty of the soul of Japan. In the rd-fever of those days, such a prophetic warn- was an act of daring which received the 'prophet's reward' of misunderstanding. Only in later years have the best minds in Japan rendered thanks to him for that brave and timely utterance. Tagore has never succumbed to the clamour of the post-war world, with its racialisms run mad. He has welcomed to his Asram men of every race and creed and given them a home in his heart.

During this visit, I found him turning away from his songs and music to plunge into the details of village reconstruction work carried on by the students of his Asram. This enterprise among the villagers is dearest of all to him. For the happiest years of his own life were intimately bound up with village Bengal, and he loves the patient, simple, kindly Bengali villager with a poet's love. When he was quite young, his father, Maharshi, wisely sent him away from crowded Calcutta to take charge of the family estate on the banks of the River Padma. There for nearly twenty years he lived among his own people and became their Poet. Now, in his old age, all his thoughts are bent towards them.

Santiniketan itself stands on rising ground with a sandy soil beneath. It is completely free from malaria, because it quickly drains off the monsoon rains and the anopheles mosquito cannot breed there. But the villages near at hand, made up of mud huts upon mud soil are decimated by the malarial pest.

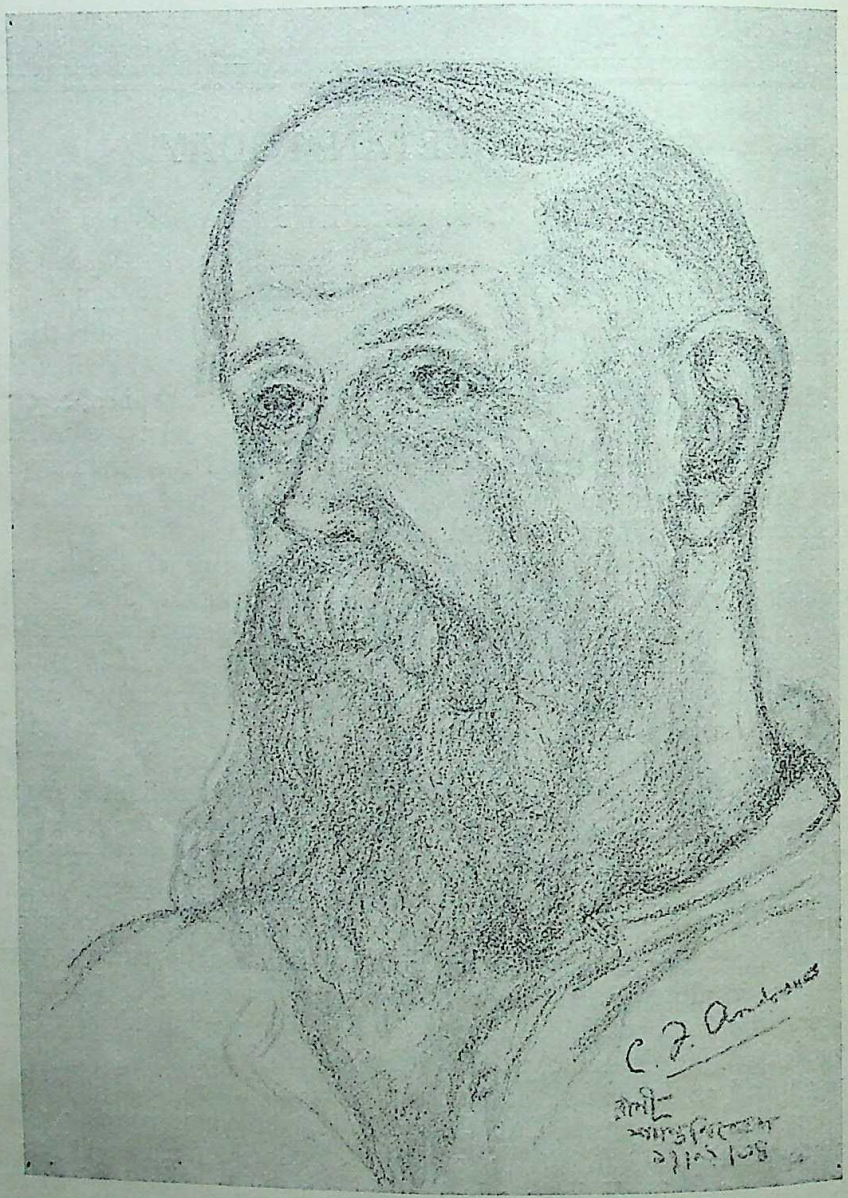
Into the work of removing this incubus from the land, Tagore has thrown all the indomitable energy of his tireless spirit. The battle has gone against him, times without number; but still he persists, calling into requisition every latest dis-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

covery of scientific skill and economic planning, in order to circumvent the terrible scourge. Some of the noblest of his workers have been driven from the field by repeated attacks of the disease, but still the gallant fight goes on. Only a few months ago, one of the most brilliant of his scientific workers, Dr. Harry Timbres, was so saturated with malaria and kala-azar that he nearly lost his life. On the very eve of an important scientific discovery, he was obliged to leave for America, where he is now writing his Report. The Society of Friends, at Philadelphia, had sent him out with his wife and children to take part in this heroic work, and they have helped him through his convalescence.

Sjt. Kalimohan Ghose and other workers, equally heroic, have suffered from the malarial scourge in the same way. Their names deserve equally to be remembered; for they have borne the burden and heat of the day. While the scientific workers have been carrying on their minute investigations, others have been raising the standards of village life and education, thus rebuilding an economic prosperity which may help the villager to resist the inroads of disease. They have covered large areas with a network of co-operative societies, which are endeavouring by mutual aid to clear away the jungle, fill up holes where stagnant water accumulates, and render first-aid during the malarial season. By these



Mr. C. F. Andrews
from a pencil sketch by Mrs. Rani Chanda

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

efforts, they have already brought about a marked improvement in the health and prosperity of the villages.

Year after year, Tagore himself on special occasions visits these areas and inspires the workers. In addition, they come to him almost daily,—as he sits in his chair on his verandah—seeking his advice and counsel. No problem is too small for him and they go away encouraged. It would be difficult to represent a better example of the true meeting of East and West than this work of recovery and peace.

Less than a hundred years ago, there was no malaria at all in these villages. People used to come out here by easy stages from disease-ridden Calcutta and to look upon this place as a health resort. Bungalows still remain where they lived in the cold weather. Now the malaria plague has stricken the whole area, and until it is removed nothing can be accomplished.

Thus the Asram at Santiniketan is not merely a home of music and song, but also a hive of industry. It is not self-centred and wrapt up in its own improvement, but it takes care of the poor and sick at its own gates. It is attempting to solve the wide problem, not only of Bengal, but of India and the Far East, by bringing back to these village populations renewed health, prosperity and peace. The words of the Psalm are becoming true:

"Then shall the Earth yield her increase, and God, even our own God, shall give us His blessing."

SUGGESTIONS FOR THE SOLUTION OF THE PROBLEM OF IRRIGATION IN BENGAL

By SUKUMAR RANJAN DAS, M. A., Ph. D.

IRRIGATION has been spoken of as the "wedding of the sunshine and the rain". It reclaims arid wastes, makes a country prosperous, causes the desert to blossom and overcomes the destructive effects of the parching winds, multiplies the productive capacity of soils, destroys insects and worms and ensures good health, lessens the dangers of floods, makes the farmer independent of rainfall and lastly creates wealth from water, sunshine and soil.

The province of Bengal for the purpose of a study of its irrigation problem should be divided into four areas, each with its own regional problem, that of the whole province coming in as a co-ordinating one. The usual process of thought on this subject runs in the old groove and classification is based upon the three types of activity, namely, those of irrigation proper, embankments, and drainage and navigation. This classification is wrong since it turns away thought from its proper channel and the consideration of the problem becomes clouded. The four areas of the province for this purpose are the following :

1. Western Bengal, *i. e.*, the area west of the Hooghly River (Bhagirathi) and south of the Ganges ; 2. Northern Bengal, the area north of the Ganges and Padma and west of the Brahmaputra and Assam ; 3. Eastern Bengal, South of Assam, east of the Brahmaputra, Jamuna and Gorai ; and 4. South Bengal, sometimes described as Central Bengal, east of the Bhagirathi, south of the Ganges and Padma and the west of Gorai.

Each of these tracts has its own peculiar conditions as regards soil, crops, health, drainage and navigation ; and, in spite of the diversity of these conditions, these tracts present on the whole a problem of the general level and slope of the province, its health and population, its productivity and its water-traffic.

The main features of the problem are therefore, the following :

Not only should water be brought down to the localities to be irrigated, but it must be done in a manner which will not interfere with the subsoil moisture for a considerable period during at least two crops a year in Western

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Bengal. As far as possible the silt-laden water of the rivers must be allowed to flow freely over countryside and in places where the existing embankments interfere with such overflow, adequate devices should be adopted to minimize the evil. Railway embankments should not only have more abundant openings but their position and construction should not direct the outflow of the flood in a particular channel or direction, but enable the whole country to be equally watered. Special precaution must also be taken so that subsoil moisture is retained as a result of the modification of the water-openings in these Railway embankments. The Railway embankments have proved a thorn in the sides of both the Government and the people. When they were constructed, and even now when Railway alignments are made, no proper thought was or is bestowed on this very important problem and the result has been disastrous. Similar remarks apply to road alignments both under provincial and district schemes. The reason lies in the want of knowledge of facts relating to natural solpes, drainage and requirements of the Province. Since there is no use crying over spilt milk, the people of the Province should unanimously ask for a revision of the policy, open discussion and compel the Government to take systematic and co-ordinated action which is scientifically and economically sound.

The problem of North Bengal is one of the clearance of dead and dying channels and treatment of Railway embankments ; those of Eastern Bengal is the fighting down of the water-hyacinth and regulation of natural flow. The problem of Central Bengal is rather intricate and difficult. The chief function here should be of restoring the old rivers and proper drainage of the country which, in the words of Sir William Wilcocks, is the ancient overflow irrigation of Bengal.

Regarding the difficulties created by the Railway embankments late Mr. Bepin Chandra Pal put in a novel suggestion that may also be seriously considered jointly by the railway authorities, the village communities on the railway lines, and the Government.* The railway lines in most parts of Bengal have an unbroken series of dug-out land where water is collected and confined during the rains which offers favourable breeding ground not only for the malaria parasites but also for the germs of cholera and other fatal diseases. It seems to the lay mind that it may not be very difficult, much less impossible, to convert these dug-out lands into regular canals which may serve partly as a source of water-supply for agricultural purposes as well as for fish-culture, yielding a very decent income to the railway authorities. There are canals of the same kind along some railway lines in England. It cannot be beyond the conception of modern engineering experts to plan a continuous system of this canal, along the entire railway line from Calcutta to Goalundo, for instance, or from Sealdah-Beliaghata to Port Canning or Diamond Harbour. The former may be connected with the Padma and the Gorai and the latter with the Matla and the Hooghly, with lock-gates at either end. The idea is fascinating to the lay mind and may be considered by engineering experts for what is worth.

Regarding surface drainage the first step in any scheme is the carrying out of a drainage survey and the construction of a drainage map noting therein if the old drainage channels can be traced at all. This has been done by the Irrigation Department of the Government. But it is a general complaint that the Irrigation Department is not so much active as the people would like it to be. However, the Department has at long last drawn up a map of the drainage of the province. This map will show the drainage lines and the public as well as the Government can so regulate the construction of railway lines and embankments as to keep the drainage of the province uninterfered. After this has been done, the ryot can be educated to construct shallow surface drains, provided with slightly raised grass borders so as to afford a free passage to the surplus water, and to assist absorption and prevent erosion.

Dr. C. A. Bentley has briefly summarized the measures to be adopted as follows

(1) Prohibition of further embankments ; (2) survey of existing embankments and their water-ways ; (3) survey of river-channels and

* *Vide* B. C. Pal's paper on "Rural Reconstruction in Bengal", *Bengal Co-Operative Journal*. Vol. XIII. No. 4.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

other water-courses ; (4) the mapping out of local spill areas and lines of drainage ; (5) improvement of existing water-channels ; (6) examination of the local water-table.

The evidence incriminating embankments as the cause both of agricultural decline and increased malaria is so overwhelming as to warrant immediate action to prohibit the construction of any new embankments. As the existing legislation cannot do this, emergency legislation will be necessary. Roads, railways and embankments are, no doubt, a necessity ; but their interests must be subordinated to those of agriculture and irrigation. However, schemes of irrigation always include improved communications and irrigation projects also require the embanking of the rivers in order that they may be adequately controlled and their waters properly utilized.

A complete record with full particulars of the various types of embankments that exist in Bengal is not available. But such a record is absolutely necessary, and it must include detailed information regarding the number, character and size of the water-ways, and the areas within the sphere of influence of any particular length of embankments. A preliminary survey must, therefore, be carried out in each district of all existing major embankments, including those for flood protection and for communications, such as, railways and roads. This preliminary survey may be done in one dry season. In this connection arises the question of the water-ways in embankments. Although bridges are always necessary where an embankment crosses a definite water-way, for the preservation of the embankment itself, the more or less haphazard provision of an extra number of culverts beyond those required for this purpose is an expedient of very doubtful value.

A survery of all existing water-courses in every district is also essential. Water-courses require to be examined from three points of few : (*i*) drainage, (*ii*) irrigation and (*iii*) communications. As regards drainage, this function of the water-courses is not generally overlooked. But it is necessary to emphasize the importance of water-courses from the point of view of irrigation and transportation, because these two important functions have been grievously neglected in the deltaic tracts of Bengal. Only second in importance to irrigation is the question of transportation. In every part of Bengal, the condition of the water-ways has an immense bearing on the question of malaria, and one of the best ways of keeping delta tracts healthy is to preserve the channels and use them both for irrigation and navigation. The malarious northern portion of Faridpur district, where there are roads and railways, exhibits a striking contrast with the healthy south-western area where the rivers and streams are very numerous and serve every village throughout the year and where all trade is carried by water.

The mapping out of local spill areas and lines of drainage is also of great importance in this connection. The question of spill areas and lines of drainage is bound up with the regime of delta channels ; and an adequate survey of the latter necessitates the careful examination of the former. Accurate information regarding this matter can only be obtained during the flood season. As in the case of the survey of embankments and minor water channels, this work can be best undertaken by the engineering staff of the district and local boards, assisted, where necessary, by officers of the Irrigation Department of the Government. The preparation of drainage maps on the lines suggested by the late Sir Edward Buck, K. C. S. I., showing by an arrow the main-drainage lines which carried the drainage water out of the village, should be taken up by every district as part of a general programme for the prevention of malaria and agricultural decline.

Next in importance is the survey of the water-table. It is probable that throughout the deltaic tracts great fluctuations take place in the height of the water-table at different seasons of the year. The yearly rise of the rivers and the rainfall are undoubtedly the factors exerting the greatest influence upon the height of the water-table. Annual and seasonal variations are governed by these two factors. It is conceivable that the presence of embankments may also in certain circumstances increase and in others reduce the mean height of the water-table very considerably, and modify the normal seasonal fluctuations in the one direction by

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

the shutting out of flood-water and in the other by the checking of the "run-off." According to Dr. C. A. Bentley the simplest method of making observations regarding the water-table is to record the height of the water in wells, and the corresponding level of the water in rivers and streams. In addition to taking water levels, investigations into the character of the ground-water will have to be undertaken as in Egypt.*

But the most important part of Irrigation in Bengal is the improvement of the existing water-channels. No really adequate scheme of improvement of the main channels can be undertaken in the absence of comprehensive surveys of the larger rivers and the smaller water-courses. Sir William Wilcocks entered into this aspect of the Irrigation Problem of Bengal with the authority of a world-renowned expert and the zeal of a true philanthropist. His suggestions on this question are bound to be studied with the utmost attention they deserve. On this subject his views are diametrically opposed to those of the Irrigation Department of the Government. He says that the Irrigation Department has tried its hand at every kind of project it could imagine except "overflow irrigation" which is the only one adapted to Bengal; the resulting poverty of the soil, congestion of rivers, and malaria have stalked the canals and banks, and the country is strewn to-day with the wrecks of useless and harmful works. According to Sir William Wilcocks† the works needed in Bengal were :

(1) The clearing out of the ancient "overflow canals" and the strengthening of their banks or the making of new banks with the excavated material.

(2) Providing the "overflow canals" with regulating heads and sluices and adding new sluices every year.

(3) Strengthening the river banks, providing paved water-ways in the banks for the feeding of the smaller canals; allowing breaches to be made annually at approved places in the banks when the fear of an inundation had passed; and allowing breaches to be made annually as a matter of course, at approved places in the banks where the country was high-lying and there was no danger at any time. As time went on, and the important canals had been provided for with masonry regulations, the secondary and tertiary canals would have been provided with suitable sluices. Such action would by this time have provided the country with perfect overflow-irrigation.

According to Sir William, in Central Bengal the most pressing work is the "overflow irrigation" of the poor sandy districts of Murshidabad, Nadia and Northern Faridpur. In these sandy tracts the old "overflow canals" have been in many places ploughed up and levelled and their traces have been destroyed; but there are still traces of old canals in many places and the best of these might be made a beginning with. When these sandy lands are high-lying and abandoned, powerful pumps might be put up and channels led off and experiments made in irrigation with the rich muddy waters of the early floods followed by the less muddy waters of the ordinary floods. Similar experiments might be made on the Bhagirathi near Berhampore.

Sir William Wilcocks has said that through the overflow canals alone will be done the fertilizing of the fields with rich muddy deposit of the river floods, and the more concentrated attack on malaria. These overflow canals have to be made serviceable once more, by having the channels cleared to full width and depth, and banks made with the earth taken out of the beds. This can be done gradually. After a couple of years of experiment, according to Sir William, it will be easy to establish some form of cheap serviceable temporary works which will hold their own for 50 years, if necessary. In digging down the centre lines of old canals between the Hooghly and the Damodar, the cleared channels should be allowed to go down the middle lines of the once magnificent water-way and they should be put in communication with every filthy pool and tank on either side which are there today.*

* For a detailed account of the above suggestions *vide Malaria and Agriculture* by Dr. C. A. Bentley, pp. 67-82.

When the flood irrigation has been secured Central and Western Bengal, it will be time think of reservoirs in the catchment basin the Damodar for the provision of October winter water to the lands between the modar and Hooghly in place of the water hich they have been deprived of.

Regarding the water control for agricul- al purposes the Royal Commission on riculture has very wisely recommended that cultivators who are the actual consumers the water, should be associated with the igation Department in the distribution of ter by means of Local Advisory Committee hich will study local needs and enquire into grievances of individual cultivators. These mmittees might also be utilized for the rpose of pushing on necessary agricultural rms or the introduction of new crops. Co-operative Organization Societies could started of the Maclegan type, or Irrigation nchayats could be organized, the work of management of the minor distributories ld be entrusted to them.*

In this connection it must be mentioned at the co-operative movement has done mense good to the people by tackling the igation problem with all the seriousness it serves. Some interesting schemes for irrigation co-operative principles have been tried in United Provinces. One of these is the nawar Co-operative Society for pumping out ter from the Gumti at a place in the nnao district for distribution in the fields members of two or three adjacent credit cieties. In this experimental undertaking Government of the United Provinces bore initial cost which was realized in instal- nts from the societies. The latter levied a te from each member according to the area rigated. The first irrigation society in Bengal as formed in the year 1916 at Khelar in the strict of Midnapore by the combined efforts members of two successful rural co-operative cieties in the area. The object of the society as to construct a dam across a natural stream d to distribute the water in the fields of the mbers by means of artificial channels. The t of the scheme was met from shares subscribed by the members. The society has removed a real want in the locality and is generally appreciated by its members. The formation of the co-operative irrigation societies has recently come to prominence owing to a strong demand for such societies in the district of Bankura in Bengal. With the single exception of an irrigation society at Khelar in the district of Midnapore organized in 1916 which, however, did not lead to any further movement in this direction, the beginnings of organized effort for the solution of the irrigation problem in Bengal date from the middle of the year 1919. In April 1919, a movement was started by the Agricultural Association in the district of Birbhum for the re-excavation of irrigation tanks and *bunds* in that district through the agency of the Branch Agricultural Associations. Over a hundred irrigation societies were formed in the district of Bankura for the execution of irrigation work entailing an expenditure of over 3 lakhs of rupees. For the success of the irrigation movement by co-operative means it is very desirable that the societies should be organized with great caution. In particular, it is very necessary that there should be a careful estimate of the cost in respect of the projects for which societies are organized. Owing to the absence of a whole time agricultural engineer, difficulties were previously experieneed in preparing careful estimates. The Government of Bengal have, however, appointed an Agricultural Engineer who is expected to help these societies with his expert advice, and hence it is probable that no more difficulties in this direction will crop in future. A Central Co-operative Irrigation Bank has been formed to finance the irrigation societies in Bankura. Regarding the good effect of these societies, Mr. G. S. Dutt, then Collector of Bankura, said: "Already the effect wrought by this co-operation has been almost magical. It would not be an exaggeration to say that the whole outlook before the people of the district has been altered in the short space of five months. Wherever an irrigation society has been formed disunion has given place to close and active co-operation, fatalism in despair and in action has given place to activity and the spirit of a new life." A concrete instance of

what co-operative irrigation can achieve in the domain of rural progress in the life of an agricultural community is the story of the wonders wrought by co-operative irrigation in America. Harold Powell, writing on co-operation in agriculture, dwells on the striking fact that in the United States of America in 1909, of the total irrigated area of the land, *viz.*, nearly 14 millions of acres, no less than one-third was under co-operative enterprises, and he goes on to say that "in no other industry in the United States is there so large a percentage of co-operation as in irrigation."

The problem of irrigation in the shape of drainage and waterways in Bengal is really not so difficult as it appears on the surface. But its solution, of course, presupposes a knowledge of the slopes and requirements of the Province. The ancient system of irrigation that obtained in Bengal about a century ago must be carefully studied and an attempt must be made to restore it, as far as possible, by the co-ordinated action of the Irrigation, Agricultural, Co-operative and Public Health Departments of the Government and the joint action of the people.

THE PROBLEM OF THE PACIFIC THROUGH ORIENTAL EYES

By TARAKNATH DAS, M. A., Ph. D.

V

RECENT developments in American-Japanese relations indicate that statesmen of Japan and the United States are anxious to solve American-Japanese problems amicably. Japanese statesmen as well as those of America realize that a war between these two nations would be a very costly affair and, whatever may be the outcome of the conflict—and there is every reason to think that there would be ultimate victory for the United States—would be a serious economic loss to both the nations. Viscount Ishii, in one of his recent interviews to the editor of *Japan Advertiser* (Tokio), an American paper, pointed out that a war between Japan and the United States would be profitable to those nations which are anxious to re-capture the markets from Japan and the United States in various parts of the world and specially in the orient. It is the opinion of many Japanese and American students of international affairs that economically and commercially the interests of Japan and the United States are not competitive, but supplementary; and therefore there is no serious economic rivalry between these two nations. Study of recent trade statistics will show that the United States of America is not suffering from Japanese trade competition. It is quite apparent that the nations that would be most benefited by a war between Japan and the United States would be Great Britain and Germany. Russia and China would also gain some benefit. This fact must not be ignored that a defeat of Japan would upset the balance of power in the Far East, which would not be to the advantage of the United States.

One may point out that when General Araki resigned the position of the Minister of War, it was the beginning of serious efforts on the part of Japan to settle all outstanding problems between Japan and the United States through negotiations. Recent exchange of notes between the American Secretary of State Mr. Hull and the Japanese Foreign Minister Mr. Hirota might be regarded as the beginning of such negotiations.

President Roosevelt by ordering that the United States Atlantic fleet, which was concentrated in the Pacific, would be removed from the Pacific, has given an indication that the United States has no aggressive intention towards Japan. This has resulted in change of attitude among the Japanese public. Furthermore, the signing of the Philippine Independence Bill has created a profound impression regarding American World Politics. The people of Asia, including the Japanese, realize that American policy is not to use the Philippines as the advance base for the establishment of an Oriental Empire as other nations have done. Japan welcomes this move more than any other nation; because it will eliminate one of the causes of possible friction between Japan and the United States. It is of great interest for all students of colonial administration that what is happening in the Philippines would have a tremendous effect in rousing national aspirations of other oriental peoples who are labouring under foreign domination. The Philippine Independence measure is not heartily

...ormed by European Powers which have ...ests in the orient; and some of them think ... this American measure would make the ...ippinoes as future prey of Japanese Impe... But it has been reported from ...on that the Japanese Ambassador ...shington two days after the passage of the ... Saito, two days after the passage of the ...ppine Independence Bill, took the initiative ... the Japanese Government would begin ...versations with the United States authorities, ...ding the steps which would guarantee ...pendence of the Philippines through inter... agreements among all the powers who ...ssess vital interests in the Pacific. If Japan can ...re equal opportunity for trade in the Philippines, ...would be more profitable for her to let the ...ippinoes govern their country, than attempting ...le them. This would remove some of the un...rable impressions regarding Japan's policies. ...fact, Philippine Independence will be an asset ... Japan. It may also be mentioned that ...rican domination over the Philippines is a ...ity from the standpoint of American ...national economic policies as well as military ...naval strategy. Mr. Bywater, the British naval ...ert, in his excellent work on the "Sea Power ...the Pacific" expressed the views of a ...guished American naval officer, on the ...ect in following words:

"The Philippines are there for Japan when... she likes to take, and nothing can prevent ...from seizing them when she feels disposed ...to so. As at present circumstanced, we could ...nothing whatever to protect them in time of ...If we were foolish enough to locate a fleet ...Manila the history of Port Arthur would ...at itself, with us in the rôle of the Russians. ...expeditionary force consisting of 18-knot ...ports, guarded by a squadron of reasonable ...gth, could leave the southern ports of Japan, ...Manila in three days and can make ...ute master of Luzon, before succor could ...e from Hawaii our nearest naval base which ...60 miles away."

The above opinion of an American naval ...rt, expressed in 1921, remains substantially ...today. While the United States is preparing ...abandon the Philippines, she is augmenting ...naval strength at Hawaii which is purely ...sive in character; and the Japanese cannot ...do not take exception to it.

Some of the European statesmen think that ...authorization of a vast naval programme, as ...as the programme of construction of ...anes by the United States, and the ...sed naval and military forces of Japan ...egarded as a prepartion towards an inevitable ...t between these two Pacific Powers. These ...n of the United States should carefully read ...ident Roosevelt's declaration in connection ...the signing of the recent Navy Bill. He ...s it clear that America was only adopting ...ey which she was free to adopt, but did not make the necessary appropriation for the whole of the naval building programme. Critics of America, specially British statesmen, should remember that America did not build up her navy to the limit of the Washington and London treaties, hoping that there will be some action regarding disarmament; and now she is taking steps to build her navy so that she will not be at a serious disadvantage when the next naval conference convenes in 1935-36. The critics of Japanese naval and military policy should also remember that if Russia is free to augment her land and air forces in the Far East which may threaten Japanese position in Manchuria and Korea and even Japan proper by air raids, and if Great Britain is free to develop the most formidable naval base at Singapore where the whole of the British fleet might be concentrated against Japan and her ever-growing over-sea-commerce, is it a crime for Japan to take the necessary steps for augmenting her naval and military strength without violating any of the existing treaties? Here I again wish to point out that there should not be double standards of international morality—one for the Asiatics and the other for the Western Powers.

One of the causes of the existing American-Japanese misunderstanding is that Japan has been refused immigration quota in the United States. This is bitterly resented by the Japanese people, as an expression of "racial discrimination". It has been recently reported that the U. S. Secretary of State, Mr. Hull, has expressed his willingness to extend "quota rights" regarding Japanese immigration, because by such a concession America would lose nothing, as only about one hundred Japanese would be allowed to immigrate into the United States annually. Such a solution would create better feeling between these two nations; and the most enlightened American public opinion is in favour of according equality to Japan in matters of immigration.

It has also been reported that the Japanese Government wishes to open negotiations with the United States regarding various outstanding problems, including the signing of a Non-agression Pact or a general arbitration treaty; and also to discuss mutual policies regarding the coming Washington Naval Conference of 1935-36. Here it may be said that the Japanese are afraid of any possibility of an Anglo-American Naval Pact or understanding before the next Washington Conference convenes in 1935-36.

It is quite clear that unless the United States Government takes an aggressively hostile stand against Japan in the Manchurian question, and if Japan does not take any further aggressive measure in China, there is some reason to think that the American and Japanese governments would consolidate their friendships of eighty years' standing; and there would be no American-Japanese War in the Pacific. Strengthening of

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

American-Japanese friendship does not mean that America would be less anxious to maintain her traditional friendship with China. American Pacific policy is to maintain her own rights in the Pacific region through cordial relations with all the great Powers in the Pacific. There are many reasons to think that Japanese statesmen, for the promotion of best interests of Japan, would do their best to come to an understanding with America on all outstanding questions. It is quite possible that they would succeed in their efforts; because there is no economic rivalry between Japan and the United States. The real economic rivalry in the orient is between Japan and Great Britain; and there is serious difference of opinion between British and American economic policies all over the world.

VI

Since the resumption of diplomatic relations between Soviet Russia and the United States, there is much talk of a possiblity of a Russo-Japanese war, in which Russia might receive financial and moral support from the United States as well as Britain against Japan. A section of British politicians may be favourable to a Russo-Japanese war, because it would weaken Britain's two rivals in Asia. But it may be safely asserted that the present government of the United States would not act in such a way which may encourage a war between Japan and Russia. It is to be hoped confidently that the United States Government would use its influence and pressure for peaceful solution of a possible Russo-Japanese dispute.

In spite of much talk of the Soviet leaders that they are prepared to meet Japanese invasion, Russia's industrial and economic condition, her external relations in Europe are in such a condition that no sane Russian statesman would court a war with Japan. A Russian defeat in a war would result in a possible Revolution and the present rulers are not likely to take chances by provoking a war with Japan. Russian transporation system is far from being in a fit condition to meet the demands that will be made on it in case of a war in the Far East. Although Russia has made great progress in improving the communication system in the Far East, during the last two years, it is far from satisfactory. Russia's diplomatic relations with various European nations have improved considerably, through the signing of non-aggression. pacts with France, Poland, Roumania, Czechoslovakia, Italy and the Baltic States. However, the advent of Hitler regime in Germany has practically dislocated German-Russian relations. There are rumours that although Hitler regime is anti-Asiatic in its outlook, it would rather support Japan against Russia, in case of a Russo-Japanese War; because anything that will weaken Russia would weaken communism and make it easier for Germany to carry out her programme of eastward expansion as expounded by Herr Rosenberg and to bring about the fulfilment of the idea of New Middle Europe, under German hegemony. The Japanese are willing to promote German-Japanese friendship; but they are quite aware of the fact that German motive behind supposed friendship for Japan is nothing more than what was the policy of Germany under Kaiser Wilhelm II, who favoured a Russo-Japanese war to strengthen German position in Europe. Furthermore, the Japanese are also aware of the fact that Germans are most anxious to aid the Chinese in developing steel industry which may help China in her efforts to arm herself, and there are German officers who are in the employ of the Chinese Government to reorganize Chinese army. Japan would not depend upon German support and attack Russia; because any attack on Russia by Japan would alienate French support to Japan.

It may be said that Japan has no real fear of Russia commercially as well as militarily. (Japan does not under-estimate Soviet Russia's military power.) Unless Russia goes against Japan, and decides to co-operate with China actively against Japan, there will be no Russo-Japanese War; because Japan would not force a war on Russia.

Japan depends considerably upon French support in international politics. It is reported that a French syndicate would invest a very large sum, to develop Manchukuo, as a joint enterprise of Japan and France. It is also a well-known fact that Japan and France are bound by treaty to respect their mutual interest in the Far East. France does not wish that Russia be involved in a war with Japan; because such a war will be of great disadvantage to France both in Europe and Asia. A Russo-Japanese war may develop into another World War and France has nothing to gain through such a development in world politics. Therefore it is to be hoped that through the moderating influence of the United States of America and France and possibly Italy which is in very close relations with Soviet Russia, there would be no war between Japan and Russia.

However, one cannot ignore, the war-like preparations in the Far East. According to the well-informed special correspondent of London *Times*, "the total strength of the Far Eastern Army of Russia including some 10,000 cavalry is about 150,000 men with something over 200 heavy guns, about 500 field guns, a similar number of light mortars, 300-400 light and a few heavy tanks, 4000-5000 machine guns and 300-400 aeroplanes. There are besides a division of O. G. P. U.'s special troops near the Manchurian frontier and at least one division of cavalry in Outer Mongolia trained on the Soviet model and at the disposal of the Soviet. An aeroplane base has been organized at Irkutsk, and chemical works for producing poison-gas at Kemerov.

VII

Prof. Tyler Dennet of Princeton University, ...f. George Washington Hall (generally known ...Upton Close) and many American authorities ...ld that the abrogation of the Anglo-Japanese ...ance in 1921, at the Washington Conference ...s really a parting of ways between Japan ...d Britain. Today there is no part of the ...rld especially in the orient, where Japanese ...d British economic and commercial interests ...not conflict.

As early as 1915 and 1916, the Japanese and ...e British began to suspect each other regarding ...ir policies in the Far East. Japan was ...termined that Britain must not acquire any ...onopoly in China even as a leasehold. This ...as one of the real reasons for the so-called ...Twenty-one Demands" of Japan, by which, ...among other things, Japan forced China to agree that she would lease, cede or sell any of Chinese territories or ports or islands to any third Power. The Japanese are fully convinced that during and after the Washington Conference, Britain followed a policy which was detrimental to Japanese interests. The Japanese feel that the Lytton Commission was engineered by Britain to bring about moral isolation of Japan in the field of diplomacy. The Japanese are quite outspoken that the Singapore Naval Base is a direct menace to Japan.

In the meantime, Japanese economic competition, in spite of the existing Imperial Preference, has undermined British commerce in all parts of the world, even in British colonies, dominions and in India. Today the nature of economic war between Britain and Japan is of much more serious character than it was between Germany and Britain before the World War. The failure of recent trade-negotiations between Japanese delegates and Lancashire business men is an indication of the depth of the conflict.

It is generally expected that many of the Western nations which are also suffering from Japanese competition would blame Japan and side with Great Britain. But is Japan really to blame for her marvellous economic and industrial developments? In this connection, might not Japan ask the Italian people if they are to blame because they have developed the fastest and best passenger service between the Orient and Europe, which is hurting British shipping?

What was the cause of the failure of the recent trade-talk between Japan and Great Britain? British business men demanded of Japanese delegates that Japan and Great Britain should agree to divide up markets of the whole world amongst themselves regarding certain class of goods. The Japanese on principle suggested that they preferred "equal opportunity and no commercial discrimination" as their policy. However, they were willing to come to an agreement with Great Britain regarding markets of Great Britain proper and her crown colonies and not regarding her dominions and markets of other nations. I believe that no fair-minded person would take exception to Japanese stand.

This commercial rivalry between Britain and Japan is a real menace and gives rise to a belief that if these two nations fail to adjust their differences, there may be a war in the Pacific. British naval experts know that Japan can take Hongkong without much difficulty; and therefore Great Britain has developed the Singapore naval base as the most formidable naval establishment in the world. According to recent reports published in the *Daily Telegraph* (London) and *Chicago Tribune* and some German papers, it is claimed that new fortifications of Singapore are impregnable. In addition to these reports, one should take into consideration

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

the recent British Empire naval conference held at Singapore, the details of which have been very closely guarded. However, it may be safely asserted that Singapore naval base is not directed primarily against China and Russia whose naval strength are in no way dangerous to Britain. Obviously, Britain has no designs against the United States in the Pacific. There is no doubt that Japan is the real objective.

It is also reported that the Governments of Holland and Great Britain have secret agreements so that the British fleet and Air Forces would use Dutch territory in the East Indies, to prevent Japan from getting hold of Java and other islands containing vast oil resources. Of course, this report has been denied; but one cannot take the denial very seriously. If the Dutch have no understanding with Britain regarding the defence of the Dutch East Indies, then it would not have been possible for the Dutch government to reduce its naval strength now when the situation in the Pacific is so uncertain. The understanding between Holland and Great Britain may be something like a secret offensive and defensive alliance.

One should know that Great Britain would never go to a war with a first class power and in the orient, unless she was sure that she would be able to utilize the resources, man-power and strategic position in India. Just as a few years before the outbreak of the World War, Britain made a great concession to the Boers, granting them full self-government, with the understanding and expectation that a contented Boer people in case of a war against Britain would not make a common cause with Germans in Africa, similarly Britain is going to give some concessions to the Indian moderates and Princes who would be willing to stand by Great Britain against Japan, as Gandhi and others did during the World War. The programme of separation of Burma from India, as advocated by the British Government, is more for military and strategic reasons. Burma possesses valuable oil and other mineral resources which must be reserved for British exploitation. Furthermore, Burma can serve as an important supporting base to British naval base at Singapore. One may also point out that recently British forces have penetrated into Yunan through Burma. Furthermore, Burma may serve as an excellent base of operation against Siam, in case the latter country decides to support Japan.

There are more reasons than one to think that if Japan and Great Britain fail to solve their differences, during the coming Washington Conference of 1935-36, then the present Anglo-Japanese rivalry may lead to a war in the Pacific. Although I may be mistaken, but it is my conviction that when the Japanese naval and military authorities were demanding, a few months ago, that Japan for her self-defence should have a strong navy and army, they were possibly thinking more of the possibility of an Anglo-Japanese conflict, than an American-Japanese war or a Russo-Japanese war.

It may be safely predicted that in spite of great resources of the British Empire and superior navy, Britain would not pick up a quarrel with Japan, unless she was sure of getting American and Chinese support. It is generally regarded as certain that China—the Cantonese faction—would range against Japan in favour of Great Britain. Therefore, the future of Anglo-Japanese relations largely remains in the hands of the United States of America, and she, I hope, will use her policy of benevolent attitude in solving the increasing difficulty between these two nations.

Furthermore, developments in European politics will have a determined effect in Britain's attitude towards Japan. Britain must protect her supremacy in the Mediterranean. She cannot fight Japan and maintain her position in the Mediterranean, unless she can get an ally in the Mediterranean. Many think that Italy is committed to aid Britain in the Mediterranean but nothing definite is known about it. However, the possible development of a German navy with the pocket-battleships, increase of Russian naval power in the Baltic and the Black Seas and the programme of the development of Turkish navy which, according to the report of *Chicago Tribune* (Paris) of March 24, 1934, has been entrusted to Japan, and increase of Spanish navy in the Mediterranean may complicate the existing situation. In this connection, Italy becomes a vital factor in any possible development in Anglo-Japanese relations.

An Anglo-Japanese war is not inevitable, although it is probable. It can be and should be averted by statesmanship. It has been reported that sober British statesmen are urging British business men to settle economic difficulties with Japan through negotiations and co-operation. There is every reason to believe that another Anglo-Japanese conference will soon be held to solve the problems of trade competition. Japanese statesmen, specially the Japanese Foreign Minister, Mr. Hirota, have made it clear that Japan would do her best to maintain friendship with Britain.

VIII

Japan has everything to gain from avoiding a war and much to lose in case of a defeat. This is fully realized by Japanese statesmen who are carrying on a policy which would protect Japan from a diplomatic military and naval defeat. However, there are ultra-nationalists and militarists in Japan who are short-sighted and often talk of war. They are apt to overestimate Japanese strength and therefore think that Japan can, without difficulty. defeat Russia, America or Great Britain. They generally forget that in case of a war against Japan, Japan may be

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

completely isolated as was the case with the German Empire, during the World War. They also forget that Japan's defensive position is not impregnable.

In 1921, Mr. Nakamura, a Japanese writer of note, wrote about the difficulties of Japanese national defence in the following way:

"Japanese control over the Sea of Japan and the Yellow Sea may not protect her from blockade. At no period of the World War did Germany lose command of the Heligoland Bight or of the Baltic, and she was therefore able to guard her coastline from naval attack. But this did not save her from the fatal pressure of the blockade, the operation of which was the real cause of her defeat. Nor, in our case, would the undisputed command of the Sea of Japan protect us from blockade. It would be within the power of a superior naval opponent to strangle our commerce and cut off our supplies without sending a single ship into the Sea of Japan. The majority of the merchant ships entering Japanese ports traverse certain steamer lanes which the enemy would have no difficulty in closing. Having established a blockade, he would certainly endeavour to undermine our resistance by attacking exposed ports of the coast with battleships, submarines and aircrafts. Many of our great commercial and naval harbours would be open to attack and the enemy, being well-informed as to our resources, would know in what direction to concentrate his efforts. On the Pacific Coast the capital of Tokyo, the huge *entrepot* of Yakohama, would lie open to the visitations of hostile flying machines. Osaka, the heart of our national industry, would not be beyond any enemy's reach, and the swarming industrial lives of Kyushu would present him with invulnerable targets. Our coast defences, submarines and torpedo boats might be able to prevent the near approach of hostile armourclads; but they could do nothing against an invading air-fleet. The sole defence against this form of attack is a battle-fleet of sufficient power to sweep outer seas and make it impossible for the enemy to send out his air-craft carrying vessels. Sea-power and air-power have already become synonymous terms; but above and beyond all we must provide ourselves with an adequate battle fleet, if the safety of the Empire is to be assured." Bywater: *Sea Power in the Pacific*, p. 305-306.

The above statement of a Japanese gives a warning to Japan; and it also explains which might be the policy of Japan regarding her future naval defence. Japanese jingoes should know this fact that if ever the combined fleet of Britain and the United States, supported by China, Russia and other powers, attack Japan, then Japan's very existence will be threatened. Japan, therefore, has much to fear from a possible diplomatic defeat.

A British naval expert in 1921 held that there was a possibility of a war between Japan and the United States and sounded the following warning to Japan:

"To foreign observers it seems that Japan has everything to lose and nothing to gain by a policy of aggressiveness. By sheer hard work and indomitable courage she has triumphed over the handicap of scanty natural resources and raised herself to a commanding position in the world. The problem of overpopulation has been solved in part by annexation of Korea and Formosa and of late years a new outlet, practically limitless in possibilities, has been found in China. It is here if anywhere that Japan may realize her true destiny, and it is there her claims for priority are less open to challenge than in any other quarter. There is plenty of resources in China for all legitimate interests, if Japan would bring herself to discard the methods she has borrowed from Prussia, in favour of a policy of conciliation and genuine friendship with the Chinese people, she would eventually acquire in that quarter a predominance which could never be seriously contested. It remains to be seen whether her rulers and statesmen have sufficient acumen to seize the unique opportunity thus presented to them instead of hazarding the fortunes of Dai Nippon in a militant gamble more reckless even than that which causes the ruin of the German Empire"—Bywater: *Sea Power in the Pacific*, pp. 318-319.

What Mr. Bywater had to say in 1921 may be well applied today in case of a war in the Pacific in which Japan may be involved. Japan has everything to gain by avoiding a war. It may be said that a victory in the battle-field or a naval war will not be sufficient. She may face a concert of Western powers and a diplomatic defeat which may be disastrous. *Furthermore, if Japan loses she will not only endanger her own destiny, but her defeat by any combination of Western powers will be a crushing blow to the cause of Asian Independence. It is my earnest hope that the Japanese people will win greater victory by following the path of conciliation and peace.*

IX

I have already mentioned that every nation which has commerce in the Pacific and plays an important part in world politics is directly or indirectly involved in all problems of the Pacific. Italy as a great Power is directly interested in all the developments of events in the Pacific. Furthermore, Signor Mussolini, as the head of the Italian Government, has made it clear in his two recent speeches and one special article that Italy has great interest in cultural and commercial expansion in the orient as a whole.

During recent years, Italy has been taking special interest in Chinese affairs. Italy was a party in suppressing the Boxer Rebellion and thus extracted an indemnity from China.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

However, on October 1, 1925, Italian and Chinese governments signed an agreement regarding the Boxer indemnity fund due to Italy and made arrangements that certain part of this amount should be spent by a Sino-Italian Commission "for educational, philanthropic works in China as well as enterprises and works of public utility, the materials for which shall be bought in Italy." This may be regarded as the beginning of farsighted cultural co-operation and commercial expansion of Italy in China.

On November 27, 1928, Italy and China signed a new treaty of amity and commerce which went into effect on May 21, 1929, upon the signature of the protocol of ratification. By this treaty it was agreed to accord *favoured nation treatment* to each other's citizens regarding customs and all related matters. The article of this agreement is very significant: "The nationals of each of the two High Contracting Parties shall be subject, in the territory of the other, to the laws and jurisdiction of the law courts of that Party to which they shall have free and easy access for the enforcement and defence of their rights."

This means that the Italian Government showed its willingness to concede to the demands of the Chinese regarding the abolition of "extra-territoriality", provided the Chinese Government could make an arrangement with all other Treaty Powers on the subject. The Chinese government made it clear that "Italian subjects shall be amenable to Chinese laws and jurisdiction from the date to be fixed by China, after having come to an agreement for the abolition of extra-territoriality with all the Powers, signatory to the Washington Treaties, it being understood that such a date shall be applicable to all such Powers."

This makes it clear that Italy is not opposed to abolition of "extra-territoriality" in China. This fact has brought about much cordiality between Italian and Chinese governments. Recently, several Chinese missions—educational, financial as well as military—have visited Rome and received cordial attention of Italian authorities. The Italian Government has lent the services of one of the best Italian airmen, Col. Bernardi, who is now in China to help the Chinese authorities in the field of consolidating and improving Chinese Air Service. Slowly but surely, Italy is spreading her influence in China; and Italian policy is definitely in favour of a free and independent China, extending equal opportunity to all nations for trade and commerce.

In the past Italian relations with Japan were most cordial; because Italy and Japan had practically the same problems—problems of population, raw materials, etc.,—to face. It is my impression, which may not be correct, that during the last few months, Italian press and public men have given expressions which have not been entirely welcome by the Japanese people as well as the government. Some people think that this is due to the fact that Japanese commercial expansion has invaded such regions—even in Africa and the Near East—where Italy held a special position. Furthermore, Italian foreign policy in Europe is at the present to be on very cordial terms with Great Britain and Russia, the two nations which are opposed to Japanese economic and political ascendancy in the Far East. Italy, to be sure, has no reason to be antagonistic to Japan and I am inclined to think that the two governments will maintain cordial relations. Yet Italian authorities, who are duty-bound to promote Italian national interests, may regard that intimate relations with Great Britain, Russia and China may be more valuable to Italy than the goodwill of a nation which is competing with Italy in international trade. However, it should not be overlooked by Italian statesmen that Japanese friendship is not a negligible factor in the world politics of today or tomorrow.

Signor Mussolini has repeatedly said that Italy's mission is to promote better understanding between the East and the West. In carrying out this mission, one of the most important factors is to do all that is possible to bring about better understanding between China and Japan, so that the most important causes of friction and possible conflict in the Far East may be removed. Secondly, one may expect that Signor Mussolini, with his personal influence with the Soviet Russian leaders, may aid the cause of better understanding between Japan and Russia. Thirdly, the Italian people and leaders should realize that *every far-sighted Asian is an advocate of Asian independence and racial equality before law.* There are Western Powers which are interested in keeping hundreds of millions of Asian people in subjection, which is a menace to the cause of World Peace. When the Japanese advocate "Asia for the Asiatics," they do not advocate that the Asian people should combine to fight the Western nations. They advocate that the Asian people should do their best to defend their homelands from foreign invaders; they must free themselves from the yoke of alien oppressors. Some of the Western journalists write about "Asiatic Menace", under the leadership of Japan. This is the product of "fear"—unfounded fear. Western Powers are quite willing to use Asian man-power and resources against themselves as they did in the World War; but they are mortally afraid of reawkening of Asia which may lead to loss of unjust privileges and profit of Western nations now dominating over certain parts of Asia. The real situation in Asia is this: there is a serious and growing opposition to European domination in Asia; but this does not mean that Asia is opposed to co-operation with those of European Powers which have no political control over Asian countries. If it is the mission of the Italian people to bring the East and the West

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

mutual understanding, then every precaution should be taken against spreading any racial hatred against the people of Asia, especially against the Japanese.

In conclusion, I wish to emphasize that behind the so-called problem of the Pacific, there is the problem of India. In the most important drama of the twentieth century—in the struggle for Asian Independence as a whole—India will play the most important part. Awakened India will in course of time, recover her birthright of freedom and it will be the most important factor in all problems of the Pacific and World Politics.

Those who believe in the doctrine of co-operation between the East and the West—the Mussolini Doctrine—through the influence of Rome, should not forget that Italy cannot afford to be merely pro-Chinese or pro-Indian. Italy, maintaining friendly relations with India, Siam, China, Japan and other Asiatic countries, and at the same time maintaining her position as a Great Power in Europe, will be able to serve her enlightened interest most effectively and contribute her share towards peaceful solution of the Problem of the Pacific.

The late Prof. Dr. Paul S. Reinsch, former United States Minister to China, speaking of the American-Chinese relations, wrote: "By doing things in themselves worthwhile, Americans will contribute most to the true liberation of the Chinese." This motto may serve as a very sound guide to all Western Powers in their relations with the oriental peoples.

Rome, Italy
April 10, 1934.

PROGRESS AND PRECEDENCE IN A CENTURY OF PROGRESS EXPOSITION

By IDA M. GURWELL

IRREGULAR things are always happening in America. For the first time in history a great World's Fair is playing a return engagement.

The public said it couldn't be done, but the Administrators of the Century of Progress Exposition did it.

Clicking daily through the turnstiles of the gates stationed at intervals along a three mile front, come thousands of incredulous spectators. Some, this is the Chicago World's Fair but made over throughout. Even the sky line has been somewhat changed, and with the pronounced improvement in colour treatment, it has been possible to emphasize enchanting vistas that were not present before. Students of lighting and colour have been at work merging light and paint, and have achieved brilliant colour results worked out in satisfying combinations. The nights this year have unforgettable loveliness.

The World's Fair, Garagantuan in size, was conceived in a world-wide depression and born at the darkest hour. There was no illusion in June, 1934, about what must be done with the year old Exposition! Mistakes had been made. Capable nurses in charge knew that if the Fair was to live healthily through its second summer, they dare not feed it more obscenity; if poisons had been stored in the young exposition's system they must be speedily eliminated. True sufficient lime, in the form of cash, had been stored away to save the year old from rickets, and there were now no symptoms of malnutrition, a staff of Specialists had provided for this, but there were times, many of them, when it took courage to fight the ailments that a great enterprise is heir to, but those in charge of the precious bundle had something beside theory; 1933 had dealt them a hand of actual experience, so we find not only a well cared for investment but a prize winning Exposition. A stupendous achievement! The Officials of the Century of Progress Exposition have a right to feel proud.

The financial backers who did not have "cold feet," at least found the depression relentless and chilling. Some of them said, "Foolhardy! We must postpone this until better times." But the majority said, "The Century of Progress must open, and on schedule." Open it did.

The world should know more about the financing of this Exposition. It has not been easy. When we realize that not one cent of public funds of any sort, no donations, no loans or subsidies from any tax-paying body, Federal, State, county or municipal, has been asked or received for either the 1933 or 1934 Chicago World's Fair, this makes the Century of Progress unique among all major Expositions.

The Fair is gathering momentum; the success of the first year gave encouragement. There is little ballyhoo. The World knows the Fair is on, and that a choice of exhibits both old and new

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

are there, and the attitude seems to be;—if *one* does not see it, it is *his* misfortune. There is a demand. This year at opening there was an advance sale of 4,000,000 tickets as against an advance sale last year of 2,300,000. Perhaps Americans have a little more money this summer, and perhaps one of the greatest reasons for the second year's success is that thousands of Americans will visit the Fair in lieu of a journey abroad because of the rate of exchange and unsettled conditions there.

How could the administrators of this vast project keep both exhibitors and public interested? How could the Exposition hope to pay out?

There is no precedent. Scarcely a person living who had been associated with the World's Columbian Exposition of forty years ago. The value of their experience was available only in old newspapers. It was suggested at a reunion of Press men that if the Century of Progress Exposition could be *immediately* repeated, a great contribution would be made to the science of expositional art, without breaking its continuity.

But such a gigantic enterprise must have tangible reasons for continuing, expressed in cold figures, before staking other added millions to an already colossal venture?

The Officials had facts gathered from 1933 and they started to compile them: They knew that seventy per cent. of the exhibitors who participated in the 1933 Fair had found it so profitable that they considered it a great waste of money and opportunity to quit when they had just started. A year was not enough. The seed had been sown, one crop had been reaped, they were anxious to harvest a second one.

$4,783,839 had been expended in 1933, in operating and maintaining the Fair for 170 days. The cost of operation by Governments, concessionaires, and exhibiting corporations probably exceeded those of the exposition, together they totalled $10,000,000.

The World's Fair attendance figure for 1933 was 22,565,859, the greatest number of visitors that ever attended an American Exposition.

More than $37,270,000 was spent by visitors for gate and concession admissions. $1.17 was the average expenditure per person, exclusive of the fifty-cent gate admission.

The bonded indebtedness of the exposition amounted to $10,000,000. Fifty per cent of that amount was paid to bondholders on November 13, 1933. The first time in history that so large a percentage of the bonded indebtedness of any exposition has ever been paid. Officials of the Fair after payment of all floating indebtedness had on hand $1,200,000 cash and current receivables. Surely a nice nest egg. Young 1934 Exposition was now assured the proper care through what might have been otherwise, a "colicy" summer.

There had been an insistent demand on the part of Chicago, after the Dress Rehearsal of 1933, for the show to continue. Last year's performance had been the salvation of business in this great industrial centre. National and International Conventions had been housed in Chicago by the score; Hotels that had previously had rooms closed save for an occasional dusting, were now filled to overflowing. The Fair was a good thing for Chicago, and Chicago sat up on its hind legs and demanded more Fair. Visitors from every part of the country wrote thousands of letters asking that the Century of Progress Exposition might continue, that they might have an opportunity to see the Fair; in many instances they expressed their convictions that they might have more money to spend in 1934.

An analysis shows that exhibitors wanted the Fair. The public was not so particular, but they could be depended on to come,—mob psychology would see to that: Chicago was clamouring for it; and the officials had already made a successful investment and wanted to continue. They knew facts. If only 13,000,000 paid admissions were rung up at the gates during the Fair of 1934, bills could be paid, and if by chance the admission equalled that of the first summer, in addition to the receipted bills, they would have a profit of many millions.

It would be difficult to estimate the value of the Century of Progress Exposition to the people of the world. Figures have not been compiled for 1934. It is estimated that in 1933, railroads brought 4,000,000 guests to the Fair. Motor buses brought an additional million. Automobiles, shiny and otherwise, loaded human freight to the tune of another 4,000,000, they occupied acres of parking space at the very gates, and spilled their dusty, carnival-spirited cargo into the grounds.

The exposition of 1934 is an improvement on its predecessor. There is more that is worth while to be seen. The second year reflects efficiency and finish in management too; in short it is a bigger and better Fair.

One hears on every side statements which while not *practical*, are *complimentary*; "This exposition should be made a permanent thing." This idea in the minds of the people is the highest tribute to the excellence of the achievement.

THE VANISHING AMERICAN

By PASUPULETI GOPALA KRISHNAYYA, B.A. (Madras),
M.A., M. SC. (Columbia), PH. D. (New York)

"There are yet many thousands of Red Indians. The tribes, according to government estimate, are increasing in numbers, and yet the full-blood is everywhere becoming rare. "Civilization" has been fatal to the red man. In its environs he loses his vigor, languishes and falls an easy prey to its diseases. The frontier trading posts, where the Red Indian carried his furs and buffalo robes have passed; with them his source of furs and robes. Confined to "reservations" he must now trade with more or less honest merchants, paying for his purchases, with government money given him by the United States government or dollars obtained through the occasional sale of a horse. This dole, or annuity system, that seemed at the time of its establishment to be the best way to help the Red Indian, has proved itself a curse for it has robbed him of all initiative; and in maintaining it, the government is perpetuating pauperism. With this dole barely sufficient to keep body and soul together the Red Indian (and all his children-ons) become more and more dependent, and more and less able to care for himself—and less worthy. The old Red Indian, the warrior of his generation, presents no problem. He must be cared for until he died. But the young tribesmen, many of whom have gone to government schools, offer a grave problem, one that seems now to defy solution."

—FRANK B. LINDERMAN

NEW York is a world by itself. One can find in it practically all nationalities of the world. I had stayed in this metropolis for over a year and brushed shoulders with boys representatives of nearly all the countries in the world, except the real native of America, the so-called Red Indian. In the grand New York Zoo—the greatest in the world—they have a specimen of the bison that once roamed thousands over the plains of the New World, alas! extinct and to be seen only in reservations fostered by the government of the United States. There is yet another species which the government keeps in reservations and which has also vanished and which deserves a place in the same Zoo and that is the Red Indian—once the proud lord and master of these United States and now the little said of him better.

As I began, after a year's stay in this greatest city of the world, one evening I was speeding in the "Inter-Borough" on the crowded and fast New York sub-way, hanging by the strap when an individual approached me and congratulated me thus, "You are an Indian, arn't you?" I nodded and querried whether he was an Indian, because he looked to me as if he could be a lad from Bengal. He said, "Yes". I next asked from what part of India he hailed from? He replied, "No, I don't come from Indianna. I come from Oklahoma". By this time I understood my mistake and replied, "Look here. I am the true Indian and you are the false Indian". He flared up and said, "What do you mean?" I tried to explain and the fellow was ignorant that there was a great and glorious country called India, thousands of miles away from his, and by this time we had come to "42nd Street Broadway" where I had to get down and his parting shot at me was, "Hey, you are kidding me. You are an Inolian (he meant Red Indian) all right."

Since his advent in North America the European has met scores of tribes of people whom he called "Indians". He has fought with them, lived with them and yet he has never known them. Long association, even intermarriage, has failed to bring natural understanding. Unable to think alike the two races have remained distinctly apart, and yet each has influenced the other. Both recognize the bewildering barrier that separates them. Both understand that because of it the offspring of miscegnation are, at birth, expatriated from either. Mixed bloods, being neither red nor white, have bridged no difference between the races; on the contrary, they have seemed to emphasize them. Indeed there has been so little inter-breeding between the races that the theory of final assimilation seems to me absurd. The red race in North America, leaving a little of its blood to remind a few succeeding generations of white men that it once existed, will pass; in reality it has already passed. And what do we know about it? Almost nothing.

Every imaginable trait has been ascribed to the Red Indian. Many a truth concerning his customs, traditions and religious beliefs have been recorded; and not once has he protested. The old time Red Indian was, to the end, profoundly indifferent to the white man's estimate of him. He was a poor teacher, a difficult man to know. The young Red Indians know next to nothing about their people, their ancient customs, or traditions, and now it is too late to learn. The change from a normal to an uncertain and unnatural existence came so suddenly to the Red Indian that his customs and traditions could not flourish and they all but perished with the bison in the early eighties. One is startled that so brief a time could wipe away traditions ages old, and after contemplation

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

wonders how much truth we know of ancient peoples.

His early experiences with the white men may have for ever estranged the Red Indian, since here, for the most part, the white man's record is bad. Anyway the Red Indian never had a fair opportunity to judge the white race justly. His estimate of it was formed by his association with white men he knew best, and unfortunately most of these were far from being fair representatives. Many of them were lawless men who had been banished from white society. Even in his dealing with the government of the United States he was sometimes cheated, and nearly always the treaties which he signed in good faith were broken by whites whose violations were upheld by the Government itself, so that long ago the Red Indian became distrustful of all white men.

The Red Indians were never saints. On the contrary they have many times qualified as nearly perfect devils. Their misdeeds have been told and retold ever since they first began to resent the white man's invasion of their land. But there is really another picture which has not been told. The Red Indian has a finer side. Any alleged wrongs he perpetuated are due to the fact that he was like an animal trapped and cornered. Here was the white man with his gun trying to deprive him of his land and possessions and the only weapon he had was the bow and arrow. The Red Indian, to his eternal credit, put up an heroic fight with such a handicap and let it be said that in the circumstances, he did behave better than his Christian invokers. With the provocation he had, his behaviour has been intensely humane.

The Red Indian is a tolerant man, a believer in one God. He has never been known to quarrel with his fellows, or with anybody else, over religion. He never manufactured an intoxicating beverage. He is not a stoic, but a natural man, who loves a joke. With friends his laugh is deep and hearty, and easily provoked. He is a thorough sportsman, the best of losers in games of chance, even in a battle to the death. He is not the petty thief that some interested people would like us to believe; and he is an individualist in all things whatsoever. He is a courteous being, a polite man, in his own lodge a gracious host. He believes in miracles (so do his conquerors if they really believe in their Bible) and his mind is as simple as a child's. He is superstitious to a degree that is beyond a white man's understanding, and he is deeply religious. And here are his conquerors bewildered.

The old Red Indian will not discuss his religion. Any tribesman who is easily led to speak of it has ceased to be a Red Indian. The old Red Indian will not often utter the name of his God aloud, and if you, in his presence, pronounce it you will feel his reverence. Instantly there will be silence, and the Red Indian's attitude will have changed.

The folk-tales of these people have interested me very much. They are as truly legends as those of the Norsemen, the Greeks, and the Hindus, but instead of representing man's combats with the elements as typified by the gods, they deal chiefly with the eccentricities of nature which they attribute to a strange character known among the tribes by various names, such as, Nahpee, Nulach-kin-nah, Esaccawata, Old-man, or Old-man-coyote, to whom the Almighty entrusted much of the work of creation. This strange character is always fickle, frequently fiendish, often foolish, and, on the contrary, sometimes almost sublime. In this you will recognize a wise provision, since it is evident that in his finding fault with created things, like the elements which sometimes tortured, the old Red Indian could not blaspheme against his God for whom he holds the greatest reverence. Speak of Nahpee or Esaccawata, Old-man, or Old-man-coyote, by whatever name he is known, and every old Red Indian will laugh merrily. They hold him in no reverence. But the pronouncement of the name of the Almighty is quite another matter. No man is more deeply religious than the old Red Indian; and no man ever loved children more. Knight-errantry, so highly respected in mediaeval times, flourished among the plains Red Indians of North America long before and long after it was known in Europe. Individual desire for fame was not alone responsible for the practice of "coupcounting"—the striking of an enemy with a bow, or cup-stick, while he was armed and fighting, without otherwise injuring him, etc. Tribal custom forcefully encouraged this to the end that young men might be brave, and through them the tribe maintain itself against the enemies. A young man could not marry until he had counted "coup," or had reached the age of twenty-five years. Even here custom made distinction in favour of valour. The young man who married at twenty-five, or after, and had not counted "coup," could not "paint his woman's face". She was obliged by tribal custom to ride with the women companions whose painted faces constantly reminded her, and the rest of the world, that their husbands were brave warriors who had distinguished themselves in battle. Any woman, white or red, would feel this, and inspire her husband to count "coup," and "paint her face". Besides the face-painting, a woman whose husband has counted "coup", was privileged to ride her husband's best war-horse, and to carry his lance and shield whenever the village moved; and it was always moving.

There were, among all the tribes of the North-western plains, clans and secret societies. These, especially the latter, possessed great influence over their members, so much that even to this day I believe them in a measure

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

...sible for the lack of unity that ...times presents itself in the administration ... tribal affairs. The secret societies, one ... remember, were apart from the clans. A ... or woman was born to a clan, the ...'s clan, always. When a man married he ... obliged by tribal law to take a woman from ...er clan. He could not marry within his ... clan. The resulting children belonged at ... to the clan of their mother; a mother's ... determined both family and tribal relation-... The secret societies elected their own ...bers upon petition. There were the Mad-dogs, ... Back-fats, the Foxes, the War-clubs, and ..., each tribe having different names for its ... societies, and clans. I know of but one ... society that confined its membership to a ...ain class. This was the Fighting-bulls of the ... Its membership was confined to aged and ...ected warriors.

Today it is difficult for one to imagine a Red ...in without a few feathers. On Red Indian men, ...en and children, artists insist upon painting ...hers, so that we naturally suppose all Red ...in wear eagle feathers. And, today, they ... wear them; but this was not so when Red ...ins were real. The eagle feather was not ... for adornment. It was a mark of distinction, ... might be worn only by men who had counted ..." (excepting the war-bonnet, which is a ...rent thing than a single feather).

Nowadays, half the tribesmen, off their reser-...ions, are "chiefs," and every tribal flapper is a ...ncess." This is movie material, counterfeit ... cowgirl. I have never known a truly ...editary chief; and there never was a Red ...in "princess". The old Red Indian chief was ... wise to foster a belief in hereditary leadership, ... he never did. A man became chief of a Red ...in tribe by prowess, and held his place by ...onstrated ability. When he died, or was ...erseded, his son, if he possessed ability, stood ...tle better chance to succeed as a chief than ... other young man of the tribe. I have known ... to succeed his father as chief, but neither ...ool nor breeding had anything to do with his ...ection. Instead of a Red Indian chief being ... wealthiest man of a tribe, he is usually one ... the poorest. The reason for his poverty is that ... continually helps his tribesmen out of his store. ... a man has no horse he goes to his chief to get ..., that is, if he is unable to steal one from an ...my; and those days have gone. Last winter ... White-quiver, a blackfoot warrior, prefaced a ...y he told me with these words: "Long ago, ...en I first knew you, and it was honest to ...al horses."

The plains Red Indian is a great believer in ...ams. He will starve and torture himself in ...paration for his hoped for "medicine-dream," ... then repair to some difficult spot, usually a ...h mountain peak where, alone, without food or ..., he will spend four days and nights, if necessary, dreaming and appealing to "helpers." His condition, both physical and mental, is necessarily unbalanced by weakness brought on through abstinence from food, taking enervation sweat-baths, and otherwise courting fatigue. Some go even further, and deeply wound their bodies so that they may be severely weakened by loss of blood. Their resulting dreams are weird, sometimes terrifying, though often strangely prophetic of the future. In a "medicine-dream" a bird, some animal, or a "person" appears and offers help to the troubled dreamer. Sometimes, however, these apparitions only proffer advice, or teach lessons by parables which are later interpreted in council by the tribe's "wise ones," usually known as "medicine-men." Thereafter, or until he has a greater dream, which seldom happens, the animal, or bird that appeared to him in his dream, is the dreamer's "medicine." This term, "medicine", is altogether wrong, and yet it is with us to remain. "Medicine" is not particularly curative; it is more nearly protective in its qualities. It is a talisman, or charm, a lucky-piece that no old Red Indian will forgo. His "medicine" is of immense importance to an old Red Indian. He implicitly believes that the superlative powers of the animal or bird that appeared to him in his medicine-dream are his own to command in time of need.

I have used the term "person" here, and my readers will need some explanation. Old Red Indians, recounting their medicine-dreams, which they very seldom do, or in repeating folk-tales, often use this term. A "person," as used here, is a sort of apparition in human form, ghostly and capable of changing itself into an animal that is equally eerie. Old Red Indians have told me that a "person" as used here is one who lived "long ago without fire."

White men have tried in vain to establish some language that might be spoken by all nations. They go on fighting and trading in many different tongues; but this is not so with the plains Red Indians. There are many tribes of the plains, each inheriting hatreds for the others that are ages old; yet they have a common language. By comprehensive signs these tribesmen can converse, even at a distance, without uttering a sound. They can clearly express themselves under all circumstances, excepting in darkness, or when they are unable to see each other. Nobody knows when the sign-language came into being. It was in general use among the tribes of the plains when white men first met them there, and it has continued down to this day. It was never known far west of the Rocky Mountains, and perhaps not east of the Mississippi River.

Perhaps the true origin of the North American Red Indian is for ever hidden by centuries of transmutation. Who is he? From where did he come to North America? And how? He does not attempt to answer these questions himself.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

believing that his people have always been here. White men answer them quite readily, and yet they are but guessing. There are similarities of features, of customs, and sometimes even of folk-tales, that seem to point to definite directions, but in trying to follow them we end in tangling inconsistencies. A year or so ago I was in the Crow country, and met Plain-feather, the old warrior. I told him that there were quite a few similiarities between the folk-lore of the Red Indians and the Hindus. He was greatly impressed, as I knew he would be. After listening to this he stood for a time looking intently at the far horizon, his strong face a study, his eyes in a dream. Then he said softly, more to himself than to me: "These things are beyond us." They are, indeed.

SWEET NEPAL, A LAND OF FOLK-SONGS

By Prof. DEVENDRA SATYARTHI

SWEET NEPAL is Nature's cradle of beauty and lies on the southern slopes of the great Himalayas. Beneath the snow-clad peaks, these slopes look like a broad fore-head under an old saint's hoary head. Viewed from a distance, the Nepalese villages, situated amidst the lovely scenes and sites of Nature, appear to be the embodiment of some mystic poet's

Bhutia girls singing Nepali songs
Photo by Das & Co., Darjeeling

golden dreams. The blooming faces of the children of the peasantry, who pass their days and nights in the simple huts of these villages, shine among the many flowers that adorn the Nepalese landscape; and their hearts sing and dance to the tune of the rippling music of the innumerable cascades and falls of their native land. They are the nurslings of Nature and delight to frolic and gambol in her company. The "noiseless tenor of their days", is passed, in the words of the poet, along the cool, sequestered vale of life where the dust and din of modern civilization come but as faint echoes from a distant land.

Extreme sympathy and wide hospitality for all who knock at their doors, are the principal traits of the Nepalese village-folk's character. Their deep-rooted belief in the inherent goodness of mankind is seldom shaken by pride, doubt or fear. It appears that the natural simplicity of the earlier races of man has come to stay with them.

In the olden days the name 'Nepal' was confined only to the Nepal valley proper, but now it represents the country as a whole. The present Nepal is bounded on the west by the river Kali, in its east lie Sikkim and Bengal; on its north is Tibet, and the United Provinces and Bihar-Orissa are on its south. Its area is nearly 54,000* square miles and the population is about 55,74,756.†

One may divide the country into four parts:

1. The Terai. It lies a little above the sea-level and covers almost the whole of the southern boundary of the country. As low-land it is moist and swampy and therefore very malarious.

2. The Valleys. These are known as Dums.

3. The Hill-Country. Its average height from the sea-level is from 1,000 to nearly 4,000 feet.

* As given in *Gurkhas* (an army Hand-book, Govt. of India, 1915).

† As given in *Gurkhas* (an army Hand-book, Govt. of India, 1933).

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

3. The Alpine Region. It includes the range of the Himalayas.

In Nepal we find all varieties of climate. Six seasons manifest themselves in full glory. Each season follows season and awakens the sleeping moments of the mountain Muse. During the rains Nepal looks like a land of clouds. The people in these days live amongst the clouds and sing the carols of their dancing beauty. The village-folks' minute observation of Nature shines forth in many of their songs, sung at the time of transplantation. Again, in spring, when the buds blossom forth, the youthful beauty and grace of Nepal rejuvenates her people and the praise and glorification of Nature find an echo in the village-girls' songs and dances, that welcome the happy advent of the new season.

Nepali girls playing on the flute

The Nepalese are primarily Hindus and are ruled by the only independent Hindu King. The Brahmins, the Chetris, the Thakurs, the Newars, the Gurungs, the Magars, the Limbus, the Raies, the Sunwars and the Tharus are the principal castes and tribes of Nepal. Of these the Brahmins, the Chetries and the Thakurs speak Nepali* while all others have dialects of their own.

In 1559 the Maharajah Dravya Shah, ancestor of His Royal Majesty, the present King of Nepal, conquered the petty state of Gurkha* and laid the foundation of the present independent Gurkha Raj. And since then the development of the Nepali language began. Now Nepali is the court-language of the country.

Before Gurkha Raj was firmly established, Kathmandu, Bhat Gaon and Patan, all the three capitals of Nepal, were the royal seats of three separate Newar states. These Newar states and many other petty states of the country were conquered in the course of time by the later kings of the same dynasty. The Newars now reside in the Nepal Valley and are great lovers of art. They have made considerable progress, especially in the realm of architecture. Cottage-industries, trade and cultivation form their principal occupations. In former days they were also great lovers of literature. The first book in Newari language was probably written in the fourteenth century, but according to Sten Konow books were written in this language even prior to the eleventh century.*

Children attending to the music of the wandering Nepali Minstrel

The Newars include both Buddhists and Hindus; the Buddhist Newars are known as Buddhamargis and Hindu Newars as Shivamargis. Both these schools of religion are in no way rivals of one another amongst these people. The Newari life may aptly be said to be a garland of festivals. The word 'Yatra' forms the synonym of festival. Some of their principal Yatras are: Bhairab Yatra, Gai Yatra, Indra Yatra, great

* The original name of the language is 'Gorkhali' Gurkha is a particular place near Kathmandu in those days it was a royal seat.

* There are many old manuscripts of Newari literature which are preserved with great care in the State Library of Kathmandu. But since the adoption of Nepali as the court-language of the kingdom, the Newari has lost its place of pride even among the Newars and the love of Newari literature has consequently declined among the natives.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

and small Machindra Yatra and Rath Yatra. Hindu and Buddhist influences have blended in these Yatras and it is not always possible to separate them from one another and dogmatize about their real origin. Songs and dances lend an additional joy to the Newari life, during these Yatras.

Excepting Nepali no other language or dialect of the country is of Sanskrit-origin. People speaking in different tongues are unable to understand one another. So, many people, who come in frequent contact with the Nepali-speaking masses learn Nepali and hence it is Nepali that serves as the *lingua franca* among the various tribes of the country. Many people have discarded their own dialects and have adopted Nepali as their mother-tongue in the course of time.

A peasant girl singing

Nepal may aptly be said to be a land of fairs and weekly markets, that are usually held at the pla es adjacent to the confluence of two rivers. People come from far and near to join in these fairs and markets. Along with trade, which seems to be the principal object of these periodical gatherings, interchange of culture, civilization, and id als, too, takes place. This is the time when dances and songs go hand in hand and contribute much to the social glee of the people. Different men and women of different castes and tribes love, learn and copy one another's songs and dances and derive immense pleasure by exhibiting them in their own villages after returning from these gatherings.

The Gurungs who are the residents of Central Nepal and are usually shepherds by profession, are great lovers of dance. Their dancing-hall, known as Rori Ghar (रोड़ी घर), is always adjacent to the village headman's house. A particular type of dance, that is called Sorti (सार्टी) and is very popular, takes place in the Rori Ghar during the harvest. Songs that accompany the Sorti Dance are named as Sorti Songs

A Gurkha mother with her baby in the cradle
Photo by D. Singh & Co., Darjeeling

(मोरटी गीत). In a year of rich harvest an additional grace and colour is lent to the songs and dances of Rori Ghar as the joy of the rustic folks knows no bounds. The Rori Ghar is confined to the young only and while dancing and singing in unison the youths and the maidens find their opportunity to choose their own sweet-hearts. Sorti songs as well as the rest that are sung in these days are usually love-songs and every year there is a rich extempore composition of many new ones that reflect deep

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

sentiments of sex-psychology with all its light and shade. Along with the many songs in the Gurung dialect, some Nepali songs, too are sung.

Amongst the Limbus of Eastern Nepal, two types of songs, differing in tune from each other, are mostly prevalent—the Lai Bari Songs (लबु-बरी गीत) and the Hak Para Songs (हक-पारा गीत). There are also some minor types differing from these two tunes but they are almost negligible. As the Limbus happen to live far away from the Nepali speaking area, they find no opportunity of coming in touch with the Nepali songs. So, the Lai Bari, the Hak Para and the sets are always in the Limbu dialect. There is a pretty custom among these people. Occasionally

Girls singing *Bhaileni* songs during the Diwali days.

the youths and the maidens indulge in a contiguous exchange of answering songs. These songs are like the Amoebaean Contest of the Shepherds and shepherdesses or the Duets of the European music-halls.* The girl sings a love-song and the boy sings back a carol of passionate love in reply. If the boy wins, he can claim the girl as his bride; but if he loses, very sportingly he surrenders his chances to a rival who may be more fortunate than himself. Whoever defeats the girl has the right to marry her. Dancing accompanies many of the songs of these people and are mostly of two types—Langma (लाङ्गमा) and Ke-langma (के-लाँगमा).

* The Jubari Songs (जुबारी गीत) of the Nepali language, too, are similar to these songs.

Amongst the Nepali-speaking masses there are some wandering minstrels who are named as *aaine* (गाने) and who form a caste of their own. The singing is confined to their males only.* These minstrels sing of love, heroism

Wandering Nepali Minstrel known as Gaine, with the instrument *Sarangi*

and the glory of Nepal to the accompaniment of Sarangi, † a particular kind of harp, which they themselves prepare; they generally possess a cheerful di-position and fill the village-atmosphere with cheerfulness. It is really a matter of great pity that these rural bards, who add new life and colour to the national life of Nepal, are considered as untouchables.

There are many types of Nepali folk-songs, sung at special times and seasons; some of them differing from one another according to different castes and occupations of the singers.

The following are the main types of these songs:

1. JHIAURE GIT (झ्याउरे गीत). The word 'Jhiauro' in Nepali means :'thin' and

* Major W. Brook Northey and Capt. C. J. Morris, the learned authors of *The Gurkhas'* (published by John Lane, the Badley Head Ltd, London), did not perhaps receive correct information about these wandering minstrels and so roundly wrote: "There is a class of professional singing women, known as GAINIS in Nepal" Page, 101.

These professional female singers, who are akin to Nauch Girls of India, form a separate class of singers and are named as Bhanrini (भाँड्रिनी). The males who accompany them to play on the musical instruments are called Bhaur (भाँड़)

† The Sarangi of these minstrels differs in shape from that of Indian type.

Digitized by Arya Samaj Foundation Chennai and eGangotri

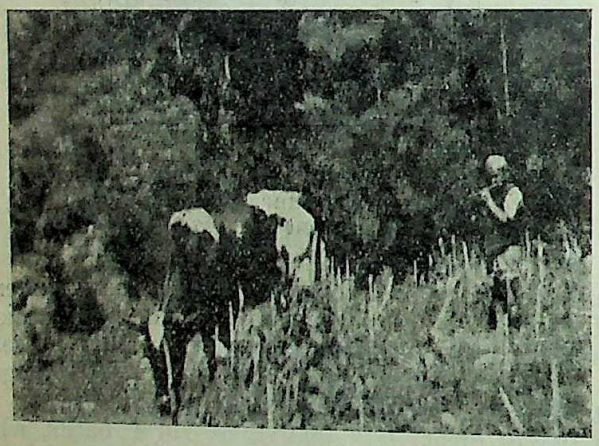
weak."* Jhiaure Songs are never longer ones and are generally quatrains. Love forms the subject-matter of these songs.

2. Swai Songs सवाई गीत). These are the songs narrating the popular stories, current among the masses and may aptly be named as ballads.

3. Malsiri Songs (मालसिरी गीत). These songs are sung during the Durga Puja festival. The victory of Mother Durga over the demons is the subject-matter of these songs.

4. Bhailo and Deusi Songs (भैलो तथा देउसी गीत). These are the melodious rhymes recited sweetly by the boys and the girls of the poorer classes who go singing from door to door demanding sweets.

5. Jubari Songs (जुवारी गीत).† Like the Jhiaure songs these also are quatrains and are sung in the form of questions and answers at the time of fairs and festivals; the singers are generally the lover and the beloved.



A cowboy playing on the flute

6. Sangini Songs (संगिनी गीत). These songs are sung by the women in chorus during the *Tix* festival. The women assemble in the village temple or under some banyan or pipul tree. They form a circle and two of them go in the centre by turns to sing and dance and the others standing away also join in the songs in a chorus. Many of these songs deal with the domestic life of the country. The women have a superstitious belief that, if they do not dance during these days, they will be born lame in their next birth.

7. Rasia Songs (रसिया गीत).§ The tune of these songs is deliberately drawn out and lengthened. The peasants, men and women, sing these love-songs while sowing the seeds and also when transplanting the paddy.

8. Balun Songs (बालुन गीत).* These songs deal with the stories of Hindu classics—the Ramayana, the Mahabharata and the Bhagavata and are generally sung by men.

9. Rateli Songs (रतेली गीत).† The night of the day on which the bridegroom's party leaves for the bride's home, is celebrated with songs and dances by the village women in the bride-groom's house. It is considered to be the happiest time in life and the women pass the whole night in singing and dancing.

A Nepali wood-cutter, mystic in appearance but more mystic when singing songs
Photo by Das Studio, Darjeeling

10. Nani-Phuloune Songs (नानी-फुल्यौने गीत) These are nursery-rhymes and cradle-songs.

11. Baramase Songs (बारामासे गीत).§ The heroines of these songs are those women who are suffering from the pangs of separation. These songs weave the natural beauty of Nepal at all times of the

...roar around the joys and sorrows of the women ...who sing these pathetic songs.

12. ASARE SONGS (असारे गीत). These are the ...songs, sung during the month of Ashar (June-July). ...The rhythm of these songs is always short and ...quick.

A Gurkha bride in her national Costume
Photo by D. Singh & Co., Darjeeling

13. SAUNE SONGS (साउने गीत). These are sung ...during the month of Shrawan (July-August). ...During these days the parents usually send for ...their daughters from their husband's home. The ...heroines of these songs are generally of two ...types: Those who are in their husband's home ...and are extremely eager to get back to their ...parental nest, and those who are fortunate enough ...to see their parents and are celebrating the rains ...with them.

14. CHAITE SONGS (चैते गीत). These are the ...spring-melodies sung especially in the month of ...Chaitra (March-April)

The charm of all these folk-songs lies in their ...original tunes and one would lose much of it, ...if they are put down to writing. Great allowance must, therefore, be made for translations which can never adequately convey to readers unacquainted with the Nepali language, the real charm of the original songs. Some illustrations of the folk-songs of Nepal are given below.

In the following song the peasant sings the joy of his life at the sight of a rich harvest :

A Gurkha mother feeding her child
Photo by D. Singh & Co., Darjeeling

Lovely are my brindled oxen,
And see my plough is lovelier still ;
Lovely are my fertile fields,
And see my crops are lovelier still.

Again he celebrates his love and respect for mother earth that sustains him :

The earth is both my father and mother,
Nourishing food from it do I get :
Blessed—O blessed, is Mother Earth, so dear,
To the earth goes all my love and respect.

The following is the song of a luckless one, not so fortunate as his brethren :

In ploughing have I spent all my years,
Oh ! the day of joy never came to me :
Too old—O too old, are my body and heart,
Joy's face, not for a moment, do I see.

Some of the songs are very charming in their expression of simple feelings artistically seen against the background of some of the local aspects of Nature. They, therefore, are not merely rich in their emotional quality but also for their observation and praise of Nature.

The simple truth that the heart that once loves never turns back, is most beautifully depicted in the following song :

When—O when may snow gather
On the Himalayan peak's yonder part ?
Where, where—O where, will stop
The rippling stream and the flying heart ?

Love is compared here to a rippling stream ; the snow may impede its flow for some time but very quickly it thaws and again we see the rippling stream. Misfortunes cannot warp the flying heart of a lover.

A childless mother pours forth her sad heart in plaintive notes :

Withered looks the pipal tree of Terai
In the burning heat of the sun :
Oh ! of what avail is my beauty to me
As I've no daughter or son.

A Nepali peasant girl

A damsel compares her love with a musk-deer :

On the yonder side of the Himalayan peaks
Lo ! there grazes a musk-deer :
How handsome looks my love,
O lovely is he as the musk-deer.

A lover adores his sweet-heart's eyes :

Full of fruits and flowers is the garden
And side by side are the KARELAS,* my love !
Like fireflies are thy lovely eyes
And through the lids they twinkle, my love !

A bride, suffering from the pangs of separation from her love, asks a village-swain to stop playing on his flute :

How charming is the Himalayan peak
Like the cast-off skin of a serpent. it looks.†
Play not—O play not, on thy flute.
All the more sad, my sad heart, it makes.

Again, she sets her feelings to Music :

Nine lakhs of stars are all in the heavens above
I cannot—O I cannot, count them :
Up to my lips surge up the words of my hearts,
I cannot—O I cannot, utter them.

In many of these little songs as well as elsewhere love for golden beauty plays a remarkable part. It should not be taken as an idle play of fancy. Let it serve as the exponent of the Nepali's passionate fondness for the beauty of the golden colour as well as of his national lover for his native land when he sings of 'heaven-like golden Nepal', of 'Nepal's golden furnaces', of 'the golden streams of Nepal', of the golden birds of Nepal, and of 'village-mothers of Nepal, offering sweets to their sons-in-law in the golden plates.'

In the following song a happy bride sings a glad song of his moon-like sweet-heart :

How beautiful looks golden Nepal,
A heaven upon the world it is :
How beautiful looks my golden sweet-heart :
The moon of the world of love she is.

Again, she sings of flowers that adorn his gold-like face.

Three towns only are there in dear Nepal,
(In every house is there) a golden furnace :
A pair of flowers on thy turban do I see, my love !
They show that thine is a young gold-like face.

The heroine of the following song is glad to take her bath in some golden stream of her native land, but as she forgets to bring the auspicious vermilion to adorn her forehead according to the custom of the country, her glad heart becomes a little sad :

Here runs—lo here runs
Dear Nepal's golden stream.
My hair—O my hair, am I cleaning
In dear Nepal's golden stream.
My hair—O my hair,—I've cleaned
In dear Nepal's golden stream,
On a rock do I sit to sun my hair
(Near dear Nepal's golden stream).
Alas—O alas ! I left at home
The vermilion that adorns my hair.
Sad O so sad, is my heart
(For the vermilion that adorns my hair.)
How should I return to my husband's place
Alas ! the vermilion I left at home,
'Here comes back my careless girl'
Shall say my mother, if I go to her home.

Here is a sad bride, who is continuously reproached by her cruel mother-in-law and begs a sparrow to bear her pathetic news to her parents but to take care that her brother and sister should be ignorant of the real message, lest they be sad on her account :

Of how much love for mother dear
Should I sing, O golden sparrow !
Of how much love for father dear
Should I sing, O golden sparrow !

* KARELA is a particular vegetable.
† The peak of the Himalayas enveloped in snows is compared to the long white slough.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

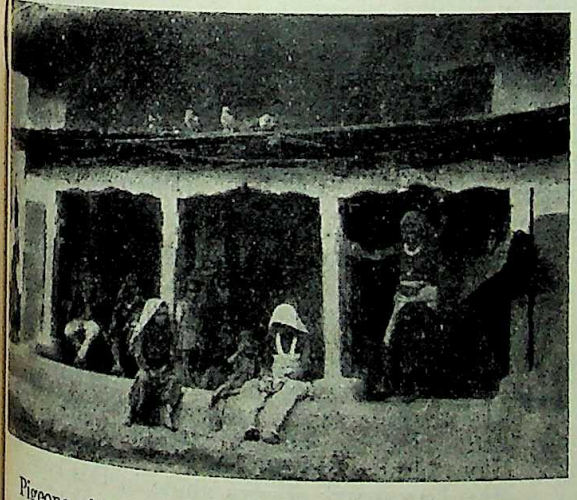
How sweet is thy song, O golden sparrow !
How lovely is thy flight, O golden sparrow !
Fly, fly—O fly to my mother's village
And carry my news, O golden sparrow !
If my mother questions thee tell her
For her mother-in-law's cruelty, thy daughter is dying,
Tell my brother, "thy sister is all right"
If he asks, O golden sparrow !
If my father questions thee, tell her
For her mother-in-law's cruelty, thy daughter is dying.
Tell my sister "thy sister is all right"
If she asks, O golden sparrow !
How sweet is thy song, O golden sparrow !
How lovely is thy flight, O golden sparrow !

The following song is sung by some mother-in-law :

Marsi *-rice in a golden plate, do I offer
But see our bridegroom eats not :
How lovely he looks when he comes
But even when addressed he speaks not.

Nepali girls seem to be very fond of pigeons. In the following song a girl asks for a pair of pigeons from her parents to whom she is bidding adieu :

'Nine pairs of pigeons are sitting on thy roof, father !
Give me—O give me, father, a pair of pigeons.'
'A cow—O a cow shall I give thee, daugher,
Sorry am I that I cannot part with a pair of pigeons.'



Pigeons sitting on the roof of a Nepali house
Photo by Das Studio, Darjeeling

'What will I do with thy cow, father,
Oh, luckless am I not to get a pair of pigeons.'
'An elephant shall I give thee, daughter
Sorry am I that I cannot part with a pair of pigeons.'
'What will I do with thy elephant, father !
Oh luckless am I not to get a pair of pigeons.'

Then the father, unable to see his daughter crying, breaks forth :

'Weep not—O weep not, daughter dear, weep not,
At once shall I give thee a pair of pigeons.'

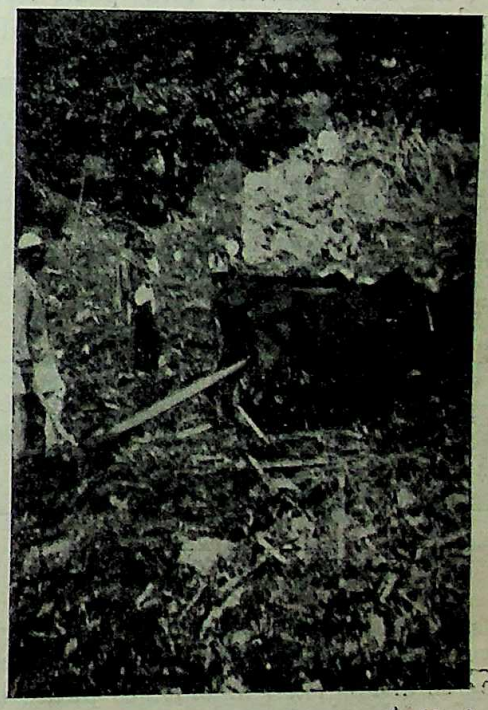
And the song ends with a note of joy that lights up the face of the girl :

'The household work at my husband's place,
Shall I always gladly perform, father !
Hearing the sweet cooings of the pair of pigeons.'

The following song shows the intensity of some mother-in-law's cruelty :

'BUHARI * ! O BUHARI !!' calls the SASU †,
'Yes, yes, O SASU !' replies the BUHARI,
'Who hath taken away, O BUHARI !
The ghee I kept in the wooden pot ?"
'I did not see it, nor have I heard about it,
How could I eat, O SASU ! ghee from the wooden pot ?"
'Thy lips look glossy with the ghee, O BUHARI !
The whole mystery do I conceive, O BUHARI !
All the doors shall I shut up,
And shall keep all the windows open :
Thou art my BUHARI, the thief of ghee,
Thy lips—O thy lips shall I brand.'

Most pathetic are the notes when the sad bride sings the tragedy of her life :



A Newari peasant ploughing and singing.
His wife and children are enjoying the song.
Ten miles down from Darjeeling.

In this strange land shall I die
And alas ! There is none to shed a tear for me !

Her next vein, too, is not less tragic :

Nothing but a defeated destiny is a woman's life,
Alas ! she is meant for slavery.

During the Diwali festival, when every member of the house wishes to have new cloths,

* Marsi is a particular variety of rich rice.

* BUHARI=a Nepali word for 'daughter-in-law' or 'son's wife.'

† SASU=a Napali word for 'mother-in-law'.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

the mother-in-law asks the bride if she wants any new costume. See how she refuses the offer, because she thinks that there is no heart behind the gift and prefers kind treatment to such a show of charity :

No bodice—O no bodice do I want
Nor do I want any PATUKA*
All I wish is love and affection
At the hands of my mother-in-law.

In the following song an exceptionally beautiful bride, who has become the object of her sister-in-law's† jealousy, thus describes her lot :

Mark of vermilion did I wish to put
On the parting of my hair
O my tiny darling sister-in-law !
But Ah me, I found not my mirror
To see in it my pretty face
O my tiny darling sister-in-law !

The implication of this song is that the mirror was hidden away by the mischievous sister-in-law.

Some soldier § has gone to the battle-field, see how his newly-married bride pours forth her heart in her sweetheart's absence.

Musicians in a Nepali marriage

Alas ! very uncertain is a soldier's life :
Even death in the battlefield is he to face !

The soldier's sister, in order to please the sad bride, says, 'My brother, thy love has returned'. But the bride cannot believe it and in the following song we find the conversation that followed between the two :

'Adorn—O adorn thy hair, O bride !
Here returns my elder brother to dear Nepal' :
'O why doth thy heart leap up for thy brother,
O sister-in-law !
In the field of battle has he gone far away
from dear Nepal.'

The hero of the following song is a soldier on his way to hunt tigers, and the heroine, who seems to be his sweetheart, is simply charmed by his lovely youth and beauty and is glad to see the lustre of heroism on his face :

Who art thou ?—O who art thou ?
O thou the hunter of the tigers !
Who hath given thee this lovely youth and beauty
O thou the hunter of the tigers !
'The son of a brave father
Am I, the hunter of tigers.
God hath bestowed this youth and beauty
Upon me, the hunter of tigers.'
The tiger is shot dead and heroism shines
On the face of the hunter of tigers,
Who art thou—O who art thou,
O thou, the hunter of tigers !

The following is the song of Queen Bibli, who is filled with joy at the approach of motherhood :

Ninth month ended and the tenth ran
Now queen Bibli's travail began,
So she broke forth as she got a flower-like son
'Study me, O astrologer ! the destiny of my son
'A pot full of gems and pearls is my share,'
said he,
'As you have got, O queen, a moon-like son.'
'What are gems and pearls ?' broke forth the Queen
'Half of my kingdom shall be given by me, the
mother of a son.'
'What will I do with the kingdom, O Queen !
Happy as a king am I in thy land, O the
mother of a son !'

The following is a *Deusi* song that the boys and the grown-up men of the poorer classes sing while asking for sweets during the Diwali festival. It should not be taken as a piece of flattery only. It may aptly be taken as an exponent of the people's felicitation for their patrons :

The pebbles which the mistress of this house
touches,

May they be turned into gems,
The earth, she treads upon,
May it be turned into grains.
The leaves, she brushes post,
May they be turned into silks.
The water, she touches with her hands,
May it be turned into oil.*
May LAKSHMI† always abide in this house,
May the young and the old grow like the
bananas,

May they all prosper like the *Dobi* grass,
May they stand like the banyan and the pipal
trees.

May this house be filled with rich raiments from
the plains,

May the salt of Bhot ‡ and the gold of Lhasha §
fill the stones of this house.

---

* PATUKA is a Nepali word for a girdle.

† Here 'sister-in-law' means 'husband's sister.'

§ The Gurkhas of Nepal are well-known soldiers not only of the army of Nepal but also of the British Indian Army. They have given a brilliant proof of their valour at various times.

* In a hill-country like Nepal where the means of conveyance for trade are very rare, oil becomes all the more precious.

† The goddess of wealth.

‡ § In olden days Tibet used to supply a good quantity of salt and gold to Nepal.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

May all sufferings and diseases of this house,
Be washed away by mother Ganges.
May all the troubles of this house be blown off
By the winds, above the Hymalayan peaks.*
May all the blessings come true that we the
Deusi-singers pray for.

The song of felicitations is ended
Come, ye brothers, let us return to our homes.

These songs paint the everyday-life of Nepal with its exact light and shade. The characters portrayed in this realm are essentially human and seem to be characters whom we have met in the streets and who are not above the veicissitudes of life, but they are all the more endeared to us by the confluence of their tears and smiles, joys and sorrows, hopes and despairs and various other happy and sad traits of life.

* The *Deusi*-singers perhaps do not have any sympathy for the Tibetans due to many wars that took place between Nepal and Tibet. So the singers find it a great fun when they sing that their troubles may be blown off by the winds above the Himalayan peaks (towards Tibet).

AN APPRECIATION OF "THE MODERN REVIEW"

By J. T. SUNDERLAND

I have long had in mind sending you [the Editor] some brief words expressing my high appreciation of the monthly magazine which for many years you have edited and published. I have taken it almost from the beginning of its issue, and consider it indispensable. It is a constant wonder to me on account of the breadth and wealth of its contents, covering as it does, and with such intelligence, the wide fields of politics, history, literature, art, education, economics, industries, social reform and religious reform. I speak with care when I say, that we do not have in America, nor is there in England, any monthly review that covers so wide a field, and does it with such accuracy of scholarship and at the same time so interestingly. One might well suppose that your Review would confine itself to Indian affairs. As a matter of fact, it gives a larger amount of important Indian matters than any other periodical with which I am acquainted, while at the same time it takes the world for its field, and is surprisingly rich in information regarding everything of most importance that is going on in all countries.

It ought to have a large circulation in foreign lands, as well as in India. I know of no other periodical that so truly and adequately represents the real India, giving to the world what the world ought to know about India's civilization, her great past, the present condition of her people, the real nature and effects of British rule, and the meaning of her great struggle for freedom.

I regard *The Modern Review* as not only an invaluable asset to India; but as a messenger to the outside world, the importance of which increases with every year of its publication.

My dear Mr. Chatterjee, I trust you will pardon these frank words from me, which I am sure will surprise you. But my personal debt to your able monthly is so great that I could not forgive myself if I refrained longer from expressing them.

New York, September 1, 1934.

ELEMENTARY EDUCATION AT BERKELEY, CALIFORNIA

By DEBENDRA CHANDRA DASGUPTA, M.A., ED.D. (Calif.)

BERKELEY is the seat of the famous university of California. The public school system at Berkeley is under a Board of Education consisting of five members, four of whom are elected by popular vote. The fifth is an ex-officio member—the Mayor of the city of Berkeley who retains his membership during his tenure of mayoral office. Berkeley is the first city in the United States of America to organize her school systems on 6-3-3 plan. The first six grades are organized into elementary schools, the seventh, eighth and ninth grades into junior high schools, and the grades tenth, eleventh, and twelfth into senior high schools. Hence we clearly see the American high school from the chronological standpoint is equivalent to our intermediate college though the standard is much superior to it. The unique feature of the public school system from the kindergarten to the University not only at Berkeley but also in the whole of the United States of America is that it not only offers free instruction to the citizens of the states but is also co-educational in character, though there are some private colleges such as Mills College at Oakland, California, for the exclusive education of the girls.

"Western Gardeners Corporation"—Columbus School

The kindergarten department of the Berkeley Public school system admits young children at the age of five and they stay at the school half a day where they receive training in manners and etiquette and undergo physical exercises such as dancing, singing, playing band, etc. Sometimes meals are served in the kindergarten schools where the children learn table etiquette. The children draw whatever pictures they feel like. In a word, the Kindergarten school does not attempt to impart any instruction to the children from books but it aims at social, moral and physical development of the young children at school. In the afternoon new batch of students attend the kindergarten schools when the old batch retire to their homes.

There are seventeen elementary schools, fourteen special classes and a sunshine school attached to the Thousand Oak School at Berkeley. The chief objectives of the elementary schools at Berkeley, as in other elementary schools in the United States of America, are to give the children a command of the fundamental 'tools of knowledge', besides a training in health, and citizenship. Briefly speaking, the elementary school authorities in the United States of America aim at the full development of the growing child. The American elementary school authorities regard the school child as a growing being and it is their sole purpose to develop the child as such and unfold his latent powers.

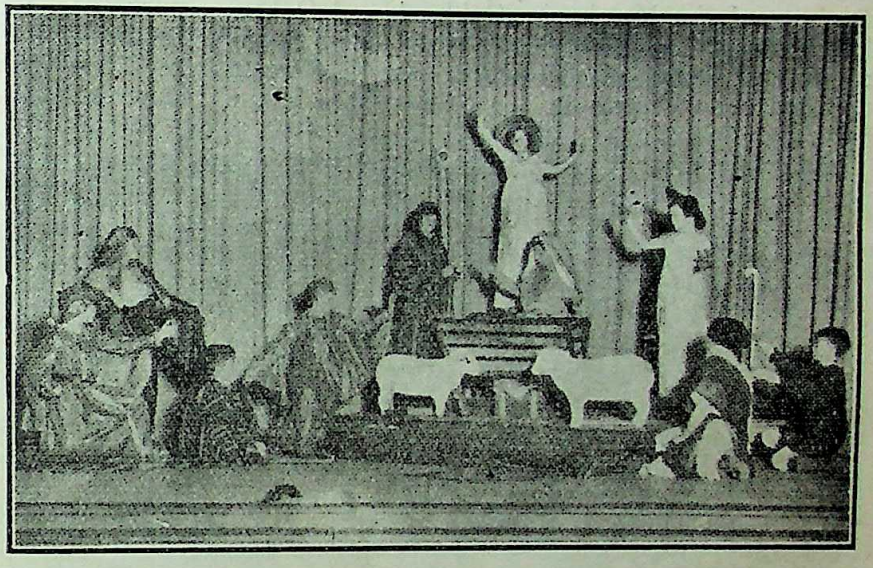
In order to discover the mental abilities of the child the Berkeley Bureau of Research and Guidance gives intelligence tests each year to all children in the fourth, sixth, and ninth grades. Such tests are also given to the senior high school students as well. Such intelligence tests are also given by the Research Bureau at any time according to its decision. But unfortunately the Indian school authorities give no such intelligence tests to the school children to classify them on the basis of mental abilities so as to develop their mental and physical well-being along the line of their growth. Instead the children are made to follow the courses of study in the same class and the inevitable result is that the class-room instruction cannot be well adjusted to the needs of the children who vary from each other in mental equipments.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

The children of the Berkeley schools system are classified into three groups, *viz.*, "X", "Y" and "Z" according to their abilities. The first group consists of children of superior intelligence who receive instruction under the same teacher in the same class and the students belonging to the second group receive instruction in another section. The third group children receive individual instruction. Children of exceptionally retarded abilities are not included in these groups but receive instruction in the special classes.

Children from the Kindergarten to the High school showing any remarkable interest or skill are reported by the teacher and the principal to the Bureau of Research and Guidance for test and observation. Each school child has a cumulative record in which his or her intelligence quotient, class progress, social interest, temperament, social status, and conduct are recorded for vocational and educational guidance. To encourage and inspire the gifted children they are sometimes introduced to "Big Brother" or "Big Sister" of the community which resembles the various honour societies of the American Universities enrolling members only on the basis of high records at the Universities.



Christmas Pageant, John Muir School

Each elementary school has one part-time counsellor, generally a lady, chosen from among the regular class-room teachers. The counsellor represents the central office of the school and makes constant investigation of the needs of the school children. Every child in every school is under constant observation and sympathetic guidance of the counsellor. The counsellor works in close co-operation with the class-room teacher, and looks after the needs of each child whether educational, mental, physical, social or moral. In case of emergency the counsellor is helped by the visiting counsellor, who investigates the case by visiting the home of the child and also the central office which records psychological, medical and psychiatric aid. The visiting counsellor who is in charge of the 'follow up' service, records the progress of the refractory child and recommends further treatment or examination according to needs. The vocational and educational guidance is a unique feature of the American school from the elementary class to the university—a feature which is quite foreign to the Indian school system.

The American schools, whether elementary or high, are a community within a larger community, and the school curriculum reflects the vital needs of the community and it is constantly changing with the moving needs of the time and society, whereas in India the school curriculum is static though recently it has shown a tendency to include some new items of courses in its fold. The elementary school curriculum at Berkeley is closely connected with the vital needs of society and it is organized on the principles of educational philosophy, and each of the courses has a well-defined objective. The curriculum of the elementary schools at Berkeley includes the following courses of study, *viz*, the three R's, history, elementary science, home economics, art, nature study, music, civics, physical education, gardening, and manual arts education. The school authorities aim at the full development of the elementary school children and they develop the reasoning or thinking powers of the children rather than pour mere bookish informations through improved technique or method at the cost of reasoning powers. The elementary schools make no effort to give vocational training to the children. Such training is deferred till they graduate from the elementary schools.

The school buildings are modern and furnished with up-to-date equipments for the purpose of imparting instruction. The school hours begin at eight in the morning and continue till three in the afternoon. Some children carry their lunch with them, some again take their lunch in the cafeteria during the recreation period. The school instruction runs for a period of five days a week and Saturdays and Sundays are observed as holidays. The classes at the Berkeley Public schools are organized on two semesters plan and the classes are called VI L (that is six low) and VI H (six high), and the students are promoted at the end of half a year. In some of the states the school authorities maintain quarter plan and the students are

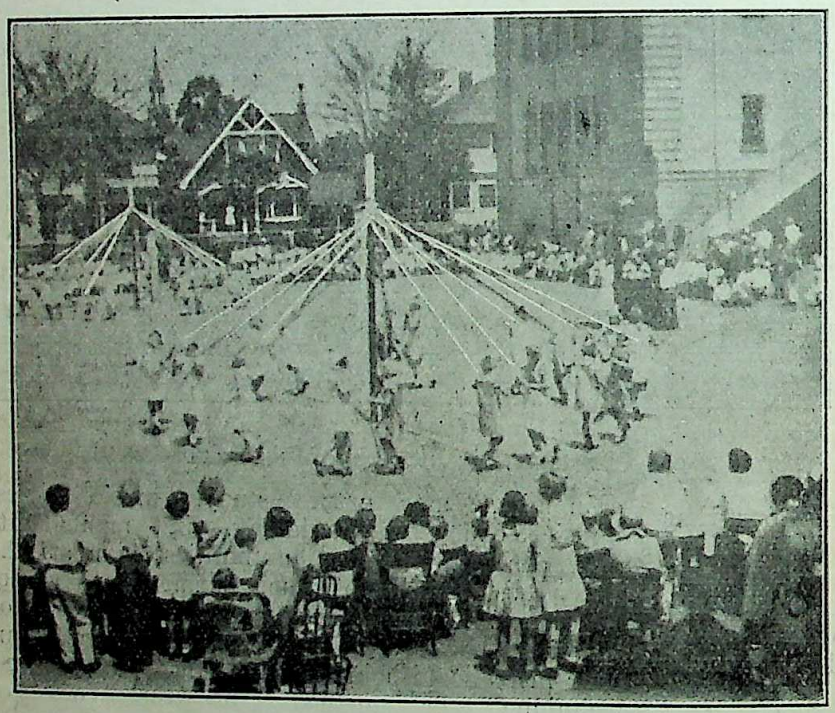
CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

promoted at the end of three months. Such promotional plan has this much to say in its favour that if a student fails in the class he or she loses only half or quarter of a year.

The school teachers teach the children courses, particularly, natural science, manual arts, civics, and gardening, through an "activity programme." To illustrate the case let us narrate some of the courses of study at the Berkeley elementary schools.

In the natural science course, the pupils make excursion into the city parks, observatories, museums, Lake Merrit in Oakland, and Golden Gate Park in San Francisco. These observations are followed by discussions in the class-room and each child contribute his or her share in the discussion. These discussions are utilized by the teacher in stimulating the children in some activity, such as, making of class pamphlets, making of collections, planning of gardens, and in dramatizations depicting the various phases of nature work.



May Pole Dance—Washington School

In civic studies, the children depict the life of children or some aspects of social life. When the writer visited Longfellow school at Berkeley, he found the children engaged in the study of the social life of Arabia. The whole room was decorated artificially with Arabian scenes and a little girl who was describing the Arabian life was donned in Arabian dress and the teacher was giving aid only when it was necessary. Sometimes the school manages to invite foreign people to give talks on his or her country particularly on the social and economical aspects of life. When the writer visited the California University elementary experimental schools at Berkeley, the fourth grade students questioned him about the social and economic problems of Indian life. One student asked why some Hindu* woman covers her whole face with veil, whereas another puts the veil only in the middle of the head while some again do not use any veil at all. Another student questioned what his (the writer's) national colours were. Besides they asked the writer many questions about the types of houses the Hindus used for their dwelling purposes, and the types of food they had in India.

Trade and industrial education is also imparted to the children through an activity programme. The trade and industrial courses in the schools are the typical representation of trade and industrial activities of the local communities and through this activity programme the teachers attempt to discover the latent abilities of the children so that these may be utilized in the future vocational guidance. Through these courses the teachers also try to develop the character and sociability of these children. The following quotation from the Berkeley Public school leaflet shows the objective of manual arts education as follows:

> "Through the above activities it is hoped that children will be kept alive to the changing aspects of the out-door life about them, that there will be aroused desires to investigate on their own responsibility, to know more of the truth of the laws of nature. We hope that this will later help to make these children interested, active citizens in the larger communities where they will live and that they will help to frame and observe intelligent measures for the proper development and protection of the great out-of-doors."

Music is a required subject from the Kindergarten school to the high. Through music course the schools try to develop in the children an appreciation and love of music and to train them for citizenship. "Music makes for citizenship, the highest expression of which is service." Music lesson is given for 1 hr. 40 minutes a week from the Kindergarten school grades to the elementary. The elementary school also has music band.

* In U. S. A. the people of India are called Hindus regardless of religious affiliations. Thus in U. S. A. The Muhammadan is also called a Hindu. On rare occasions they also call us East Indians. Indians there means the aboriginal tribes of America.

The physical education for the elementary school children at Berkeley includes a programme of instruction both theoretical and practical. A programme of activities such as stunts, pentathlon, and games is followed by a mass corrective work of five to ten minutes which is given daily to all children of the seventeen elementary schools. The students in the elementary schools, in addition to receiving twenty minutes' theoretical physical education, are given a half-hour dance once a week.
